In all the history of the world perhaps there was never a time when mothers needed so much as now to consider the trimming they put on the inside of their heads as well as that on the outside; and the Chautauqua Circles are helping thousands of them to a richer mental life, to a knowledge which gives them inspiration for their home life and a perspective for judgment on the world's doings.

MEN TWICE BORN

(Continued from page 122)

valid retirement. Modern wars, however, do things differently. While the man is still under the care of the physician, and before his artificial limb is selected and fitted, he is interviewed by a vocational man, skilled in finding and developing latent abilities. The upshot of it is that at the earliest possible moment the patient is launched on the way of reeducation; his latent capabilities, dulled and shocked into idleness by the war, are gradually aroused and trained, first by what are called invalid occupations carried on in bed or in a wheeled chair; second, by occupational therapy, or cure by work in special workshops devised for the purpose; third, by vocational training in schools and institutions. The fourth stage is the industrial rebirth of the man, his placement in a job, and the continued kindly supervision of the Government.

WILLIAM LEAVITT STODDARD.

MAKING GOOD ON GUNS

(Continued from page 120)

of machine guns in America that instead of 20,000 a year we are now producing at the rate of 225,000 a year. This is a record of achievement that cannot be discounted by a "hurried" reference to wooden guns.

There remain only the big guns to be considered. As in the case of machine guns, the French and British authorities offered to furnish our expeditionary forces with heavy artillery, in order to "place the minimum strain on available tonnage." The offer was accepted. Orders for shells and cannon, amounting to a billion and a half dollars, were placed in England by our War Department in seven months.

At the same time, our Ordnance Bureau prepared for the production of heavy guns in America. It ordered three-inch guns of a new American model. It obtained from France designs and models for the manufacture of the famous French guns. There was no machinery in this country capable of making the recoil mechanisms of the larger guns. For these, castings must be tooled with such accuracy that they will not be "off" two-thousandths of an inch in six feet. Private manufacturers had to be prevailed upon to undertake the work. They had to be helped financially, in building a thirteen-acre plant and in buying six million dollars' worth of special tools. Consequently their contract was not signed until November 1, and out of this delay, apparently, came the charge that the Ordnance Bureau retarded the production of French 75's in America by trying to improve on the recoil mechanisms, which are admittedly the most marvelous part of a perfect gun. The charge is untrue.

In short, all the accusations against the Ordnance Bureau are accusations that are based on appearances, not on evidence. Instead of rushing men to the battlefield with obsolete rifles, the War Department has sent them with weapons whose superiority will go far to win the war. Our soldiers in the fighting line have been furnished with the best machine guns in Europe, and those who are to follow will have better machine guns than Europe's best. The best French heavy ordnance has been given to our gunners, and shipping has been saved and a displacement of munition workers has been prevented while factories were being built here to increase the production of the guns against the time when we shall be able to send more troops to France and provide more ships to transport them. A far-sighted plan has been carried out intelligently.

Cash From Black Muck  
A War-Time Opportunity

HARVEST TIME AT "GREENACRES"

"GREENACRES," a superb farming property—651 acres in extent—only 70 miles from New York, the world's greatest vegetable market—is for sale at a fraction of its value.

The marvelous soil of "GREENACRES"—"black muck" or humus—grows the finest quality of onions, celery and every kind of "garden truck."

One hundred acres at "Greenacres" are already plowed and ready for Spring planting. The onion seed and fertilizer are already purchased. An expert onion and celery farmer who knows "black muck" like a book is on the job and ready to grow big war crops for the man who buys this business.

The labor question is not a problem, because the Polacks who are the past masters in onion and celery culture are living in the modern laborers' cottages at "Greenacres"—and are ready and eager to work "on shares."

"Greenacres" is equipped for immediate and large development.

Farmhouses, barns, laborers' cottages, tool houses, drying houses, office building, modern water system, have been built and installed at great expense.

"Greenacres" is in the heart of the black muck section of Orange County (New York), famous for its growing of onions and celery.

"Greenacres" has been scientifically tested and has "come through" 100 per cent. Professor E. O. Phippin, of the New York State College of Agriculture Experiment Station of Cornell University, after conducting an experiment station for three years at "Greenacres," reports in part:

"There is certainly a wonderful opportunity here.

"These farms offer a splendid opportunity not only for developing an area of highly valuable soil, but also for effecting a type of agricultural business organization which has not had much prominence in the East.

"It is unusual to find so large an area of muck soil which can be developed at such small relative expense.

"The soil is of a highly productive character, as our results in the past three years show quite well.

"Its depth insures permanency for many years.

"It has a foundation for a long period of crops at great values.

"In many other places the drainage problem is especially difficult, and there is often a heavy growth of timber to be cleared away—but in this case, both factors are minimized.

"Considering the location, so near to the large markets of New York City and Philadelphia, the opportunities for business development are certainly promising!"

Across the Wallkill River lie Florida and Chester, where the black muck land is held at prices of from \$300 to \$1000 per acre. But Professor Phippin says:

"Your section is also better drained naturally than considerable areas on the east side of the Wallkill River."

THE EVIDENCE

Before the war—when prices for onions and celery were a mere fraction of the present quotations in the produce market—six acres at "Greenacres," on a test, showed a net profit at \$80 an acre on the onion crop alone.

NEED WE SAY MORE

To convince you that an extraordinary war-time opportunity is within your reach?

You would never get this chance if we were not so fully occupied with other business activities in New York.

One man among all the readers of The Independent is going to buy this farm property. Are you that one? If interested mail the attached coupon today for further particulars. Our representative, a man who knows the true value of farm properties in Orange County, will meet you with a motor car at Middletown, New York (on the Erie), and show you "Greenacres," and let you talk with the man in charge. It costs you nothing to investigate. Act now.

THE OWNERS OF "GREENACRES"

P. O. Box 66, Times Square Station, New York

Please give me full particulars about your farm property and your war-time offer to sell.

ADDRESS .....

## Ever try to plan your own Systems?

Save your time—and get the Systems right, *without experiment*—by letting “Y and E” work out all the details for you. (We do not charge for service.)

## Office Systems That Simplify

Simply as a matter of furthering good will, we will give you the benefit of everything we have learned in our 38 years of study and experience—years in which we have made nearly a million system installations, covering every line of business.

If you are having trouble with your purchase records, let us show you a purchase system that will eliminate the trouble—

If your stock keeps running above or below the limits specified, let us show you a stock record adapted exactly to your business—

If your letters or catalogs or orders aren't always easy to find—ask what we would recommend as a better filing system—

If your sales records aren't definite and useful, let us give you some that *are*!

Whatever records or systems you have that should be clearer, simpler, more comprehensive—let us show you what we can show.

Should there be need of new equipment and don't want to buy it from “Y to E” because you like us, or because you don't find equal quality elsewhere, or for any other reason, you will find our prices attractive also. Write for information, or inquire at our local store, in your city.

## MOBILIZING AMERICAN MONEY

(Continued from page 121)

1917, the reduction in other than Imperial Government loans was about £175,000,000. Thus, to the extent that this reduction arose from the activities of the Capital Issues Committee, that body was successful in providing just that much additional capital for the British Government's loans; at the same time preventing the unnecessary consumption of labor and materials which were so vitally needed by the Government and which otherwise would have been devoted to miscellaneous private and corporate purposes.

The War Finance Bill in its second line of activity, that of mobilizing investment funds for necessary borrowing, goes a step further than the English procedure. The actual developments of the last few months here have indicated that many deserving borrowers, realizing that under present conditions they could not find investors who would buy their new issues, have appealed directly to their deposit banks for loans. If the proceeds of these loans have, in substantial part, been invested in “plant account,” that is, in bricks and mortar, as is not improbable, there has been thus created a type of loan which is not self-liquidating. On the contrary, its tendency is to render the bank position much less mobile. In fact, the best available figures indicate that loans of national banks, which represent about one-half the banking resources of the country, increased approximately \$7,000,000,000 between March 5, 1917, about the time America entered the war, and December 31, 1917.

The bill, therefore, provides that any banker or bank that has loaned money to a corporation (in case its operations are compatible with the war purposes of the United States) may obtain advances from the War Finance Corporation on the security of loans made to such a borrower; or that in exceptional instances the Finance Corporation may exercise its discretion in making advances direct to the borrowing corporation. To provide funds for such purposes the War Finance Corporation has an authorized capital of \$500,000,000, to be provided by the United States Government. In addition, the War Finance Corporation may issue up to \$3,000,000,000 of its own bonds, to run not over five years. Such bonds may be offered and sold on the market and the proceeds will be available to use in loans to be made by the corporation. The present Liberty Bonds have, of course, been bought by millions of citizens all over the country. Yet it is believed that a different type of bond, like the one just described, which the War Finance Corporation has

power to issue, may also find a ready market with investors, even tho not an obligation of the Government itself. Its attractions will be its shorter maturity and possibly higher interest rate.

Another important feature of the measure just passed is the power to aid savings banks and insurance companies which might otherwise find it necessary to raise large amounts of funds by the sale of securities on a market already greatly depressed. This clause and the points already set forth cover the essential purposes and proposed workings of the War Finance Corporation. The measure has been criticized as tending strongly toward inflation and creating what is tantamount to fiat money. While it is true that if the powers of the measure are unwisely and badly used an opening is afforded for undue inflation, there is no reason to suppose that such unwise handling is likely. If we hesitated in war time to create measures granting unusual and broad powers to the Government we should hardly get anywhere. The fact is that, under this measure, the Federal Reserve Banks may rediscount for member banks paper secured by bonds of the War Finance Corporation. But, in the same way, they may now rediscount paper secured by Liberty Loan Bonds. It might therefore be charged that the inclusion of such a right as to Liberty Bonds was tantamount to authorizing fiat money to the extent of \$5,800,000,000; this being the approximate amount of Liberty Bonds outstanding. But Mr. Warburg, of the Federal Reserve Board, has stated that only about \$300,000,000 of Liberty Bonds have found their way into the Federal Reserve Banks thruout the country. This is only about 5 per cent of the amount of Liberty Bonds outstanding.

Personally, therefore, I am not apprehensive that the working of the War Finance Corporation will in itself result in excessive inflation. On the other hand, constructively the measure certainly provides the foundation on which to build up two highly necessary lines of activity. While it is essentially a war measure and one which in peace times we should adopt as reluctantly as we should price-fixing or rationing of materials, the measure seems admirably designed to assist in solving the primary questions before the American people today: How best to meet the critical investment situation which we are now in; how most readily to maintain the country's prosperity; finally how best to utilize the full strength of our resources to beat Germany.

## WORDS OF THE WEEK

**SOVIET** (So vyet)—Russian word for council or committee: used particularly just at present to denominate the councils of workmen and soldiers who are controlling the actions of the Revolutionary Government.

**RIGHT OF ANGARY**—The right of a belligerent to seize and apply to the purposes of war property of a neutral state in the territory of the belligerent. Such property must be restored at the conclusion of the war and indemnities paid for its use. This right was recently exercised by the United States when it seized the Dutch ships in American harbors.

**AMIENS** (A me en)—One of the chief manufacturing towns in northern France, situated on the Somme River. Its cathedral, which was built in the thirteenth century,

is one of the show places of Europe. The town is at present the chief objective in the great German drive because it is the base of the English armies in France and because it is an important railroad center on the line from Paris to Calais.

**FERDINAND FOCH** (Fosh)—Chief in command of all of the armies of the Allies. He was born in the south of France on the Spanish border on October 2, 1851. He has been in the army since before the Franco-Prussian War, first as an artillery officer, later as a general in command. He is generally regarded as the man who saved the day under “Papa” Joffre in the battle of the Marne (September, 1914) and again in the first battle of Ypres (April, 1915). He is known in the French army as “le patron,” “the Boss.”

## TORPEDOES, MINES AND MEN

(Continued from page 129)

each charged with T. N. T. Two other mines were lashed close by to the deck. One of these "careless and inefficient" officers ran back, at the risk of his life, to try and set the explosion gear of the mines at "safe." But the stern sank before he could reach them.

Eight minutes after the torpedo struck, she sank. But in that eight minutes—listen to what was done. First picture the scene, imagine the débris flying high in the air, the crash of falling masts, stupefying roar of successive explosions; the men lying dead and dying about the decks, some floating in the water; the pall of smoke and escaping steam! Now, what was done? The gun crews stood to their guns in readiness for a shot at the submarine. An auxiliary engine was rigged on to the lighting system and a wireless improvised in an effort to send out a low power S. O. S. The life rafts were launched—the boats, alas, were smashed. The splinter mats that protect the bridge from shrapnel fire, huge mattresses five feet square, were cut away and thrown overboard with the lifebuoys to uphold struggling swimmers. The effort to rig up a wireless failing for lack of time, the guns were repeatedly fired to attract attention. When she began to sink, her bows rose almost perpendicularly while she twisted a half circle, but just before that the commander had run along the deck ordering everybody into the water. As she sank, he stepped off himself into the sea.

While there, swimming for his life, shaken by the loss of his ship, stupified by the tremendous concussions and surrounded by his dead and drowning men, the habit of discipline was still so strong, his spirit so fine, that he took accurate note of the submarine when she popped up out of the water. Listen to this—from a man who could see, at that moment, nothing but slow drowning ahead:

"The submarine approached within six hundred yards, picked up one survivor, then submerged again. It appeared to be between one hundred and fifty and two hundred feet long. It carried a three inch gun forward of the conning tower and the periscopes were housed. Her general appearance was that of the U-51-56 class, but her conning tower was like those of the U-49 class."

He says of his officers and men that "they were cool, calm and helpful to each other," and the sequel proved it. Tho greatly weakened by cold and exposure, one officer swam from one raft to another in an endeavor to equalize their weights. He died, poor fellow, during the night from cold and exposure, but the survivors all say of him: "He was game to the last." A boatswain's mate stripped off his own clothing to try and warm his dying officer. At the risk of almost certain death, one fine lad had stayed in the motor sailor boat till the ship sank trying to cast loose the lashings and get it off. If he had succeeded twenty more lives would have been saved, but his failure in no way dims the shining courage of his act.

Two officers and sixty-four men gave up their lives that night, but they have not died in vain. They had played their part in protecting the thousands of supply ships which our flotilla has convoyed in the last eight months. They helped to feed the starving millions of Europe; to shove the war against the Hun. And they are not unavenged. They had made their own settlement in full in the war with the submarines.

## Price List Per 1000 Calories

Quaker Oats	5¢
Eggs	49¢
Round Steak	35¢
Young Chicken	\$1.23
Leg of Lamb	40¢
Ham	28¢
White Fish	62¢

## What You Buy

### When You Buy Food

#### *First, you buy calories—the unit of nutrition.*

In Quaker Oats you get 1810 calories per pound. In meats, eggs, fish and chicken—average—you get 750 calories per pound. So Quaker Oats excels there by 141 per cent.

#### *You buy body-building elements and minerals.*

As a flesh builder Quaker Oats is almost the same as lean beef. In lime, phosphorus and iron it is vastly superior to beef.

#### *You buy palate-pleasing qualities.*

No other grain food which Nature gives us can match Quaker Oats in flavor.

#### *And you consider—or should—the cost.*

In Quaker Oats you get 1000 calories for five cents. In meats, eggs, fish and chicken—average—those 1000 calories cost 48 cents. That is almost ten times as much.

Those are the overwhelming reasons for using more Quaker Oats. Make it your basic food. Make it the entire breakfast. Mix it with your flour foods to add flavor and save wheat.

## Quaker Oats

### The Doubly-Delicious Flakes

Quaker Oats won its worldwide supremacy by its exquisite flavor. It is flaked from queen grain only, just the big, rich, luscious oats.

We get but ten pounds from a bushel. That flavor makes oat foods doubly delightful. And it costs you no extra price. Get it.

Cost comparisons based on prices current at time of writing

## JU-JITSU

Book direct from Japan. Absolutely the latest and best book of its kind. By Ohshima and Yokoyama, Professors of Ju-Jitsu in Kodokwan, Tokio. Teaches all the holds, breaks, defenses, throws, blows, tricks and secrets of this great art of self-defense. Illustrated with close to one hundred actual photographs. Learn to protect yourself. 300 pages. 7½ x 5½ inches. Cloth bound. \$2.70 postpaid. Send your order today. Money back if not satisfied. An ideal gift to your soldier boy. Tokio, Japan and U. S. Branch.

RIKKO ART COMPANY - Cleveland, Ohio

## LIGHTEN HOUSECLEANING KEEP OUT DUST & WIND

Chamberlin Strips are an all-season money-saver. In warmer months they bar the dust, wind, soot, damp. Protect your furnishings. Prevent doors and windows sticking or rattling. In winter they repay their cost within 4 years by saving 1-5th to 2-5ths on fuel. **GUARANTEED 10 YEARS**—because only skilled mechanics from our factory branches are permitted to install them—but outlast your building.

**CHAMBERLIN  
METAL WEATHER STRIPS**  
"THE STANDARD FOR 25 YEARS"

We equip windows, doors, casements or transoms—wood or metal—in new or old buildings.

**WRITE** for illustrated, descriptive book and list of users in your vicinity.

**CHAMBERLIN METAL WEATHER STRIP CO.**  
Headquarters: 119 Dinan Building, Detroit Mich.

One of the vessel's reports reads: "The sea was immediately covered with floating oil to the full size of a submarine, and a man's body was seen by members of the crew."

The British Admiralty is very conservative. It does not allow a "sinking" except on indisputable evidence. Now if a mine explodes above a submarine it sends her straight to the bottom and all that one sees is more or less oil. Oil reports show frequently in the sunken destroyer's record, so we know that besides those credited to her, there were doubtless others. Like a good fighter, she wreaked her own vengeance before she fell. Peace to her! Peace to the fine lads that lie with her at the bottom of the sea!

Now for the other casualty. Here again imagine the actual conditions. Two inches of periscope, no larger than a floating beer bottle, suddenly emerge from a choppy sea half a mile away on the destroyer's beam. An eagle's vision could not find it. As in the other case, first warning comes from the torpedo, the lightning stroke of death, racing across the sea. There's a yell from the lookout! The clang of the engine room bell! The vessel swings on her heel—too late! The torpedo strikes astern in the after crew's quarters.

Fourteen men were down in that compartment, which was practically blown away. One man's feet were touching a frame that was fused by the intense heat engendered by the explosion. Looking at the mass of twisted wreckage, later, I could hardly believe it possible that any person could have come out of that compartment alive. Yet with the exception of a fractured ankle suffered by the one man, they all escaped unhurt. Why?

Because of one man's sacrifice. On watch aft, he saw the torpedo heading straight for the stern where two depth mines, each charged with T. N. T., hung ready for use. He knew the compartment was full of men. He had seen a depth mine raise a column of water, yards wide, feet above the sea. He knew what they could do. It would have been quite easy for him to run forward to safety, but the sense of duty which rise in our race superior to the fear of death dominated the brave lad. Like the officer on the other sunken ship, he ran aft in a desperate race with the torpedo to reach and set the mines at "safe." His hands were on them when the torpedo struck. He went up with them in the air, but that he had made them safe is proven by the fact that they did not explode till high above the deck.

If this lad had been in the British navy, his wife, mother, sister or other surviving relative would have received the Victoria Cross his courage and sacrifice had earned. We have no such decoration. In place thereof, our editor, sitting in his warm office with his feet on a carpeted floor, uses the incident as a peg on which to hang his statement that "The Navy Falls Down." Save the mark!

Common justice calls for the statement that this vessel could not have been more skilfully handled. With all of her stern blown off above the propeller, one screw and her rudder gone, she kept going. She could only steam in slow circles. But circling thus, like a wounded hawk, she turned such a hot fire on the submarine when it came up to deliver a finishing blow, that it dived again and scuttled like a scared crab from the dangerous vicinity. Great seamanship was shown in getting that vessel back to port, but it is a tale too long for my space. Sufficient that, combined with the gallantry displayed by the officers and crews of both vessels, the courage, fortitude and seamanship displayed by all, these

casualties are raised to the ranks of achievements worthy to go down in the history of our navy.

Surely we must expect casualties. Our officers and crews do. As one sailor lad put it, "We never know when we'll kick over a mine." On the occasion that I went out with part of the fleet we maneuvered for two hours in waters that we found out afterward had just been mined by a submarine. All in the day's work—and taken as such by the fellows who do it. And if they are willing to accept the risks; they to whom a torpedoing or the "kicking over of a mine" means death, surely we landlubbers who live at home at ease ought to try and emulate their spirit.

The ever present danger is, however, the least of the destroyer sailor's troubles. He thinks more of the incessant hardships to which he is exposed. The vessels go out and stay out in all weathers, and let me tell you from experience that there is nothing in the way of motion on earth at once so insidiously sickening and yet so violent as that of a destroyer in a heavy sea. Take the worst of the dizzy whirls and roller coaster plunges at Coney Island; add the violent pitching of a small yacht in a dead roll; throw in a stiff suggestion of a western bronco's best buck; mix all with a few individual shivers and shakes that are a destroyer's very own; finally add the driving force of fifteen thousand horse power engines thrusting this knife blade of vessels head on into huge seas, and you get a motion that will make a sailor sick who has been going to sea for thirty years.

The boat on which I cruised was once out for nine days in a howling gale, and the chief executive officer gave me the following description of it: "You could neither lie down, sit up, stand, walk nor sleep. I was thrown off the ward room transom eight times one night. She was going over on her beam ends at each roll, and every time I dropt almost plumb for twelve feet and hit the opposite locker. It was dangerous. I might just as well have fallen down a well. I was so bruised, after a while, that I gave it up tho I was dying to sleep. There was nothing to do but hang on to a staunchion and stick it out.

"By day, the seas were a wonderful sight. The boat would rear up under a charging wave and stand on her heel as it passed on with two-thirds of her length exposed. It was a wonder that she didn't break her back. And when she fell—the thousand tons of her would strike the water a tremendous blow. She'd quiver like a shaken lance; tremble like a frightened horse for ten minutes afterward. The waves were enormous; bases dark green, tips light jade against the sky and so clear that we could often see porpoises shooting thru like fish behind the plate glass of an aquarium. We couldn't take any sights; had to run by dead reckoning thru four and five knot tides. Often we were practically lost; had to hail a lightship to find out where we were at. We couldn't even signal each other. We'd perhaps get a couple of letters from a destroyer only two or three hundred yards away, then down she would go, even the tips of her masts out of sight in the trough of a wave. It made a fellow feel mighty small to be tucked away, like that, in a little crevice of that roaring ocean. After nine days of it we were completely exhausted."

Small wonder if they were! Nine days hanging on to a staunchion, unable to stand, sit down, eat, sleep? Nine days and nights with the vessel's nose under water or away up in the clouds? In all that time never a bath, wash nor shave; usually half or wholly sea-sick? Yet, thru all, doing their duty as in the mildest weather.

A son of mine happens to be on this particular ship, and this is the description he gives of a more recent storm: "We were caught in a howling gale; the worst storm I ever saw in the eight years I have been to sea. The wind blew with a velocity of one hundred and ten miles an hour; the ocean was one huge, mountainous sea. Our decks were swept clean of all movable objects, tool chests, boats and so forth. All of the living compartments were flooded with water; everything was wet; and to make it worse, the thermometer dropt away below freezing point. For thirty-six hours we lay hove-to, riding it out, before we could go about our duty."

Some weather! Before the war it would have been considered impossible for a destroyer to live thru it. A commander who sent out a ship in a gale like that might have been court martialed for imperilling the lives of his officers and men. But now they go out and stay out as a matter of course; never even think of trying to come in.

More comfortable, the fogs that drop a thick gray blanket over the seas are far more wearing on the nerves. Imagine half a dozen destroyers guarding a thirty-vessel convoy. At night a fog bank closes around them before they can scatter, and from an exact science, navigation degenerates into the blind groping of a blind navigator over blind seas. Not a commander in our fleet but has collected an assortment of nightmares in such weather to last him the rest of his life. Not a sailor that cannot relate hair-raising experiences such as this:

"Out of the thick pea soup fog, a huge black freighter suddenly rose on our bows. As we swung on our heel with one screw reversed a destroyer came shooting at us from the opposite quarter. Avoiding her, we almost ran down another steamer. I tell you for a while gray hell was loose there on a black sea."

They have not always escaped, either. Fogs have caused casualties, but so far, thank God! no fatalities! Nevertheless their dangers, in summing up, our fleet's work, have to be added to storm and tempest, mine and submarine.

It may be said, in conclusion, that the work of the destroyers at the present juncture is the most important of the war. While the European armies lock in a death grapple and the British and German fleets stand at "stalemate," a decision is being fought out on the sea by the Allied destroyers and Hun submarines. For if the latter could cut off the stream of supply ships from neutral countries and American ports, the Allies would quickly be reduced to that point where Germany could claim, if not victory, at least its equivalent, a draw. This is already perceived. It will be seen still more clearly when, the war over and the obscuring battle clouds swept away, the future historians sift the evidence and render their verdict. Be certain, in that day the American destroyer flotilla will receive full credit as one of the deciding factors in this greatest of wars.

In the meantime let us spend no effort or time in foolish criticism. Our sailors are going every day to face fogs and storms, cold and frosts, imminent dangers of the seas. Among them, as I have said, is a son of mine—perhaps one of yours; if not, then a relative or friend. Theirs the hardships and dangers; ours loyal support. In order that they may do their best, they must carry in their hearts the knowledge that the home folks stand stoutly behind them. In that case they won't mind the hardships, the dangers. They will go out cheerfully with old Farragut's watchword on their lips: "DAMN THE TORPE-DOES! GO AHEAD."

## Better Industrial Housing

**T**HE use of inflammable material in the construction of workingmen's houses is fast becoming an obsolete method. It has been proven that such homes are only temporary, and, while they last, a source of endless repairs and maintenance expense.

In sharp contrast to the old-style workingmen's villages, consisting of long monotonous rows of tumble-down shacks, are the present-day industrial developments.

Permanent homes are being built on well-planned allotments. Many of these homes are built of NATCO Hollow Tile.

With the use of NATCO these homes are fire-safe and weatherproof.

NATCO needs no painting or repairs.

The big units lay up rapidly in a wall, thus effecting quite a saving in labor.

Our new Booklet on Industrial Housing (Bulletin 172) is just off the press. It contains photographs of several big NATCO developments together with floor-plans of a few houses.

Send for your copy today.

**NATIONAL FIRE PROOFING COMPANY**  
724 Federal Street  
Pittsburgh, Pa.

Workingmen's Houses, Bethlehem Steel Co.  
Sparrows Point, Maryland

Architects: Bissel & Sinkler, Philadelphia, Pa.

One of four cottage rows, 30' x 250', 10 apartments each, 6 rooms, stair hall and bath.

In this development there are also 30 double houses, each having 6 rooms, stair hall and bath.

Ten rows of shacks, ten 1-room apartments to the row, are also provided as quarters for colored labor.

All these houses are built of 8"x5"x12" Natco Hollow Tile furnished and erected by the National Fire Proofing Company.

### Why Does God Permit Wars?

Thousands ask themselves this question. As never before in our generation men and women seek light and guidance. Those who stay at home to watch, and ponder, and perhaps weep, long for an insight into the meaning of God's will. We have need of all the comfort and help we can get.

Endowed for that purpose, this Society offers to send you, without cost or obligation other than 5 cents for mailing, Emanuel Swedenborg's "Divine Providence", a book that shows the way to a clearer understanding of God's purposes.

On the market 10 years.

## EYES TO THE FRONT

(Continued from page 132)

have you been soldier enough to follow the meatless and wheatless program without a murmur and without a hitch, to lose money gladly when your heat was shut off, to adjust your work to wartime conditions promptly and fully and never emit a growl? Have you, regarding the war, a militant morality? A straight spine is the mark of the man with his eyes to the front.

7. *The American soldier begins the day's work at 5:30 o'clock, and to get up this early he has to go to bed the night before at 8:30 or 9:30 o'clock.* That is, to do an hour's more work in the morning he cuts out two or three hours of doing nothing at night. Reason? Body and brain work best in the early morning; sleep is most refreshing in the early night hours; heat and light are saved by going to bed early. When is your regular time for going to bed? Could you not make it an hour earlier during the war, save that much light and heat every evening, and devote an extra morning hour to regular war duty of some kind? The habit of early rising, apart from the war, is an aid to health, industry, optimism, alertness, decisiveness, care, thought, progress. The man who greets the dawn generally has eyes to the front.

8. *The American soldier wears a uniform which symbolizes economy, durability and purpose.* The common people of England and France are choosing their garments with equal care. Yet our shops and stores are advertising the current styles and excessive prices without regard to the universal need for strict personal economy. A darned coat or a patched dress would be a good civilian uniform. Have you looked thru your stock of old clothes, old hats, old shoes, to see how many garments you could make decent for everyday use, by alterations and repairs? This does not mean to close one's fist on his pocketbook and buy nothing new. It does mean that the average person could and should buy only half as much new clothing during the war as he was accustomed to buy before. This is no time to finger the fashion plates. You can't watch the styles and walk with your eyes to the front.

9. *The American soldier has been provided with a complete change of habits.* A habit, like a garment, must be cleansed frequently, and finally thrown away. When a man or a nation clings year after year to the same outfit of habits, the result is more shabbiness and spiritual decay. For a generation we have buried ourselves in habits that weren't clean and good even at the start—the habits of over-eating, over-dressing, over-talking, over-playing, under-sleeping, under-exercizing, under-thinking, under-giving, under-sacrificing, under-praying. So God sent a world storm to blow the tatters of custom away. The sooner we get hold of this fact and use it, the sooner the war will be over. How many of your old bad habits have you put off, how many perfectly good new ones have you taken on? Every soldier in camp or trench has put off at least five old ones, taken on at least five new ones. Proud and straight in his fresh moral apparel, he marches with his eyes to the front.

10. *The American soldier puts his big job first.* He is in such deadly earnest that everything outside beating the Germans looks too unimportant to consider. He plays well, but only that he may fight better. He enjoys his food, but he knows that every bill of fare is arranged for the maximum of nourishment, without regard to any fancy or whim of the palate. He reads much, but only books that are sound, clean, refreshing. He doesn't give up a thing a healthy man

really needs, but he gives up everything that might cause physical, mental or moral injury. How about you? Do your card-parties or late dinners or "smokers" or afternoon teas or long-drawn-out dances or other forms of alleged amusement fit you for better war work? Do you entertain your friends with pro-German prodigality—or with patriotic frugality? How many of your pleasures are luxuries—how many are necessities? Cut out the luxury pleasures during the war. The big jobs, in winning the war, and in making the world over after the war, will go to the men strong enough to order their own lives by their own command: Eyes to the front!

11. *The American soldier has real friends—comrades inspired with a holy zeal and high purpose in a common cause.* He is twice the fighter, twice the man, for having their presence, faith, sympathy, bravery, skill, coöperation. Real friends are the people who are doing real things together. The war opens many new doors of acquaintanceship. Look for them. Shed the artificial and superfluous, then you can walk more freely with your eyes to the front.

12. *The American soldier fights with his tongue.* All his words are efficient war words. Do you waste time in foolish war speculation and argumentation—or do you keep still and get busy doing your share to win the war? A man with his tongue going clickety-clack never yet marched with his eyes to the front.

13. *The American soldier is prepared to meet every possible form of attack by the enemy.* There isn't a move a German can make, or a weapon he can wield, but the Yankee will be ready for him. Are you thus prepared? What is the worst thing the war could do to you? Exactly how would you meet it, overcome it, be stronger on account of it? The proof that a man is mentally and morally grown is that he has a purpose high enough to overlook and strong enough to overcome all temporary failures, hardships, losses and defeat. To be able to walk firmly thru darkness by faith is the frequent test of the man who resolutely keeps his eyes to the front.

14. *The American soldier is in command of himself.* He doesn't allow his palate, or his purse, or his heart, or his tongue, or his temperament, or his family feeling, or any other part of him to get away from his will power. He has overcome his native American desire for personal freedom. Have you a soldier's command of your physical, mental and spiritual forces? Have you the mental vision and moral force to line yourself up with your own ideal of yourself, no matter what the effort costs? It is the steady grip on yourself that puts you forward, every part of you following your eyes to the front.

15. *The American soldier looks in the face of death—and smiles.* He wants to live, but he wants more to do the work and finish the job ahead of him, whether he lives or dies. The supreme test of a man is that he would rather do his work and die for it than live and not do it. Whoever has reached that point of self-surrender can view quietly and serenely all the changes and vicissitudes of life. The man who frets and worries, even in war, has his eyes fixed on the shadows of a multitude of petty things, while the spirit of grandeur and the glory of surrender would free him from his cares if only he would look up and gain the clear sweep of the horizon. Our motives and our methods being right, nothing else matters. To be able to look on life and death with equal calmness, fortitude and faith is to be the soldier that every man must be who has taken a vow to fight, live and work with his marching orders "Eyes to the front!"

## Special low prices Dutch Bulbs

Good only until June 1st  
Order Now!

# THE NEW BOOKS

## American Literature

ALTHO American writers are included in the "English Men of Letters" series and in Chambers's "Cyclopedia of English Literature" and in the Tauchnitz "Collection of British Authors," they do not appear in "The Cambridge History of English Literature," which is, however, not to be regretted, for it affords the opportunity for a supplementary or companion series. This first volume covers the Colonial, Revolutionary and Early National periods. Two more volumes will complete the American work. It is under the editorship of Professors Trent, Erskine, Iberman and Van Doren, and sixteen authors have contributed chapters to this volume. Paul Elmer More, formerly literary editor of The Independent, takes the chapters on Edwards and Emerson. Irving is discussed by Major George Haven Putnam, one of the few men now living who has personal recollections of the author on whose head the hand of Washington rested in blessing; a chain of three linked lives that spans the nation's existence.

The most valuable, because the most distinctive, feature of the American History as of its British prototype is the inclusion of certain people of importance in their day whom we are apt to ignore because their names rarely recur in conversation and current literature. The great mass of reading matter in any period is not supplied by those whom later ages value as classics. Yet a knowledge of this reading is necessary if we are to understand the current movements of thought. Consequently the chapters on the travelers and explorers of the coast and the hinterland, on the political and religious movements and on early newspapers and drama, are of exceptional interest for they contain material never before brought together in such compact and convenient form.

In a word *The Cambridge History of American Literature* does not fall behind the English Cambridge in either style or scholarship and that is as high praise as could be given to any work of this kind.

*The Cambridge History of American Literature.* Vol. I. G. P. Putnam & Sons Co. \$3.50.

## Women and War

A worthy companion to Miss Fraser's *Women and War Work*, reviewed in The Independent of April 13, is *American Women and the World War*, by Ida Clyde Clarke, the story of how the women mobilized and organized.

Soon after the declaration of war by Congress, the Council of National Defense appointed a committee of women of national prominence to consider and advise how the assistance of American women might be made available in the prosecution of the war. It is indeed very unfortunate that this woman's committee is merely advisory. It is capable, however, of much initiation and manipulation.

Definite organization began upon receipt of a letter from Secretary Baker, when,

The committee met in Washington in early May and formulated a tentative plan of organization which was approved by the Council of National Defense and immediately sent out to leading women in each of the forty-eight states. The plan proposed to coordinate women's organizations and their working forces in order to enlist at once the greatest possible number in the service which the national crisis demanded.

One of the big results has been in the conservation of food and the increased garden production.

Mr. Charles Lathrop Pack is responsible for the statement that the value of the crops raised on back yard lots is \$350,000,000, and when asked as to what part women had in achieving this stupendous result, Mr. Pack said, "The women did it all."

Just what the untrained woman body can do under the leadership of the Red Cross division is here summed up:

A memorandum of six weeks' shippings in the fall of 1917 showed that women furnished 3,681,895 surgical dressings; 1,517,076 pieces of hospital linen; 424,550 articles of patients' clothing; 301,563 articles of miscellaneous supplies; 240,621 knitted articles. And each six weeks brings in more workers than the last, better trained, every day learning more competent and less wasteful methods, and gradually increasing output.

The book is an encyclopedia of what has been accomplished, what is being undertaken, what is being done in every state. Indeed, if you want to know anything about the work of the committee consult this book. Then you will read it cover to cover.

*American Women and the World War*, by Ida Clyde Clarke. D. Appleton & Co. \$2.

## The Iron Ration

WE are curious to know the effect of the war on every country and type of individual that comes within its sphere of influence, but our curiosity about its effect in the Central Empires, and on their peoples, is at once the deepest and the most unsatisfied. The author of this book has had unique opportunities of studying the physical conditions and the psychology of Germany, Austria-Hungary, and to some extent Turkey, and he has set forth his impressions clearly and vividly, and with an obvious effort after impartiality.

This is "not an isolated case" of a German officer's view of the war:

"When war reaches the proportions it has today it ceases to be a military exercise. . . . The peoples of Europe are at one another's throat today because one set of capitalists is afraid that it is to lose a part of its dividends to another. The only way we have of getting even with them is to turn socialist, and put the curb on our masters."

The author states that "the efficient organization of the German governments is buncombe—rot pure and simple."

"So intense was (the) struggle for bread that men and women began to look upon all else in life as wholly secondary. A laxness in sex matters ensued. . . . Here I will say that war is highly detrimental to all classes of men and women. When human society is driven to realize that nothing in life counts when there is no food, intellectual progress ceases. . . ."

A large part of the book is devoted to the food problem, which is inevitable as it bulked ever larger to the German mind. Interviews are recorded with Czernin, Zimmermann, Tisza, Kuhlmann, the Sultan, and numerous generals and other representative people, giving remarkable sidelights on their viewpoint of matters which we have only seen from a very different angle.

*The Iron Ration*, by George Abel Schreiner. Harper and Brothers, \$2.

## The Artist Rubens

IT is not necessary to be an admirer of Rubens the artist to enjoy this story of his life and work. Eminently fitted as Louis Hourticq, Inspector of Fine Arts of the City of Paris, would be expected to prove himself in criticism and appreciation of the artist, it is surprisingly welcome to find

as well a most readable and human study of the man.

Rubens had always a delightfully child-like nature, not such as we associate generally with artists, and he was successful financially. He had so many orders that he kept several of his pupils busy painting pictures to which he would put a few finishing touches. And he did this quite frankly and ingenuously, but he was not so frank on the occasion of a trip to the Court of Madrid with pictures as gifts from the Duke of Mantua.

The roads were broken up, and the heavy baggage had to be left behind. When it had all been gotten together again new disaster was discovered. His paintings were partly rotted. Luckily the King was not there, and before his return everything was put in order. Rubens was resourceful. He retouched the injured paintings and replaced those hurt beyond repair by two pictures which he himself improvised. Everything turned out well. The King was delighted and the Duke of Lerma in ecstasy before the copies, which he took for originals.

"No man was ever more drunk with the poetry of the human animal, or has expressed in a more stirring way the beauty of material life," Monsieur Hourticq says of him, and he points to the abandoned joy that is shown in his treatment of a hunting scene where "all the contortions of rage and fear and suffering might be savagely intermingled."

There are more or less authentic anecdotes about how Rubens profited by menageries that passed thru Antwerp. In his own house he kept dogs, great solidly built Danes and little curled poodles, whom he allowed to assist at the most solemn events in history; in the garden lived the peacocks who always escorted his Junos, and even those of Van Dyck, two heavy beasts, one a bright bay and the other a dapper gray. In Rubens's work Pegasus himself was painted from nature.

Rubens: *The Story of His Life and Work*, by Louis Hourticq. Duffield & Co. \$2.25.

## Economics and Sociology

Volume 27 of *The American Nation. National Progress 1907-1917*, by Frederic A. Ogg, an authoritative and compact history of the decade beginning in the middle of Roosevelt's second term. Harpers, \$2.)

*Theories of Social Progress*, by Arthur J. Todd, is a critical study of the attempts to formulate the conditions of human progress. The book is admirably adapted for supplementary textbook use to the student of sociology. (Macmillan, \$2.25.)

*Principles of American Diplomacy*, by John Bassett Moore, shows what American diplomacy has actually meant—its special significance and the character and extent of its influence. Many references and documents have been added and it contains a full presentation of American foreign policy. A comprehensive exposition in a convenient manual, designed both for the student and general reader. (Harper's, \$2.)

## Fiction in Brief

*THE ROAD THAT LED HOME*, by Will E. Ingersoll. (Harpers, \$1.35). Story of a romantic life in the western wheatland.

*HIS DAUGHTER*, by Gouverneur Morris. (Scribners, \$1.35). Story of an American whose nature is refined in the fire of war.

*GUNNER DEPEW*, by A. N. Depew. (Reilly & Britton, \$1.50). Exciting story of what the author did and saw in two years of fighting.

*GERTIE SWARTZ*, by Helen R. Martin. (Doubleday Page, \$1.40). The struggles of a Pennsylvania Dutch family in the conflict between labor and capital.

*BOY WOODBURN*, by Alfred Ollivant. (Doubleday Page, \$1.40). Story of a girl who lived among rough men as a shining star of character and charm.

*COVERED WITH MUD AND GLORY*, by Georges Lafond. (Small, Maynard, \$1.50). A collection of actual occurrences with a machine gun company in action.

*THE BIOGRAPHY OF A MILLION DOLLARS*, by George Kibbe Turner. (Little Brown, \$1.50). A romance of business that grips the reader to a satisfactory finale.

*AN ORKNEY MAID*, by Amelia E. Barr. (Appleton, \$1.50). Two girls see their lovers go off to war. Contrast in character and reaction makes the theme of the novel.

*SUNSHINE BEGGARS*, by Sidney McCall. (Little Brown, \$1.50). Story of how a poverty stricken family installed a little Italian art into a narrow, conventional American community.

## This name American Bankers Association

This name makes "A.B.A." Cheques recognized the world over as the safest form of travel money.

They are everywhere known to be as good as gold, because they bear the approval of an Association composed of 17,000 of the strongest American banks. Hotels, railroad and steamship companies and the best merchants accept "A.B.A." Cheques readily, and 50,000 banks cash them without exchange.

The only identification needed is the countersignature of the owner *in the presence* of the person accepting an "A.B.A." Cheque.

Get them at your bank. If your own bank is not yet supplied with "A.B.A." Cheques, write Bankers Trust Company, New York, for booklet and information as to where they may be obtained in your vicinity.

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT  
HIGH SCHOOL, NEW YORK CITY

#### I. Patriotism and Loyalty.

1. Write a précis of President Wilson's Message: OUR UTMOST SACRIFICE. How does the spirit of the message differ from the spirit of German statements? Write a paragraph of contrast on the professions of German civilians and the acts of German military forces. Write a paragraph of negative statement on the acts of the German Government. Write an exposition on "An Empire of Force, and an Empire of Gain." What is the effect of the last paragraph? Write a paragraph on "The Character of President Wilson as Seen in His Message." Write a paragraph on "The Greatness of the American People as Seen in the President's Message."

2. Memorize the last paragraph of the President's Message, and recite it with proper emphasis.

3. Give an oral explanation of what is meant by a "new democracy." Write two contrasting paragraphs, one on class struggle, the other on coöperation. Write a paragraph of cause and effect on the theme: "All citizens should contribute something to the welfare of the state." Write a paragraph of specific instance on: Ideal Relations Between the Management of Industry and the Workers.

4. Show how Herman Whitaker employs narration as a means of emphasis in TORPEDOES, MINES AND MEN. Write an argument in favor of an American decoration similar to the Victoria Cross. Point out examples of descriptive narration in TORPEDOES, MINES AND MEN. Write a spirited oration on "The American Sailor of Today." Tell orally any of the incidents narrated by Mr. Whitaker.

5. Write an original story of "a dyspeptic city clerk" who was "remade into a vigorous animal," as suggested in the first sentence of MEN TWICE BORN. Write two companion paragraphs in which you show two ways in which the title, "Men Twice Born," may be interpreted. Write a paragraph of specific instance on the "rebirth" of a wounded man. Give a talk in which you show what characteristics of modern civilization are illustrated by the work of rehabilitation.

6. Select at least ten epigrams from EYES TO THE FRONT! Write a paragraph of cause and effect on the theme: "The Germans are more afraid of American soldiers than of any other soldiers." Sum up the advantages that a soldier has that a civilian does not have. Explain orally how a civilian may obtain the health advantages of a soldier in training. Explain the advantage of working hard "for a huge altruistic purpose." Explain the advantage of "having no time in which to loaf." Give a talk on the advantage of team work; of discipline; of early rising; of plain clothing. Give a talk on "The Necessity of Putting a Big Job First." Write an outline of EYES TO THE FRONT! What principle of arrangement does the author follow?

#### II. The News of the Week.

1. Give a talk in which you explain the purpose and the nature of the Overman bill. Explain in a four minute speech, as if at a meeting of farm owners, what is meant by the Federal Farm Loan System. Write a descriptive narration of the interview between General Smuts and Count Mensdorff. Explain to your classmates what is meant by "The Question of Alsace-Lorraine," mentioned in the AUSTRO-FRENCH PEACE PARLEY. Tell orally what events of importance have recently occurred in the Far East. Give a short but clear explanation of the recent events on the Western Front, using a black-board diagram as an aid.

#### III. Special Articles.

1. Read THE SUBMERGED YEARS. Write a sympathetic composition on the work of a mother. Explain what is meant by "submerged years." Write a composition in which you show how you can repay your mother for "the submerged years." Write a paragraph in which you develop the topic: "God could not be everywhere, so He sent us mothers." What is the purpose of the writer of THE SUBMERGED YEARS?
2. Summarize, from WHY THE FIFTEEN THOUSAND FAIL, the common reasons for failure. Write an editorial article for your school paper explaining why many students fail in school work. Follow the plan of Mr. Keir's article.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE  
NEW YORK CITY

#### I. The President's Message—"Our Utmost Sacrifice."

1. "The nation is awake." What are the evidences of this?
2. "I have sought to learn the objects Germany has in this war from the mouths of her own spokesmen," etc. What has the President found out?
3. "We have ourselves proposed no injustice, no aggression." Make this sentence a topic for the statement of our war aims.
4. "What then are we to do?" Answer the President's question in your own words.

#### II. The Story of the Week.

1. Arrange the news items discussed this week in two groups under the following headings: (a) Domestic News, (b) Foreign News.
2. Rearrange them under the following headings: (a) Congress at Work, (b) Organizing Industry for War, (c) Our Food Problem, (d) Progress of the War, (e) Peace Negotiations.

3. Answer the following questions: (a) What is the most important subject before Congress at present? (b) What is our most important war problem? (c) What will be the probable result of the landing of the Japanese and the English in Siberia? (d) Why have Lloyd George's proposals concerning Ireland raised such a storm of protests?

#### III. The Minor Nationalities—"The Duties of Little Nations."

1. "Agents of Bulgaria, Lithuania, the Ukraine and other long oppressed people have a deplorable habit of taking for granted the right to throw their strength to the highest bidder regardless of the purposes for which that strength may be used." Give several instances in history to substantiate this statement.
2. "No national cause in human history has attracted more widespread sympathy than the Irish, and upon that sympathy has been built a mighty structure of reforms which at last is culminating in the shining promise of Home Rule." Review the important steps in Ireland's struggle toward Home Rule.

#### IV. The Duties of Civilians—"Eyes to the Front!"

1. "We have no civilian army." "We are most handicapped by freedom." These two statements are paradoxes. Explain the significance of each.
2. Pick out one or more similar paradoxes in the article. Why does the author present his opinions in this form?
3. Study three or four of the "fifteen facts." Discuss them from the point of view of your own life.

#### V. A New Industrial Program—"The New Democracy."

1. Show how "differences in birth, in education, and in economic opportunity have interfered with our ideal."
2. "The new democracy will be established through coöperation rather than thru class struggle." What does this mean?
3. Explain the paragraph which begins: "For more than a hundred years we have been busy in this country," etc.
4. How do we know "that in England and in this country we are approaching a period of real industrial democracy"?

#### VI. War Time Finance—"Mobilizing American Money."

1. What relation have the facts in this article to war time taxation and war time government loans?
2. "The workings of the corporation, if successful, should prove a great stabilizer," etc. Show just how this will be true.
3. Show how American private financial history has passed thru three stages during the past five or six years.
4. How does the War Finance Corporation act afford an opening for undue inflation? Why is there no reason to suppose that such inflation will occur?

#### VII. Problems of Business Organization—"Why the Fifteen Thousand Fail."

1. Explain each of the "eight diseases that are fatal to business."
2. Distinguish between "inexperience," "unwise use of capital" and "poor accounting" as causes of failure in business.
3. Look up the word "nepotism" in the Century Dictionary. What is the significance of the word as used in this article?
4. Discuss one or more examples of poor location or of good location which come within your own knowledge.

# How I Improved My Memory In One Evening

## The Amazing Experience of Victor Jones

"Of course I place you! Mr. Addison Sims of Seattle.

"If I remember correctly—and I do remember correctly—Mr. Burroughs, the lumberman, introduced me to you at the luncheon of the Seattle Rotary Club three years ago in May. This is a pleasure indeed! I haven't laid eyes on you since that day. How is the grain business? And how did that amalgamation work out?"

The assurance of this speaker—in the crowded corridor of the Hotel McAlpin—compelled me to turn and look at him, though I must say it is not my usual habit to "listen in" even in a hotel lobby.

"He is David M. Roth, the most famous memory expert in the United States," said my friend Kennedy, answering my question before I could get it out. "He will show you a lot more wonderful things than that, before the evening is over."

And he did.

As we went into the banquet room the toastmaster was introducing a long line of the guests to Mr. Roth. I got in line and when it came my turn, Mr. Roth asked, "What are your initials, Mr. Jones, and your business connection and telephone number?" Why he asked this, I learned later, when he picked out from the crowd the 60 men he had met two hours before and called each by name without a mistake. What is more, he named each man's business and telephone number, for good measure.

I won't tell you all the other amazing things this man did except to tell how he called back, without a minute's hesitation, long lists of numbers, bank clearings, prices, lot numbers, parcel post rates and anything else the guests gave him in rapid order.

\*\*\*\*\*

When I met Mr. Roth again—which you may be sure I did the first chance I got—he rather bowled me over by saying, in his quiet, modest way:

"There is nothing miraculous about my remembering anything I want to remember, whether it be names, faces, figures, facts or something I have read in a magazine.

"You can do this just as easily as I do. Anyone with an average mind can learn quickly to do exactly the same things which seem so miraculous when I do them.

"My own memory," continued Mr. Roth, "was originally very faulty. Yes it was—

a really poor memory. On meeting a man I would lose his name in thirty seconds, while now there are probably 10,000 men and women in the United States, many of whom I have met but once, whose names I can call instantly on meeting them."

"That is all right for you, Mr. Roth," I interrupted, "you have given years to it. But how about me?"

"Mr. Jones," he replied, "I can teach you the secret of a good memory in one evening. This is not a guess, because I have done it with thousands of pupils. In the first of seven simple lessons which I have prepared for home study, I show you the basic principle of my whole system and you will find it—not hard work as you might fear—but just like playing a fascinating game. I will prove it to you."

He didn't have to prove it. His Course did; I got it the very next day from his publishers, the Independent Corporation.

When I tackled the first lesson, I suppose I was the most surprised man in forty-eight states to find that I had learned—in about one hour—how to remember a list of one hundred words so that I could call them off forward and back without a single mistake.

That first lesson stuck. And so did the other six.

Read this letter from C. Louis Allen, who at 32 years is president of a million dollar corporation, the Pyrene Manufacturing Company of New York, makers of the famous fire extinguisher:

"Now that the Roth Memory Course is finished, I want to tell you how much I have enjoyed the study of this most fascinating subject. Usually these courses involve a great deal of drudgery, but this has been nothing but pure pleasure all the way through. I have derived much benefit from taking the course of instructions and feel that I shall continue to strengthen my memory. That is the best part of it. I shall be glad of an opportunity to recommend your work to my friends."

Mr. Allen didn't put it a bit too strong.

The Roth Course is priceless! I can absolutely count on my memory now. I can call the name of most any man I have met before—and I am getting better all the time. I can remember any figures I wish to remember. Telephone numbers come to mind instantly, once I have filed them by Mr. Roth's easy method. Street addresses are just as easy.

The old fear of forgetting (you know what that is) has vanished. I used to be "scared stiff" on my feet because I wasn't sure. I couldn't remember what I wanted to say.

Now I am sure of myself, and confident, and "easy as an old shoe" when I get on my feet at the club, or at a banquet, or in a business meeting, or in any social gathering.

Perhaps the most enjoyable part of it all is that I have become a good conversationalist—and I used to be as silent as a sphinx when I got into a crowd of people who knew things.

Now I can call up like a flash of lightning most any fact I want right at the instant I need it most. I used to think a "hair trigger" memory belonged only to the prodigy and genius. Now I see that every

man of us has that kind of a memory if he only knows how to make it work right.

I tell you it is a wonderful thing, after groping around in the dark for so many years to be able to switch the big searchlight on your mind and see instantly everything you want to remember.

This Roth Course will do wonders in your office.

Since we took it up you never hear anyone in our office say "I guess" or "I think it was about so much" or "I forget that right now" or "I can't remember" or "I must look up his name." Now they are right there with the answer—like a shot.

Have you ever heard of "Multigraph" Smith? Real name H. Q. Smith, Division Manager of the Multigraph Sales Company, Ltd., in Montreal. Here is just a bit from a letter of his that I saw last week:

"Here is the whole thing in a nutshell: Mr. Roth has a most remarkable Memory Course. It is simple, and easy as falling off a log. Yet with one hour a day of practice, anyone—I don't care who he is—can improve his Memory 100% in a week and 1,000% in six months."

My advice to you is don't wait another minute. Send to Independent Corporation for Mr. Roth's amazing course and see what a wonderful memory you have got. Your dividends in increased earning power will be enormous.

VICTOR JONES

### Send No Money

So confident is the Independent Corporation, the publishers of the Roth Memory Course, that once you have an opportunity to see in your own home how easy it is to double, yes, triple your memory power in a few short hours, that they are willing to send the course on free examination.

Don't send any money. Merely mail the coupon or write a letter and the complete course will be sent, all charges prepaid, at once. If you are not entirely satisfied send it back any time within five days after you receive it and you will owe nothing.

On the other hand, if you are as pleased as are the thousands of other men and women who have used the course send only \$5 in full payment. You take no risk and you have everything to gain, so mail the coupon now before this remarkable offer is withdrawn.

## J U S T A W O R D

There are few books that one can read with more pleasure and profit than the dictionary. The old jest that it is very interesting but changes the subject too often for one to keep the run of the story has lost its point for us since most of our reading in the newspapers is quite as disconnected. It is popular now to chop up the news into two or three line sentences and fill whole columns with this literary hash. Even editorials must now be cut down to short paragraphs, scarcely as long as those of the dictionary and not half so interesting. Besides it is not necessary to read the dictionary in alphabetical order. Read it by cross references and you will find it the most connected and logical of books. Start with any word and follow out the definitions of all the words used in defining it.

Whenever one gets the feeling that he knows something about everything that is worth knowing in the world the best thing he can do is to turn to the dictionary. He must be a very well educated man indeed who can read two pages without striking something that he did not know before, or getting new light on a subject which has already interested him. Sometimes in reading the dictionary we chance upon a word which reveals to us a branch of knowledge whose very existence was unknown to us and which we might never have hit upon in the ordinary course of reading. For we read in ruts; following only some few lines as we have started in and then because we read until there is nothing new for us in these few subjects we think we know everything, and that our reading has been extensive, whereas it has only been great. A great reader is not always a well-read man.

Reading the dictionary is also of real value as a corrective of our ideas of words. We do not always understand the words we have heard and used from childhood, and ordinary reading does not necessarily correct our misconceptions. A man may pass thru life without knowing the true meaning of some common word, neither he nor his friends suspecting that he means something entirely different from what they do. We are very apt to see only one side of a word, one phase of its signification. Usually this is because of our ignorance of its derivation and its relations to other words of the same origin. A knowledge of history is not more necessary to a comprehension of politics than a knowledge of the origin and history of words is essential to the art of using them.

Sometimes, however, the dictionary is very sad reading. There so many grand, beautiful and needed words marked with that fatal syllable "obs." We deprive our minds and cripple our spoken thoughts by using only a few hundred hackneyed words when there are thousands of better

words capable of expressing every shade of meaning, every delicate emotion, and of giving to our ideas a beauty of form which would make them as attractive to others as they are to ourselves. The dictionary is full of words that are noble in origin, full of meaning, pleasant in sound, but *dead*. How we long to bring them into the world of the living but we cannot, we are as helpless as they. If we should try

to revive them and introduce them to our circle of readers, they would be sneered at as interlopers and we would be called pedants.

As we read over the long lists of obsolete words in the dictionary we involuntarily think of "Thanatopsis," they that tread the earth are but a handful to the tribes that slumber in its bosom. Here are words of such lordly proportion and such broad signification that, contrasted with the vulgar looks and dwindled form of our ordinary words, we are forced to say with a sigh "there were giants on the earth in those days." We seem to be wandering thru some vast verbal necropolis, and we can easily read the inscriptions on the tombstones. "Died from neglect" seems to be the most common epitaph but "Killed by overwork" is almost as frequent. "Here lies a word the author of whose being, at that time monarch of the literary world, destined him to play an important part in history but he died in infancy, having never left his cradle." Then, again, we find the record of a word whose life was long and useful, one who never abused the position of trust and authority which he occupied, and who was looked upon with respect and veneration by men whose ancestors he had served centuries before, but this inscription marks his resting place, "Murdered by a vulgar demagogue to advance his personal interests."

## REMARKABLE REMARKS

ISRAEL ZANGWILL—We live after Christ but not in the Christian era.

THEODORE P. SHONTS—Far be it from me to oppose Government regulation.

EMPEROR WILLIAM—God by my mouth summons you to carry out His decrees.

GLEN BUCK—Truth snuggles in strange places and often slumbers even in a joke.

WALTER RUNCIMAN—We have been fed on promises and prophecies when we want facts.

DR. DILLON—A complete victory thru military operations is, to say the least, unlikely.

ED. HOWE—It is probable that your friends are as faithful to you as you are to them.

EZRA POUND—How hideous it is to see three generations of one house gathered together.

EX-AMBASSADOR GERARD—The Kaiser puts on his night shirt every afternoon after lunch and sleeps for two hours.

BERTRAND RUSSELL—Mathematics may be defined as the subject in which we never know what we are talking about, nor whether what we are saying is true.

HERBERT KAUFMAN—If you can make a minute yield more than formerly, step right to the head of the line and take your pick of front row seats.

GERALD STANLEY LEE—Germany would have been in possession of Europe at this moment if she had not sneaked across to Paris thru Belgium.

# Right and Wrong Methods in Child Training

**M**ANY loving parents with the best interest of their children at heart are unknowingly committing nothing less than a crime against their little ones because of the methods they use in training them in the way they should go.

Not only do these methods fail in their immediate purpose, but they work an irreparable harm in their effect on the child's future success and happiness.

Abraham Lincoln, perhaps our greatest American, once said: "All that I am and all that I ever hope to be I owe to my mother." Great men before and since Lincoln have in the very same way given the big share of credit to their parents—and how truly they spoke!

The trouble has always been that we have never given any really scientific study to the question of child training—we have not searched for the cause of disobedience, the cause of wilfulness, the cause of untruthfulness, and of other symptoms which, if not treated in the right way, may lead to dire consequences. Instead, we punish the child for exhibiting the bad trait, or else "let it go." As a result, we do the child an actual wrong instead of helping it. What we should do is to attack the trouble at its source.

## Confidence the Basis of Control

The new system of child training is founded upon the principle that confidence is the basis of control.

Scolding and whipping are relics of the Barbarous Ages

Under this new system children who have been well-nigh unmanageable become obedient and willing, and such traits as bashfulness, jealousy, fear, bragging, etc., are overcome. But the system goes deeper than that, for it instills high ideals and builds character, which is of course the goal of all parents' efforts in child training.

Physical punishment, shouted commands, and other barbarous relics of the old system have no place in this modern school. Children are made comrades, not slaves; are helped, not punished. And the results are nothing short of marvelous.

Instead of a hardship, child training becomes a genuine pleasure, as the parent shares every confidence, every joy and every sorrow of the child, and at the same time has its unqualified respect. This is a situation rarely possible under old training methods.

And what a source of pride now as well as in after years! To have children whose every action shows culture and refinement, perfect little gentlemen and gentlewomen, yet full of childish enthusiasm and spontaneity withal!

## Results Without Friction

To put in practice these new ideas in child training, strange as it may seem, takes less time than the old method. It is simply a question of applying principles founded on a scientific study of human nature, going at it in such a way as to get immediate results without friction.

The founder of this new system is Professor Ray C. Beery, A. B., M. A. (Harvard and Columbia), who has written a complete Course in Practical Child Training. This Course is based on Professor Beery's extensive investigations and wide practical experience, and provides a well-worked-out plan which the parent can easily follow. The Parents' Association, a national organization devoted to improving the methods of child training, has adopted the Beery system and is teaching the course to its members by mail.

## Nothing Else Like It

Membership in the Parents' Association entitles you to a complete course of lessons in child training by Professor Beery. These lessons must not be confused with the hundreds of books on child training which leave the reader in the dark because of vagueness and lack of definite and practical application of the principles laid down. It does not deal in glittering generalities. Instead, it shows by concrete illustrations and detailed explanations exactly what to do to meet every emergency and how to accomplish immediate results and make a permanent impression.

No matter whether your child is still in the cradle or is eighteen years old, this course will show how to apply the

The New Method places confidence as the basis of control

right methods at once. You merely take up the particular trait, turn to the proper page, and apply the lessons to the child. You are told exactly what to do. You cannot begin too soon, for the child's behavior in the first few years of life depends on the parent, not on the child.

## This Book Free

"New Methods in Child Training" is the title of a little book which describes the Parents' Association and outlines Professor Beery's course in Practical Child Training. The Association will gladly send a copy free on request.

If you are truly anxious to make the greatest possible success of your children's lives, you owe it to them to at least get this free book which shows how you may become a member of the Parents' Association and secure the fine benefit of this wonderful new way in child training. Merely mail the coupon or a postcard or letter, but do it today, as this offer may never be made here again.

## Do You Know How—

- to instruct children in the delicate matters of sex?
  - to always obtain cheerful obedience?
  - to correct mistakes of early training?
  - to keep child from crying?
  - to develop initiative in child?
  - to teach child instantly to comply with command, "Don't touch"?
  - to suppress temper in children without punishment?
  - to succeed with child of any age without display of authority?
  - to discourage the "Why" habit in regard to commands?
  - to prevent quarreling and fighting?
  - to cure impertinence? Discourtesy? Vulgarity?
  - to remove fear of darkness? Fear of thunder and lightning? Fear of harmless animals?
  - to encourage child to talk?
  - to teach punctuality?
  - Perseverance? Carefulness?
  - to overcome obstinacy?
  - to cultivate mental concentration?
  - to teach honesty and truthfulness?
- There are only a few of the hundreds of questions fully answered and explained, in a way that makes application of the principles involved easy through the course.

# The Scientific Way To Save Teeth

*All Statements Approved by High Dental Authorities*

## End That Film Then Keep It from Accumulating

These are facts which everybody should consider nowadays. Any well-informed dentist will confirm them. And they do away with old teeth-cleaning theories.

The all-important object in tooth brushing is to remove that slimy film. You feel it with your tongue. Any method which fails to do that will fail to save your teeth.

That film is the cause of nearly all tooth troubles. It absorbs stains, and thus the teeth discolor. It hardens into tartar.

It holds food particles which ferment and form acid, the cause of decay. It covers the acid and holds it in contact with the teeth.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. And by entering the system, bacteria and their toxins may cause many serious troubles.

It is that clinging film—not merely food debris—which the tooth brush must combat. And that is where the tooth brush has so largely failed. The film lingers in crevices, hardens and stays. There the ordinary dentifrice little affects it.

That is why brushed teeth so often discolor and decay. That is why tartar forms, why pyorrhea starts. And why a vigorous dental cleaning is so often necessary.

The reason lies in that film. Now we wish to explain—and ask you to prove—how a new way called Pepsodent deals with that film.

## A Week's Test Will Show How to Do It

Analysis shows that the film is albuminous. So Pepsodent is based on pepsin, the digestant of albumin. The object is to dissolve the film, then keep it from accumulating.

Pepsin long seemed impossible. It must be activated, and the usual agent is an acid harmful to the teeth.

But science has in late years found a harmless activating method. Five governments have already granted patents. This method—used in Pepsodent—makes it possible to daily apply pepsin to the film.

For over three years, its effects have been under clinical observation. Able authorities have watched its effects in the dental chair and in the home. Now they agree that Pepsodent seems to solve this film problem. Today a very large number of dentists are urging its daily use.

We ask you to prove the results for yourself by accepting a One-Week tube. Use it like any dainty tooth paste, then watch its effects. Note how clean your teeth feel after using. Note the absence of slimy film. Note how the teeth whiten as the film disappears. That will show that Pepsodent is doing what has not before been done.

Make this test at once. You have found old methods ineffective. Learn what this one does. It will be a revelation.

Please cut out the coupon now.

## MORE MEN NOW!

**T**HE grim situation on the western front demands men. The onswEEPing hordes of the enemy can be stopped only by the bodies of men, the will power of men, the exalted spirit of men. The battle may be lost for lack of other things. It cannot be won without men. When the enemy is stopped, as he must and will be stopped, he must be driven back whence he came, overwhelmed, and crushed. That will require more men—men by companies, by battalions, by regiments, by divisions, by armies. The victory for humanity and righteousness will be won by man power, or it will not—— But the converse is unthinkable.

England and France are spending their man power with ungrudging hands. They are keeping nothing back. They call to us to come quickly, to come generously, to come in overwhelming force. We must answer the call without a hint of hesitation or a shadow of delay. They are fighting our fight, as they have fought it for three years and a half, with courage and unimpeachable devotion. We cannot fail them.

It is a matter for gratification that already America's manhood is standing shoulder to shoulder with the men of Britain and of France in this most terrible of all the battles of all time. We can rejoice with the "stern joy that warriors feel" that we are pouring the man power of America across the seas to buttress those grimly holding lines. We have done better than we had planned. We have put trained men into the battle line and behind it more rapidly than any one had dared to hope. We have been better than our word. But we have not done enough.

Until we have done *all* that we can, or all that the task before us requires, we shall never have done enough.

In the lurid light from the rocking battle line in France

and Flanders a new vision of what we have to do should confront our vision. In that illumination we should see that our plans, no matter how well we have carried them thru, are not great enough. The task is mightier than it seemed. The call to the man power of America is a more imperious call than we had realized. We must send more men, and more men, and still more men.

Our plans must be revised, augmented, redrawn to a more gigantic scale. We have a million and a half men in service and in training. We are calling out eight hundred thousand more in the second draft. But even that will be not enough. We can do better. We can give more.

Let us have more men. Let us have more camps and cantonments. Let us begin to build them now and speed them to completion with all the boasted American energy and drive. It takes three months to build a cantonment. It takes from six to eight months to make men into soldiers ready to go overseas. We must make our plans *now* for next year.

On our present schedule we shall have something like two and a half million men in service and in training when the present year of the world's travail ends. We ought to have twice as many. The more men we give the quicker the task will be done. The more men we send, the more will come back safe and sound. The way to save American lives is to offer American lives with prodigal hands.

We should reconsider our plans *now*. We should double them *now*. We should begin to make ready as many more cantonments, as many more camps, as much more equipment and clothing and supplies as we now have—and we should do it *now*.

The enemy is *now* making his supreme assault upon all that we believe and hold dear. The answer of America should be—*More men now*.

## HOME RULE FOR ENGLAND

**T**HE measure establishing a separate government for Ireland which is about to be introduced into the British Parliament might well be entitled "A Bill for the Relief of the United Kingdom," for the Irish question has been the dominant factor in British politics for the last thirty years. A question is never settled right unless it is settled at the right time. If the Home Rule bill that Gladstone introduced in 1886 had passed—and a switch of fifteen votes would have passed it—Ireland would have been contented with an autonomy no greater than that of an American state. Now we are told by the minority report of the Dublin convention there is a "strong probability that the controlling force of such self-government would today be the republican or Sinn Fein party, which is openly and aggressively hostile to Great Britain and the empire." The little group of wilful men who blocked the Home Rule bill in 1886 seceded from the Liberal party and formed the Unionist party, which virtually swallowed up the Conservative. Since then the United Kingdom has been divided into two parties, a Home Rule and an Anti-Home Rule party, and every question before Parliament from the abolition of the town pump at Land's End to the partition of Bengal has been decided with reference to the Irish issue, just as in our own country before the Civil War every question hinged on Pro and Anti Slavery. If Home Rule should actually go into effect, the Unionist party would cease to have any reason for existence. On the other hand the reduction of the Irish representation at Westminster from 103 to 42 as now proposed would deprive the Liberal party of a substantial part of its support.

The Irish delegation in the House of Commons is nearly twice as large as it should be in proportion to the population of the island, and thru its determination and vocifer-

ousness it has exercised a power out of proportion to its numbers. This irreconcilable nationalistic minority has paralyzed politics in the United Kingdom just as the irreconcilable nationalistic minorities have paralyzed politics in the Austro-Hungarian monarchy. The attempt of the Liberals to start land reform, the attempt of the Unionists to start tariff reform were thwarted by the interminable Irish problem. And now when England is fighting for very life and needs every man she can get, the Irish problem ties her hands. Having failed to settle it in the hundred years of peace, England is now compelled to settle it in the midst of war. As Sir Horace Plunkett, chairman of the Irish Convention, says: "We had to find a way out of the most complex, anomalous political situation to be found in history—I might almost say in fiction."

"The difficulties of the Irish Convention," says its chairman, "may be summed up in two words: 'Ulster' and 'Customs.'" He might have said one word, for deadlock between Ulster and the south was more over "customs" than anything else. This new issue has overshadowed all the old points of contention. During the nine months while the Irish Convention has been in secret session we might have presumed it in hot debate over questions of race, language, land and religion. We may have imagined the scene as a kaleidoscope mix-up of Orange and Green; one side swearing at the Pope and the other anathematizing the Masons; some talking English and some Irish; landlords, tenants and proletarians arguing over Ricardo and Henry George; ethnologists discussing the comparative merits of brachycephalic and dolichocephalic heads; historians debating over Cromwell and Parnell; some reading the plays of Yeats and others reading British Bluebooks. But now the doors are opened and we see that they have spent most of their time

talking about the tariff just like Americans! The Nationalists have come to realize what the war has taught the rest of the world, that there can be no genuine independence without economic independence, and that there can be no economic independence without the right to develop home industries by tariff measures. Even during the potato blight years, when a million men, women and children were starving to death, enough grain was shipped out of Ireland for England to have kept the Irish alive. The Nationalists insisted that Ireland must have the same right as Canada, Australia, New Zealand, and South Africa to protect its own interests by a tariff even against the mother country. But the Unionists declared that this meant secession, and they cited the example of the United States, which "established at the cost of much blood and treasure national unity, when the Confederacy claimed, like the Irish Nationalists, the right to set up an independent government." The issue is therefore clearly drawn whether Ireland shall have home rule in the sense of a British dominion or of an American state. It is the same difference as fundamentally distinguishes the Democratic from the Republican parties in the United States. It is the eternal antithesis of analysis and synthesis. It is the perpetual opposition of centrifugal and centripetal forces whose balance keeps stellar and political systems in equilibrium. Empires like individuals pass thru alternate periods of integration and disintegration. The nineteenth century was on the whole a period of integration. The twentieth finds the pendulum swinging swiftly the other way.

Deeply as is America concerned in the settlement of the Irish question, probably the less we interfere just now the better. The average American feels that the Irish should have home rule and that the Irish should be drafted. But which should come first and how far either should go, he should leave to those most closely involved to settle—if they can.

## WAR PRODUCTION AND INDUSTRIAL PEACE

**W**AR is fought with men and with materials. Without either the other is useless. Materials depend upon production. Anything that lessens or retards production militates against success in the war.

For this reason war time is no time for conflicts between capital and labor. When employer and worker fall out, production languishes.

It is of vital importance therefore that the plan which has been worked out by the War Labor Conference Board should be made effective as speedily as possible. As was pointed out in "The Story of the Week" two weeks ago it is the product of a rather unusual agreement between representatives of capital and representatives of labor. It is remarkable because the five employers on the board were rather conservative than otherwise, while the labor leaders were more radical than many of their class. That they were able to find middle ground on which they could agree to stand amicably together is gratifying and full of promise.

The plan of the Conference Board involves concessions by both sides. Its main feature is compulsory mediation and conciliation, in any labor controversy touching war production, by a body composed of representatives of labor, of capital, and of the general public. The acceptance of this method of settling industrial disputes implies a concession on the part of labor. For labor has been reluctant to consent to the principle of compulsory arbitration. It implies a concession on the part of the employers in their acceptance of the principle of collective bargaining, of the right of the workers to organize, and of the recognition of the union. Both sides have also yielded something, by which they have always laid great store, in agreeing that there shall be no strikes or lockouts during the war.

But perhaps the most important thing that has come out of the deliberations of the Conference Board is the recognition of the fact that in industry there are three parties in interest and not two. Industry is not a battle, in which two sides are struggling for the lion's share; it is rather a triangular partnership, in which the interest of one is the interest of all, and the welfare of all the responsibility of each. Capital and labor stand at two points of the triangle, and the public at the third. The public interest in matters of industrial relations is as vital as that of either of the others.

## SHALL WE DO LESS THAN THEY?

**T**HE wealth of the United States is greater than the combined wealth of Great Britain, France and Germany. The national debt of Great Britain is 192 per cent of the estimated yearly income of the British people; the debt of Germany is 236 per cent of the German people's income; the debt of France is 333 per cent of the yearly income of the people of France. Our debt is 17½ per cent of our national income. In other words, if France should devote the entire yearly income of its people to paying off its national debt, it would take more than three years to do it. If we should do the same, we could pay our national debt off in a little more than two months.

Stupendous as the figures of our war-tax bills, our Liberty loans, our war appropriation bills seem to our unaccustomed minds, we have not yet begun to spend in comparison with what our allies and the enemy have already spent in the years while we were not spending but getting.

Shall we hesitate over a mere three billion dollar loan, one-thirteenth of our annual income?

The Third Liberty Loan is lagging. Faced with these figures, how can we let it lag?

With the sound of the enemy's murderous guns almost reverberating across the water, how can we let it lag?

With a realization of all that is at stake for us, for humanity, for the world, how can we let it lag?

Shall we fall short of the standard our allies have set? Shall we do less than they?

## HINTS FOR THE AMATEUR STRATEGIST

**T**HOSE of us who follow the battle from afar soon find that we can get no hang of the thing from merely reading the daily *communiqués* and that obtaining our opinions of its progress and prospects second-hand is likewise unsatisfactory. So "every man his own strategist" has become a general rule and is more commendable than "every man his own doctor" or lawyer, since nothing is risked but one's opinion. The only way to understand the situation as it unfolds from day to day is to work it out as a problem in chess or rather in that made-in-Germany game of war, which even in Entente countries bears the name of *Kriegspiel*.

The first essential is a map of the *terrain* as detailed as you can get, preferably a military map with the contour lines on it. If you are lucky enough to possess a set of Baedekers, now impossible to buy, you will find its plans of city environs and mountain walks invaluable. The fact that Germany had pretty nearly a monopoly of the map and picture postal business of the world gave her a military advantage, for by drawing on her Leipzig stock of lithographs and photographs she was ready to go campaigning anywhere. On a good topographical map the elevations are marked with the number of meters above the sea and this is not only useful in showing the dominating positions but often gives one the location of contested points, for the hills are often referred to by these numbers, as "Hill 103." It is only on a contoured or hachured map that one can understand why the Germans have been able to maintain for the

last three years that narrow salient across the Meuse at St. Mihiel which on a flat map seems quite untenable, or why Messines is more important than Armentières. History is animated geography. The map is the foundation of your knowledge. If you do not want to mark up your map, mount it on a soft board and use colored headed pins.

Next you will need a pair of compasses or dividers to measure distances, tho you can get along with the scale of miles drawn off on a strip of paper or card. When you read that the Germans have shortened or lengthened their line by half, just stride your compasses along its meanderings and see if it is so. It is more fun to find out about a thing than it is to talk nonsense about it. How many pages of nonsense have been written about how the enemy was dangerously lengthening his front by his advances in Russia, the Balkans and Italy when the simple application of a compass or a string would show that the front was shortened by each of these campaigns.

When you read that the latest drive has netted the Germans a hundred or thousand square miles measure it for yourself. Place a thin, translucent sheet of paper over the map and outline the area to be measured. Then lay it off like a checkerboard with one mile or twenty-five mile squares and simply count them, allowing roughly for the fractional squares cut in two by the boundary line. Any territory however irregular can be measured in a few minutes with quite sufficient accuracy and it saves lots of guessing and gassing.

Get your information straight from headquarters as much as you can. Pay no attention to the headlines except as a guide to the right column. Go right to the *communiqués* of the belligerent war offices and if your daily paper does not publish them all buy one that does. These official announcements are often designed to be misleading but rarely condescend to misstating. By comparing them with one another and with the events as they later transpire you will soon find out for yourself which capital is disposed to send out the most reliable despatches and which is most given to prevarication. You will also learn to allow for the personal equation of the different correspondents. A most instructive exercise is to read over one of the campaigns of the earlier years of the war as now published in various volumes with the files of a daily paper of the same period and see in how far the contemporary news and prognostications have been verified. Remember that the concealment of intelligence and even the circulation of false rumors are common and legitimate ruses of war. You may be tolerably sure after a day or two as to what towns have been taken or lost, but be cautious about accepting figures of enemy casualties, or troops engaged. All of the able-bodied men in the belligerent countries have been killed off more than once in the estimates of their opponents, but still somehow the fighting goes on. The tender hearts of the Germans have repeatedly been anguished at the reckless way the British have wasted men by bringing them forward to certain death by German guns. The British have been equally horrified at German brutality in sacrificing their men uselessly against the invulnerable British lines. But when it comes to counting the casualties that is not so easy except to the party gaining the field. For instance, we hear that the Germans lost between 300,000 and 600,000 men in the recent drive toward Amiens. But this information comes chiefly from the British side, and how could troops who were driven back thirty-five miles in a week tell how many of the pursuing enemy they had killed? All they can know is that the Germans "came on in waves" and were "mown down in windrows" by the British machine guns. The estimates of Entente experts as to the number of troops that the Germans have on the western front differ by a full million. Don't be hasty in drawing deductions about the morale of the enemy from the reports that captured prisoners look discouraged and dilapidated. Imagine how optimistic you would feel after being shelled,

gassed and left without reinforcements and food for several days. Remember also that prisoners put thru the "third degree" are not always truthful and that the orders found on them cannot be relied upon to reveal the real plans of their commanders.

It is necessary to change sides occasionally as in chess. However patriotic and tender-hearted you may be you must study the situation also from the enemy's standpoint. You cannot play *Kriegspiel* blindfolded by partizanship. A wise commander views the field objectively and impersonally, but he is not therefore to be counted cold-hearted or—what is worse—cruel.

To get some knowledge of the rules of the game read any book on strategy accessible, such as Clausewitz's "On War" for the German view and Foch's "The Principles of War" and "The Conduct of War" for the French, and Colonel Maude's article on "Strategy" in the *Encyclopedia Britannica* for the British. To understand the newer developments study the battle plans explained in some of the continued histories of the present war, such as the *London Times'* or Nelson's and such volumes as Conan Doyle's "The British Campaign in France and Flanders, 1914 and 1915"; Whittton's "The Marne Campaign"; Souza's "Germany in Defeat"; Hilaire Belloc's "Elements of the Great War," and Symonds' "History of the World War."

Altho the art of war has been defined as "the greatest amount of common sense used in the shortest possible time," the ability to use "common sense" under such circumstances has in all ages been recognized as an evidence of a high type of genius and it is not altogether from admiration of brute force that more monuments have been raised to great generals than to any other class of men. But the amateur who altogether lacks training and presumably native genius has the advantage of not being burdened by responsibility or limited by time and he will find the solution of the strategical problems presented by the current news often easy and always fascinating. The main principles of geometrical strategy are simple and unchangeable. The chief effect of the introduction of modern inventions, such as tanks, railroads, telephones, airplanes, photography, long range guns and unlimited ammunition, is to magnify operations and modify tactics. Just because this war is bigger, better organized and slower it is easier to follow and even to anticipate than the lesser wars of old. The fighting in France has been more like the siege of Sevastopol than like one of Napoleon's campaigns. There is less of the incalculable and adventitious than there used to be when the temporary tipsiness or indigestion of a general, the broken leg of a courier's horse or the unsuspected existence of a sunken road could turn the tide of battle. Accidents do happen in the best regulated campaigns, but they are not so apt to be fatal as formerly. The incalculable element is for the most part merely the unknown. If the British had known that the Turkish forts at Gallipoli had run out of ammunition in the first days of fighting, they would not have withdrawn their fleet as they did but boldly entered the Dardanelles and captured Constantinople. What baffles the amateur strategist is probably the very thing that is puzzling the professional, namely, the strength and disposition of the enemy.

For instance, when you have plotted upon your map the present positions of the armies in France you will see that Hindenburg's move is to drive his salient forward to Amiens. You will see that Foch's move is to smash in the sides of the salient. One side has a chance for a "wedge" movement, the other has a "pincer" movement. Now it is safe to assume that opportunities so obvious to us are not overlooked by these distinguished generals, but what is the obstacle to these operations we can only speculate. It is permissible—and enjoyable—to speculate, but the amateur should be chary of indulging his "liberty of prophecy" lest he join the experts whose monumental errors are unpleasantly conspicuous in the literature of the last three years.

# THE STORY OF THE WEEK

Press Illustrating

## THE COMMANDER AT YPRES

General Plumer is in command of the Second Army of British troops which bore the brunt of the Great Battle at the northern end of the line. They fell back from Messines Ridge and made a stand at Ypres

Where is General Maurice, the British military critic, spoke Blücher? for most observers when, after a visit of four days at the front, he said: "Our feelings now are probably very much like those in London during Waterloo, but, provided we are standing firm and taking the hammering, and provided Blücher is marching to battle, there is no reason to despair. The great question is, 'What has become of Blücher?'" The maneuver army, which in anticipation of the present offensive was authorized by the Supreme War Council of Versailles last January and has now been placed under the command of General Foch, has not yet made its appearance on the scene, and until it does the battle must be accounted indecisive, regardless of German gains. Even if the Germans should ultimately reach the Channel coast at Dunkirk, twenty-five miles ahead of their latest advance, it would not necessarily be fatal, for the Germans, exhausted by their losses and extended over new and unfortified territory, would then be subject to attack from the south by whatever reserves General Foch may have ready at his disposal.

These reserves consist in large part of French troops, for the bulk of these have not yet been engaged in the

spring campaign, together with the American contingent and such British forces as have been separated from Haig's command for this purpose. The strength of the combined forces is a matter of pure speculation and estimates vary widely. The French High Commissioner to the United States, André Tardieu, stated in January that the French had 3,000,000 men in the battle zone. According to the latest official statements of the British Government, about 6,000,000 men have recruited for the British army and navy since the war began, and about 4,000,000 are now on the payroll.

According to the German estimate—which, of course, is the only official statement made public—there are now 210,000 Americans on the firing line. But it is well known that much larger numbers are receiving intensive training somewhere in France or are on their way to Europe.

According to British estimates, the Germans have 200 divisions on the Franco-Belgian front, and of these 126 divisions were employed during the

first month of the new offensive. A German division is now counted as 12,000 to 14,000 men.

From these official figures it would seem that the Allies should have somewhere in reserve two or three times as many men as the Germans have so far employed, and that either the French or British forces alone must outnumber the German. Yet Premier Lloyd George, in introducing the man-power bill into Parliament, said that the combined Allied forces before the present offensive were only slightly greater than the German. Chancellor of the Exchequer Bonar Law told Parliament on March 8: "I am justified in saying with certainty that both as regards men and guns we have, if anything, a slight superiority." Since then the Germans have lost heavily, presumably much more than the British, since they have been charging strong positions in mass.

A large number of British guns have been taken, but in spite of this the Allies must still be superior in artillery as well as aircraft.

## CLOSING IN ON YPRES

The new German drive which began at Armentières on April 9 had at the end of a week gone beyond Merville and Bailleul. A further advance in this direction would bring them to Hazebrouck, the junction for the railroads feeding the armies in Belgium. The Germans have also taken Passchendaele Ridge north of Ypres and Messines Ridge to the south, which throws Ypres in a dangerous pocket.

## THE GREAT WAR

*April 12*—Raids on American lines at Toul repulsed. American naval collier "Cyclops," on Caribbean voyage, reported missing since March 4.

*April 13*—Germans take Helsingfors, Finland. Germans take Neuve Eglise, southwest of Ypres.

*April 14*—Germans take Bailleul. Turks occupy Batum in Russian Caucasus.

*April 15*—Germans take southern end of Messines Ridge, south of Ypres. Charles M. Schwab made director of Fleet Corporation.

*April 16*—Secretary Baker returns. Bolo Pasha executed.

*April 17*—Baron von Burian succeeds Czernin as Austro-Hungarian Foreign Minister. French troops appear on Flanders front.

*April 18*—British ship losses for week, eleven over 1600 tons and five smaller. Germans attack at Givenchy. British man-power bill signed by King.

### The New German Tactics

For more than three years all efforts of either side to break the lines on the western front had proved fruitless and it came to be regarded as settled that modern military science had made the defensive too strong to be overcome so long as men, munitions and courage held out. Even the unexpected introduction of new and powerful weapons, such as poison gas by the Germans and tanks by the British, did not restore the advantage to the offensive. So it is somewhat difficult to account for the success of the Germans in driving deep salients at two separate points into a line which had been long prepared for such an attack. So far as known the Germans have hit upon no new invention except the supergun that is bombarding Paris, but this, altho a complete surprize, has so far added nothing to the strength of the enemy. We cannot explain the German advance by the mass attacks, for they showed the same disregard for human life at Verdun and Ypres.

It seems then that Hindenburg, or more likely Ludendorff, who is considered to be the master strategist, has worked out a new system capable of overcoming the deadlock of trench warfare. Just what there is novel about it does not yet appear, but the effect is to secure an unprecedented mobility after the attack has opened. The British at Messines and Cambrai, the French in Champagne, the Germans at Verdun smashed in the front lines with equal facility, but they were never able to follow thru the stroke as the Germans have now. Hitherto when a body of troops had gained possession of the enemy's trenches there was nothing they could do except to sit tight and wait until their own artillery was brought up or the enemy's counter attack ousted them. But in the present operations there have so far been no counter attacks in force and the German artillery has been somehow kept close to the front. Tanks are used as tractors for the heavy guns and abundant material is provided for the bridging of shell holes and trenches. The Germans claim that they are using four

times the artillery of the British. Each division of the German army used in this offensive is supplied with sixty-eight batteries instead of twelve as formerly, besides several hundred trench mortars and great numbers of machine guns. Only two of the four regiments of a division are sent to the front and these are relieved every two days or so by fresh troops slipt thru their ranks.

In the new German tactics the preliminary bombardment is briefer than formerly but extends to a wider range so as to break up communications and reserve depots. Poison gas is used more extensively than ever; not as formerly discharged from cylinders producing a cloud that swept toward the front trenches opposite—and swept back if the wind changed—but now mostly in gas bombs which can be fired into a town or camp miles in the rear. Then mass charges are made even across the open against the fiercest fire, one wave following another, regardless of losses. By constantly throwing fresh troops against the exhausted enemy the offensive may be kept up with almost its original *élan*. In the Somme battle the British and French have had to fight forty-seven divisions twice and two three times. If the advance meets with a decided check at any point the effort in this direction is abandoned and a swift and secret shift is made to some other parts of the line.

### The Third Battle of Ypres

The plan of the Germans as appears from papers found on prisoners was to attack the British lines south of Arras and then in case this offensive was unsuccessful or was checked, to launch another north of Arras. The first offensive was started on March 21 and was carried about thirty-five miles before it was halted in front of Amiens. The second blow was delivered at Armentières and was carried beyond Merville and Meteren or about fifteen miles. This brings the Germans to within three miles of Hazebrouck, which has been all thru the war the supply center and distributing point for the British in Flanders. The country before Hazebrouck is a maze of tracks, depots and dumps looking like some vast switchyard.

The advance of the Germans from Armentières to Bailleul brought them a dozen miles to the rear of Ypres tho separated from it by the range of hills that encircles Ypres on the south and east. These are the only hights hereabouts, for beyond the country runs flat to the sea at Dunkirk and is broken only by the Yser River and various canals. That is why the environs of Ypres have been the scene of some of the fiercest fighting of the war. The Germans made the most energetic efforts to take this strategic point in October, 1914, and again in April, 1915. Now they are trying it a third time with better prospects of success, for they have already possession of the Wytschaete and Messines Ridge that protects the city on the south and of Passchendaele Ridge.

The British are holding on to their

positions with a bulldog grip, for they are ground bought with the best blood of the empire. Neuve Eglise, on the southern slope of the ridge, was taken and lost five times in three days, during which time the fighting went on continuously in daylight and darkness among the ruins.

### Raids on the American Lines

Besides assisting the British in holding the line in Picardy the Americans have had to stand repeated attacks upon their own sector on the bank of the Meuse northwest of Toul and in the Apremont Forest. Some eight hundred troops recently transferred from Russia were picked, drilled and rehearsed for the purpose of entering the third line of the American front. Between April 10 and 16 four raids were made, preceded by an all-night bombardment with high explosives and gas shells. But the enemy was in every case repulsed with heavy losses. At the end of the week the Americans were not only in possession of their own trenches but had regained control of No Man's Land as well. More than a hundred of the Germans were killed and two or three hundred wounded in these engagements. Of the thirty-six prisoners taken on Friday twelve subsequently died of their wounds. On Sunday eleven more Germans were captured. Some of the prisoners are under twenty years of age; others belong to the Landwehr (Reserves) of older men. The German official version of the battle is: "North of St. Mihiel we carried out a successful thrust against American troops. We inflicted heavy losses on them and brought back prisoners." The total of the American casualty lists up to April 17 is 3754, of whom 268 were killed in action.

### HAIG'S ORDER

On April 12 Field Marshal Sir Douglas Haig issued the following special order to "all ranks of the British army in France and Flanders":

Three weeks ago today the enemy began his terrific attacks against us on a fifty mile front. His objects are to separate us from the French, to take the Channel ports and to destroy the British army.

In spite of throwing already one hundred and six divisions into the battle and enduring the most reckless sacrifice of human life he has yet made little progress toward his goals.

We owe this to the determined fighting and self-sacrifice of our troops. Words fail me to express the admiration which I feel for the splendid resistance offered by all ranks of our army under the most trying circumstances.

Many among us now are tired. To those I would say that victory will belong to the side which holds out the longest. The French army is moving rapidly and in great force to our support. There is no other course open to us but to fight it out.

Every position must be held to the last man. There must be no retirement. With our backs to the wall and believing in the justice of our cause each one of us must fight to the end. The safety of our homes and the freedom of mankind depend alike upon the conduct of each one of us at this critical moment.

**The Conquest of Finland** It will be remembered that when Finland declared her independence of Russia she appealed to other nations for arms, food and recognition. The Scandinavian and Central Powers and France acknowledged the independence of the Finnish republic, but England and America were rather reluctant to take any positive action lest it should offend the Russian Government, which was supporting the Red Guards or Bolsheviki of Finland. Germany, however, was hindered by no such scruples, and not only supplied the Finnish Government with arms, but sent back the Finns who had volunteered to fight Russia in the German ranks. Besides this, a German force was landed at Eckero on the Aland Islands, altho these had been occupied by Sweden. From here they were marched across the ice of the Gulf of Bothnia to Abo on the Finland main. Joining there the Finnish White Guard under General Mannerheim, with the German troops under General von der Goltz, the combined forces moved eastward toward the capital. As their line of march was not far from the sea the German navy, skirting the coast as close as the ice permitted, could give them aid, and more troops were landed from German transports at Hango, half way to Helsingfors. Other German forces were landed at Loviza, east of Helsingfors, so the capital was attacked on all sides. The Red Guard, assisted by many women, put up a vigorous resistance, but were no match for German generalship. Several thousand prisoners and a large amount of booty were taken with the city. The White Guard is reported to have shot all the Russians captured, as well as the leaders of the Finnish Reds. In the fight for Cammerfors 2000 of the Red Guard are said to have been killed and 8000 made prisoners.

The German army is still advancing eastward along the railroad leading to Petrograd. Another expedition has been sent northward, with a view, it seems, of seizing the new Russian harbor of Pola on the Arctic Ocean. The railroad leading to this port is being defended by British and American engineers and marines in coöperation with the Red Guard or Bolsheviki.

**Austrian Peace Overtures** The revelation of the fact that representatives of Austria and of France and England had met to discuss peace terms was followed this week by a still more astonishing disclosure, the publication of a letter written March 31, 1917, and signed by the Emperor of Austria in which he concedes many of the points for which the Allies are contending. The publication of this document has already led to the resignation of the Austro-Hungarian Foreign Minister, Count Czernin, and even caused talk of the abdication of the Emperor. The letter, which we publish below, is address to Prince Sixtus of Bourbon, elder brother of Empress Zita of Austria. He and his brother Prince Fran-

A VILLAGE OF FRANCE IN 1915

© Kadel & Herbert

IN 1918—THE SAME SPOT

These photographs, taken from an aeroplane, bring out graphically the devastation that is being wrought in France today. Artillery fire has swept this village into a shell-churned mass of debris thru which the line of what was formerly a highroad is barely discernible. There is no trace left of the big chateau, prominent in the center of the photograph above, nor of the farmhouses and cottages around it.

cis Xavier, offered their services to France at the outbreak of the war, but were debarred by the law of the French Republic prohibiting members of the former royal families of France from entering the French army. But the two princes entered the Belgian service and so distinguished themselves by their bravery in the defense of Ypres that they were admitted to the French service and are now in Morocco.

The Emperor's letter is said to have been conveyed thru the Duchess of Parma, mother of Empress Zita of Austria and of Prince Sixtus. It was promptly referred by the latter to President Poincaré and is now given to the press by Premier Clemenceau in support of his assertion to Count Czernin that "a personage of much higher rank" than Count Revertata had initiated negotiations.

The Austrian and German press give various explanations and denials. They call the letter forged, falsified, garbled, mistranslated and the like. The Emperor of Austria in a telegram to the German Emperor says of it:

The French Premier, driven into a corner, is endeavoring to escape from the net in which he has entangled himself by piling up more and more untruth, and he does not hesitate to make the completely false statement that I recognized that France had a just claim to the reacquisition to Alsace-Lorraine. I disavow this assertion with indignation.

At the moment when Austro-Hungarian cannon are thundering jointly with German cannon on the western front it hardly needs proof that I am fighting for these provinces, and I am ready to continue fighting exactly as if it were a question of defending my own land.

It will be noted that Emperor Charles does not repudiate the alleged letter altogether, but confines his denial to the interpretation of a single clause.

## FANCY MEETING YOU!

to protect Siberia from "Burglar Bill"

Even as we have it in the English translation we can see that the words might be interpreted to mean: "I will support France's claims regarding Alsace-Lorraine if these are just," or "in so far as these are just," in reference to the fact that France has a better ethnological, linguistic and historic claim to certain parts of the disputed territory on the left of the Rhine than to others. It will be also noted by the reader that the Emperor does not now deny that he favored making some concessions in this direction, but he merely refers to the obvious fact that his cannon are now employed in the defense of these provinces against the French.

It is now said that it was at the instigation of Emperor Charles that the Pope made his peace proposals and that the Clericals of the German Reichstag joined with the Socialists in the peace resolution of July 19 which President Wilson recently commended. Count Czernin, who evidently sympathized with his sovereign in his desire for peace, has been markedly courteous in his references to the President and has professed acceptance to his conditions of a permanent peace. The removal of Count Czernin probably means that Austria, like Germany, has now passed under the dominance of the militarist party.

Emperor Charles's  
Peace Letter

The disclosure of the active personal participation of the Emperor of Austria in the peace negotiations which were going on last year is an event in the diplomatic field as important as the Hindenburg drive in the military field. It justifies the policy of President Wilson, which was at the time harshly criticized by his political opponents, in making a distinction between Austria and Germany and in adopting a conciliatory attitude toward the former and postponing a declaration of war against Austria as long as possible.

The letter of the Emperor Charles is of such significance that we print it entire as it was given out by the French Government:

MY DEAR SIXTUS—The end of the third year of this war, which has brought so much mourning and grief into the world,

approaches. All the peoples of my empire are more closely united than ever in the common determination to safeguard the integrity of the monarchy at the cost even of the heaviest sacrifices.

Thanks to their union, with the generous coöperation of all nationalities, my empire and monarchy have succeeded in resisting the gravest assaults for nearly three years. Nobody can question the military advantages secured by my troops, particularly in the Balkans.

France, on her side, has shown force, resistance, and dashing courage which are magnificent. We all unreservedly admire the admirable bravery, which is traditional to her army, and the spirit of sacrifice of the entire French people.

Therefore it is a special pleasure to me to note that, altho for the moment adversaries, no real divergence of views or aspirations separates many of my empire from France, and that I am justified in hoping that my keen sympathy for France, joined to that which prevails in the whole monarchy, will forever avoid a return of the state of war, for which no responsibility can fall on me.

With this in mind, and to show in a definite manner the reality of these feelings, I beg you to convey privately and unofficially to President Poincaré that I will support by every means, and by exerting all my personal influence with my allies, France's just claims regarding Alsace-Lorraine.

Belgium should be entirely reestablished in her sovereignty, retaining entirely her African possessions without prejudice to the compensations she should receive for the losses she has undergone.

Serbia should be reestablished in her sovereignty and, as a pledge of our good-will, we are ready to assure her equitable natural access to the Adriatic, and also wide economic concessions in Austria-Hungary. On her side, we will demand, as primordial and essential conditions, that Serbia cease in the future all relation with, and suppress every association or group whose political object aims at the disintegration of the monarchy, particularly the Serbian political society, Narodni Ochrana; that Serbia loyally and by every means in her power prevent any kind of political agitation, either in Serbia or beyond her frontiers, in the foregoing direction, and give assurances thereof under the guarantee of the Entente Powers.

The events in Russia compel me to reserve my ideas with regard to that country until a legal definite Government is established there.

Having thus laid my ideas clearly before you, I would ask you in turn, after consulting with these two powers, to lay before me the opinion first of France and England, with a view thus to preparing the ground for an understanding on the basis of which official preliminary negotiations could be taken up and reach a result satisfactory to all.

Hoping that thus we will soon be able together to put a limit to the sufferings of

so many millions of men and families now plunged in sadness and anxiety. I beg to assure you of my warmest and most brotherly affection.

CHARLES.

**Report of the Irish Convention** The convention of Irishmen of all parties except the Sinn Fein, which met at Dublin on July 25 to devise a form of self-government for Ireland, has come to the conclusion of its labors, but is unable to report an agreement. There is not even a majority recommendation of a plan to present, but merely a narrative of proceedings and the votes which the several proposals received. Even this formal report, without any recommendations, was carried only by a vote of 44 to 29, and appended to it are two minority reports of protest, one from the Ulster and one from the Nationalist side. Still, the chairman, Sir Horace Plunkett, is able to say that "Notwithstanding the difficulties wherewith we were surrounded, a larger measure of agreement has been reached upon the principle and details of Irish self-government than has ever yet been attained."

It seems that the Nationalists were earnestly desirous of reaching an agreement and made concession after concession to their opponents. In many of their compromise proposals they received the support of the Southern Unionists and the Labor representatives, but the nineteen Ulster members were unalterably opposed to any scheme of Home Rule that included Ulster and they usually voted as a block against every clause. The attitude of Ulster is thus exprest in the minority report of this faction:

The discussions proved beyond doubt that the aim of the Nationalists is to establish a Parliament in Ireland which would be practically free from effective control by the Imperial Parliament. It is only necessary to draw attention to modern political movements to realize the unwisdom of establishing within the United Kingdom two Parliaments having coequal powers. All other countries have fought against this disintegration policy.

Failing any evidence of an approach to the narrowing of our differences, and in view of the new demands of the Nationalists, we were finally forced to declare that Ulster is unable to participate in any scheme of self-government for Ireland. We cannot overlook the strong probability that the controlling force of such would today be the Republican, or Sinn Fein, party, which is openly and aggressively hostile to Great Britain and the empire.

Had we thought that a majority of the convention intended to demand not the subordinate powers of previous home rule bills, but what is tantamount to full national independence, we would not have agreed to enter the convention.

On the other hand, the attitude of the Nationalists may be inferred from these three quotations:

It looked as tho the gravity of the times, the principles of freedom, for which the allied nations claimed to stand, the widespread desire for a settlement thruout the Dominions and among our American kindred and the disastrous consequences of further conflict and disunion might bring about a spontaneous resolve among all the delegates to establish our country as a free and contented nation within the empire.

We regard Ireland as a nation of economic unity. Self-government does not exist where those nominally entrusted with the

affairs of government have not control of the fiscal and economic policy.

Any attempt to impose conscription upon a nation without its sanction is utterly impolitic and unjust and bound to end in disaster.

**Home Rule Proposals** Because of the failure of the Irish Convention to come to any agreement the report contains no definite plan, but the proposals which received a majority vote are likely to be made a basis of a bill to be presented to Parliament in lieu of the Home Rule act now on the statute book. These proposals carried in most cases by votes of about 48 to 19, that is, against the solid Ulster vote, provide for the following form of government:

The Irish Parliament to consist of a Senate and House of Commons. The Senate, designed to represent various classes and interests instead of various localities, is to be composed of one Lord Chancellor, four bishops of the Roman Catholic Church, two bishops of the Church of Ireland, one representative of the General Assembly, three Lord Mayors, of Dublin, Belfast and Cork; fifteen peers resident in Ireland, elected by peers resident in Ireland; eleven persons nominated by Lord Lieutenant, fifteen representatives of commerce and industry, four representatives of labor, one for each province; eight representatives of county councils, two for each province. Total, sixty-four.

In the House of Commons forty per cent of the membership is guaranteed to Ulster, and this extra representation cannot be reduced except by three-fourths majority of both houses.

The Irish Parliament is to have no power to make laws on the Crown and its succession, the making of peace and war, army and navy, treaties and foreign relations, dignities and titles of honor, control of harbors for military and naval purposes, coinage, etc.

There are special prohibitions against interfering with religious equality, with Free Masons, and with Trinity College and Queens University.

Ireland is to be represented in the British House of Commons by forty-two members, who will have the right to vote on all matters.

The question of customs—the chief bone of contention in the convention—is postponed for consideration after but within seven years after the war.

**In Washington** The mills of Congress have been grinding exceedingly fine, but no important product came forth during the past week. Hearings on the Administration bill for the conservation and use of the water power resources of the United States continued on the House side. The Senate Judiciary Committee concluded its hearings on the activities of the German-American Alliance, and recommended to the Senate that the charter of that organization be revoked. The disloyalty bill continued to be a topic of debate. Much to the relief of thousands of Government employees the conference committee on the bill regu-

lating salaries agreed not to increase the hours of work, and raised the limit of those due to receive increases in pay to reach the \$2500 class. Disagreements between House and Senate on the so-called sabotage bill persisted. A House committee favorably reported an Administration measure designed to make the United States independent of the world during war time by encouraging the production of ores, metals and minerals which in the past have been largely imported. Under the terms of this bill the Government not only conserves or controls the development of the raw materials, but regulates the supply, distribution, and if necessary, the prices of the materials involved. Money for the housing of new Government employees is nearly in sight, and the disposition of Congress appears to be favorable to the concrete ship proposition, of which more will be heard later. Fifty millions is the total requested by the Shipping Board.

**The Sabotage Bill** Apparently Congress has decided against the proposition which was at one time seriously advanced, to enact legislation preventing peaceful strikes during war time. The "sabotage" bill, as it has been termed, contains a provision declaring that whoever "with intent to injure, interfere with, or obstruct the United States or any associate nation in preparing for or carrying on the war, shall conspire to prevent the erection or production of such war premises, war material, or war utilities, shall," be subject to a heavy penalty.

President Gompers of the American Federation of Labor described this section as legislation "making participation in a strike an offense," and declared further: "You may make the stoppage of work unlawful, but you cannot thus prevent it; instead you will only make men lawbreakers as well as strikers. I warn Congress not to commit the deviltry and folly of enacting such a law."

The advocates of the provision thus attacked quoted during the debate in

the Senate a report made on a report by the National Industrial Conference Board in which the waste to production arising from strikes was statistically set forth. As a result of 1156 strikes, 283,402 men were made idle, and a total of 6,285,519 days of production was lost to industry. Senator Sherman of Illinois declared after the reading of these figures:

Not even the magnificent industrial resources of the American people can stand a loss of that kind any more than we can stand dumping steel billets or armor plate into the Atlantic Ocean and say we can keep up our resources indefinitely with a waste of that kind. Man power is just as important industrially as it is in a military sense.

Speaking on behalf of Mr. Gompers, Senator Hollis of New Hampshire summarized the labor side of the case in these words:

It has been my fear all winter and all the spring that the Senate would take some such action as was taken yesterday; that it, adopt some law that might be construed by a court somewhere to prevent peaceful strikes. If we could prevent strikes by legislation, if we could make labor more efficient by statute, that would be a very easy solution of the problem; but the only thing that the laboring men have with which to improve their condition is their refusal to work and their ability to unite for that purpose, for it is easy for any one to see that the single laborer has no power against aggregated capital. It is only when labor has the same right to organize and enforce its views that it can stand up against capital. . . . Strikes can not be successful unless they are heartily backed by public opinion; and as soon as there is anything lawless about a strike, the better element, which controls public opinion, will make the strike unsuccessful.

Conscription of labor in order to win the war is the solution offered by Senator Fall of New Mexico and by former Speaker Cannon.

**Ships and Waterways** The tendency toward one-man administration of affairs in war time found another illustration last week in the creation of the office of director general of the Emergency Fleet Corporation, and the appointment of Charles M. Schwab, steel maker and ship maker, chairman of the board of

© International Film  
**MORE MEN FOR OUR MERCHANT MARINE**  
A Navigation and Marine Engineering School has been established at the Seaman's Institute in New York by the United States Shipping Board for the purpose of qualifying men as officers for our new merchant marine

directors of the Bethlehem Steel Corporation, to the new post. Incidentally, this appointment is the first designation in the tangled shipping situation which has not grown out of internal friction. An indication of what was in the mind of the Administration in securing the services of Mr. Schwab may be gathered from this quotation of an official statement:

"The carrying forward of the construction work in the 130 shipyards now in operation is so vast that it requires a reinforcement of the ship-building organization thruout the country."

Almost without a headline of prominence, the Government's announcement that it was taking over the coastwise shipping lines was issued in a proclamation by the President, and at midnight on the night of April 12 the deed was done. It means the addition of more than sixty vessels with an average tonnage of 3500 to the coast carrying business, and consequently an increase in coastal tonnage now under government control to the total of 400,000.

A few days later the Government also took over the Erie Canal. The Director General of Railways announced the intention to build a fleet of barges to be operated by the Government thru the canal from the Great Lakes to the Hudson River and down to New York. It is expected that other inland waterways, such as the Chesapeake and Ohio Canal, the Black Warrior River in Alabama, and several Atlantic Coast waterways, will be taken over soon for operation in coördination with the railways.

**The So-called Labor Shortage** In spite of sporadic outbursts, chiefly in Congress, the events of the past week apparently indicate a genuine meeting of minds on the part of representatives of capital and labor, which meeting of minds is hailed by those who are in close touch with what is actually being accomplished as a long step forward toward winning the war. At the sixth annual convention of the Chamber of Commerce of the United States, held at Chicago, this note was repeatedly struck. Dr. Charles A. Eaton, head of the national service section of the United States Shipping Board, commenting on the coming together of these diverse interests under the auspices of the Federal Government, declared: "I want to see a partnership cemented between these men which I trust will never be broken asunder when times of peace come."

The same week was made notable by two official pronouncements on the so-called labor shortage. Both emanate from the Department of Labor, where a newly created employment service and public service reserve are at work organizing the machinery of the distribution of labor.

William E. Hall, director of the public service reserve, made public a statement to the effect that the reports of a scarcity of men to build ships is "exaggerated," and that up to this more than 260,000 me-

chanics have been enrolled for shipyard work. These men are being supplemented by fresh recruits either from training schools established by the Emergency Fleet Corporation, or by workers from allied trades in which employment is slack.

The other pronouncement comes from the Assistant Secretary of Labor, Mr. Post, and is by far the most vigorous and radical analysis of the farm labor "shortage" which has come from a Government official in a long time. Part of this statement is as follows:

The American farmer is the victim of publicity. So many people have been crying that there is a great shortage of labor that the farmer is beginning to believe it himself. Two-thirds of the farm labor shortage is imaginary and the other third can be remedied. Careful surveys by agents of the Department of Labor indicate that outside of truck gardens there is no shortage at present except in the South. Truck gardeners have been subjected to unusual hardship by Government contractors, who have enticed laborers from surrounding farms to nearby cities instead of bringing them in from more distant points, where there are large reserves of idle men.

It is true that there is a shortage of experienced farm help in many sections.

Providence Sunday Journal

#### MAKE IT A BUMPER CROP

There are, however, enough idle men in the cities to fill the gaps. Why, then, do they not go to the farms? The chief causes are low farm wages and poor working conditions. It is significant in the states where wages average \$50 to \$70 per month there is no shortage of farm help. The shortage reports come from the states which pay \$15 to \$40 per month. The degree of shortage varies with the lowness of the wage. Never in history have prices for farm products been so high. Many farmers claim that even at present prices they are not making money. Be that as it may, any agreement which applies to the farmer applies to the farm hand also. If the farmer himself complains of living conditions when his market prices are doubled, he can not expect his employees to exist on the same old wage.

The Government is prepared to assist the farmer to the limit of its power. Up to the first of the year forty-seven farm labor offices had been established by the Labor Department. Seventy-eight more have been added. Farm labor specialists are already on the ground in forty-four out of the forty-eight states. All third and fourth class post offices have been authorized to act as farm labor offices and daily newspapers and commercial organizations have been asked to establish farm labor offices under the United States Employment Service. The Labor Department has solved the problem of labor for shipyards. It is prepared to deal similarly with the problem of farm labor. It is prepared to protect the farmer against the

inroads of the Government contractor which sweep small areas bare of workers. If the farmer will do his part the Government will do its part.

**Back from the Front** The Secretary of War has returned from the battle-front to make an eminently satisfactory report to the American people of the way in which America's boys are bearing themselves over there. Mr. Baker has this to say:

Any man who goes to France will have an increasing sense of admiration for the magnitude, the thoroughness, and the speed with which the American Army has done its work; and by that, of course, I refer chiefly to its organization of means of communications, lines of supply, its warehouses and distributing facilities, the schools organized for the training of the special arms and the special officers. You get the impression of the American Army in France as a beehive of the most energetic people, and everybody is doing his job with enthusiasm and success. They know no hours and no limitations on labor; the question is to get the most done possible, and the amount done is an amazing story.

The condition of our soldiers in France is a thing that I am very happy to have an opportunity to tell in the widest possible way. Our boys are well physically—big, strong, robust and healthy—and they are well in every other way. Their spirits are high, their behavior is most admirable, their relations with the French people and the French soldiers, and the British soldiers to the extent I saw of them, were cordial and sympathetic. The healthfulness and wholesomeness about the American Army over there is perfectly splendid.

Every one will be glad to hear it, altho it is just what we all expected. Mr. Baker does not say so, but it is probable, and devoutly to be hoped, that he comes back impressed with the conviction that we must send more and more of the same brand of American manhood and that speedily.

**Twenty New York Cities Go Dry** A special election was held last week in thirty-eight

cities of New York State under the local option law. Twenty of the cities voted to banish liquor selling from their borders and eighteen declined to do so. The municipalities which have turned "dry" are Auburn, Batavia, Binghamton, Canandaigua, Corning, Cortland, Elmira, Fulton, Gloversville, Hornell, Ithaca, Jamestown, Johnstown, Middletown, Norwich, Oneida, Oneonta, Plattsburg, Salamanca, Watertown. They have an aggregate population of 375,000. The largest among them were Binghamton with a population of 54,000, Elmira with a population of 40,000, and Jamestown with a population of 38,000. Women voted in large numbers in all of the communities.

The result of the election was doubtless somewhat disappointing to the advocates of prohibition, who had hoped that the rising tide of sentiment against the liquor traffic, reinforced by the vote of the new women citizens, would bring success all along the line.

But it must have been more of a disappointment to the advocates of the liquor traffic, for the result means a net loss to them in twenty cities, and merely a maintenance of the status quo in the other eighteen.

*The most important vessel in the war against U-boats is the large and fast destroyer*

## THE OBVIOUS ANSWER

This is the eleventh message from the United States Government to the American People. Presented each week in *The Independent* by George Creel, Chairman of Committee on Public Information, appointed by President Wilson

**T**HERE are other ways of killing a dog besides choking it to death with melted butter"—altho this antique fact seems to have been overlooked by many of the critics of America's shipbuilding program.

There are other ways of defeating the German submarine menace besides building more ships than the U-boat can sink. One obvious way is to build more ships that can sink the U-boats. And when America's measures of defense against the submarine menace are being considered, it is not enough to complain—as most of our domestic critics have complained—that we are not choking the dog to death with defenseless merchant marine.

When Congress declared war against Germany, there were only a certain number of shipyards in this country. There was only a certain amount of material for shipbuilding and skilled labor to use it. More important, there were only a limited number of plants for the production of marine engines and all the machinery and fittings necessary to transform an empty hull into a ship. If these yards, and this labor, and these plants had all been devoted to the building of a merchant marine, the Emergency Fleet Corporation would have had little to worry about, and the domestic critics of our shipbuilding program would have been bewailing the fact that we were trying to build more ships than the submarines could sink, instead of building ships to sink submarines.

Obviously, the Government did a wise thing in devoting much of the immediate shipping resources of the country to an offensive movement against the U-boat. But how wise that program is, and how large it is, and what a strain it has put upon the shipbuilding facilities of the nation, seems to have been overlooked by the writers who are calling upon America to "wake up to the submarine menace."

Consider the one fact that when the British navy went to war in July, 1914, it was the greatest sea force the world had ever seen; and that our regular navy now has 50,000 more men in it than the British regular navy had then.

Or consider that since war was declared we have added to the navy 1275 ships of all classes, aggregating 1,055,115 tons.

Or consider that we are building more American destroyers than there were in any two navies of the world when war began; that these boats, worth \$2,000,000 each, with as great a horsepower as the battleships of the "Maine" class, used to take two years to build; that we are building them in eight months; and that we have launched one, two-thirds complete, in four months.

To supplement the destroyers, we are building cruisers that are the largest and speediest in the world, with the sole exception of the four British battle cruisers of the "Hood" type.

When war was declared we had 123 naval vessels building or authorized. We have since placed contracts for 950 more, of which 100 are submarine chasers for one of our co-belligerents. We have taken over 109 interned German ships that had been so damaged the Germans boasted it would be impossible to repair them before the war ended; and 39 of the largest of these vessels were repaired and in commission within six months. More than 700 privately owned vessels have been taken over to be fitted for naval use. On account of the demands upon steel construction, several hundred submarine chasers have been built of wood, and these are driven by three 200-horsepower gasoline engines, because it was found impossible to obtain steam-power plants for them rapidly enough. Many of these boats have crost the Atlantic in the stormiest weather and proved themselves superior to any other kind of wooden ship for work against the U-boat. The new Ford patrol boats, named the Eagles, are considerably larger than the submarine chasers; they correspond to the earlier destroyers. Included in the building program are more than 800 small boats, being built at navy yards and private yards. Altogether, there are already four times as many vessels in naval service as there were a year ago, and the number is growing constantly.

Of all these, of course, the most im-

portant in the U-boat war is the large and fast destroyer. At first, there was not a vacant way in the country upon which a destroyer could be built. In many yards, there was no ground for such a way. New keels have been laid where a few months ago there were swamps. New shops have been built for making forgings, for building boilers and engines, pumps, forced-draft blowers and every important part of machinery equipment. Recently a destroyer was built, tested, put in commission and sent to sea within fifty-one weeks from the time its keel was laid. It steamed from a Pacific port, nosed thru the Panama Canal, and docked at an Atlantic port in ten days and a half.

The reports from one detachment of destroyers show that in a six-month period the boats have been 3600 days at sea, that they have steamed more than a million miles in the war zone, that they have escorted 717 single vessels and 86 convoys, and that they have attacked 81 submarines.

And the success of these boats in the war on the submarine has been determinative. Sir Eric Geddes reports: "Destruction of Allied shipping decreases steadily. Destruction of German submarines steadily rises." The U-boat no longer dares to come to the surface to attack merchant vessels with shell-fire. The destroyer compels it to attack with torpedoes. As soon as a periscope is sighted the destroyer goes after it full speed, and drops a powerful depth bomb. The submarine has to loose its torpedo, submerge and get away quickly. It has not time to take accurate aim. Consequently there has been a great increase in the number of vessels that are attacked and succeed in escaping.

Formerly, the submarine sank fifty per cent of its victims fifty miles from land. Now less than one per cent of the ships are torpedoed beyond the fifty-mile limit. The submarine no longer dares to go hunting; it lies in wait where the sea-lanes converge. Consequently, it has become possible to save many vessels that are struck. And there is this further advantage that airplanes and small patrol boats can be used in these shore waters and are being used successfully. [Continued on page 173]

# WHAT OF CONGRESS?

STAFF CORRESPONDENCE FROM WASHINGTON

**T**HE old, familiar political spectacle in

which Congress blames the Administration for omissions and the Administration endeavors to place the blame back on Congress, shows signs of renewed activity. Certain it is that Congress is plenty free of its criticism of the Executive—meaning by that term not

only the President, but the entire executive structure of the Government. Daily the sessions on the hill indicate that, now with Mr. Baker, now with Mr. Creel, now with alleged political appointments of officers, there is a disposition to "throw rocks." And the Administration cannot answer by hurling similar missiles in reply. Drawing its financial support from Congress, it must perforce sit by and explain, and explain again.

But even in Congress itself there are symptoms which, logically diagnosed, lead one to the conclusion that it is realized by some few that the regenerating and reorganizing hand of war has not been busy on Capitol Hill. I do not refer to the time expended in debate nor the delay in enacting legislation: Congress is a deliberative body and it must deliberate tho the function may seem unnecessary when there is pressing need for men, money, authority. I mean the machinery of Congress. This is as it always has been. Almost alone of the governmental institutions in Washington, the mechanism by which laws are proposed, considered, and acted upon remains ancient and out-of-date. None of the efficiency experts whom it is the fashion to quote have succeeded in tampering here. Yet a handful or so of members are acutely aware of this situation, and if one listens closely, one may hear faint sounds of rebellion and reformation.

A little while ago Representative Alvan T. Fuller, an Independent member from Massachusetts, made public a letter addrest to the Speaker in which Mr. Fuller offered his resignation as a member of the Committee on Expenditures in the Interior Department. Mr. Fuller's reason for his action was that the committee was one of many inactive committees designed to give committee assignments to members. "The public should know," he wrote, "that Congress is overorganized with standing committees that do no work, whereas the basis should be efficiency with the people getting full value for every bit of legislative machinery that exists. As it is now, these dead committees are nothing more than their chairmen, who

control whatever clerical and office perquisites attach to each of them. Certainly this is no time for such a condition to exist and continue."

In the course of the little blaze which burst forth in the House upon this action, one member, whose name it is not necessary to publish, defended the "dead" committee system in spite of the recorded fact that he himself had been chairman of a similar institution, this chairmanship netting him, thru the device of employing his wife in the double capacity as private secretary and clerk of committee, something like \$2700 a year beyond his salary.

The spoils aspect of the situation is at once important and unimportant. Small perquisites sustain the momentum of beneficiaries of things as they are and prevent the advocates of things as they ought to be from securing a fair jury. Spoils makes a good talking point. Deeper than spoils is the system which years of accretion have built up in Congress—deeper than the roots of parties or individuals can reach.

**T**HIS system, described from the point of view of the present emergency, is one which has removed from Congress the initiative in making legislation. This is not the theory, but it is the practise. Instead of being an assembly of collected statesmen, representative of the political and social thought of the four corners of the United States, Congress has become an institution thru which bills must be passed in order to receive the O. K. without which they are not legal. With very few exceptions, the important measures of the last few years neither originated in Congress nor were they fully comprehended by Congress. They were drawn in one of the executive departments and sent to Congress with a request that they pass. Congress radically changed certain of these bills, and in so far as it did that, it exercised its constitutional function. There was nothing illegal or unprecedented in this action of the executive departments. The only criticism here made is that the situation is as it is.

"I am a business man and accustomed to looking at these things from a com-

monsense standpoint," wrote Mr. Fuller in his famous letter, which the organ of the National Voters' League has just published entire. "I was somewhat fearful about my qualifications for undertaking the duties of a Congressman because of lack of political experience. I find that the duties I have fallen heir to as a Congressman are of an entirely dif-

ferent nature than those I anticipated. When I meet any of my constituents, they usually greet me with the expression, 'My, but you must be busy down in Washington!' Now I would like to be really busy, and I am mighty sure that if the proper spirit animated our present Congress, these needless committees would be changed into real agencies for the service of the Government. Why could not some of these needless committees that never meet and that are occupying valuable room and employing secretaries and messengers that have no work to do be utilized for various useful purposes, such as inspecting camps, soliciting labor for shipyards, doing any one of the hundred and one things that the Government is in need of today? Instead of this, you and I know that two-thirds of our committees are useless, and, instead of being really busy, the majority of our congressmen down here are telling stories and practising up to see who can spit the farthest."

It does not altogether answer such questions as these to say that Congress has always been open to criticism. So has the red tape of the War Department and of every other Circumlocution Office. Nor does it answer the question for a Republican to charge or a Democrat to boast that in the main Congress has done what the President and presumably therefore the Nation has asked it to do. Still with these answers there remains an uneasy feeling that Congress has not measured up.

What Mr. Fuller, the Voters' League, and those who have long hoped for a simplification and democratization of Congress are feeling keenly in this hour when every ounce of energy counts so tremendously, is that Congress has grown into an institution measured by which the War Department in its worst days was modern and up-to-date. Because of the burden of clumsy processes, Congress does not possess the power to gather together and itself focus the forces of public opinion and thought. Congress is not creative. When the pressure of public opinion becomes great, Congress finds the public's spokesmen [Continued on page 165]

## OUR WOMEN OVER THERE

*In the six branches of war service represented on this page women receive official recognition and wear a uniform authorized by the United States Government. The enlistment is for service overseas*

**IN THE MEDICAL CORPS**  
*Dr. Mary Lapham (at the left) is in France with a medical unit of the American Women's Hospital. The question of giving commissions to women in the Medical Corps is under discussion*

**A RED CROSS DIRECTOR**  
*Both nurses and directors of the American Red Cross wear an official uniform with the distinctive head dress. Mrs. Robert Maclay (at the right) lately returned from France to lecture*

*Photographs from Press Illustrating*

**THE Y. W. C. A. IN FRANCE**  
*Women working at canteen under the Y. W. C. A. wear an olive drab uniform similar to that of the Y. M. C. A. workers overseas, with a heavy dark green traveling cape. The entertainers cover their feminine finery with a long uniform coat*

**A UNITED STATES ARMY NURSE**  
*The dark blue uniform at the left is comparable in women's war service to the infantry O. D. We cannot have too many nurses—their ranks need recruits now more than any other branch of women's war work. The training required is two years for any overseas work*

**THE SIGNAL CORPS NEEDS WOMEN**

*Two units of telephone operators have already been sent over as a part of the United States Army Signal Corps. This operator is in uniform: dark blue suit and coat, stiff hat, insignia*

**A CHAUFFEUR AT THE FRONT**

*People have not always been inclined to take seriously the smart, khaki-uniformed women who dash about New York driving their own cars. But the Women's Motor Corps is making good in France. Miss Caroline Mountain (at the right) has been driving a supply truck for civilian relief in the war zone*

#### IN COMMAND OF BATTLE-SHIPS

Rear-Admiral Rodman is commander of the United States fleet of battle-ships. The censor gives us little information now as to where they are or what they are doing. The photograph at the right shows a line of five steaming out for battle maneuvers off the Atlantic Coast of the United States some months ago

## THE AMERICAN NAVY ON THE OTHER SIDE

Vice-Admiral Sims (below) is in command of the American navy operating in European waters. Under him in charge of special divisions are the four rear-admirals whose photographs are published on this page

Press Illustrating

#### OFF THE COAST OF FRANCE

The ships that accomplish the transportation of American troops and supplies to the battle-front in France are under the direction there of Rear-Admiral Wilson of the United States Navy. His command extends also to any United States naval operations carried on off the coast of France

#### FULL FIGHTING STRENGTH

There are now more than one hundred and fifty vessels of our navy, not including a considerable number of submarine chasers, operating on the other side of the Atlantic. They carry over 35,000 men and officers. This number does not include the personnel of the troop ships, supply vessels, armed guards, signal men, radio men, etc. Our anti-submarine activities cover in war areas alone over 1,000,000 square miles of sea. Enemy submarines have sunk but two American fighting units—the destroyer "Jacob Jones" and the yacht "Alcedo"

#### ON SPECIAL DUTY

Rear-Admiral Dunn (at the left) commands a special branch of American naval operations under Admiral Sims. But information as to what it is or where it is the censor does not yet permit to be published

#### IN SOUTHERN WATERS

Our navy in the south is under command of Rear-Admiral Niblack (at the right)

© Kadel & Herbert

#### SENDING FORWARD FRENCH RESERVES

On April 18 dispatches announced the arrival of great French reserves of artillery and men to back the British line. These heavy guns, mounted on railroad cars, were brought up. The aerial photograph shows them here stationed behind the third line of trenches

© Kadel & Herbert

#### THEY SHALL NOT PASS

Once more the men of France are making good the slogan of the great battle of the war. These poilus, fighting at close range to repulse the enemy, were photographed during an actual attack. In the foreground are the rifle and helmet of a wounded man

# WHERE FRANCE RECEIVES HER OWN

## The Story of Evian, the Gateway from Captivity to Freedom

**E**VIAN-Les-Bains, on Lake Geneva, used to be the most expensive watering-place in all France. The baths are different now.

In the park of the once fashionable Casino there are two great wooden bath-houses—sheds in a palace garden. One of these is the jolliest spot in France. There the small boys who have been sent back to France by the Germans, out of the occupied towns in the north, behind the German lines, splash and shout and laugh themselves back into French boyhood.

The boys, ranging in age from three to thirteen, are admitted to the baths in squads of twelve. For even the smallest the "mothering" is done by three big poilus in sopping overalls—and there are probably not three kinder, gentler soldiers in all the French army. They undress the little fellows who can't manage it for themselves, bathe them, and then accomplish the almost unbelievable task of getting them back into their complicated clothes.

They are a little timid about entering the bath-house, these youngsters who have felt the brutal hand of the enemy for three years or more, but when they get within range of the racket that is being made by the boys actually in the baths they begin to grin. By the time the friendly poilu has shouted a hearty, if meaningless "Allez-ooop!" to them and showed them where to put their clothes and pushed them under the warm showers with a big slippery piece of soap, they are quite ready to make a joyful noise themselves.

In the midst of the noisy splashing fun, the master of the bath blows a whistle, the showers stop, and the boys are herded into a dressing room where they dry themselves in gaudy flannel gowns and then put on their own clothes, which have been disinfected in hot steam in the meantime.

*The Red Cross has a group of hospitals to take care of the children who come back*

*An officer "permissionaire" finds his children who have been kept in Germany two years*

The boys are only part of the army that comes back thru Luxemburg and Germany and Switzerland—an army of the old, the infirm, the wasted and ex-

hausted, and the children, those from whom Germany can no longer extract an hour's work. Two trains pull into Evian every day, carrying altogether a thousand or twelve hundred people. They are due to arrive at 4:48 in the morning and 4:08 in the afternoon, and with every train the same ceremony of welcome is repeated.

At the station are eight big American Red Cross ambulances, to carry the old, the infirm and the babies. Six trumpeters blare a welcome. They are dressed, with that delicate tact which makes France what it is, in the old army uniform that was familiar to these exiles when they left France, tho it has since been abandoned.

The women and the old men and the children shout—with a quaver in the voice but a great gladness in the heart—"Vive la France!" One's heart thumps. These folks are

French, and France receives them with joy. They are homeless; they may be sent to strange corners of France; they will be lonely, perhaps they will be in want; but for the moment their cup is full.

They stream up the street to the Casino, not so gay as it used to be, but infinitely happier. There, after a simple meal is served, the mayor, silk-hatted and in full evening dress, whether it is early morning or tea-time, makes a formal little speech of welcome. He tells the refugees, always with the same earnestness, that they are truly soldiers of France, and that their moral resistance to the invader has been a victory for the Patrie.

Then they sing. They sing the "Marseillaise." Some weep. Some pray. But they sing. And if you have heard them sing you do not forget it.

*A vestiaire under the Red Cross furnishes clothes for the whole family if necessary*

—three hundred thousand recording the repatriated who have already passed thru Evian, eight hundred thousand carrying the names of refugees still looked for.

Their relatives write for news of them, and thru the card index these letters of inquiry and the addresses they carry—each a promise of shelter or aid—are instantly accessible when the refugees do come back.

So there they go, these six or seven hundred newcomers in their own country, some of them to find friendly messages, and some of them to find nothing.

And after that they go to the baths, the disinfectors, and the disinsectors. From the baths they pass on to be examined, for they have not been too kindly treated, and many of them bring infection that would still further permanently wreck the health of France if they were sent at once into the interior of the country.

To isolation hospitals go those with contagious diseases, to sanatoria the tuberculous, to rest-homes the infirm, to convalescent homes those merely unwell, to special children's hospitals the youngsters who are sick.

The American Red Cross charges itself particularly with the examination and care of the children. It has already examined twelve thousand of them at its dispensary in the Casino.

Good news! "They are living—both of them"

Americans, "à la stature formidable," who serve under the American Ambulance, meet each train of repatriés at Evian

In the first two weeks it detected and segregated ten cases of diphtheria, forty of measles, fifteen of chicken-pox and seven of scarlet fever.

Before the Red Cross began its work two youngsters with diphtheria slipped thru Evian; one hundred and twenty cases and seven deaths in Lyons were traced to those two!

The Red Cross has a group of hospitals for the children. For the great mass of the repatriates there is a lonely future. Less than half have relatives to go to; the others must be quartered on France.

By a system of exchange of information, the records of refugee families who come to Evian are passed on to the American Red Cross delegates scattered thruout the refugee zone, and so there will be for many of them at least wise and sympathetic care and assistance.

From thirty to forty thousand of these refugees are temporarily dependent on the Red Cross for help and sustenance.

The greater task belongs to France, the slow, hard task of reconstruction. France does what it can; but France cannot give them back their homes, or those who made the homes. Evian is a joyful place—but there can be very little joy for this generation in France.

These photographs are published thru the courtesy of "L'Illustration," Paris

They sing the "Marseillaise." Some weep. Some pray. But then sing. And if you have heard them you do not forget it

# THE REPUBLIC OF COMMON SENSE

Ninth message from the National Security League, Committee on Patriotism Through Education, of which The Independent is the official publication

**W**E say, "my home," "my town," "my country," but we never say "my world." Social organization has not extended beyond the nation; the term humanity represents a fine idealism but not a specific loyalty.

There have been mighty attempts to push forward to a super-nationalism, but so far all of these have been imperialistic. Yet there has not been wanting in them a certain ideal quality. Under the ambitious aggression of Alexander was the hope of imparting the Greek culture to the European world. Rome was no mere vulgar conqueror but believed that the *pax romana* would give to mankind a universal justice which it had never known. Napoleon, imperial egotist that he was, had a great vision of a new Europe rising from the old feudalism and in the Code Napoléon endeavored to achieve some unity of civilization. Even the frightful military aggression which menaces the world today is not without its idealistic quality, for the German genuinely believes that the world needs his organizing power.

All the imperialistic endeavors to unify men were wrecked upon the rock of a passionate affirmation of nationalism. And the last will be wrecked there likewise. If it could be possible that we shall fall under the German might then our children would fight to be free; and if they should fail then their children would take up the struggle. The submission of the world to the conqueror will never succeed.

Yet stark nationalism is not satisfactory. Indeed the world had inevitably built up an internationalism of a certain kind. There were not wanting those who believed in that internationalism as really effective even to the ending of war. One element in this was the internationalism of diplomacy. Ambassadors interpreted the nations to one another, harmonized differences, concluded agreements. Formal treaties bound the nations to mutual action. Specific conventions produced the Red Cross pledges and sought to safeguard the interests of neutrals and non-belligerents in war time. Indeed most international agreements were for war time, a kind of Marquis of Queensberry

BY THEODORE GERALD SOARES

PROFESSOR OF PRACTICAL THEOLOGY  
IN THE UNIVERSITY OF CHICAGO

rules, yet such a great internationalism as the postal and telegraph service must not be overlooked.

There was the internationalism of trade. A marvelous, intricate fabric of world credit had been organized. One could buy in New York a draft payable in the remotest parts of the globe. One could order goods from the far interior of Africa or of China. Business agents were sent to any spot on earth where trade could be carried on. It was thought that the world commerce was so complex that no nation would dare to disturb it by a war.

There was the internationalism of science. We used the world phrase, "The Republic of Letters." Did any one write a good book, did any one discover a new truth, did any one bring forth an invention?—these were the common property of all mankind. We said that the world of thinking men had become unified.

There was the internationalism of labor. The extremer labor sentiment insisted that the worker in any land was a brother and the capitalist in any land was an enemy. Socialists declared that at the first hint of war the workers in every country would organize a general strike and make war impossible. The very word *L'Internationale* was a proclamation that patriotism was outgrown; indeed the I. W. W. in America consistently refuses to vote, repudiating country in the interests of mankind.

**S**O had grown up that large body of practise and sentiment that may well be called the old internationalism. All this came down with a crash in the summer of 1914. The Kaiser spoke the simple truth when he told our Ambassador that international law was no longer operative. The pirate is on the sea or beneath it; the Red Cross has ceased to be a pledge and has become a target; treaties are scraps of paper.

The internationalism of science disappeared when the German Government showed that it could mobilize its scholars as easily as its soldiers. A quick telegram of command brought the

signatures of the Ninety-three intellectuals to that document which will be an eternal disgrace to German scholarship.

Trade shuddered and shook itself, then adjusted itself to the new order of things and found it nearly possible to do "business as usual." Socialism for one brief hour uttered its brave protest in Berlin against the iniquity of the Austrian note, then felt the iron grip upon its throat and fell silent.

The old internationalism is dead. We look to the future and wonder what shall protect us from the terrible dangers that the mere national organization of society involves. We are led to reexamine the value of the nation. Is it so supremely good that we may pay this awful price for it? Surely it is very good.

**T**HE nation is a great area of peace. It is marvelous to think of the vast stretch of country over which we Americans may travel, finding everywhere our common tongue, our common laws, our own ways of thinking and of doing things, in a word, our own folk. It is no small thing that the world has got so far along that a hundred millions of people may dwell together unarmed, peacefully pursuing their own ways, settling any differences in the courts of law. It means so much that we rejoice in patriotism and look with just suspicion on any man who undervalues it.

But it is well to remember that, as the world is organized, patriotism is the privilege of the few. It is denied to the many or granted to them only upon sufferance. Patriotism is today a crime punishable by fine, imprisonment or death in Belgium, in Alsace-Lorraine, in Poland, in Bohemia, in Croatia, in Armenia, in Syria. If patriotism is permitted in the Scandinavian lands, in Holland, in Switzerland, in the Baltic provinces, it is because the high command at Berlin is not yet ready to order otherwise.

Patriotism is the privilege of the Great State. The Germans are at least consistent in their theory of government. They do not speak of the nation but of the state. They expect to include in the Greater Germanic state many subject nations to whom patriotism

shall be denied. When they declare that the small state has no right of existence they are true to the present world order. Mere unlimited nationalism offers no guarantee of continued nationalism. We have a situation which makes nationalism impossible except to the few nations strong enough to secure it, and to the weaker nations only pending the time when they may be included in some imperial scheme.

We need a new internationalism in order to save nationalism itself. Fortunately, there are already indications of the direction in which that supernational organization will be found. See it in that wide area of peace, the Britannic League of Free Nations, as the British Empire is more rightly called. Canada is a nation, Australia, New Zealand, South Africa are nations. They choose to yield their separate power of making war and to belong to the great league. The United States and Canada have a league of peace symbolized in that marvelous five thousand miles of unprotected frontier where nation keeps faith with nation and has kept it for one hundred years. There is something of hope in the coming league of American republics. There are wonderful possibilities in the grand alliance of the free democracies now united in the fraternity of war. We may hope forever to be joined in the great fraternity of peace.

The deliberate judgment of mankind outside the Germanic peoples, and we may well believe it will be reinforced by millions among them, is that war—stupid, wicked, barbarous war—must cease. There must be a world order which will make war as impossible among the nations as it is now among the states of the American Republic. The world court and the world police must be established.

It used to be the theologians who traduced human nature; it is now the editorial writers. Human nature will not be changed, of that we may be very sure. Original human nature probably has not been changed in these last five thousand years. We are not born with any more civilization than was David, who massacred his prisoners, but at least some people do not massacre prisoners today. Human sentiment has changed. The situations in which human nature operates have changed. The old human nature has learned some decencies and it can learn some more.

The new internationalism will not be the millennium. There will be quite enough wickedness in the next chapter of human evolution to satisfy the most exacting requirements of a sceptic of human nature. But a great common sense will triumph. Nationalism with all its values will be preserved and it will have the wisdom to secure a certain well defined super-nationalism, which may preserve the nations in their peaceful life and strike a deadly blow at any criminal among the peoples who would disturb that peace.

## WHAT OF CONGRESS ?

(Continued from page 164)

not in Congress but in the President. Congress is at one end of the Avenue, the President at the other. The President goes to Congress, but Congress does not go to the President. The separation has worked all to the advantage of the prestige of the latter, not the former.

It may be that this system is not as bad as sometimes painted. But to understand it means to have a background which will help to understand some of the manifestations of friction between one part of the United States Government and another at a time when such are occasionally dangerous.

## EIGHT STORIES OF GOOD CHEER

With Introductions by Frederick Houk Law

## COLONEL CARTER WELCOMES A FRIEND

"Salt yo' food, suh, with humor, . . . Season it with wit, and sprinkle it all over with the charm of good fellowship, but never poison it with the cares of yo' life."

BY F. HOPKINSON SMITH

SUCH was the philosophy of Colonel Carter of Cartersville, a Southern gentleman who had lived in the Confederacy, and whose love for the South—and for Virginia in particular—was deep and lasting. As the years had gone on—for we suppose it to be 1891, when the Colonel is about fifty years of age—he had seen poverty close in more and more. His dear old Carter Hall had barely escaped from foreclosure, and the old house and much of the land, had been kept in the family only by the generosity of his aunt, Miss Nancy Carter.

But the Colonel never despairs. Cheerful, hearty, certain as Mr. Micawber that "something will turn up," he has come North, filled with the visionary project of building a fifty mile railroad from the little village of Cartersville to the sea—all of it thru thinly populated districts, and over practically worthless land—a railroad for which there is

THE dinner was at the colonel's—an old-fashioned, partly furnished, two-story house nearly a century old which crouches down behind a larger and more modern dwelling fronting on Bedford Place within a stone's throw of the tall clock tower of Jefferson Market.

The street entrance to this curious abode is marked by a swinging wooden gate opening into a narrow tunnel which dodges under the front house. It is an uncanny sort of passageway, mouldy and wet from a long-neglected leak overhead, and is lighted at night by a rusty lantern with dingy glass sides.

On sunny days this gruesome tunnel frames from the street a delightful picture of a bit of the yard beyond, with the quaint colonial door and its three steps let down in a welcoming way.

Its retired location and shabby entrance brought it quite within the colonel's income, and as the rent was not payable in advance, and the landlord patient, he had surrounded himself not only with all the comforts but with many of the luxuries of a more pretentious home. In this he was assisted by his negro servant Chad,—an abbreviation of Nebuchadnezzar,—who was chambermaid, cook, butler, body-servant, and boots, and who by his marvelous tales of the magnificence of "de old fambly place in Caartersville" had established a credit among the shopkeepers on the avenue which would have been denied a much more solvent customer.

To this hospitable retreat I wended my way in obedience to one of the colonel's characteristic notes:—

No. 51 BEDFORD PLACE.

Friday.

Everything is booming—Fitz says the scheme will take like the measles—dinner tomorrow at six—don't be late.

CARTER.

The colonel had written several similar notes that week,—I lived but a few streets away,—all on the spur of the moment, and all expressive of his varying moods and wants; the former suggested by his unbounded enthusiasm over his new railroad

scheme, and the latter by such requests as these: "Will you lend me half a dozen napkins—mine are all in the wash, and I want enough to carry me over Sunday. Chad will bring, with your permission, the extra pair of andirons you spoke of." Or, "Kindly hand Chad the two magazines and a corkscrew."

Of course Chad always tucked them under his arm, and carried them away, for nobody ever refused the colonel anything—nobody who loved him. As for himself, he would have been equally generous in return, and have emptied his house, and even his pocketbook, in my behalf, had that latter receptacle been capable of further effort. Should this have been temporarily overstrained,—and it generally was,—he would have promptly borrowed the amount of the nearest friend, and then have rubbed his hands and glowed all day with delight at being able to relieve my necessity.

"I am a Virginian, suh. Command me," was his way of putting it.

So to-night I pushed open the swinging door, felt my way along the dark passage, and crossed the small yard choked with snow at the precise minute when the two hands of the great clock in the tall tower pointed to six.

The door was opened by Chad.

"Walk right in suh; de colonel's in de dinin'-room."

Chad was wrong. The colonel was at that moment finishing his toilet upstairs, in what he was pleased to call his "dressing-room," his cheery voice announcing that fact over the balusters as soon as he heard my own, coupled with the additional information that he would be down in five minutes.

What a cosy charming interior, this dining-room of the colonel's! It had once been two rooms, and two very small ones at that, divided by folding doors. From out the rear one there had opened a smaller room answering to the space occupied by the narrow hall and staircase in front. All the interior partitions and doors dividing these three rooms had been knocked away at some time in its history, leaving an L in-

no possible excuse except the Colonel's local and personal pride.

The novel, "Colonel Carter of Cartersville," by F. Hopkinson Smith, 1838, one of our most delightful novelists and short story writers, tells how two of the Colonel's devoted friends, believing his plans nothing but dreams, aid him because they love him. Finally, the discovery of coal on the Cartersville estate justifies the old Southerner's project and restores him to affluence. The charming old Colonel, who owes everything to his aunt and to his devoted friends, rises at a dinner in their honor, and says, "Fill yo' glasses, gentlemen, and drink to the health of that greatest of all blessings—a true Southern lady!"

The selection that follows tells of the Colonel's reception of his two friends soon after his arrival in the North. The warm hospitality, happy spirit, and the charm that comes directly from the heart, make the Colonel as lovable in our eyes as in the eyes of those who had the pleasure of sitting with him—for such qualities create happiness, and win love.

terior having two windows in front and three in the rear.

Some one of its former occupants, more luxurious than the others, had paneled the walls of this now irregular-shaped apartment with a dark wood running half way to the low ceiling, badly smoked and blackened by time, and had built two fireplaces—an open wood fire which laughed at me from behind my own andirons, and an old-fashioned English grate set into the chimney with wide hobs—convenient and necessary for the various brews and mixtures for which the colonel was famous.

Midway, equally warmed by both fires, stood the table, its centre freshened by a great dish of celery white and crisp, with covers for three on a snow-white cloth resplendent in old India blue, while at each end shone a pair of silver coasters,—heirlooms from Carter Hall,—one holding a cut-glass decanter of Madeira, the other awaiting its customary bottle of claret.

On the hearth before the wood fire rested a pile of plates, also India blue, and on the mantel over the grate stood a row of bottles adapting themselves, like all good foreigners, to the rigors of our climate. Add a pair of silver candelabra with candles,—the colonel despised gas,—dark red curtains drawn close, three or four easy chairs, a few etchings and sketches loaned from my studio, together with a modest sideboard at the end of the L, and you have the salient features of a room so inviting and restful that you wanted life made up of one long dinner, continually served within its hospitable walls.

But I hear the colonel calling down the back stairs:—

"Not a minute over eighteen, Chad. You ruined those ducks last Sunday."

The next moment he had me by both hands.

"My dear Major, I am pa'alized to think I kep' you waitin'. Just up from my office. Been workin' like a slave, suh. Only five minutes to dress befo' dinner. Have a drop of sherry and a dash of bitters, or shall we wait for Fitzpatrick? No? All right! He should have been [Continued on page 175]

## THE OBVIOUS ANSWER

(Continued from page 163)

America's direct reply to the submarine menace has been an effective reply. When the critic of our shipbuilding progress points out that we are not building merchant ships fast enough to overcome our losses, he overlooks the fact that we are evidently building navy vessels fast enough to overcome the cause of our losses. Of the two ways of nullifying the submarine campaign, we have put the strength of our effort into the quicker, the less costly, the more practical way. It is necessary to build merchant vessels, and they are being built; but it is necessary also to build a fleet to protect merchant vessels, and it was wiser to devote our first efforts to that end, even if it limited our power to turn out a merchant marine fast enough to recoup our first losses. As time goes on, it becomes more and more apparent that we have done right in devoting a considerable part of our shipbuilding facilities to strengthening our "first line of defense."

In the same way, critics of our war progress are advocating the melted-butter program in our fight against food-shortages. It is argued that instead of adopting measures of food control and food conservation and price-fixing, we should have devoted all our efforts to encouraging an increase of food production, allowing the greater prices to stimulate greater crops.

As a matter of fact, it is not the case that the American farmer has been discouraged in the planting of winter wheat. He has seeded, this year, 42,000,000 acres of winter wheat. That is 2,000,000 acres more than the year before, 150,000 acres more than ever before, and 7,000,000 acres more than his average acreage before the war. The increase over the pre-war prices has been 131 per cent in the case of wheat and 109 per cent in the case of corn. Difficulties in transportation have altered the relation of these prices in some localities—especially in the East—but for the farmer the price of wheat has been higher than the price of corn.

There has been no attempt "to regulate the prices of farm products." There has been no attempt to regulate the price of any farm product but wheat. In some instances the Food Administration has intervened at the request of the producers, to obtain a settlement in a local dispute about the price of milk. In the case of pork products the Food Administration, on the recommendation of the producers, undertook to use the purchases of the Allied governments for the purpose of maintaining a minimum price for live hogs in Chicago.

If we had not controlled the distribution and the price of wheat, the shortage in Europe would have made our white bread a delicacy of food to be had only in Fifth Avenue mansions. We would have had bread riots, industrial disorders and a possible breakdown of our whole war program. The price fixed on wheat has been high enough to encourage the patriotic desire of the farmer to raise crops large enough to help feed the world. That price has been low enough to keep down the cost of bread for the poorer classes. By a system of licenses, the middleman has been prevented from profiteering in food, and hoarding has been discouraged. The American people have loyally cooperated in all necessary measures of food conservation. We have taken a middle course between autocratic price-control and the disastrous chaos of unlimited war-time competition in the necessities of life. As in the case of the submarine, we have attacked the problem offensively as well as defensively, and fought the dog with the proper club as well as with the unctuous butter.

# DID YOU BORROW THIS COPY?

Or Did You Buy It on the News Stand? Haven't You Become a Regular Subscriber Yet?

The Independent's Story of the Great War is of new interest to the men and women of America, who must sharpen their vision, co-ordinate the daily news and think clearly on the new problems of the hour.

So you would enjoy The Independent much more if you received it every week direct as soon as published—for The Independent is a "journal of the hour" and you should read it while the events are red-hot. The Independent is called the "most satisfactory war journal in America."

You should keep all the copies in your home for ready reference, for The Independent is contemporary history.

Use the war coupon below and be convinced that a paid-in-advance subscription is best.

# SPEAKING OF INSURANCE

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

## FRATERNAL CHILD INSURANCE

THE legislature of New York has passed, and the Governor has approved, a bill, under the provisions of which fraternal insurance orders may write insurance on children.

This proposition has been under discussion by the fraternal orders and insurance commissioners for three or four years. A bill similar to the one which has now become a law was passed by the New York legislature in 1915, but it was opposed by the Superintendent of Insurance and was vetoed by the Governor, principally because it did not provide—as does the present measure—that a fraternal order must properly safeguard the interests of the new class it purposed admitting to membership.

Under the law just enacted a fraternal order which does not now maintain one class of its adult membership at adequate rates, to which the juvenile members may be transferred upon attaining the age of eighteen, may not insure children.

This provision will be understood more easily in the light of the following explanation:

All of the fraternal insurance orders now operating started granting insurance on what we will call the natural premium plan; that is, each member paid an assessment as many times in a year as it was necessary to make up the amount of the death claims incurred. It was a hat-passing arrangement. Wiser in their conceit than the mathematicians who were guiding the operations of the regular insurance companies, the advocates of assessment insurance held that reserves accumulated in advance, in addition to current mortality costs with which to meet the heavier loss ratios arising from the advancing age of the membership, were not only unnecessary but were resorted to by the companies merely for the purpose of keeping up expensive quarters and paying exorbitant salaries to officers.

Hard experience finally convinced them that the companies were right. They were confronted with a rate of mortality which could not be met under their system. They were virtually insolvent and the only thing which saved them from actual bankruptcy was the unlimited power of levying assessments which they possess. They were compelled to exercise it in many instances and to the members affected it looked like a "game of freeze-out" which their supreme councils were operating against them.

In the course of time the necessity of putting rates on something like a scientific basis found acceptance among the men managing some of the societies, and they appealed to their memberships to help them save the others.

A certain proportion were willing to do this and a new division was created in which plans and rates were recast more nearly in accordance with the requirements of solvent life insurance contracts. Some few of the societies have succeeded in transforming the whole membership to this basis, but many of them are yet operating on the old pass-the-hat principle. These would not be able to avail themselves of the privileges accorded by

the new addition to the New York insurance law.

The fraternal orders now maintaining one section of their membership on some sort of satisfactory reserve basis—even tho the remainder of the membership continued on the old assessment plan—are in a position to grant insurance to children as provided by the new law, for they are equipt with a division to which the child upon reaching eighteen may be transferred.

The reader will understand that in all these orders the assessment (or monthly instalment) plan of paying premiums has been continued, the difference being that the amount now paid each time is not solely for the purpose of meeting current mortality. That instalment now includes a sum each time which is saved—accumulated—and invested at not less than four per cent. It is the reserve.

The juvenile insurance will follow the same course. Orders undertaking it qualify under the law when they are able to put into force at one time not less than five hundred certificates on which one assessment has been paid. If, and when, the number of such certificates falls below five hun-

dred, the business must be discontinued. Funds accumulated under the juvenile class must be segregated from all other funds and a separate financial statement of them rendered to the Insurance Department at the end of each year.

The new law provides that the beneficiary under the child's certificate has no vested right in the new certificate, issued in exchange at age eighteen, in the adult class. A mother may procure insurance on her child, naming herself as beneficiary; but when the child reaches the age of eighteen he or she may name the beneficiary.

What effect will this innovation have on the business of the three or four life insurance companies which at the present time write all the industrial business, the greater proportion of which is on children from one year to eighteen years of age? It is difficult to say. If we are to judge the result by the attitude of the companies toward the bill while it was pending, we would put it down as negligible, for none of them evinced any noticeable interest.

Some years ago there was periodically public agitation against the system of child insurance on the ground that it promoted infant murder. Will the same cry arise against the extension of the system as permitted by the new law?

## ALIEN ENEMY COMPANIES

ON April 8 there was simultaneously introduced in the Senate and House of the New York legislature a bill which attracted more than usual attention in some quarters.

It became an object of curiosity and interrogation for three reasons: the time at which it came into the legislature, five days before final adjournment; the request that it be urged for passage by the Governor and the Superintendent of Insurance, and the real object underlying its proposal.

The bill purports to have emanated from the office of the Alien Property Custodian and, in brief, proposes that the assets of the United States branches of enemy and ally of enemy fire insurance companies be used in the organization of domestic companies.

By order of the Secretary of the Treasury several months ago, acting under a law recently passed by the Congress, these companies were refused licences to continue business and were ordered to liquidate.

The morning after the day on which the bills were introduced at Albany, President Hurd, of the American Defense Society, protested to Governor Whitman against rushing the measure thru the legislature. He said in his telegram:

Secretary McAdoo's refusal of licenses to enemy companies required their liquidation under the law. This proposed Act is an attempt to continue German companies under the cover of American companies. The bill would operate to continue the interest of German companies in the American insurance field. No bill of such vast importance should be rushed thru in the closing days of the legislature without a public hearing. The American Defense Society earnestly requests such a hearing.

A small diminution in fire insuring facilities naturally resulted from the suspension of the enemy companies; but the general effect on American business may safely be set down as negligible for, by comparison,

the assets thus withdrawn were insignificant. Their restoration in the shape of American companies would be of small consequence.

Fire underwriters, as such, are little concerned over the matter; but some of them, as loyal citizens of the United States and uncompromising enemies of Germany and her allies, are suspicious of the result which such an arrangement might work in preserving enemy interests during the war. No explanation accompanies the proposal save that it will utilize the capital now inactive in the interest of American trade and commerce.

But, it is pointed out, if there is a concealed purpose here to keep the plants intact and in good working order only to restore them in as good and probably better shape to their alien owners and managers after the war, why suspend them at all? "Why not let everything take the course mapped out, ending in absolute liquidation?" is the question asked. There is good common sense in the inquiry.

In considering this proposition it is impossible for me to forget that the person in charge of insurance matters under the Alien Property Custodian was for years, and up to the time the order of the Secretary of the Treasury was issued, the United States manager of a fire reinsurance company domiciled in one of the ally of enemy countries, and it is difficult for me to conclude that he has had no part in shaping this bill.

The legislature had adjourned two days when this was written, and I am as yet unadvised as to the action, if any, it took; but if the bill died with the session, I am not certain even that disposes of the matter and, therefore, feel that nothing has been lost in laying it before our readers now.

## COLONEL CARTER WELCOMES A FRIEND

(Continued from page 172)

here befo' this. You don't know Fitz? Most extraord'nary man; a great mind. suh; literature, science, politics, finance, everything at his fingers' ends. He has been of the greatest service to me since I have been in New York in this railroad enterprise, which I am happy to say is now reachin' a culmination. You shall hear all about it after dinner. Put yo' body in that chair and yo' feet on the fender—my fire and yo' fender! No, Fitz's fender and yo' andirons! Charmin' combination!"

It is always one of my delights to watch the colonel as he busies himself about the room, warming a big chair for his guests, punching the fire, brushing the sparks from the pile of plates, and testing the temperature of the claret lovingly with the palms of his hands.

He is perhaps fifty years of age, tall and slightly built. His iron gray hair is brushed straight back from his forehead, overlapping his collar behind. His eyes are deep-set and twinkling; nose prominent; cheeks slightly sunken; brow wide and high; and chin and jaw strong and marked. His moustache droops over a firm, well-cut mouth and unites at its ends with a gray goatee which rests on his shirt front.

Like most Southerners living away from great cities his voice is soft and low, and tempered with a cadence that is delicious.

He wears a black broadcloth coat,—a double-breasted garment,—with similar colored waistcoat and trousers, a turndown collar, a shirt of many plaits which is under-starched and over-wrinkled but always clean, large cuffs very much frayed, a narrow black or white tie, and low shoes with white cotton stockings.

This black broadcloth coat, by the way, is quite the most interesting feature of the colonel's costume. So many changes are constantly made in its general make-up that you never quite believe it is the same ill-buttoned, shiny garment until you become familiar with its possibilities.

When the colonel has a funeral or other serious matter on his mind, this coat is buttoned close up under his chin showing only the upper edge of his white collar, his gaunt throat and the stray end of a black cravat. When he is invited to dinner he buttons it lower down, revealing as well a bit of his plaited shirt, and when it is a wedding this old stand-by is thrown wide open discovering a stiff, starched, white waistcoat with ivory buttons and snowy neck-cloth.

These several make-ups used once to surprise me, and I often found myself insisting that the looseness and grace with which this garment flapped about the colonel's thin legs was only possible in a brand-new coat having all the spring and lightness of youth in its seams. I was always mistaken. I had only to look at the mismated buttons and the raveled edge of the lining fringing the tails. It was the same coat.

The colonel wore to-night the lower-buttoned style with the white tie. It was indeed the adjustment of this necessary article which had consumed the five minutes passed in his dressing-room, slightly lengthened by the time necessary to trim his cuffs—a little nicety which he rarely overlooked and which it mortified him to forget.

What a frank, generous, tender-hearted fellow he is: happy as a boy; hospitable to the verge of beggary; enthusiastic as he is visionary; simple as he is genuine. A Virginian of good birth, fair education, and limited knowledge of the world and of men.

# RED GUM

You can hardly look through a high class magazine of general circulation today without finding from one to half a dozen attractive advertising pages designed to interest the building owner or home builder in the advantages—practical as well as artistic—of some particular species of wood.

The more you study the subject of wood values, the more fascinating the subject becomes, and this is as it should be, for you live intimately with your doors, trim and panelling, and if these are chosen with taste and discrimination they are a constant joy.

The first wood which was advertised to the general public was

## RED GUM

and the public has responded most understandingly.

There are scores of America's finest hotels and literally hundreds of office buildings, apartment houses and charming private residences in which the doors, trim and panelling are made of

## RED GUM

("AMERICA'S FINEST CABINET WOOD.")

When you are looking into the subject of wood, as you must, sooner or later, write to the

**GUM LUMBER MANUFACTURERS' ASSOCIATION**  
1328 Bank of Commerce Building MEMPHIS, TENN.

and ask them to send you interesting RED GUM booklets and graphic RED GUM samples. There is no charge for them (even though they are worth quite a lot of money).

## Are You Stagnant?

Are you losing ground; are you drooping back, not forcing ahead? You know that energy is essential to efficiency. This is a business age, a forceful, live, vigorous age and every phase of human effort is measured along these lines. You cannot achieve success unless you have personal power. Cultivate this power—Gain strength and with it will come health. These two are inseparable; develop one and you gain the other. With health and strength, you are better able to gain success.

### Why Don't You Better Yourself?

If you will place yourself in my hands, every organ in your body will be brought into normal function. My system and method will vitalize you. It has done so for thousands, and again I say—it will do so for you. I can bring your forces of Nature into play. No matter what your present condition, my method is restorative—rejuvenating. You will be vitalized; the glands of your body that store secretions necessary to robust health will be invigorated; your mental activity will be increased; your energy augmented; you will be a live factor in whatever sphere you may be.

### Be Physically Fit and Mentally Able

Put more vim, more vigor, more energy in your work; be full of nerve force and physical strength and mental power; be resistant and be resourceful. I can make you tingle with vigorous life and put you on a plane that you never dreamed you could be upon, and do it easily, simply and naturally.

**STRONGFORT** Send for a free copy of my book, "Promotion and Conservation of Health, Strength and Mental Energy," and include 6c in stamps to cover mailing expenses.

THE INDEPENDENT

119 West 40th Street - New York

proud of his ancestry, proud of his State, and proud of himself; believing in states' rights, slavery, and the Confederacy; and away down in the bottom of his soul still clinging to the belief that the poor white trash of the earth includes about everybody outside of Fairfax County. When he hands you his card it bears this unabridged inscription:—

Colonel George Fairfax Carter,  
of Carter Hall,

Cartersville, Virginia.

He omits "United States of America," simply because it would add nothing to his identity or his dignity.

"There's Fitz," said the colonel as a sharp double knock sounded at the outer gate; and the next instant a stout, thick-set, round-faced man of forty, with merry, bead-like eyes protected by big-bowed spectacles, pushed open the door, and peered in good-humored. The colonel sprang forward and seized him by both shoulders.

"What the devil do you mean, Fitz, by comin' ten minutes late? Don't you know, suh, that the burnin' of a canvasback is a crime?"

"Stuck in the snow? Well, I'll forgive you this once, but Chad won't. Give me yo' coat—bless me! it is as wet as a setter dog. Now put yo' belated carcass into this chair which I have been warmin' for you, right next to my dearest old friend, the Major. Major, Fitz!—Fitz, the Major! Take hold of each other. Does my heart good to get you both together. Have you brought a copy of the prospectus of our railroad? You know I want the Major in with us on the groun' flo'. But after dinner—not a word befo'."

This railroad was the colonel's only hope for the impoverished acres of Carter Hall, but lately saved from foreclosure by the generosity of his aunt, Miss Nancy Carter, who had redeemed it with almost all her savings, the house and half of the outlying lands being, thereupon, deeded to her. The other half reverted to the colonel.

I explained to Fitz immediately after his hearty greeting that I was a humble landscape painter, and not a major at all, having not the remotest connection with any military organization whatever; but that the colonel always insisted upon surrounding himself with a staff, and that my promotion was in conformity with this habit.

The colonel laughed, seized the poker, and rapped three times on the floor. A voice from the kitchen rumbled up:—

"Comin', sah!"

It was Chad "dishin' the dinner" below, his explanations increasing in distinctness as he pushed the rear door open with his foot,—both hands being occupied with the soup tureen which he bore aloft and placed at the head of the table. In a moment more he retired to the outer hall and reappeared brilliant in white jacket and apron. Then he ranged himself behind the colonel's chair and with great dignity announced that dinner was served.

"Come, Major! Fitz, sit where you can warm yo' back—you are not thawed out yet. One minute, gentlemen,—an old custom of my ancestors which I never omit."

The blessing was asked with becoming reverence; there was a slight pause, and then the colonel lifted the cover of the tureen and sent a savory cloud of incense to the ceiling.

The soup was a cream of something with baby crabs. There was also a fish,—boiled, with slices of hard boiled eggs fringing the dish, oiled by a hedge of parsley and supplemented by a pyramid of potatoes with their jackets ragged as tramps. Then a ham, brown and crisp, and bristling all over with cloves.

Then the ducks!

It was beautiful to see the colonel's face when Chad, with a bow like a folding jack-knife, held this dish before him.

"Lay 'em here, Chad—right under my nose. Now hand me that pile of plates sizzlin' hot, and give that caarvin' knife a turn or two across the hearth. Major, dip a bit of celery in the salt and follow it with a mou'ful of claret. It will prepare yo' palate for the kind of food we raise gentlemen on down my way. See that red blood, suh, followin' the knife!"

"Suit you, marsa?" Chad never forgot his slave days.

"To a turn, Chad,—I wouldn't take a thousand dollars for you," replied the colonel, relapsing as unconsciously into an old habit. It was not to be wondered at that the colonel loved a good dinner. To dine well was with him an inherited instinct; one of the necessary preliminaries to all the important duties in life. To share with you his last crust was a part of his religion; to eat alone, a crime.

"There, Major," said the colonel as Chad laid the smoking plate before me, "is the breast of a bird that fo' days ago was divin' for wild celery within fo'ty miles of Caarter Hall. My dear old aunt Nancy sends me a pair every week, bless her sweet soul! Fill yo' glasses and let us drink to her health and happiness." Here the colonel rose from his chair: "Gentlemen, the best thing on this earth—a true Southern lady!"

"Now, Chad, the red pepper."

"No jelly, Colonel?" said Fitz, with an eye on the sideboard.

"Jelly? No, suh; not a suspicion of it. A pinch of salt, a dust of cayenne, then shut yo' eyes and mouth, and don't open them 'cept for a drop of good red wine. It is the salt marsh in the early mornin' that you are tastin', sur,—not molasses candy. You Nawtherners don't really treat a canvasback with any degree of respect. You ought never to come into his presence when he lies in state without takin' off yo' hats. That may be one reason why he skips over the Nawthern States when he takes his annual fall outin'."

"But you use it on venison?" argued Fitz.

Venison is diff'ent, suh. That game lives on moose buds, the soft inner bark of the sugar maple, and the tufts of sweet grass. There is a propriety and justice in his endin' his days smothered in sweets; but the wild duck, suh, is bawn of the salt ice, braves the storm, and lives a life of peyl and hardship. You don't degrade a' oyster, a soft shell crab, or a clam with confectionery; why a canvasback duck?

"Now, Chad, serve coffee."

The colonel pushed back his chair, and opened a drawer in a table on his right, producing three small clay pipes with reed stems and a buckskin bag of tobacco. This he poured out on a plate, breaking the coarser grains with the palms of his hands, and filling the pipes with the greatest care.

Fitz watched him curiously, and when he reached for the third pipe, said:

"No, Colonel, none for me; smoke a cigar—got a pocketful."

"Smoke yo' own cigars, will you, and in the presence of a Virginian? I don't believe you have got a drop of Irish blood left in yo' veins, or you would take this pipe."

"Too strong for me," remonstrated Fitz.

"Throw that villainous device away, I say, Fitz, and surprise yo' nostrils with a whiff of this. Virginia tobacco, suh—raised at Caartersville—cured by my own servants. No? Well, you will, Major. Here, try that; every breath of it is a nosegay," said the colonel, turning to me.

# The New Books

## The Romance of Commerce

NOW when the energy of all the world is directed toward the destruction of the accumulated wealth of generations and when the warrior has again become the hero of the hour it is a curious but not inappropriate time to bring out a volume showing forth the daring, imagination and public spirit of tradesmen, the creators and distributors of wealth. This large and desultory volume contains a vast accumulation of material, apparently gathered by various hands but with few indications of its sources. It is history written from a new point of view, that of the merchant, as the older histories were written from the point of view of the warrior or statesmen.

The Chinese as the inventors of money and the makers of silk and porcelain are first to claim the author's admiration. Next he turns to the Phoenicians and shows how this wonderful people with a territory about a third the size of Massachusetts built up a trade that extended over the whole known world and lasted for 3500 years. Greece is less important in his eyes than Phoenicia and Rome is practically ignored. But to great commercial cities of Italy, especially Venice and Florence, full and colorful chapters are developed. It illustrates the difficulty of writing history from any but the traditional viewpoint that the author has not been able to find out much of anything about how the Medici made their money, altho hundreds of volumes have been written on how they spent it.

Later the money power past to the northern cities. The Fuggers of Augsburg ruled over kings and the Hansa Towns made wars on their own account. The rest of the volume is largely taken up with the rise of merchant princes in England and their admission to the aristocracy, richly illustrated as are the other chapters with portraits and contemporary pictures.

Mr. Selfridge, as we should expect from the man who had the nerve to start an American department store in London, is an admirer of business enterprize, of the merchant adventurer, past and present. He is rather contemptuous of the plodding frugality that was the ideal of Samuel Smiles. But we should quote his own words on this interesting point:

Just as life is often so much of a gamble, so the making of a fortune possesses almost always in its formula a large quantity of risk. This is not the risk of the lottery kind, which brings success or failure on the turn of the card, nor does it depend on the element of pure chance which so many call luck. But it stakes its future on the judgment of its leader; it bets on its own conclusions. The absolutely sure things in this world are not so interesting, to say the least of it, as those which may not win, but which in winning win big stakes. Anything which places a barrier against progress, against walking in any but the old frequently trodden paths, tends to dry up the springs of imagination.

And this faculty of imagination is one of the most useful that the real man of Commerce can possess. It cuts the path thru the forest of inexperience upon which judgment can more carefully walk. Imagination urges on. It is the yeast of progress. It pictures the desirable. It is like the architect's plan, while judgment and effort follow and build. No great thing was ever accomplished by the world's greatest men or greatest merchants without imagination.

Samuel Smiles and his rules of saving, or thrift, of following in the footsteps of our

## Make the Great Outdoors Your Vacation Home

### Keep Fit, Happy and Healthy

Heed the call of the open. Live outdoors and regain energy and vim so necessary in these strenuous times. Go when and where you like. Stay as long as you please. Enjoy home-cooked meals and clean, comfortable beds—at an expense so slight that a family of four can take a vacation or tour almost as economically as they can stay at home. For a day's outing or a long tour of weeks you can enjoy perfect freedom, independent of anyone or anything.

### The "Auto-Kamp" Trailer

A complete home on wheels. Attaches to your motor car and travels along smoothly and without the slightest strain on the car. Set up in 5 to 7 minutes. Provides fully-equipped sleeping tent with two wide beds plenty big enough for four. Complete kitchen, Ice Box and Food Compartment. Everything you need for perfect comfort on the road is included. Send today for the "Auto-Kamp" catalog giving complete description, prices, etc. Don't plan your vacation until you get this book. Write us at once.

## The Bethlehem Bach Choir

### An Historical and Interpretative Sketch

BY RAYMOND WALTERS  
Registrar and Assistant Professor of English, Lehigh University

THIS book gives an interesting account of these Pennsylvania singers—"The best choir in the United States"—whose Spring festivals at Lehigh under Dr. J. Fred Wolle, Conductor, have become world famed. The religious, musical and community aspects of the choir are presented.

THERE is traced also the remarkable musical record of the Moravians of Bethlehem from pioneer days in 1741 to the present industrial era, when Charles M. Schwab fosters the production both of music and of steel at Bethlehem.

who would be very glad to receive a copy of THE INDEPENDENT with your compliments. If you will send their names and addresses by an early mail, we shall send the copies promptly.

THE INDEPENDENT

119 West 40th Street New York

fathers, may be well enough, but a long way behind the principles of the great merchant-adventurers who fearlessly planted the flag and established the outposts of the nation's Commerce in the most distant points of the civilized and incivilized earth.

*The Romance of Commerce*, by H. Gordon Selfridge. John Lane Company. \$3.

## Night in No Man's Land

WE don't know what it is because we have not been there. But could any one who wants to imagine what the sensation is ask more than he gets in this brief vivid picture?

Spread out before me like a panorama, as far as the eye could reach, were the trenches, outlined by hundreds of twinkling, flashing star-shells, some red, some green, others yellow or white. Blot out the sounds and the unmistakable odor, and it might have been a fireworks display at some summer amusement park. But the sounds! Who can describe the sounds of no-man's-land, and its environs at night. There is the nasty hollow *rat-a-tat-tat* of the machine-gun, now far off and dull, now sharp and staccato, like a snare-drum, as its hungry mouth sweeps in your direction. Then comes a series of echoes, hollow, sinister echoes, that you feel as much as hear. A spent bullet whistles past you, and dies away in the distance; a big gun booms down from afar; and over it all rises the intangible sound of men moving, living things living, or transports groaning up, and a medley of nameless noises that arise from nowhere, yet are everywhere in no-man's-land. And all about you is the smell of dank water, of blackness that is all the blacker for the distant star-shells, of dead and living things, all bound together into an odor that is the property of no place but no-man's-land.

This is only one of the remarkable passages that holds the reader breathless as he grips the covers of Sergeant Pinkerton's war book, *Ladies from Hell*. That is what the Germans called the Scotsmen in kilts who came tearing thru their lines. The name has stuck to this gallant regiment, the London Scottish, which, with Sergeant Pinkerton in it, was in the thick of the fighting beginning with the Marne.

*Ladies from Hell*, by R. Douglas Pinkerton. Century Company. \$1.50.

## Are We Civilized?

ACCORDING to Ralph Adams Cram in *The Nemesis of Mediocrity*, a revolutionary essay, one of the most startling of the war revelations is the loss of leadership. The cause of this anomalous conditions he attributes

to democracy which has reduced mankind to a dead level of incapacity.

There are those that increasingly lead under the grim schooling of war, slowly, painfully and toward an end still obscure and undetermined. Arduously they struggle to build up a following, to see the insane life of the moment and see it whole; to keep ahead of the whirlwind of hell-let-loose and direct an amazed and disordered society along paths of ultimate safety. And always the event out-distances them, the phantasmagoria of chaos whirls bewilderingly beyond, and either they follow helplessly or wake of progressive destruction.

The author carefully distinguishes between the ideal of democracy and its present method.

True democracy means three things: Abolition of Privilege; Equal Opportunity for All; and Utilization of Ability. Unless democracy, and no matter how "progressive" its methods, how apparently democratic its machinery, it may perfectly well be an oligarchy, a kakistocracy or a tyranny.

*The Nemesis of Mediocrity*, by Ralph Adams Cram. Marshall Jones Company. \$1.

## Efficient Living

*Health First* emphasizes nutrition and other common sense aspects. Dr. H. D. Chapin sees the needs which call for methods of suggestion and mental healing and takes a conservative position on their possibilities. (Century, \$1.50.)

*Good Health*, by Alvah H. Doty, is a modern version of older texts on physiology and hygiene. It lays much stress on the parts and organs of the body, but has excellent material on matters of social health, as sewage, ventilation, vacations, etc. (Appletons, \$1.50.)

The very popular methods of mental health control are illustrated by Dr. William Lee Howard's *How to Rest*. The subtitle is "Food for tired nerves and weary bodies." The author is skilful in the analysis of disturbing conditions and gives very helpful accounts of concrete cases from his practise. (Edward J. Clode, \$1.)

A much more radical and somewhat disorganized statement of the point of view of how to rest appears in *Mental Control of the Body*, by V. H. White—the result of a very eclectic experience with various forms of will cure, mental healing, etc. (Edward J. Clode, \$1.)

The "bath tub route to health" is charted in *Bathing for Health*, by Edwin F. Bowers, which combines practical directions with criticism of sundry methods and a sketch of the history of the use of water for purposes of cleanliness and health. (Edward J. Clode, \$1.)

An excellent course for all men is found in *Physical Training for Business Men*, by Irving Hancock. There are remarkably good illustrations as well as instructions based on the beginning and more advanced drills used in the regular army. (Putnam, \$1.75.)

The "water wagon" is forcibly advocated by Dr. Eugene Fiske in *Alcohol, Its Relation to Human Efficiency and Longevity*. The writer has little use for alcohol as drink or medicine but makes a fair inquiry into laboratory and insurance society investigations. (Funk & Wagnalls, \$1.)

## War Books in Brief

A "TEMPORARY GENTLEMAN" IN FRANCE. (Putnam, \$1.50.) Frank, unstudied letters written from the front by a regimental officer.

AT THE SERBIAN FRONT, by E. P. Stebbing. (John Lane, \$1.50.) A detailed record of what the Entente Army is doing in Macedonia.

STEALTHY TERROR, by John Ferguson. (John Lane, \$1.40.) Tale of grim intrigue and exciting adventure with the German Secret Service.

ROVING AND FIGHTING, by E. S. O'Reilly. (Century, \$2.) Fact-story of the author's colorful life told with good humor and engaging simplicity.

THE OUTRAGE, by Annie C. Chartres. (Knopf, \$1.35.) Powerful and exciting story of the German invasion of Belgium by the Italian poetess.

NATIONAL MINIATURES, by "Tattler." (Knopf, \$1.50.) Short, breezy, picturesque portrait sketches of the public men and women of our day.

FRONT LINES, by Boyd Cable. (Dutton, \$1.50.) Tense stories of "the Front" by a man who went there in 1914 and knows the heart of the trenches.

TRAPPED IN BLACK RUSSIA, by Ruth Pierce. (Houghton Mifflin, \$1.25.) Personal letters telling of the experiences involved with her arrest as a spy.

THE MAD MONK OF RUSSIA, ILIADOR, by S. M. Trufanoff. (Century, \$2.) The life, memoirs and confessions of Trufanoff (Iliodor), for years Rasputin's closest friend.

DONALD THOMPSON IN RUSSIA, by Donald Thompson. (Century, \$2.) Letters comprising a contemporary, eye-witness record of Russia in revolution by an American.

MY EMPRESS, by Marfa Mouchanow. (John Lane, \$2.50.) Twenty-three years of intimate life with former Czarina Alexandra of Russia by her First Maid in Waiting.

SURGEON GROW, by Malcolm C. Grow. (Stokes, \$1.50.) The personal story of an American "fighting physician" who served with the Russians in three great campaigns.

CRESCENT AND IRON CROSS, by E. F. Benson. (Doran, \$1.25.) Describes the hideous oppression under which the subject peoples of the Ottoman Empire have so long suffered.

A SOLDIER UNAFAID, by Andre Cornet-Auquier. (Little Brown, \$1.) Human interest letters from the trenches of the Alsatian front by an officer now dead from his wounds.

RUNAWAY RUSSIA, by Florence Harper. (Century, \$2.) The Russian Revolution as seen thru a woman's eyes, and with special reference to the catacyclism as it affected women.

BATTERING THE BOCHE, by Preston Gibson. (Century, \$1.) A brilliant, dramatic account of fighting on the West Front by a young American dramatist who was in its midst.

MISS PIM'S CAMOUFLAGE, by Lady Stanley. (Houghton Mifflin, \$1.50.) High-spirited tale of adventure, written with vividness and humor and with a wealth of knowledge of war-time conditions.

WHERE DO YOU STAND? by Hermann Hagedorn. (Macmillan, 50 cents.) A fervent appeal to German-Americans to come out squarely and enthusiastically in support of the United States against Germany.

## THE BEST INVESTMENT

BY EDMUND C. CONVERSE

CHAIRMAN OF THE BOARD OF DIRECTORS  
OF THE INTERNATIONAL NICKEL COMPANY

IN the usage of the English language profound respect is given to the word "bond." Not only is it a synonym for faith kept, but it signifies a beginning or a progress in wealth. There are riches that have wings, but those that are in bonds, and especially Government bonds, are reckoned so stable, backed as they are by the assets of a whole nation, that they have always been desired as vehicles for safely handing on to his children a man's accumulations.

In older countries than this such a man's wealth is not referred to by amount or quantity. It is measured instead by yearly income. People do not say So-and-so is "worth" this or that sum; they say that his "income" is this or that amount per year.

Liberty Loan bonds are issued in denominations so low, may be bought in instalments so small and yield so high a rate of interest, that anybody able to lay by \$50 or \$100 in the course of several months finds himself provided with the same privileges of safety and annual income for his savings as only the very rich used to have access to.

To the man with a family, whose earnings make even \$100 seem a considerable sum, the "baby" issues of the Third Liberty Loan are an incomparable means to start a fund which will be as permanent as the American people.

They will provide at regular intervals a return better than that of banks. As long as this Government lasts the property will be intact and the great feature of a yearly profit indisputably guaranteed. What better species of aid and security to his dependents could a man leave? It is his duty to leave them something.

Banks and trust companies are offering subscription facilities to the thrifty which make it possible for all members of a wage earner's family to help in his permanent investment. What they are able to divert from self indulgence, little fritterings that perhaps give them no real yield even in pleasure, should add to the number of "Liberties" the family can accumulate.

The times have made it the fashion to spend as little as possible, because the discomforts and pains of those who have gone to fight make it seem a miserable kind of disloyalty to practise any sort of wastage while they are going without all the enjoyments of life—and grappling with death itself.

Every reason of instinct, patriotism, devotion to family, and desire to encourage the fighting men should attract the wage earners to this new form of spending their money, yet securely keeping it.

Commuter (anxiously)—I want to get the 12:50.

His Nibs, the Train Announcer—It's ten to one you won't get it.—*Time Table.*

It broke the fisher all up. He was fishing and a fish warden stood by and watched him, and a man came along and said to that warden:

"It's out of season to catch fish. Why don't you arrest that man?"

And the warden replied:

"True, it's against the law to catch fish, but there's no law against a man's holding a pole with a cord attached, dangling in the water. That's all he has done or is likely to do."—*New York Globe.*

## To the 100,000,000 People and 10,000,000 Bond Holders in America

THERE are now more than 10,000,000 bond holders in the United States, as against only 300,000 a year ago. The sale of the three Liberty Loans has made this a nation of bond-buyers—most of them lacking experience in investment and without the facilities for safekeeping their securities.

We offer to all investors the following invaluable service:

1. We solicit orders for Liberty Bonds in all denominations (without profit or commission).
2. We will store Liberty Bonds in our vaults without charge, clipping the coupons, if desired, and remitting to bond holders.
3. We will make collateral loans on such bonds.
4. We advise all investors to hold Liberty Bonds until maturity. However, should an emergency make it necessary to turn bonds into cash, we will sell them for the owners at the market price at a nominal charge.
5. Our statistical department is ready at any time to furnish full and accurate information on the various Liberty Loans, their conversion privileges, market, and the like, for the guidance of investors.

We invite all investors to make subscription for Liberty Bonds through us and to call at any of our offices and let us explain our Liberty Bond service in further detail. If unable to call, write us today for particulars.

## PROFITS From Investments

Your investment profits depend on something more than the mere decision to buy stocks or bonds.

Any broker can execute orders for securities when you so desire.

But it is the knowledge of WHEN and HOW best to buy that makes investments profitable to you.

Our fortnightly publication

"Investment Opportunities,"

tells WHEN — and our copyrighted

TWENTY PAYMENT BOOKLET

tells HOW. Both sent upon request for 63-IN.

**SLATTERY & CO.**  
(Inc.)  
Investment Securities

(Founded 1908)

40 Exchange Place New York

## THE TEN PAYMENT PLAN

Buy an Income Month by Month

### Share in the Profits of American Industries

through the purchase of dividend paying stocks of the country's leading corporations.

#### Advantages of The Ten Payment Plan

1. You may buy to suit your means—one share and upwards.
2. Convenient terms—initial deposit of \$2.00, the balance payable in nine equal monthly payments.
3. A systematic plan of saving—PROFITABLE WHILE YOU SAVE—and enabling you to acquire full ownership in the securities you buy.

Write for booklet D-4 and list of investment suggestions.

## Farm Mortgage Loans

Carefully selected and conservatively made in the best agricultural sections of

Kansas and Oklahoma

by one of the oldest farm loan companies in this part of the country. This business was established in 1872 by L. U. Humphrey, later Governor of Kansas. Write for booklet and list.

**The Humphrey Investment Co.**

Independence, Kansas      McAlester, Oklahoma

## One Thing You Can Buy NOW

Lacey Profit Sharing Bonds have certain inherent qualities which make them an especially desirable purchase in these times of hesitancy. The Lacey interests have never lost a cent for an investor in their 38 years of experience.

ASK FOR BOOKLET T-203

**JAMES D. LACEY TIMBER CO.**

332 S. Michigan Ave. Chicago

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

### DIVIDEND

**PACIFIC GAS AND ELECTRIC CO.**  
FIRST PREFERRED DIVIDEND NO. 15.  
ORIGINAL PREFERRED DIVIDEND NO. 49.  
The Board of Directors will meet on April 30, 1918, and declare the regular quarterly dividends to that date of \$1.50 per share upon the full-paid First Preferred and Original Preferred Capital Stock of the Company, payable by checks mailed May 15, 1918, to stockholders of record at 3:30 o'clock P. M., April 30, 1918. The transfer books will not close. D. H. FOOTE, Secretary.  
San Francisco, California, April 10, 1918.

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

- I. Patriotism and Loyalty.**
  1. Read **THE BEST INVESTMENT**. Write a letter to some person in your neighborhood, giving reasons why that person should buy Liberty Bonds. Enclose a Liberty Bond blank with your letter.
  2. Write a letter to your father, suggesting that he buy a Liberty Bond for you. Use some of the arguments suggested in the editorial **SHALL WE DO LESS THAN THEY?**
  3. Give a short speech such as you might use in selling Liberty Bonds. Make use of your speech in interviewing the people of your neighborhood, in accordance with further directions that your teacher will give you.
  4. Write an editorial article for your school paper, encouraging the students in your school to work for the sale of Liberty Bonds.
  5. Write a brief of the Message from the United States Government to the American People.
  6. Read **THE REPUBLIC OF COMMON SENSE**. Give a spirited talk in which you show the various values that are gained by the national organization of society.
  7. Give a forceful talk in which you show that it is the duty of every person in the United States to encourage absolute loyalty to the Government of the United States.
  8. Give arguments to show that internationalism, in the full sense of the word, is an impossibility.
- II. The News of the Week.**
  1. Draw a blackboard diagram to illustrate the present positions of all the forces fighting in any part of Europe. Give a talk in which you explain the purpose of recent military movements, and the significance of the present situation.
  2. Give a clear explanation of the form of government proposed for Ireland.
  3. Give orally a carefully prepared and well thought out argument for or against Home Rule for Ireland.
  4. You are an American of Irish descent. Write to your relatives in Ireland telling them what attitude they should take in the present crisis. Make your letter convincing as well as sympathetic.
  5. Select some editorial article, and show its relation to the news of the week. Explain in full the distinction between an editorial article and a news article. Write a news article concerning a recent event in your school. Write an editorial article on the same event.
- III. Literature.**
  1. Read **COLONEL CARTER WELCOMES A FRIEND**. Without using notes of any kind give orally an explanation of the situation at the opening of the selection.
  2. Give orally a description of the exterior of Colonel Carter's residence. Tell how the author's description helps us to understand the character of Colonel Carter.
  3. Give a similar description of the interior of Colonel Carter's residence. What peculiarities of Colonel Carter does the author's description make emphatic?
  4. Give a description of Colonel Carter. What characteristics of personal appearance does the author emphasize? How does the author's description of the Colonel impress the reader toward the hero of the story.
  5. Sum up the reasons that make Colonel Carter a lovable character.
  6. What is your opinion of Colonel Carter as a business man?
  7. Write an original story in which you make use of Colonel Carter as a character. Make the action of your story take place in your school, or in its neighborhood.
  8. Write a short composition in which you point out the characteristics of F. Hopkinson Smith as a writer, as revealed by this selection.
  9. Write a composition in which you show how this selection is like, or unlike, some of the preceding "Good Cheer" selections.

#### Special Articles.

1. Write a story based upon some illustration in this number of *The Independent*. Use all the persons in the picture as characters in your story.
2. Select the best written advertisement in this number. Write, in full, your reasons for making the selection.
3. Explain the author's use of verb forms in **WHERE FRANCE RECEIVES HER OWN**. How do the verb forms affect the reader's interest?

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

- I. The New Internationalism—"The Republic of Common Sense."**
  1. "There have been mighty attempts to push forward to a supernationalism." (a) Discuss one or more of the attempts referred to in the paragraph. (b) Why did each of these attempts fail?
  2. What does the author mean by (a) "the internationalism of diplomacy"; (b) "the internationalism of trade"; (c) "the internationalism of science"; (d) "the internationalism of labor"?
  3. "The old internationalism is dead." (a) What killed it? (b) What is to take its place?
  4. Discuss these two statements: (a) "... patriotism is the privilege of the few." (b) "Patriotism is the privilege of the Great State."
- II. The Third Liberty Loan—"The Best Investment," "Shall We Do Less Than They?"**
  1. Make the strongest plea that you can for investing in the Third Liberty Loan under each of these four headings: (a) "instinct," (b) "patriotism," (c) "devotion to family," (d) "desire to encourage the fighting men."
  2. Describe some of the organizations in your community which have been formed especially for the purpose of insuring the success of the Loan.
  3. Prove that the people must still have billions to loan the Government.
- III. Congressional Government—"What of Congress?" "In Washington," "The Sabotage Bill."**
  1. "... the mechanism by which laws are proposed, considered, and acted upon remains ancient and out-of-date." What is the basis for this statement?
  2. "Congress is overorganized with standing committees that do no work," etc. Is this true? If so, what remedies can you suggest?
  3. "... the important measures of the last few years neither originated in Congress nor were they fully comprehended by Congress." Cite one or more examples which prove this statement.
  4. "Congress finds the public's spokesman not in Congress, but in the President." Compare this statement with those made in the chapters on the American President in Bryce's "American Commonwealth."
  5. Do you find in the news items any evidence of the weaknesses of Congressional government?
- IV. The Fight on the Western Front—"Hints for Amateur Strategists," "More Men Now!" "Where is Blücher?" "The New German Tactics," "The Attack on Ypres," "Haig's Order," "Americans at the Front."**
  1. Why is it necessary to have a good topographical map if one wishes to follow the progress of the war intelligently? What other aids can you suggest?
  2. Why is Messines more important from a military point of view than Armentières? Why have the Germans paused in their attack near Amiens and taken up an attack near Ypres?
  3. "The fighting in France has been more like the siege of Sevastopol than like one of Napoleon's campaigns." In what sense is this true?
  4. Lay out on a map (a) the sectors held by various Allied forces, (b) chief points on the battle front, (c) the results of the German attack.
- VI. Irish Home Rule—"Home Rule for England," "Report of the Irish Convention," "Home Rule Proposed."**
  1. In what sense is it true that a Home Rule bill for Ireland should be entitled "A Bill for the Relief of the United Kingdom"?
  2. "And now when England is fighting for very life ... the Irish problem ties her hands." In what way?
  3. "The difficulties of the Irish Convention may be summed up in two words: 'Ulster' and 'Customs.'" Expand each of these two topics into two or three paragraphs.
  4. Explain some of the allusions in the sentence: "We may have imagined the scene as a kaleidoscopic mix-up of Orange and Green," etc.
  5. What are some of the positive suggestions made in the report of the Irish Convention? How many of these suggestions are embodied in the Home Rule bill which is proposed?

**"It took me just three minutes to iron this tablecloth!  
But of course I did it on my Simplex!"**

"The ironing of a tablecloth was always the most dreaded piece of my ironing. To get the desired gloss, I started with the cloth quite wet.

Then it took at least 30 minutes of the hardest kind of work (and when I was very particular, nearer an hour) to get it perfectly dry. Today, on my Simplex Ironer, I finished this cloth beautifully in just 3 minutes.

"This is only a single item. I repeat this time-saving stunt every week on my husband's shirts, my own lingerie and aprons, towels, doilies and dresser scarfs.

And curtains which used to take a half day to stretch I now finish in a few minutes. They come out beautifully and always hang straight."

# SIMPLEX IRONER

"THE BEST IRONER"

**The Simplex Ironer completes a four-hour ironing in one hour  
at a total fuel cost of 4¢. Is easy, pleasant, and safe to operate.**

Electric Drive Simplex for homes with electric current. Power ironer for the farm or washing machine user. Hand Power Simplex for the home without gas or electricity.

Can be had on easy payments and on approval. Durably made to last a lifetime. Write for our free illustrated book, "Clean Linen in Abundance." Also illustrated story, "Aunt Eliza from Boston."

*Consult our Service Department in planning and arranging your home laundry—no obligation.*

**AMERICAN IRONING MACHINE CO., 508-168 N. Michigan Ave., CHICAGO**

*We also make Ironing Machines and Equipment for the Small or Hand Laundry, Hotel, Institution, etc. Write for catalog.*

## REMARKABLE REMARKS

The most popular department of The Independent—to judge by the extent to which it is copied by other journals—is Remarkable Remarks. But that column is confined to contemporaries and so when we happen to come across a quotable sentence that was said some time ago we cannot get it in there. Now timeliness, we grant, is a consideration of importance. But in the realm of remarks timeliness is not dependent on occasion. This week, therefore, we have harked back for the Remarkable Remarks. In order not to conflict with the R. R. column we shall call these

### LIVE REMARKS BY DEAD AUTHORS

**WILLIAM PENN**—Wars are the duels of princes.

**GOETHE**—Every solution of a problem is a new problem.

**LORENZO DE' MEDICI**—He only knows how to conquer who knows how to forgive.

**CONFUCIUS**—Of all people girls and servants are the most difficult to behave towards.

**VAN GOGH**—Do not think that the dead are dead: as long as there are the living the dead shall live.

**E. VON HARTMANN**—The source of all wrongdoing is selfishness and it is the problem of ethics to make it harmless.

**H. D. THOREAU**—I would rather sit on a pumpkin and have it all to myself than to be crowded on a velvet cushion.

**FRANCIS BACON**—We think according to our nature; speak as we have been taught but act as we have been accustomed.

**DUKE COSMO OF FLORENCE**—We read that we ought to forgive our enemies but we do not read that we ought to forgive our friends.

**PLATO**—Do not employ force in educating the children but make their study a sort of play so that you may be better able to discern their natural aptitudes.

**HENRI FREDERIC AMIEL**—The world, which is only eager to silence you when you do speak, is angry with your silence as soon as its own action has killed in you the desire to speak.

**THOMAS CARLYLE**—A Preaching Friar settles himself in every village and builds a pulpit which he calls Newspaper. Therefrom he preaches what most momentous doctrine is in him for man's salvation.

**EUGENE FIELD**—A vigilant and active soul invariably compels boldness, so destructive are the growth and operations of the soul to those vestigial features which humanity has inherited from those grosser animals, our prehistoric ancestors.

**THOMAS HOBBES**—The passions of men which asunder are moderate, as the heat of one brand; in Assembly are like many brands, that inflame one another (espe-

# He Saved \$2 a Week— Now Worth \$450,000

Amazing Story of a Man Who Learned the Secret of Saving, Which is  
Now Made Easy for Any One Through a New Simple Method

By PETER RHODES

I have read many a good story of achievement and money making in the American Magazine, but I doubt if I recall one more striking and more practically suggestive than this true incident recited in the April number by the president of one of the largest Savings Banks in New York City.

Here is the story just as the bank president told it:

"A middle-aged man came into my office a few days ago.

"I owe everything I have in the world today to your Savings Bank," were his first words.

"How's that?" was my reply.

"About fifteen years ago," he said, "I began to deposit \$2 a week in your bank. I was making only \$12 at the time, but week after week I kept it up until I had saved about \$800. Then came my great opportunity. A man in the shop where I was working showed me something he had invented. The more I studied it the more enthusiastic I got about its possibilities. We drew up an agreement, he to furnish the invention, and I the capital. We started in a small way, of course, but today—"

"He paused and drew a slip of paper from his pocket.

"This is what I personally am worth today," he said simply.

"The sum on the slip of paper was \$450,000!

"Yet, except in the size of the final figure, that particular instance is not unusual. Every day one hears of men who have saved their earnings, have found a chance to invest them in business and, because they were able to seize that opportunity, have made good."

How much have YOU saved in the past 12 months?

How much have YOU put in the savings bank? Or in War Savings Stamps? Or in Liberty Bonds? Or into that fund for your new home? Or into the family luxury fund?

To face such questions as these—and face them squarely—and answer them honestly—is a wholesome experience, for any man or woman. It is positively essential in such times as these!

I don't mean this in a preaching sense but just on the basis of your own personal comfort and welfare, and your qualifications as a good citizen and patriot.

If you tell me "I can't seem to save a dollar more, no matter how much I make, or how hard I try," I tell you it is simply because you have not learned the simple secret of handling your money. You have not discovered how EASY it is to apply a system that will cut down your expenses and put money in the bank—and free your mind from the worry that

slows you up in business and everything else you do.

YOU CAN SAVE.

And still have MORE money for the things you want than you ever dreamed was possible.

I will now show you how.

Whether your income is \$1,000, \$2,000 or \$5,000 a year, the new method which I shall describe here will amaze you when you see how many ways it discloses for saving the money you have frittered away without thinking or knowing where it went.

THE FIRST SECRET OF SAVING

Is to know what becomes of your money.

The second is to know how much you can AFFORD to spend.

THE FERRIN MONEY SAVING ACCOUNT BOOK has been designed to meet these two cardinal requirements.

This is how it works:

1. Estimate your expenses in advance. The Ferrin System will make it as easy as A B C.
2. Put your items down in a budget. The Ferrin Account Book has a budget device that experts have pronounced the greatest invention in the history of family and personal accounting.
3. Figure out how much you will probably need for food, light, heat, clothes, entertainment and so on. Leave no expense unlisted—no matter how small, for it is the small leaks that drain the cash account and bring that unpleasant shock at the end of the month, when you find your balance on the wrong side of the book, and must disappoint the wife and children who have been looking forward to certain comforts and pleasures. Set aside a liberal amount for miscellany and emergency.
4. When all expenses have been taken care of, set aside the balance to SAVE. Do not try to save too much. The way to be sure of saving money is to allow yourself enough to meet your expenses without drawing on your savings account.
5. By setting aside a specified amount for each of your needs you will never worry about bills—for no bill will ever surprise you. Your Ferrin Account Book and Budget will prevent that. When the rent comes due you will HAVE IT. When you need new clothes you will HAVE THE CASH FOR THEM.

When you go to the theatre you will go with a free mind and a clear conscience. You will enjoy yourself ten times as much because you will KNOW you are spending money that you can afford to spend and that has been specifically set aside for that purpose.

## The Ferrin Account System

grew from the realization that a simple automatic system of accounting was absolutely essential to success in personal money matters.

This amazingly simple method has been introduced by the Independent Corporation, because the publishers of The Independent (and Harper's Weekly) recognize the nation-wide need of such a device—at this time especially—and because the founding of such a system of money saving fits closely with the program of efficiency which is being developed by its Efficiency Service and its Division of Business Education.

The Ferrin Money Saving System is encompassed in a handsome dark blue seal grain fabrikoid, semi-flexible, account book, stamped in gold. It contains 112 pages, size 8¼ x 10¼ inches. This wonderful aid to money saving, this

watch dog of your income and expenditures, will tell you to a penny where the money goes. It will keep actual track of your spending and enable you to plug up the leaks which keep most people poor. It will keep you out of debt. It will keep money in the bank.

The Ferrin Money Saving Account Book is the first and only device of its kind. It is the only account book based on the BUDGET idea. It is the only one that provides for the income as well as the classified items of expense.

You simply lay out your budget according to the sample budgets given for incomes of one to five thousand dollars a year. This can be modified easily to suit your special conditions, or we will gladly arrange a budget for you, whatever your income.

BUDGETING your income on that simple Ferrin System is the most important factor in money saving and this is the only book that shows you exactly how to do it. It is more than a book—it is a system and contains compact information on keeping expense accounts; making an inventory of household goods; making safe investments and other financial matters of vital interest to every family.

## Two Minutes a Day

The Ferrin System takes only about two minutes a day. No knowledge of bookkeeping is required. Any child who can read can keep the accounts. Instead of being a hardship, saving becomes fun. Keeping records the Ferrin way is more enjoyable than a game. And the pleasure lasts forever.

## Examine It Free

So confident are we of the great value of this Ferrin Money Saving Account Book, that we will gladly send it to you on approval, without a penny in advance. Keep it a week. See how simple it is. See how much you have missed by not having it before. See how much it must mean to you from the very day you get it. Then, if you feel that you can afford not to have it, return it and you will owe nothing.

But if you feel that it means the beginning of a new era of financial independence for you, send only \$2, the small sum asked. The Ferrin Money Saving Account Book is an investment and will return its cost many times over every year. The system is good for four years, which makes it cost about 4 cents a month! And you need send no money until you see it and examine it and are satisfied that it will pay you big returns! Remember the man whose \$2 weekly savings grew to nearly half a million dollars.

Mail the coupon or letter now, while the matter is on your mind.

## GERMANY AT BAY

*Major Haldane MacFall*

A remarkable interpretation of the German menace and an impressive forecast of the peace map. Maps and illustrations. 12mo. Net, \$1.50

## NEW DORAN BOOKS

### THE REAL COLONEL HOUSE

*By Arthur D. Howden Smith*

The first AUTHENTIC story of Colonel E. M. House, the closest confidant and personal representative of President Wilson. One single revelation of a startling nature made by this volume makes possible a rewriting of America's part in the World War.

Illustrated. 12mo. Net, \$1.50

## JAPAN OR GERMANY

*Frederic Coleman, F.R.G.S.*

The inside story of the struggle for Siberia by an eyewitness. Intimate, fascinating and sound information. 12mo. Net, \$1.35

### TWO WAR YEARS IN CONSTANTINOPLE

*Dr. Harry Stuermer*

Former Correspondent, *Cologne Gazette*. An exposure of Germany's methods in Turkey, by "one German who dared to tell the truth." Sketches of German and young Turkish ethics and politics. 12mo. Net, \$1.50

### NAVAL POWER IN THE WAR

*Lieut.-Com. Charles C. Gill*

The ablest recent discussion of sea power. Adopted by the Naval Academy, approved by the Navy Department. With maps and illustrations. 12mo. Net, \$1.25

### A HERITAGE OF FREEDOM

*Matthew Page Andrews*

An historical study of the spirit of liberalism uniting England and America; uncovers a new page of history. 12mo. Boards. Net, \$0.50

### THE WAR AND AFTER

*Sir Oliver Lodge*

A searching study of the world-canker, and a vision of the Great Crusade to which the nations of the earth are called. 8vo. Net, \$1.50

## FACE TO FACE WITH KAISERISM

*By James W. Gerard*

A further exposé of how "we will come to the United States and get what we want." Contains facts which could not before be told. Includes an intimate personal record kept day by day by Gerard in Germany. Treats of the German spy system at Washington. Illustrated. 8vo. Net, \$2.00

### WOMEN WANTED *Opens up the large question: After the war—what?*

*Mabel Potter Daggett*

The astounding story of what women have done in industry since the war. The new era has come and the world doesn't know it, says the author. Illustrated. Net, \$1.50

### AN AUTUMN SOWING *In Benson's best vein*

*E. F. Benson*

What an expert can do with a familiar theme. "Among new novels, the most obviously destined to popularity."—*London Daily News*. 12mo. Net, \$1.35

### THE ESCAPE OF A PRINCESS PAT

*George Pearson*

The straight story of fifteen months in the hands of the Huns. The most appalling book yet written of the war. Illustrated. 12mo. Net, \$1.40

### THE RED CROSS BARGE

*Mrs. Belloc Lowndes*

"In dramatic constructions it is superb—novel, sympathetic and convincing in the highest degree."—*New York Tribune*. 12mo. Net, \$1.25

## FRONTIERS OF FREEDOM

*By Secretary of War Newton D. Baker*

Gives the picture of a man who is impatient of anything but the best that America can do. Contains Mr. Baker's memorable survey before the Senate Committee and his addresses to the various units at the front. 8vo. Net, \$1.50

## THE MIND OF ARTHUR JAMES

### BALFOUR

*Wilfrid M. Short*

Selections revealing the mind and opinions of this international figure, with an added section on Germany. With portrait. 8vo. Net, \$2.50

*Selections from His Non-Political Writings, Speeches and Addresses, 1879-1917*

### THE CHRISTIAN DOCTRINE OF RECONCILIATION

*By the Rev. James Denney, D.D.*

Writing to his congregation at Edinburgh, Principal Alexander Whyte said of this book: "I cannot tell you, sir, all the expansion and elevation and exhilaration and gospeling of mind and heart that have come to me from my repeated readings of that masterly book." 8vo. Net, \$2.00

### GOD AND THE SOLDIER

*By Norman MacLean, D.D., and J. R. P. Sclater, D.D.*

From a series of discussions among the chaplains in one of the great camps in France grew this vindication of orthodox Christianity as the religion of the fighting men. Practical questions, answers in non-technical language. 12mo. Net, \$1.25

### ROUGH RHYMES OF A PADRE

*By Woodbine Willie, M.C., C.S.*

If some Padres are "solemn blokes" not this. "Gawd" to him is as human as any man in the trenches. Here is something altogether new in war poetry. A book for every soldier's kit. One that has swept England. 12mo. Boards. Net, \$0.50

### THE SILVER TRUMPET

*By Amelia Josephine Burr*

Illumines the psychology of those who are left at home, or concentrates into a few lines poignant bits of drama from the war zone. Stirring with heroic appeal. 12mo. Net, \$1.00

## YOUR BOYS

*By Gipsy Smith*

Dramatic personal stories of a real man's work among the boys at the front. What real religion means to them out there. 12mo. Net, \$0.50

### THE FIERY CROSS: Some Verse for Today and Tomorrow

*By John Oxenham*

Breathing a spirit of spirituality and high endeavor—speaks directly to all who feel the vital need for a return to God and a higher spiritual life. By "the poet laureate of the war." 12mo. Net, \$1.00

**GEORGE H. DORAN COMPANY**  
PUBLISHERS NEW YORK

## W. E. FORD:

### A Biography

*J. D. Beresford and Kenneth Richmond*

Of particular significance is this singular story of a hypothetical character, who revolutionized education. 12mo. Net, \$1.35

# The Independent

## THE DIRECTOR OF AIRCRAFT PRODUCTION

The appointment of John D. Ryan to direct the manufacture of American aircraft marks another step in the progress toward business efficiency of our war organization. As president of the Anaconda Copper Mining Company, Mr. Ryan directed the largest single unit in the copper industry. Since June, 1917, he has been in Washington as assistant to Henry P. Davison in the Red Cross

## NOW FOR THE THIRD NATIONAL ARMY

**T**HE first quota of the second National Army is moving into the training camps. It consists of 150,000 men, distributed among the sixteen cantonments from Massachusetts to California. Other increments will go into training month by month thruout the year, until, so it is reported, from 800,000 to a 1,000,000 men are in the new National Army. There are now 1,600,000 men in the army, regulars, national guard and draft army. Something like two and a half million men in service and training by the end of 1918 seems to be the Government's present plan.

When he appeared before a Senate committee last week to report on his trip of inspection overseas, Secretary Baker was not ready to discuss any new plans for changes in the draft age or for other alterations in our army program. But he did say, if the Washington despatches are accurate, that "it was useless for us to send men to training camps when we had no way of transporting a vast number of soldiers to France."

Mr. Baker apparently proposes to limit the number of men who shall be called into training during the coming year by the probabilities in regard to the ships that will be available to carry them overseas. If this is his real judgment, we believe that he is making a serious mistake. Nothing is clearer than that the situation on the western front demands men, and will demand men in ever increasing numbers until the war is won. The United States must send its man-power in huge masses and with "damnable iteration" until the power of Germany is finally overwhelmed.

We ought to begin training at the first possible moment

every man for whom it is possible for us to provide living quarters, training grounds, equipment and instructors. Our goal should be not 2,500,000 men, but 5,000,000 men. We should be building the training camps for them without a day of avoidable delay.

If, when they are trained, the ships are not ready to carry them overseas, let them go on training. The longer they are at it the harder, the more expert, the more useful they will be. It would be a great calamity and a great disgrace if the next year should open with any lack of American man-power in hardened, trained and disciplined shape and in overwhelming numbers.

What if we do not see the ships now to carry them over? Ships are building; and the knowledge that a vast army will need a vast fleet within a year will speed up the ship-building as nothing else could.

Besides, to have the men and not the ships would be infinitely better than to have the ships and not the men.

The Secretary of War would do well to begin to think, to plan and to prepare, in larger figures. Cantonments take time to build. Now is the time to begin an entire new set. Soldiers take time to make from men in the street. The soldiers we shall send abroad for the spring campaign of 1919 must begin their training before 1918 is half over. We need more camps and cantonments before the summer is well under way.

The first National Army is well-nigh trained. The second National Army has begun to take its place in the training camps. The third National Army should step into the olive-drab before four months have passed. The time to speed up our preparations is now.

## THE LICHNOWSKY REVELATIONS

**A**GAIN we are indebted to the socialists for a disclosure of the devious paths of diplomacy. When Trotzky published the secret treaties that he found in the Foreign Office at Petrograd he said to the German socialists: "Do not condemn Russia alone. Go search your own archives at Berlin and you will find things just as bad." The German socialists have not yet broken into the Berlin Foreign Office, but they did in some mysterious way get hold of the secret memorandum of Prince Lichnowsky and like the Bolsheviki have published it. Prince Karl Lichnowsky was the German Ambassador in London from 1912 to August, 1914. When the war broke out he was made the scapegoat for the catastrophe and was blamed by officials and public for having blundered in handling the British situation and having been tricked by Sir Edward Grey. Smarting under this injustice he wrote out a vindication of his policy in the form of a "Memorandum of My London Mission" for preservation in the family archives. But he showed it under pledge of secrecy to a few friends. One of these gave it to an officer in the political department of the German General Staff, who as the Prince says, "completely failing to understand the importance of what he was doing" manifolded the document and sent it to a number of personages. We may question whether the officer of the General Staff was completely unaware of the importance of the memorandum which he took the trouble to manifold, and we may speculate as to how certain fragments of this document came to the hands of the Swedish Socialist journal, *Politiken*, the Berlin *Vorwärts* and the *Münchener Nachrichten*, where they were published.

Putting these scattered scraps of paper together we get a most amazing document, a glimpse of the inside workings of intrigue such as under ordinary circumstances we could not have expected until long after the death of the actors. It is a complete justification of Sir Edward Grey and Lord

Haldane, altho because of public condemnation the former has lost his office and the latter has been sent to Coventry. It is an absolute refutation of the German allegation that England made war inevitable by shutting out Germany from "a place in the sun," that is, tropical colonies. It is an emphatic confirmation of two main points in President Wilson's policy, that secret diplomacy is dangerous and that the German people were deceived into supporting the Government.

When the British Blue Books giving the history of pre-war diplomacy appeared the friends of Germany said: "Wait. This is only one side of the story. Suspend judgment till we get the German version of these events." Well, now we have it and from the official representative of the German side in the Anglo-German negotiations. And this is what he says:

I had to support in London a policy which I knew to be fallacious. I was paid out for it for it was a sin against the Holy Ghost.

Thus ended my London mission. It was wrecked, not by the perfidy of the British, but by the perfidy of our policy.

The Lichnowsky memorandum throws a flood of light upon all phases of the situation out of which the war arose. Among other things it proves:

That France had begun to forget her traditional policy of "revenge."

That the Czar was sincerely anxious to maintain peace.

That Russia was not desirous of driving the Sultan from Constantinople.

That England offered Germany more opportunities in Africa than she was willing to take.

That England conceded to Germany an extension of the Bagdad railroad to Basra, which was more than Germany expected.

That treaties settling all questions about Africa and Turkey had been agreed upon.

That Sir Edward Grey wanted to make these treaties public but Germany refused.

That Sir Edward Grey had worked earnestly for peace in the Balkans.

That the German military party had determined on war in 1916 but seized the opportunity of the Austrian Archduke's assassination to precipitate the conflict before Russia was ready.

That at the Potsdam council of July 5, 1914, the German authorities unanimously approved of the Austrian ultimatum to Serbia.

That England had no intention of making war on account of jealousy of the expansion of Germany's trade or navy.

That Germany knew that England would not attack, but would defend France and Belgium.

What Prince Lichnowsky says of the crucial week in which war and peace hung in the balance we must quote in his own words:

As appears from all official publications, without the facts being controverted by our own White Book which, owing to its poverty and gaps, constitutes a grave self-accusation:

1. We encouraged Count Berchtold to attack Serbia, altho no German interest was involved, and the danger of a world-war must have been known to us—whether we knew the text of the ultimatum is a question of complete indifference.

2. In the days between July 23 and July 30, 1914, when M. Sazonoff emphatically declared that Russia could not tolerate an attack upon Serbia, we rejected the British proposals of mediation, altho Serbia, under Russian and British pressure, had accepted almost the whole ultimatum, and altho an agreement about the two points in question could easily have been reached, and Count Berchtold was even ready to satisfy himself with the Serbian reply.

3. On July 30, when Count Berchtold wanted to give way, we, without Austria having been attacked, replied to Russia's mere mobilization by sending an ultimatum to Petersburg, and on July 31 we declared war on the Russians, altho the Czar had pledged his word that as long as negotiations continued not a man should march—so that we deliberately destroyed the possibility of a peaceful settlement.

In view of these indisputable facts, it is not surprising that the whole civilized world outside Germany attributes to us the sole guilt for the world war.

Altho Prince Lichnowsky's statement is of absorbing interest it is after all not so much a revelation as a confirmation. It contains little that was not known or at least confidently believed by the Allies and the neutral world. The fact that Germany and England had come to an agreement in regard to their disputed spheres of influence in Africa and Mesopotamia was commonly understood and freely discussed before the war; see for instance *The Fortnightly Review*, February 2, 1914, p. 215. But it has not been realized how exceedingly generous England was in assigning African and Asiatic territory to Germany. In the treaty which Prince Lichnowsky and Herr von Kühlmann had negotiated with Sir Edward Grey in 1914 the Germans were allowed to extend their railroad beyond Bagdad, its proposed terminus, to Basra, thus resigning to Germany the whole of the Tigris and Euphrates valleys with all their possibilities of river shipping and irrigation development. The Shatt-el-Arab, which connects these rivers to the Persian Gulf, was to be internationalized, thus giving the Germans a free outlet to the Indian Ocean.

By the secret treaty signed by Count Hatzfeldt and Mr. Balfour in 1898 the Portuguese colonies of Africa were to be divided into "economico-political spheres of interest" between Germany and Great Britain. This agreement was extended and made more definite in 1913. All Portuguese Angola as far as the twentieth degree of longitude was allotted to the Germans, a territory twice as large as Germany. Between this and German East Africa there lies the Belgian Congo and this also was offered to Germany by Sir Edward Grey, which, as Prince Lichnowsky says, "would have given us the right of preëemption and a possibility of economic penetration in the Congo State. But we refused this offer, out of alleged respect for Belgian sensibilities!"

Sir Edward even consigned to the Germans the Portuguese islands of San Thomé and Príncipe, altho this disappointed the French, who had hoped to get them.

Thus passed what was, in the opinion of Prince Lichnowsky, Germany's last chance at colonial empire, for this is what he sees for the future:

And what result have we to expect from the struggle of people? The United States of Africa will be British, like the United States of America, Australia and Oceania; and the Latin States of Europe, as I said years ago, will fall into the same relationship to the United Kingdom as the Latin sisters of America to the United States. They will be dominated by the Anglo-Saxon; France, exhausted by the war, will link herself still more closely to Great Britain. In the long run, Spain also will not resist.

In Asia, the Russians and Japanese will expand with their limitations and their customs, and the South will remain to the British.

The world will belong to the Anglo-Saxon, the Russian, and the Japanese, and the German will remain alone with Austria and Hungary. His sphere of power will be that of thought and of trade, not that of the bureaucrats and the soldiers. The German appeared too late, and the world war has destroyed the last possibility of catching up the lost ground, of founding a Colonial Empire.

## MAKE WAY FOR LIBERTY!

THE last call for the Third Liberty Loan is sounding. There is no question that it will be oversubscribed. The only question is, How much?

What is your part in the answer?

Have you subscribed for at least one bond? It will cost you only one dollar a week. You buy it not from what you have saved already, but from what you can save during the coming year. Fifteen cents a day will more than do it. Who cannot save at that modest rate?

Have you taken every bond you can?

It is the safest investment in the world. It pays better than the savings bank. Your investment is the practical measure of your patriotism, your devotion to American ideals, your determination that the world shall be made a safe place for decent, honorable, self-respecting people and nations to live in.

Buy a bond! Buy another bond! Buy every bond you can! Then buy one more for luck!

## THE EDUCATIONAL FOUNDATIONS

THE security and the freedom of America after the war has been fought thru and the peril of autocratic tyranny has been disposed of, will be grounded in education as well as in character and intelligence. Thru education and social pressure the elements of our population that are not yet American must be made American, and the unpatriotic who are so because they are misinformed or uninformed, must be made acquainted with national and world conditions and with true history, while the unpatriotic who are criminal or are mentally defective, must otherwise be disposed of. The great work of Americanization and of patriotic education, too long neglected, is now being carried forward effectively with all the energies and appliances that can be contributed by individual ability, carefully planned organization, and money.

This education, however, cannot be a thing apart. It must

be based upon a sound and practical elementary education, and must be developed as an essential part of public school education, college and university training, community activity and church work.

A new spirit has taken possession of secular education in this country and new ideas are everywhere bringing forth results. In every section—East, West and South—states and communities are increasing their taxation for public schools, colleges of agriculture and mechanic arts, and state universities. Education is no longer conceived as primarily useful to train clergymen, lawyers and doctors for service in church and state, altho this function was never discharged so adequately as now. It is the great body of the people that education now seeks to reach, and between the masses and the older professional groups is the great staff of engineers, chemists, sanitary and health experts, and scientific agriculturists, whose preparation for efficient usefulness is becoming year by year more thoro. The humanities, including literature, history and philosophy, are not being neglected; rather, they are being vitalized and presented in a larger perspective. The essentially new elements in education are those practical things which we now begin to see must be made the deep and solid foundations of the entire superstructure.

There is only one way in which to become adequately acquainted with the new program and what is being accomplished in carrying it out, and that is to go from county to county and state to state thruout the Union and personally inspect the schools. To one who does this the progress discovered is a revelation. Everywhere he finds that three or four fundamental things are accepted as imperatively necessary. All else must be based upon these and adjusted to them.

The first is domestic science or household economics. In sections that we have been accustomed to think of as educationally backward the investigator will find high schools, and even grade schools, equipt with the necessary arrangements and appliances for the practical teaching of cooking, the selection and economical use of foods, sewing, and the proper care of the house. There are wide regions in the United States in which the population has been inadequately nourished, not because of any real lack of food or ability to produce it, but because of waste and ignorance in its preparation. It is not an exaggeration to say that there is every reason to expect that the next generation of the American people will know what good cooking is, will be able to have it, and will insist upon getting it. The same may be said of the economical and tasteful use of fabrics in the making of clothing. Household economics is a branch of human knowledge and accomplishment that has come to stay.

Next in fundamental importance is the new training in mechanic arts. As the girls are taught household economics, the boys are taught skill in handwork, and the principles of construction. Everywhere the workshop is becoming a matter-of-course part of the school equipment, and boys leave the high schools well prepared to take up the more advanced training in the colleges of agriculture and mechanic arts.

The third fundamental is elementary biology and its practical relations to health and sanitation. There is still vast ignorance of these subjects in all parts of the country, in the great cities no less than in the rural regions. Quackery and the sale of nostrums are still lucrative, and to our shame we discover that it is still possible for the mayor of a great city to attack health and sanitary experts and, in the interests of demagoguery, to attempt to destroy the efficiency of a board of health. The only security against dangers of this kind lies in thoroughgoing and universal elementary instruction in biology, and the experiments everywhere under way demonstrate that it is entirely feasible to impart this instruction in the higher grades of the elemen-

tary schools to an extent that is well worth while, and, in a larger way, in the high schools.

The fourth fundamental is social education, and this is altogether feasible in both elementary and high schools. It includes instruction by incident, historic event, observation of things going on in the local community, and in countless other ways, upon the activities, duties and opportunities that combine to make possible coöperation and achievement thru the relationships and the institutions of human society. In this education three matters are of paramount importance. These are, the emphasis of personal duty, the ceaseless presentation of the necessity of choosing competent men instead of merely popular men for public office and the discharge of public duty, and the tireless reiteration, with a wealth of personal incident and historic example, of the obligations and ideals of patriotism.

The successful carrying on and development of education in these fundamental things calls for energy, vision and unselfishness. It is a work that cannot be achieved by spasmodic or irresponsible attempts. Wherever it is being pushed with increasing success one effective man or group of men will be found organizing and administering it. A case in point is afforded by a southern town where education has been making strides in recent years. At Jacksonville, Florida, the County Superintendent of Instruction, Mr. Fons A. Hathaway, in less than three years has obtained from the taxpayers the millions of dollars necessary to rebuild or remodel and re-equip, according to the most modern plans, all the more important school buildings, and to reorganize the courses of instruction in a way to secure the enthusiastic confidence of a progressive community. What one man can do, other men can do. But no county, town or city need expect to keep its place in the line of educational progress, or contribute anything to the new achievement, if it is content to look at the problem and the opportunity from that demagogic standpoint which has been the educational, as it is the civic and the administrative curse, of so many of our largest cities.

---

The American people are showing great activity in turning out home-made coal-tar products, especially pacifists.

---

Every little helps. Guatemala is four times as big as Belgium and Belgium was big enough to trip up the Kaiser.

---

The Germans are within gunshot of Amiens. If you want to know what is endangered read Ruskin's "The Bible of Amiens."

---

Since the Germans have occupied the Finnish islands in the Gulf of Bothnia it is rumored that they have changed their national air to *Deutschland über Aland*.

---

Russia's national flag, the papers say, will be red with the inscription "Ressiskay Sotzialyiticheskaya Federativnaya Sovietskaya Respublika." This is not a red flag. It is a red ribbon and unreadable.

---

Twenty cities in New York recently voted themselves "dry" while nineteen decided to remain "wet." There is small comfort for the supporters of the liquor traffic in that. For the twenty are a complete loss, while the eighteen represent no gain. The Empire State moves with discouraging reluctance toward prohibition—but it does move.

---

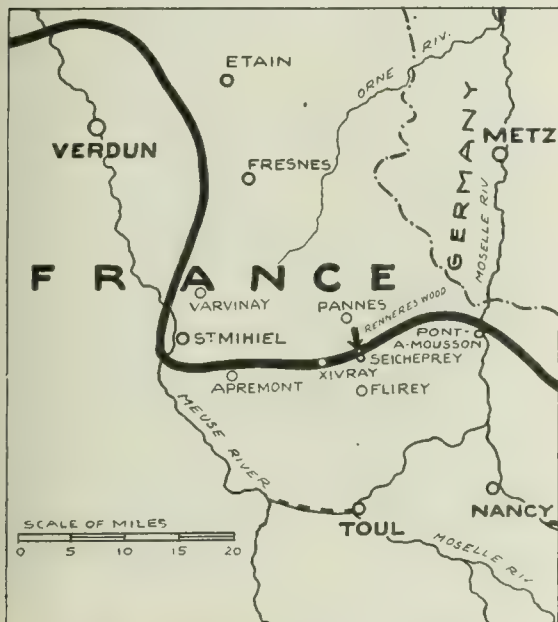

Our Navy Department announces that it has plans for a gun to shoot 105 miles. This is good news but would it not have been more courteous to leave the announcement to the other party? We should have preferred to have heard of it first in a despatch from Berlin complaining of the shells that were falling on the far side of the Rhine. It is a maxim of business men, "Do not begin to advertise too long before the opening."

---

In a popular suburb of New York during two months of the "late unpleasantness" with the thermometer, three families, aggregating eight adults and seven children, united to form one household. They saved coal, cut down living expenses, and came out better friends than when they went in—thereby disappointing the expectations, freely expressed, of their bitterest friends and dearest enemies. The experiment is worth imitating next winter—if any one dares.

# THE STORY OF THE WEEK

## THE BATTLE OF SEICHEPREY

In the attack of April 20 the Germans took the village of Seicheprey on the American front, but were expelled a few hours later

### The Attack on Seicheprey

The first attack in force which General Pershing's troops have had to withstand was delivered on Saturday, April 20, against the center of the American sector at Seicheprey. The attack was preceded by a night bombardment with high explosives and gas shells. Early in the morning a body of shock troops, said to be mostly south Saxons and numbering 1200, charged the American lines on the front of about a mile and a half. They penetrated Remières Wood on the right and from this side made their way up to the crest of the hill overlooking the village of Seicheprey. Pursuing then their tactics of infiltration by which fresh troops in small detachments are passed to the front between the troops already engaged, the Germans continued to advance until noon, reaching a mile and a quarter in advance of their original lines. Seicheprey was taken in the forenoon after fierce hand-to-hand fighting among the houses, dugouts and cellars, "whose occupants," according to the German communiqués, "were killed almost to the last man."

After noon the counter attack was delivered by the Americans with the aid of the French. The Germans made desperate efforts to prevent the arrival of reinforcements by throwing forward their airplanes at low altitudes and pouring machine gun fire down upon the advancing Americans, but the American anti-aircraft guns were brought to bear upon them, and two of their planes were brought down by American airmen. The communications with the front which had been broken by the German fire were restored and the American troops advancing from all sides drove the Germans out of the village and the Bois de Remières about five o'clock in the afternoon.

The Germans regard the engagement

as a victory and claim the capture of five officers, one doctor, and 178 men as well as 25 machine guns. The Associated Press despatch on the contrary states that no Americans were taken prisoners. Three hundred Germans were found dead in front of the German lines and their wounded must have numbered many more. They were able to hold none of the ground that they had gained. Reports from all sources agree that the Americans put up a stubborn defense and displayed great gallantry in the counter-attack. New weapons made their first appearance on both sides. A new German rapid fire pistol constructed on the principle of the machine gun was found in the hands of a German officer. On the other hand Pershing had armed his men with the wild West weapon, the sawed-off shotgun, which poured out buckshot from its double barrels in the faces of the enemy.

The Red Cross relief of the American prisoners taken in the war report that they are receiving the food and clothing sent to them. The Spanish inspectors who have charge of the Red Cross deny that the American prisoners have been hawked about the country and exhibited in cages to the insults of the civilian population. They have not been able to verify any reports of ill treatment and suffering among the Americans, and doubt the truth of them.

### Renewal of the German Drive

After a week of comparative quiet the Germans on April 24 renewed their offensive on both their salients. They met with stubborn resistance, but gained a little ground.

The drive which was started on the 21st of March was checked a week later about ten miles east of Amiens and since then has made very little progress. The point of the German wedge

London Evening News

"DON'T THINK WE'LL GO, AFTER ALL"  
The Kaiser changes his mind concerning his trip to Paris when he sees the downpour of shells

is bounded by the two rivers which join three miles east of Amiens, the Avre on the south and the Somme on the north. In the angle between the two rivers there is a group of hills overlooking the low land beyond and the immediate German objective is to gain possession of these commanding points. The village of Villers-Bretonneux on a bluff about 350 feet high was captured by the Germans after a hard fight, but was regained the following night by a brilliant exploit of Australian troops. Hangard, the village south of Villers-Bretonneux, has again been taken by the Germans. The Germans claim 2000 prisoners in the first forty-eight hours of the renewed attack. The new German tanks made their first appearance in this battle. They are larger and more heavily armed than the British, but slower and less readily maneuvered. In an encounter between these land dreadnaughts the British gained the field. An American contingent is fighting with the British and French before Amiens and is reported to have suffered heavy losses.

Simultaneously with this drive in the direction of Amiens the Germans again attacked the chain of hills south of Ypres. Here the ground gained during the first two days was little on both sides, but of greater strategic importance than in the Amiens sector. It seems that the Germans were able to penetrate thru the low section of the ridge between Wytschaete and Mt. Kemmel. This brings them close to Ypres upon the south as they already were close to this place upon the north-east and east. If the Germans succeed in gaining Kemmel, which is the dominant high of this section, it is likely to compel a withdrawal of the British forces from Ypres and perhaps the remaining part of Belgium.

## THE GREAT WAR

April 19—Italian troops appear on Somme front. Turks take Kars and Batum in Caucasus.

April 20—Germans take Seicheprey but are driven out by Americans. Armenians retake Van.

April 21—Priests administer anti-draft oath to Irish. Germans enter the Crimea.

April 22—Guatemala declares war against Germany. New British budget amounts to \$14,000,000,000.

April 23—British sink concrete-laden cruisers in harbor of Ostend and Zeebrugge. Dublin has workless day as demonstration against draft.

April 24—Germans renew drive at Amiens and Ypres. Viscount Motono resigns Foreign Ministry of Japan.

April 25—Germans gain at Wytschaete Ridge but lose Villers-Bretonneux. Germany putting pressure on Netherlands.

## Bottling Up the Belgian Ports

The capture of Antwerp in the fall of 1914 gave the Germans access to the Belgian ports of Ostend and Zeebrugge, which they have used ever since as a base for their U-boats and destroyers. In order to put a stop to this just now when it is of the utmost importance to keep the Channel passage clear, the British Navy on the night of April 22 made a brilliant raid upon the two ports in the hope of blocking their entrances. Five obsolete cruisers were filled with concrete with the intention of running them into the harbor entrance and there sinking them. The water attacking the cement would solify and it would be some time before these steel clad rocks could be blasted out of the passage. The cruisers selected for this purpose were the "Brilliant," "Sirius," "Iphigenia," "Intrepid," and "Thetis," which were constructed along in the nineties at a cost of about \$1,500,000 apiece but are now of little value, owing to the increased speed and gun-power of modern vessels.

Zeebrugge is an artificial port made by building a mole in the shape of a quadrant of a circle a mile and a half long projecting into the shallow sea. Sheltered by this, a channel 518 feet wide leads to the lock of the canal system. It appears that two of the three cruisers intended to block this channel gained the entrance, and since they were about 200 feet long, the channel is probably pretty well blocked, but as the experience of Lieutenant Hobson in attempting to block the harbor at Santiago de Cuba with the collier "Merri-mac," and the three attempts of Admiral Togo to block the exit of Port Arthur proved, it is not easy to bottle up a fleet even where the mouth of the harbor is narrow. The third cruiser for Zeebrugge grounded before reaching

its destination. Two cement laden cruisers were run ashore and blown up at Ostend, but it is uncertain whether they blocked the harbor.

The blocking ships were accompanied by a large force of monitors and small motor boats to assist in the blockading maneuver and the bombardment of the ports. The smoke screen which had been devised was not so successful as was hoped in concealing the attack, for a change of wind carried it in the wrong direction. The "Vindictive," an old cruiser, accompanied by a couple of ferry boats, was used to land the raiding party upon the end of the mole. In spite of heavy bombardment while the sea was lighted by brilliant star shells, the "Vindictive" cleared the end of the mole and landed the British marines on the inside. The Germans shouted "It's the Americans" and gave way so the landing party was able to destroy the batteries, magazines, and depots along the entire length of the breakwater. After an hour of such work the landing party reëmbarked upon the cruiser, which made its way safely out of the entrance and to the home port, altho a great hole was blown in its side by the explosion of one of the large shells. Two British submarines were sunk on the inside of the mole and there blown up, inflicting considerable damage upon the pile work and concrete. It is also reported that the locks at the entrance of the canal leading to Bruges were blown up. Besides the vessels intentionally sunk, the British lost one destroyer and four small boats. The officer who led the attack was one of the victims.

## The Situation in Siberia

Information about the momentous events occurring in eastern Siberia is fragmentary and unreliable. There are vague rumors of widespread Bolsheviki disturbances, of the organization and arming of 94,000 former prisoners from Germany and Austria to hold the railroad against the Japanese, of civil war in China, and of the establishment of a pro-Ally government in Siberia. The seat, strength and personnel of this new government have not been disclosed, but a statement of its principles has been given out from Washington. According to this information the "Government of Autonomous Siberia" is composed of zemstvos (provincial assemblies), coöperative societies, municipalities and other public organizations of the old régime, and among its declared objects are:

To oppose actively the Bolsheviki, so that the legitimate power of the All-Russian National Constituent Assembly may be securely established.

To defend the political and economic independence and the territorial integrity of Siberia.

To resist actively the peace concluded with the Central Empires by the Bolshevik Government, coöperating in this with the Allied Powers, with the view of concluding jointly with the Allied nations a general democratic peace.

To reëstablish friendly, recognized relations with the Allied and neutral nations based on existing agreements and treaties.

To take all necessary measures to counteract the further penetration of Russian territory by the enemy powers.

Press Illustrating

## COUNT CZERNIN'S SUCCESSOR

The task of picking up the pieces of Austrian diplomacy has been given to Baron Stephen Burian, appointed Minister of Foreign Affairs to succeed Count Czernin

This new Siberian government appeals to the Allies for aid. On the other hand the Bolsheviki Government at Moscow has protested to the Allies against the landing of Japanese and British forces at Vladivostok and have threatened war against them if they are not withdrawn. Orders have been given by the Moscow Government to ship all the munitions, machinery and metals at Vladivostok to European Russia. But this could not be done very rapidly even without interference, because the five thousand miles of the Siberian railroad is now almost incapacitated from bad management and dilapidation. These stores may be regarded as belonging to the Japanese, British and American firms which furnished them, since the Bolsheviki have repudiated the bonds that were to pay for them. In any case the Japanese and British troops guarding these stores would not allow them to be transported west, for they would be apt to fall into the hands of the enemy. More Japanese troops have been landed at Vladivostok to put down local disturbances by the Bolsheviki, but they do not appear to have advanced into the interior. The Associated Press report that American marines had been landed at Vladivostok is denied by Washington.

On to the "Berlin to Bagdad" no longer satisfies German ambitions. An all-rail route from the North Cape to Bagdad or even to Herat is being talked of. The control of Finland is a step toward securing the northern terminal of this extensive project.

In the brief dispatch of March 1, telling of the treaty of peace that had been signed between the Russian and the Finn there was an obscure reference to the renunciation by Russia

## THE U-BOAT NESTS

Five old British cruisers loaded with concrete have been sunk at the entrances of the Belgian ports of Ostend and Zeebrugge and the Zeebrugge mole was raided

of all claims to railroads, telegraphs, docks, fortresses and other property "on the Arctic Ocean." This was puzzling, because Finland does not extend to the Arctic Ocean, but is cut off from it by a narrow strip of Norway which connects with Russia. Now, however, we understand what this means. For even before the White Guards with German aid had retrieved their capital from the Reds they pushed north and sent an expedition to the White Sea at Kem, 150 miles east of the Finnish frontier. This expedition, it appears, was repulsed by local Bolsheviki or Red Guard with the aid of French and British marines who were guarding the railroad which runs along the western shore of the White Sea. This railroad was constructed, largely by American engineers, since the war began, for the purpose of giving Russia an ice-free harbor. The White Sea is icebound for the greater part of the year, and, since Archangel was Russia's only available European port, supplies then had to be sent via Vladivostok, 5000 miles away. But by running a railroad from Petrograd on the western instead of the eastern side of the White Sea access was had to Kola, which is on Katerina Bay, an ice-free outlet to the Arctic Ocean.

It is therefore of vital importance to the Allies to keep this connection clear. Besides, there have accumulated at Kola, Archangel and other points in this region great stores of munitions and supplies from the factories of America and the Allies for the Russian service, and it would be a serious matter if these fell into the hands of the Germans. So the British and French have put their pride in their pocket and have consented to accept a commission from Trotzky, the Bolshevik ruler of Petrograd, and to put their troops under the supreme authority of the local Soviet. They agree to supply whatever is necessary for the inhabitants and the Red Guard and not to interfere in their internal affairs. The Allies landed first a machine gun detachment and later a body of troops, sufficient, it is believed, to hold the Murman coast against any force of Finns and Germans that may be sent against it.

The coastal strip of Norwegian territory that cuts off Finland from the sea is barely twenty miles wide at one point, but to break thru it would involve an infraction of Norwegian neutrality. This might bring Norway into the war and perhaps Sweden also, for Sweden is incensed at the German occupation of the Aland Islands, which she claimed and had occupied. It is suggested that Norway might exchange a bit of her Arctic littoral for the tongue of Finland that obtrusively protrudes into Norway north of Sweden. This would give Finland access to the sea thru the Varanger or the Tana fjord.

But Russia is now weaker than Norway, so it seems more likely that the Finns will push for Kola or for a port on the White Sea. The Finns claim that the Russian Government promised them such an outlet to the Arctic

ocean thirty years ago, when Finland ceded to Russia strips of the frontier. Finland now demands the fulfillment of this pledge and has taken matters into her own hand. There is also a further menace in this movement, for, as we explained in an editorial on April 20, if the Germans get access to the Arctic thru Finland, they are likely to seize Spitsbergen with its untouched treasures of iron and coal.

#### The Dutch in Danger

So far the Netherlands have succeeded in maintaining their neutrality, altho from their position between the two belligerents they have been subjected to annoying restrictions upon both sides. Their shipping has suffered from the depredation of the U-boats and the limitation of Great Britain. The recent action of the United States in seizing the Dutch ships in American harbors, altho authorized by international law, is hotly resented in Holland. The sympathies of the people are predominantly with the Allies, for they have realized from the conditions of Belgians who have taken refuge in their country what German domination means. On the other hand the court party and to a certain extent the commercial circles are more in sympathy with Germany.

Now it appears that Germany is bringing pressure to bear upon Holland to induce that country to enter the war

upon the German side, or if not, to provoke a quarrel which might prove as an excuse for an invasion. The Germans claim that the Netherlands Government, by submitting with only a formal protest to the restrictions upon its importations and the seizure of its vessels, has virtually violated its neutrality in favor of the Allies. Germany is therefore making more counter claims which as far as disclosed seem to be demands for the transportation of munitions thru Dutch territory both by land and water, the Dutch province of Limburg projects down and cuts off the direct railroad communications between the German base of Aachen and Brussels. At one point this strip of Dutch territory is only five miles wide and it has been a great temptation to the Germans during the war to break thru it and avoid the long detour. They were deterred from this, we must assume, not so much from respect for Dutch neutrality but because of the Dutch troops that were stationed upon the border and the fear lest by adding the Netherlands to the list of their enemies they would give the Allies an opportunity of driving a wedge into the heart of Germany. The neutrality of Holland has been a great advantage to Germany as affording protection to the German right and also as supplying raw material and the opportunity of communication with the outside world.

THE GERMAN ADVANCE TOWARD THE ARCTIC

German troops in conjunction with the Finnish White Guard have taken Helsingfors from the Red or Bolsheviki forces and in the north have invaded Russia as far as the White Sea in the attempt to get possession of the new Russian railroad leading to the Arctic part of Kola. The railroad is being defended by Bolsheviki with the aid of British and French troops. The Finns are desirous of obtaining an outlet to the north either thru Norwegian territory to the Tana or Varanger Fjord or thru Russian territory to Kola and the Murman Coast.

Now, however, the military party is in the ascendant in Germany, and flushed with its recent triumphs in France, it may be willing to take the risk of a war with Holland with the hope of securing thereby its invaluable naval bases threatening England. The new demands made upon the Netherlands are said to be the privilege of shipping munitions and supplies to the German armies over the Dutch railroads and of sand and gravel thru the Dutch canals for the fortifications now being constructed upon their new front. These concessions, which would be a violation of neutrality, the Dutch Government has so far refused and it is rumored that negotiations have been broken off between the two countries.

The situation is one which very closely concerns the United States. If Germany should conquer Holland, the Dutch possessions in the East and West Indies would pass into German hands. If Holland should join or be forced into a union with the Central Powers these colonies would almost as certainly pass under German control. In either case the Allies would doubtless seize the Dutch colonies as a measure of self defense if necessary to prevent them from falling into the hands of Germany. It would, for instance, be intolerable for Great Britain to have the rich island of Java lying between Australia and India become a German possession, and it would be dangerous to American interests to allow Germany to get hold of the island of Curaçao, with its enclosed harbor, lying at the entrance of the Panama Canal.

**Canada Carries On** By abolishing all exemptions for able-bodied men between twenty and twenty-three years of age, Canada has virtually adopted conscription, tho it may be called by another name. This action apparently settles at least the question of principle for the Dominion. Whether it at the same time settles the practise remains to be seen. At any

rate, it marks the conclusion of one phase of administration of the military service act, which has been popularly and derisively called the "exemptions act."

In behalf of this law it is claimed that it has had the effect of familiarizing the Canadian public with the idea and with the possibility of compulsory military service. Its existence on the statute books is to be held responsible for the small size of the Canadian quotas to the front. "There has not been the same voluntary effort that was in evidence before the operation of the act," declares a special despatch from Toronto to the *New York Times*, "because the Government having taken the matter into its own hands, individuals waited for the Government to act. The hope is now expressed that the period of delay is over. The labor problem arising from the summary application of the new provisions will be dealt with as occasion arrives. Little has been done yet in the way of suspending unessential industries or in substitution of men physically unfit or women in some of the essential industries."

Sir Robert Borden is quoted as stating in a recent secret session of the House of Commons that Canada must keep her fighting divisions on the western front regardless of sacrifices.

**In Congress** At least two important pieces of legislation were finished last week: one, the so-called woman spy bill, which obliges women of German and Austro-Hungarian nationality to submit to the restrictions already in force for men of these nations; the other, the bill authorizing the melting of 350,000,000 silver dollars in the Treasury in order to pay off trade balances. In addition, the House advanced the war to the extent of passing the naval appropriation bill, carrying the unprecedented sum of a billion and a quarter dollars. Owing to the fact that many members of both houses were away speaking for

the Liberty loan, and that several in the Senate were attending funerals of colleagues, little progress was made in either body.

The bill fixing the price of wheat at \$2.50 a bushel was sent back to conference. The oil leasing bill, which is a consolidation of several proposals, was favorably reported to the House. Hearings on the "treason" bill in the Senate were nipped in the bud by the President's letter to Senator Overman, quoted below, after, however, much interesting testimony had been taken.

The controversy between Mr. Creel, of the Committee on Public Information, and the House concluded with the formal return by the House to the Postmaster General of the special report containing the objectionable statement. Senator McCumber disclosed a propaganda of post cards demanding of Congress, "For God's sake, hurry up," and insisted that Congress had done and was doing its duty. At the lately resumed weekly round table meeting of the Senate Military Affairs Committee with the Secretary of War, there was developed information which caused the semi-official intimation that both the air program and the ship program were "picking up." To the Senate General Crowder gave the news that under the proposed classification of the draft, 2,000,000 men will be placed in Class 1. The President signed the "sabotage" bill, providing penalties for delaying war production, without, however, the anti-peaceful strike clause.

#### On the Court-Martial Bill

A minor but interesting issue culminating in the resignation from the Department of Justice of Assistant Attorney General Charles Warren, rose to a climax and promptly thereafter fell to a conclusion last week. The issue centered around a difference of opinion as to the Chamberlain bill, which proposes that civilians violating the sedition laws be tried by court-martial. Mr. Warren prepared and submitted to Congress a memorandum advocating this legislation, and for some time hearings have been under way before the military affairs committee on the measure. Then quite suddenly Mr. Warren resigned and a few days later appeared a letter from the Attorney General to a member of Congress setting forth clearly the difference in views on the matters involved in the proposal. At the same time the President made public a letter to Senator Overman, the more important section of which is as follows:

"I am heartily obliged to you for consulting me about the court-martial bill, as perhaps I may call it for short. I am wholly and unalterably opposed to such legislation, and very much value the opportunity you give me to say so. I think it is not only unconstitutional, but that in character, it would put us nearly upon the level of the very people we are fighting and affecting to despise. It would be altogether inconsistent with the spirit and practise of America, and in view of the recent legislation—the espionage bill, the sabot-

A FRONT-LINE SUPPLY STATION

In this trench depot at La Harazee are collected periscopes, rifle and hand grenades, spiral barbed wire stakes and rifle grenade rifles. Above the trench on the right is suspended a gas alarm bell made from a shell casing

age bill and the woman spy bill—I think it is unnecessary and uncalled for.”

**Ships Are Moving** Ships are moving, according to reports from several quarters of last week's doings with this critical war material. Nor can it all be credited to Mr. Schwab, the new commander-in-chief of the construction of ships. On April 19 thirty-four new ships were announced to be ready to sail out of the Great Lakes to take their part in the trans-Atlantic trade. These particular vessels were begun by private parties and were requisitioned by the Government in the early stages of their construction. They are of the so-called “Frederickstadt” type, that is to say, they are primarily lake ships, averaging about 3100 tons. With cargoes stowed away, this little fleet may already have slipped quietly from “an Atlantic port” into the treacherous seas.

Acting in his capacity as head of the Railroad Administration, Mr. McAdoo has established a ship line service on the Great Lakes. The purpose of this move is to relieve rail congestion and facilitate the carriage of goods thru this crowded area. “Cars that have been held up on western railroads by the congestion on the central railroads,” declares an official statement, “will be immediately released with the opening of lake navigation and the loads moved east by the way of lake and railroad lines east of Buffalo, thereby releasing equipment to the western railroads for the use in their territory and relieving the railroads in the central freight territory of the saving of power, fuel, and cars that can be devoted to other business.”

Probably quite as important for the future of ships and the war is the physical removal by Mr. Schwab, of the Emergency Fleet Corporation, up to Philadelphia. “Fifty per cent of the shipbuilding in the United States is go-

© International Film

**A SUCCESSFUL CALAMITY**

President Wilson burned his hand during his ride in the big British tank “Britannia,” part of Washington's Third Liberty Loan parade. But the casualty only added a touch of realism: it failed to mar the President's enthusiastic interest in the trip

ing on near Philadelphia,” said Mr. Schwab, “and that's where I'm going to be. I consider my ability to arouse enthusiasm among the men the greatest asset I possess,” this remarkable statement continues. “I like to be out in the yards among the workers, to make them feel they are a vital part of the organization. I expect to spend

most of my time where the ships are being constructed, not only around Philadelphia, but wherever the yards are located.”

In addition to this transfer of offices and office force from the Capital to the industrial center, Mr. Schwab indicated that there might be a shakeup in the personnel of the Emergency Fleet Corporation. Chiefly, however, the changes are suggested by the way of additions rather than forced resignations.

**Secretary Baker Reports**

Before settling down into his desk chair too far, Secretary of War Baker made it a point to lay confidential reports of his trip to France before the military affairs committees of both House and Senate. This visit to Congress is to be taken no doubt as preparatory to the formal filing of recommendations to the military appropriation bill. From the news which was allowed to leak out to the public as a result of these talks with Mr. Baker, it is assumed that the Administration is not disposed to call more men any faster than they can be trained, absorbed into the military organization, equipt and sent abroad. Political gossip has it that the next attack launched on Mr. Baker will center around the question of numbers rather than around any other feature of the Administration's military policy. In the official recommendations from the War Department, to be made shortly, this issue will doubtless be raised.

**Fill the Coal Bin Now**

Out of the past chaos in the coal situation, and for the purpose of clearing up present confusion and possible future congestion, the Fuel Administration has issued an important statement to coal dealers and consumers. The gist of the statement is that coal should be ordered *now* for next winter's use. The statement explains

Paul Thompson

**THE FIRST AMERICAN TANK**

“The America,” biggest of land battleships, was built for the United States at a plant near Boston. It cost approximately \$60,000

some of the puzzling technical details of the coal business in these words:

"The Fuel Administration has been advised that coal consumers in some sections of the country are withholding their orders for coal in the expectation that the zone of distribution may be altered in a way that will broaden their sources of supply. It should be distinctly understood by coal producers, coal dealers and coal consumers that the regulations carrying out the 'zoning order' of the distribution of coal consumption were adopted in conjunction with the Railroad Administration, after the most careful study of the whole problem.

"Any modifications of the zoning plan that may be made will be in the direction of further restriction rather than toward enlarging sources of supply.

"War demands for coal as the year advances may demand still further restrictions of the consumer's freedom to choose coal.

"There should, therefore, be no further delay upon the part of coal dealers and coal consumers in placing their orders for their coal supply. Patriotism demands that orders be placed at once in order that the railroads may realize the exact transportation movement demanded for coal, and in order that production may be maintained at a maximum."

In other words, coal is the one commodity which should be "laid in" now.

#### The War Trade Blacklist

Again public attention has been brought to the foreign trade "war" which has already merrily begun. At Cincinnati the National Foreign Trade Council met and "resolutely," pointing out particularly that Germany is organizing for her campaign while her troops are still fighting to extend her territorial boundaries. "The United States has no definite foreign trade policy yet," is one of the statements issuing from the convention.

Nevertheless, on the same day the

War Trade Board at Washington made public a blacklist of some two thousand names of enemy controlled banks and industries in neutral countries with which American citizens are forbidden to trade, along with a revised list for the South American Republics. That this move is not designed to stifle American trade is evidenced by the fact that where possible the War Trade Board announces that it is prepared to suggest substitute firms. A study of these lists shows convincingly that refusal to do business with those mentioned is really a matter of serious concern. Great Britain is coöperating with the United States in this connection.

Officials of the War Trade Board have been quoted as saying that the board will probably last after the war, and that it will be looked to as a kind of general staff assigned to the duty of directing the future international trade policy of this country.

#### King Cotton Abdicates

From the Southern Cotton Association, which for selfish reasons alone might be supposed to oppose the reduction of cotton acreage, comes the news that southern farmers are this year planting sufficient foodstuffs to make them independent of all outside purchases. Specifically, more grains and more meat animals are being produced. Georgia is given as an example in general, with the hog as an exhibit in particular. According to Colonel Jordan, president of the organization, that state in 1914 bought from the West, or imported into Georgia, \$40,000,000 worth of pork; in 1917 this had decreased to \$14,000,000; and he now predicts that Georgia will get along during 1918 on less than \$10,000,000 worth of imported pork, next year raising all that it can consume locally.

Pledges to grow everything that their families and tenants need in the way of foodstuffs have been made by hundreds of farmers in the South who have been encouraged in this work by

the local authorities, by the state authorities and by the Federal Government. The gradual dethroning of King Cotton and the establishment of a "democracy of crops" is a consummation which agricultural experts, regardless of section, have been advocating for many years. It would appear that one of the by-products of the war is the stimulation of this process.

#### The Children's Chance

Recognizing the value of children to the nation in the present emergency, if not at all times, the Government is appealing to mothers of babies and to boys between sixteen and twenty-one years of age to perform two quite distinct services.

Under the title "Doing War Work at Home" the Children's Bureau has opened its propaganda for Children's Year—April 6, 1918, to April 6, 1919. "About one-third of the drafted men," says this authority, "examined for the army in this country are rejected for physical defects, many of which might have been prevented or cured in infancy and early childhood if the parents had understood how it could be done. And the defects which disqualify a man for service in the army hamper him in civil life as well."

The first six weeks of the campaign are being devoted to weighing and measuring all children under school age. Other details in the program will be announced from time to time. Among the coöperating agencies is the Women's Committee of the Council of National Defense. The Children's Bureau, Washington, D. C., is the central place to write for information.

The other movement affecting the young is the enrolling of boys for summer farm work. More than 100,000 have so far signed up in only six states, according to the United States employment service. The movement is spreading fast with, it is stated, excellent prospects both for the boys and for the crops.

#### ICEBERGS ABOARD—AN INCIDENT OF WINTER FIGHTING ON THE SEAS

"The ever present danger is the least of the sailor's troubles. He thinks more of the incessant hardships to which he is exposed," said Herman Whitaker recently in an article in The Independent describing his cruise on a United States destroyer. This is the description he gives of a storm "very similar to the conditions under which this photograph was taken: 'We were caught in a howling gale. The ocean was one huge, mountainous sea. Our decks were swept clean of all movable objects, tool chests, boats, and so forth. All of the living compartments were flooded with water; everything was wet; and to make it worse the thermometer dropt away below freezing point'"

# CUTTING OUT THE DEAD WOOD

STAFF CORRESPONDENCE FROM WASHINGTON

**T**HE real reason for having this bill before the Senate is the investigation by the Senate Committee on Military Affairs. The movement began because of certain remarks which were made by the distinguished Senator who is chairman of that committee, Mr. Chamberlain, and much good has

come from the discussion which was started at that time."—Senator Hollis, of New Hampshire, speaking on the Overman bill to empower the President to reorganize the executive departments and bureaus on a war basis.

For now these several weeks the Overman bill has been before the Senate. It is expected shortly to pass that body and go to the House. It is a peculiar bill with a peculiar history which has somehow escaped general recognition by the public. That it is regarded as important by the Administration may be gathered from the apparently well-founded rumor, current in Washington, that the President is irrevocably committed to the enactment of this legislation and that, if need be, he will push it to the limit of his ability.

What is this proposal, why is it important, what will its adoption accomplish?

The quotation just given from Senator Hollis hints at the genesis of the bill. The bill was the Administration's answer to the Roosevelt-Chamberlain drive against Secretary Baker and the Administration in general. That drive had as one objective the creation of a ministry of munitions and a "war cabinet." Two bills covering these subjects were framed and introduced and today gather dust in some pigeonhole. In their place the Overman bill was drafted, reported and presented for debate to Congress. The Overman bill is larger in scope and purpose than either of the others. It goes the whole way as against the fraction of the way which was proposed by the Republican critics and Mr. Chamberlain. It undertakes to make administration more efficient by creating an authority more centralized and at the same time more elastic.

As described by Senator Beckham of Kentucky the Overman bill comes down to this:

"... The President is not asking for more actual power, but is seeking to have Congress to give him the authority that he may 'coördinate or consolidate the executive bureaus, agencies, and offices in the interest of economy and the more efficient concentration of the Government.' In brief, he is simply asking that he be allowed to redistribute in a

more businesslike and efficient measure the power which he already has. Altho this is only a war measure, some such authority really should be given to the President in times of peace, because it is a well known fact that there is great duplication of work, many instances of unnecessary waste and extravagance in the present organization of our departments and bureaus. The attention of Congress and of the people has been called to this fact for many years. We are all familiar with what Senator Aldrich said some years ago, to the effect that our Government, even in those times, on a more businesslike basis could be conducted for \$300,000,000 less than it did cost without sacrificing the public service. President Taft on numerous occasions pointed out the cumbersome, clumsy and expensive features of the present system. Other distinguished men and officials have time and time again commented upon it, and yet nothing was ever done to remedy it. If such reforms were needed under conditions of peace, how much more are they needed now under present conditions."

In a word, the Overman bill proposes at one stroke of the pen to make possible changes and reforms within the internal structure of the executive departments of the Federal Government which are decades overdue. To argue for this bill it is not necessary to specify these changes in detail: where none are demonstrably needed, none need be made; but where there is overlapping and duplication, even triplication, the bill permits consolidation and elimination. It places the responsibility for carrying out these processes in a single man, the Chief Executive, who, it is to be assumed, would act upon the recommendation of his cabinet and advisers. To put it differently, the Overman bill proposes to let what is commonly called "the Government" as distinguished from Congress and the courts, rearrange itself in the light of the new, numerous and multiplied duties imposed upon it by the exigency of the war. By enacting this bill Congress will be saying: "Here, clean up your business; cut out the dead wood; hitch up your teams; pull together!"

branches of the Government of muddling and failure to cooperate.

At this point we can begin to see where the rub is. The executive departments were created by Congress, first one, then another, then more, and finally the avalanche of the last few years and months. While nominally under their respective chiefs, these departments are nevertheless tributary to Congress in that they must seek their funds from that body. A great deal of the time of many members of Congress is spent at annual hearings at which representatives of the departments put in their arguments for more money to carry on projects under their direction. Before the war Congress determined not only the amounts of money to be expended *in toto* for each bureau, but fixed also the itemization of the sub-appropriations down to the sum allowable for stationery, rent and the salaries of individual employees. The gradual growth of this system has imposed on Congress not only a vast amount of detailed work, comparable to figuring tariff schedules or regulating railroad rates, but it has also rendered the development of the bureaus inflexible and made it necessary to pay for an extra clerk at \$1200, or beg for another field agent to relieve an overburdened staff and prevent the loss of time and money.

Now, while it is true that the Overman bill as originally reported, did not permit the expenditure of money for any purpose other than that for which it was appropriated, nevertheless by permitting rearrangement of offices and functions, it did allow the expenditure of money by a different agency from that originally charged with the duty. This proposition, in the opinion of many members of Congress, is the sticking point in the bill. It is removing from the legislative branch of the Government to the executive branch a power which the former is loath to abandon. This is a power of which Congress is and long has been exceedingly jealous.

Year after year Congress expends precious time listening to arguments for and against a proposition to move the Bureau of This in the Department of That into [Continued on page 219

It is a noteworthy fact that the introduction of the Overman bill marked the close of the era in Congress during which the executive departments were criticized for the sins which the Overman bill is designed to correct. As long as the Overman bill is pending, just that long Congress is logically estopped from accusing the other various

The first keel was laid on shipway No. 1, one of the fifty ways in the Hog Island yard

## HOG ISLAND

BY HAMILTON HOLT

**N**EXT to the Panama Canal, the Shipbuilding Plant on Hog Island is beyond doubt the greatest industrial enterprize yet attempted in the United States. I shall never forget the panorama that unfolded itself before my eyes. Here was an absolutely flat stretch of land circling back from a straight mile and a half of water front that last summer was nothing but a dismal, soggy, salt swamp inhabited only by muskrats and mosquitoes, now a beehive of industry, and one of the great manufacturing cities of the world.

The din was deafening. A dozen switch engines were backing and filling in every direction. Giant cranes were unloading huge pieces of steel and logs from the freight cars. Donkey engines were puffing. Sirens were blowing. Those titanic human woodpeckers, the compressed air riveters, were splitting the ears with their welding. A half dozen scows were dredging the river and a dozen pile drivers were descending with giant whacks upon the logs at the water's edge. Every street was congested with chugging automobiles and autotrucks. Men were moving everywhere, between the teams and across the lots and in the open spaces. They were carpenters shingling the roofs, and painters painting the sides of buildings, common laborers digging subways and sewers and cellars. With begrimed faces and mud-encrusted shoes the men worked and walked along, laughing and shouting, singing and swearing. Hog Island was alive.

This is the shipyard that proposes to be the largest in the world, that has a contract to build fifty ways and turn out of them this year and next 120 fabricated ships for the American Government. And what is more, they are keeping up with their time schedule. This yard has already cost twenty million dollars and despite the investigating of Congress will cost twenty millions more. It is going to employ an army of 30,000 workers when it gets fully under way. Like the flower in the moving pictures that unfolds before our eyes in a few minutes from bud to blossom, Hog Island typifies the very essence of American industry, activity and enterprize.

# STOPPING THE RAT HOLE

BY PARK BENJAMIN

**T**HE attack which has just been made upon Zeebrugge—the most dangerous German submarine and destroyer base on the North Sea—appears to have resulted in the complete blocking of the waterway and the stoppage of any further egress of U-boats. It is not only one of the most important naval actions of the war, but is a novelty in naval tactics.

Zeebrugge has been the worst thorn in the side of the British Navy. It lies over three hundred miles nearer to the British coast than does the next German base to the eastward, and therefore submarines have a much shorter distance to travel and undergo less exposure in reaching their prescribed areas of operation. Because of the shallowness of the adjacent water heavy vessels cannot approach near enough to reduce the defenses by bombardment, while, on the other hand, small vessels cannot cope with the powerful batteries reinforced by submarines and destroyers. Nevertheless, shelling of the mole and harbor has gone on intermittently ever since the war began, especially by light draft monitors carrying large caliber guns.

For some time past it has been the prevailing opinion in this country that much more actively offensive warfare against the German submarines should be undertaken and that assaults on the bases from which they come forth would be fully justified, whatever the cost might be. While the existing mine fields, aeroplanes and heavy artillery behind strong fortifications have been regarded as formidable enough to support this conclusion of impossibility, in the case of Zeebrugge new difficulties are added. The submarines there sheltered have not been massed behind the mole, but in the canal some ten miles in length which leads from the harbor to Bruges, where there are extensive docks and shipyards and whither the Germans send the parts of U-boats made in many factories throughout the empire in order to be assembled.

The closing of the North Sea harbors by sinking stone or cement laden ships in the channels was proposed at the beginning of the war, and the expedient is a very old one. We tried it in order to obstruct the harbor of Charleston during the Civil War, the Russians repeatedly sought to close in the same way the roadsteads at Port Arthur and elsewhere during their war with Japan, and, of course, every one remembers Hobson's exploit with the "Merrimac" at Santiago. But none of these attempts succeeded. It is a very difficult thing to sink a ship exactly where you want it in a channel, especially if there be a strong tide or current, and, more especially still, when the enemy is filling the air with projectiles moving straight in your direction. Besides, ever since Nelson's time it has been the accepted faith that the worst thing possible is to shut up ene-

my vessels in a harbor, the proper course being to leave the channel free and induce them to come out and be destroyed in pitched battle on the open sea—as Admiral Cervera's ships were. And this precept has had its deterrent influence, even if it does not apply to submarines, which fight only under water and which emerge without being seen by the blockading ships.

**W**HOEVER invented the tactics of the recent operation has earned fame and ought to get it. Nobody, so far as naval history shows, has ever thought to supply the defense with a compellingly attractive but none the less false objective and so to mask the advance of the obstructing ships into the waterway besides affording them ample time to place themselves accurately in selected position and then settle comfortably to the bottom.

Certainly the German defenders of Zeebrugge had reason to believe that the great curved breakwater which literally makes the harbor was the main objective. After intense bombardment by the outlying monitors, the cruisers and small vessels landed their storming parties on the mole itself, while old submarines full of explosives were blown up against the structure and alongside of the piling which joined the masonry to the shore. Dense smoke screens were projected over the whole. With all this going on in that vicinity, even the brilliant illumination of the harbor elsewhere by electric lights, star shells and various fireworks does not seem to have revealed the block ships as they deliberately moved to their pre-arranged stations and quietly sank there, nor to have betrayed the presence of the destroyers searching for the canal entrance. The affair was managed, as well as designed, with consummate skill and courage.

**A**S to the probable results: We all know now that the submarine menace has by no means realized the anticipations of its promoters. What with depth bombs, and under-water projectiles and more and more agile destroyers and heavy artillery on every merchantman, and great enlightenment among merchant marines as to what convoys are for and what they themselves have got to do when under convoy, and more accumulated experience in the Navy concerning convoying than ever before existed, and latterly the provision of new means for detecting the whereabouts of an ambushed submarine, the life of the U-boat is not a happy one, and her achievements are growing small by degrees and beautifully less. If to all this is now to be added the sealing of Zeebrugge and the consequent elimination of by far the most troublesome hornet's nest in the North Sea, the ultimate failure of the U-boat campaign of ruthlessness may as well be recognized now as later on.

As to the permanency of the obstructions, time must of course tell. The Germans will certainly attempt to blow them up, which their great size will render far from easy, or dredge around them in the hope of so opening passages. Any work of this kind will be seriously impeded if the Allies keep up a shelling of the port. If any considerable portion of the Mole has been opened, the influx of sand will not only reduce the depth of water in the artificial harbor, but will all the more firmly embed the sunken ships. The unfortunate U-boats based on Zeebrugge and now at sea will be rendered homeless, for, even if they do not go aground in the effort, the obstructions will be just as effective to bar their returning to the canal as to prevent the others still in it from getting out. To find themselves obliged to continue on to Heligoland or Wilhelmshaven means a long addition to their journey infested with unsympathetic destroyers.

Of course, the question will be asked why this attack could not have been made before—and, indeed, at any time since the war began. Probably for the good and sufficient reason that no one until now thought of the way which led to success. Plenty of people, after solemnly averring that a thing is impossible, go and do it—and naval people are no exception to the rule.

**M**EANTIME one may speculate as to what Germany proposes now to do with the naval detachments and the big naval guns which are a part of her offensive array on the west front. Already a yearning desire in the Allied navies is showing itself to go in and clean up the whole Zeebrugge outfit. They are even regretting that a bigger force was not sent in with the block ships—which, perhaps, might have done this. If the German naval contingent is not rushed back to Zeebrugge, the Allies may take advantage of the opportunity to make the new raid. If it is, the offensive is that much weakened.

In any event, it is very plain that the long-urged naval attack on the German North Sea front has fairly started. The sinking of twelve German trawlers off the Danish coast a few days ago began it. The German fleet did not come out to protect them, but contented itself with muttering about what it would do if it could get out. It may, and probably will, mutter even louder when it hears of this Zeebrugge affair—but still it will not come out. That maneuver it will reserve until—now the game has started—the Allies shut up all the submarine nests, and, with the U-boat perils eliminated, send their fleets directly against the heel of the German Achilles, which is the north front. Then they will sally forth—but they will never get back.

## MY BROTHER'S KEEPER

Tenth message from the National Security League, Committee on Patriotism Through Education, of which The Independent is the official publication

BY ARTHUR M. WOLFSON

PRINCIPAL OF THE HIGH SCHOOL  
OF COMMERCE, NEW YORK CITY

IN the summer of 1914, a group of Americans and Germans sat in a café in a *Kur Ort* near Frankfurt discussing the motives of President Wilson in sending the American fleet to Vera Cruz. Eighteen American bluejackets had been killed, seventy had been wounded. To the Germans the occupation of the Mexican port was an easily understood process. The sacrifice of American lives was justified by the circumstances; Mexican rebels had violated the honor of the American flag; such violation must be paid for either in territory or in indemnities. That was the method which Germany had used in 1897 in its dealings with China when the German fleet seized the Shantung peninsula and forced the will of the Fatherland upon the Chinese Government. But to their minds the subsequent proposal made by the President that the American fleet should be withdrawn without any apologies from the Mexicans and without any indemnities was another example, as they said, of American "*Narren Politik*."

Ten years ago I recall another heated discussion in Berlin in which a group of German students attacked the Monroe Doctrine in the words of Prince Bismarck as "an international impertinence" which had no basis in any principle of international law. These same Germans were voluble in their criticisms of the United States as the "land of the almighty dollar." The Americans, they said, were materialists; they had produced no art, no music, no drama. They were busy piling up huge fortunes without any thought for the propagation of intellectual and spiritual ideals.

At the same time that the Germans were accusing the Americans of being fools in international politics, of maintaining a doctrine that was an international impertinence, they themselves were concocting deep-laid schemes of "peaceful occupation" in Latin-America. "Germany takes under her protection," they said, "the Republics of Argentina, Chile, Uruguay and Paraguay, the southern third of Bolivia . . . and the southern part of Brazil." "If the Germans do not accomplish their mission, then sooner or later, . . . the natives of Spanish and Portuguese America will be subdued and despoiled by the United States."

The Monroe Doctrine may be an international impertinence if we accept as our ideal the rules and the procedure of the European chancelleries, but it was conceived and it has been carried out in a spirit that, thus far, no European statesman has been able completely to understand. "We owe it, therefore, to candor . . . to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as

dangerous to our peace and safety" was not said by President Monroe in any spirit of national vainglory or for any purpose of selfish national aggrandizement. It was meant rather as a declaration that the American continents must henceforth be recognized as the experiment station for the development of democratic forms of government, that the people of Latin-America must be left to themselves, as far as possible, to work out the political principle that in these later days has been called the right of self-determination.

Fourteen months ago this nation was startled out of its century long dream that the American continents were safe for democracy by the publication of the Zimmerman note. The effort of the Imperial Minister for Foreign Affairs to establish a base of attack upon the United States two weeks before Germany announced its intention to resume its policy of unrestricted submarine warfare was not an example of "*Narren Politik*." For a generation the German merchant, the German banker and the German sailor have been preparing a net into which the people of the western hemisphere were unconsciously walking. German agents were to be found in all parts of Central and South America. They were consciously carrying forward, while the people of the United States were looking on untroubled, a system of "peaceful occupation." We Americans and not the Germans were the idealists and the dreamers. We believed that the Monroe Doctrine was protected by the isolation of the western continents.

In the long run we have always justified our faith in the virtue of a policy of self-government for every inch of territory that we have conquered or annexed. Even the most severe critic can scarcely allege that the United States has ever consciously interfered with the development of free institutions in any part of the western hemisphere. In 1845, it is true, we did take up arms against Mexico; we did despoil her of territory, but we might have gone much further and annexed all of her possessions. Several great European nations were eager to approve of such action and could not understand our self-denying ordinance. We might have taken what we did without compensation, but we preferred to pay what was considered a fair price. Our actions even in those days were strangely generous and altruistic, altho today they would seem reactionary should we repeat them so far have we advanced since the days when Americans held their fellow men in bond-

age. Even in 1848, there were those who protested violently against this departure from our national traditions, and ever since we have done moral penance for our violent deeds. Tho we did acquire New Mexico, Arizona and California by conquest, we have long since paid back to the people of these territories in full measure by granting them full political rights. Today the citizens of Massachusetts and the citizens of California are fighting side by side in this great struggle for democracy because both are animated by common ideals. Can the same be said of the men from Prussia and the men from Alsace-Lorraine?

There are still cynics in this country and in Europe who accuse us of entering upon the war for the liberation of Cuba in the interests of the owners of sugar plantations. The history of our dealings with Cuba and Porto Rico and our endeavor to establish self-government and ultimate freedom in the Philippine Islands is a complete answer to this accusation. In the case of Cuba we have carried out our declared intention: "That the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island except for the pacification thereof, and asserts its determination, when that is accomplished, to leave the government and control of this land to its people."

In 1911, after a generation of quiet, a new revolution broke out in Mexico. For six years the lawless acts of bandits and revolutionists continued. Twice President Wilson was forced to send troops into Mexico, but each time he held faith with the traditional policy of this country as he expressed it: "We do not stand for occupations. We do not stand for material interests. We do not stand for any narrow conception, even of political institutions, but we do stand for this, that we are bonded together in America to see to it that no man shall serve any master who is not of his own choosing."

Today we are fighting with a still broader vision. "I am proposing," said President Wilson in his address to the Senate on January 22, 1917, "as it were, that the nations should with one accord adopt the doctrine of President Monroe as the doctrine of the world: that no nation should seek to extend its polity over any other nation or people, but that every people should be left free to determine its own polity, its own way of development, unhindered, unthreatened, unafraid." If once again, most reluctantly, she has called her young men together with the sound of the bugle, it is to fight for the cause of democracy as our fathers understood it and for a cause that is even grander and more universal—for freedom and the right of peoples to self-determination in all parts of the world.

THE PRUSSIAN BIRD OF PREY

# SKY PILOTS OF THE U. S. N.

BY HERMAN WHITAKER

Herman Whitaker writes out of a full experience, with pen dipped in his own life's struggle, his stories of action and adventure. He ran away from his home in California to serve three years in the British army, busted bronchos on the Manitoba frontier, became a lumberjack in Ontario, pioneered in the Hudson Bay country, fled from the Cree Indians to California. Worked twelve hours a day and read five hours every night. Cut his niche in American literature. Went to El Paso with General Pershing, joined Villa's Saltillo campaign against Huerta. He is at the battle front now as war correspondent of The Independent

"WHAT the—" the Commander began as I stepped from the train, then concluded, "Who would have expected to see you down here?"

You see we had crost on the same transport five months before. "Down here" was a United States Dirigible Station on the south coast of France. Wherefore his surprize to see me, a civilian, there.

On the transport he had commanded a lifeboat—or would have had the U-boats gotten us—and as I remembered his careful examination of its oars, sails, sea plugs; how he had tasted the water and biscuit to make sure they were fresh; also his lecture to the boat's complement of passengers; I knew that the station was in good hands.

While we were being whirled away in a "Peaceful Henry," I took stock of his sartorial aspects, which had changed somewhat since we parted at Liverpool. A sailor on horseback has from time immemorial been something of a joke. A sailor on skates, roller or ice, wide trousers flapping like raven's wings in

rhythm with his stroke, is hardly less funny. Neither does your seaman look well at the wheel of a buggy—*horse* or *baby*. In fact it is quite hard to fit him into any background but that of the sea. His clothes and sea roll clash with all other schemes. But in their brown service uniforms, these flying sailors of ours are quite natty. But for the blue and gold shoulder straps, it were hard to tell the Commander from an officer of our line.

Like the "Heavier than Airs" I had visited at another station, the war had dumped this lot of sailor lads in queer quarters. Beyond the dead flat mile of the flying field, a river—a real one, wide, deep and swift, quite unlike the Thames and other creeks they dignify with the title across the British Channel—swept the stone skirts of a quaint, peaked French town. Here and there, low stone farmsteads splashed the dull winter green of the prospect with blobs of white. An impressionistic painter would have used up half a tube on each. As in all south-France views, fat-bellied windmills waved gray wooden arms in the distance like plethoric mil-

lers warming their hands on a frosty morning. From the dead center of all which the great canvas hangar raised its hundred feet of hight and ran like an overgrown haystack seven or eight hundred feet along the field.

The men were at dinner, when we arrived, in one of the low huts that form their home in this far-off land, and one glance at the table confirmed an impression I had gained while cruising with our destroyer fleet—that the American officer, taking it by and large, does not "eat" as well as his men. Outside the day was gray and cheerless. A damp cold wind blew over the bleak countryside. The Commander had already told me the little French town offered nothing in the way of amusement; not even a picture house. One could scarcely imagine a duller place to spend the winter months. But the men had just been made happy by the arrival of a consignment of baseball and boxing sets, footballs, a box of quoits, and were looking forward to the arrival of a Victrola and piano that were said to be on the way.

"When they come we'll be able to dance and sing in the evenings," one lad assured me with cheery optimism. "Then we'll feel all right."

"Sure we will!" another added. "And if they put us on the American Y. M. C. A. amusement circuit, we'll be happy as sand larks." And they will—that is, as happy as they can be away from Dakota or Iowa, Kansas, Alabama, California, or whatever state they happen to hail from.

At the officers' table at lunch, I got a reflex of this happiness in the satisfaction all showed at the arrival of the outfits; for it seemed that a previous consignment of boxing gloves and bats had been diverted by a U-boat to the bottom of the sea.

Of the dozen officers at the station, nearly all had trained at the dirigible school in Akron, Ohio. Many of them had been there together; and from their small nucleus had sprung this big organization which would soon be flying four large ships. One or two of them had come out of civilian life in the last six months. I believe the Commander and his lieutenant—who had also crost on the same boat with us—were the only Annapolis men. But what the others had lacked in service they more than made up in enthusiasm. They had plunged head over heels into their work; were so thoroly permeated that, so to speak, it seeped from every pore. Their conversation at table bristled with technical terms; was dark with flying lore.

The "lighter than airs" were first used to furnish eyes for the British patrol fleet

"Sondage," "angles of inclination," "ascensioned forces," "stabilizers" and "elevators," "fins," full-mouthed phrases such as these confounded my layman's ignorance. I wanted to learn—and I did; among other things that a dirigible is operated on practically the same principles as a submarine; which might be expected as air and water, the mediums they float in differ only in density. Both are fitted with narrow vertical and lateral planes, the "fins" and "equalizers," which cut the air or water sharply and deliver it in a steady stream to the rudder and "elevators." The latter are large discs placed at the ends of the "stabilizers," and are really lateral rudders. Raised, they catch the wind and send the ship up. Deprest, they pull her down. The ship swings, of course, like any sea vessel in the direction the vertical rudder turns.

Dirigibles are safer than sea planes, which fall if their motors fail; but the former can float for hours while their mechanics make engine adjustments or minor repairs. Also they can remain poised above a certain spot to deliver an attack or take an observation. The greatest advantage of all—they can stay out for thirty or forty hours and cruise seven or eight hundred miles. Because of these advantages, your "Lighter than Airs" are inclined to put on a little "swank" and look down on the "Heavier than Airs" as belonging to a primitive craft which practically represents the stone age in flying. They seemed to be in doubt, however, as to their position in the scale with the submarine till the Commander summed up a heated argument.

"We steer by landmarks over the earth, by compass at sea. It isn't necessary to learn navigation. Those submarine chaps have to know a lot more than we."

Among the things the "Lighter than Air" must know, is how to make the hydrogen gas he uses in flying. After dinner we went around to the gas house where hydrogen is stored in a canvas ometer which, in turn, is connected by canvas tubes with the dirigible ballonets so that the exact pressure required is always maintained. Three "caustic" pits, from which the gas is evolved, still lay wide open on the outside as the French had left them.

"Sondage" and "angles of inclination," those mysterious terms, explained themselves when the Lieutenant, who was showing me around the station, sent up some toy balloons to determine the wind velocity. If they rise a thousand feet vertically while traveling the same distance horizontally, the wind is stronger, of course, than if they had risen twice the height. Worked by a scale thru triangulation wind velocity is easily determined.

"Come along!" The Commander cut off the Lieutenant's explanation. "We are going to bring her out!"

"Her" was the dirigible, now due to depart on patrol. The crew of a hundred and fifty men required to handle her were already in the hangar. With its long rows of latticed steel piers rising in a graceful arch overhead like fluted columns, its vast interior spaces, the golden light that suffused in mellow streams thru the canvas roof, it looked like a great cathedral and within it, like Mahomet's coffin, which is said to hang in mid-air without support, the great ship floated light as thistledown under the arch.

Your true sailor is neat as a New England housewife and just as careful about brass and paint; this ship's crew of mechanics were giving her the last loving touches. Every bit of brass, copper, aluminum shone like silver or gold. The painted body gleamed like a grand piano. With glue and sandpaper, the master mechanic was touching up a slight abrasion on the propeller, for with the blades revolving two thousand to the minute, the slightest roughness will cause vibration, which will grow worse and worse till it finally wrecks the engine. An object so small and soft as a chestnut has been known to pierce a blade like a high power bullet and break it off thru the ensuing vibration. Accordingly, every wire, nut and bolt had been subjected to microscopic examination.

On the ship's bows she carried a Lewis gun on a swivel that permitted almost perpendicular depression; and peeping underneath, I saw in their racks on each side the four bombs she carries for the especial benefit of U-boats. Today she was also carrying practise bombs made of concrete, which she would presently drop on a target.

The sand bags and mooring [Continued on page 222]

## THE OUTDOOR LIVING ROOM

BY WINNIFRED FALES AND MARY NORTHEND

**T**IME was when the typical country house consisted of an imposing edifice to which a small porch or "piazza" formed an insignificant appendage. Today the situation is reversed and the home in the country has evolved into a small body of rooms completely surrounded by porches: another illustration of the tail that wags the dog.

With the rapid increase in the size and number of porches, has come a corresponding extension of their functions, until at the present time they are recognized centers of family and social life in summer, and even—since the creation of glass-enclosed sun porch—in winter. A generation or two ago the women of a family would drag their rocking chairs out from

*The functions of a living and dining porch may be combined if there is space enough*

the sitting room to the piazza on warm afternoons, and there sway placidly to and fro, plying industrious needles, until the setting sun, stabbing its sharp lances

should dampen their haircloth or patchwork cushions.

Today, what a difference! We eat, sleep, lounge, read, write, knit, cook,

thru the loopholes in the protecting curtain of woodbine or "creeping Jinny," forced a retreat. Occasionally, in the evening, the young folks assembled on the steps to greet the rising moon with the assurance that Nellie was a Lady, or a fervent entreaty to Bring back my Bonnie to Me-e-e. For the remainder of the twenty-four hours the piazza was deserted. It did not even have any furniture of its own except for the hammock of netted cord, the brigade of rocking chairs being daily tugged forth crabwise from the house, and as regularly tugged back again before the early dew

*The porch furnishings must be both durable and comfortable This brick-floored sun porch is nearly all of glass on three sides*

*The various types of rustic furniture are found to be happily placed on the porch of a bungalow envired by trees and rugged slopes*

receive calls, give teas and auction parties, and even get married on the porch. Once, a porch party was a rare and exciting event: now, life in the country is a perpetual porch party with three very capital P's. Moreover, the furnishing of the porch has assumed an importance not surpassed by that of any room inside the house.

And to furnish a porch is such a delightful undertaking. Makers of porch furniture and accessories strive to outdo one another in the variety and fascination of their wares, and the unfortunate possessor of only one or two porches is so wrought upon by the spectacle of hundreds of ravishing objects that she can by no means make room for, that she finds herself wishing it were possible to visit an institution for ownerless porches and adopt a round dozen.

But for the saving realization that the style of the furnishings must be in harmony with the architecture of the house, one never would be able to decide; but with the range of choice thus opportunely restricted, a decision becomes possible. Thus, the various interesting types of rustic furniture are found to be happily placed on the porch of a bungalow envired by trees and rugged slopes; and Windsor chairs, high-backed settees and gate-leg tables are automatically suggested by a stately Colonial portico, which they set off with a dignity and completeness that leaves nothing to be desired. For the many and diverse modern types of house, the range of course is wider. Woven furniture—of willow, reed, Chinese linen, prairie grass—is both suitable and attractive. Painted metal furniture with awning stripe cushions, tho designed more especially for the lawn, is no less appropriate on a terrace porch, or one floored and walled with tile, brick or cement, or with only a pergola roof. Painted wood furniture is perhaps the most decorative of all, and is equally at home in settings simple, or magnificent. Swings, hammocks and built-in seats are agreeable additions in all but the most formal surroundings.

The supreme tests of fitness for the

major furnishings of the porch are comfort and durability; the latter, of course, having special reference to furniture for open porches, which must be able to withstand exposure to the elements. The metal and woven types, and rustic furniture built of hickory and swamp cedar are all excellent in this regard. The chief drawback to the rustic chairs and settees is that they often have projecting knots and angles which, by some malignant fatality, are invariably placed where they will do the most harm. Happily, this defect can be mitigated by judicious cushioning.

Of course the element of beauty is not

terious hollows that even the best regulated chair back fails to fill.

Convenience demands that there shall be a number of small tables—those in nests are space saving—light enough to be readily moved about and placed beside a chair wherever there is a cup, plate or glass to be held, or newspapers, magazines, or a work basket.

A desk is a useful feature which, strangely enough, is rarely provided, tho there is no good reason why one who desires to write a letter should be forced either to retire indoors or resort to a tablet balanced insecurely on the knee. The desk should be

of a style that closes securely when not in use, and plenty of paper weights should be provided for anchoring the writing materials in breezy weather. Minor conveniences for the living porch include book wagons, knitting stands and smoker's tables. A tea cart may be classed among the necessities, and will justify its existence in many ways besides fulfilling its specific office of trundling forth refreshments.

It would, of course, amaze those gentle ladies of the rocking chair period to be told that a porch should have just as definite and carefully planned a color scheme as a parlor, but such nevertheless is the case. It also is true that in some respects the outdoor scheme requires the greater skill

in planning; for while it may be dictated in part by the texture and colors of the structural materials of the house, the decorative scheme must likewise be harmoniously related to that of the interior from which the porch opens, and of the landscape which it overlooks. This transition is enormously aided by a generous disposal of vines, shrubs and flowering plants, particularly if the porch is enclosed or semi-enclosed. Merely a series of plain, green-painted wooden boxes fastened to the railing, or placed across the windows of a glassed-in porch, and filled with vivid nasturtiums or geraniums, will form a connecting link between the house and garden, and one who wishes can find in the shops a bewildering and fascinating variety of receptacles for plants and cut flowers, ranging from cedar [Continued on page 226]

*In the glassed-in porch, painted lattice may be appropriately featured*

to be disregarded, tho were the most ardent devotee of Beauty for Beauty's sake offered the choice between an afternoon in a comfortable chair of exquisite design, and one which, tho unpleasing to the eye, possess the gracious faculty of conforming to the contours of the human frame, it would not be difficult to foretell his decision. As it happens, however, excellence of proportion is an essential of beauty as of comfort, and as the color or upholstery of a piece of furniture can be dictated by the purchaser, esthetic and practical ends may be simultaneously served.

In selecting porch chairs, it is a safe plan to choose those which harmonize with the proposed decorative scheme, but to test them for comfort before buying. Even then an abundance of small downy cushions should be provided for tucking into the mys-

ON this page are illustrated nine new imported English chintzes of supreme merit, all block-printed on linen except No. 8. In all of these chintzes the obligation to the past is clear, but utilized with complete discretion and rare effectiveness. All of the designs are patented in America, and I am under especial obligations to the importer for permission to illustrate them here. The selling price is much higher than that of the domestic cretonnes, but the goods are one-third wider and block-printed on linen instead of roller-printed on cotton. The color impression arouses my enthusiasm every time I look at them, especially at No. 5, the richness of which is extraordinary. Willy-nilly one is obliged to admit that chintzes like these have an independent right of existence all their own, based not upon their reproducing the effects of the loom, but upon effects original with, and unique to, the block. They are worthy to be placed side by side with the best of the creations of William Morris.

The patterns are numbered for reference as follows: In the top row, reading from the left, Nos. 1, 2, 3, and 4; in the center of the page, No. 5; in the bottom row, Nos. 6, 7, 8 and 9. No. 1, entitled the Game

# HAND-BLOCKED CHINTZES

BY GEORGE LELAND HUNTER

Birds of Europe, is an original creation of masculine strength, the best chintz for a bachelor's room that I have ever seen. No. 2 is a gentler design calculated to go with Hepplewhite or Sheraton furniture against an Adam background. No. 3 is printed from the original ancient blocks, and consequently pays fine tribute to the taste of more than a century ago. The name of No. 4, the Pergolesi

medallion, explains the source and style of the design, and associates it definitely with Adam and Wedgwood. Nos. 2 and 3, printed from the original ancient blocks, even more than No. 3 illustrates the wonderful "smudge" effects secured by the creators of long ago, but possible only in block printing. The richness of the tones is indescribable. No. 6 is a modern composition in the Chinese style of the Chippendale period, showing rococo scrolls side by side with the Chinese pagodas and cloud bands that influenced their development. The household ornaments in the vertical band suggest some of the most interesting of the Kien-Lung Chinese rugs. No. 7 is a reproduction of the chintz that for generations hung in Lord Salisbury's Hatfield House. No. 8, named Spring Flowers, is a roller print on cotton that seeks the effects of the linen block print, and succeeds to an unusual extent, but far more it must be admitted in our photographic comparison, than in comparison of the actual materials. No. 9 is a pattern of great dignity, of the Early Georgian type which flourished under the inspiration of the talented architect, Sir William Kent, who revived the heavy Palladian style brought a century before by Inigo Jones from Vicenza in Italy.

# What to Put on Your Porch

*Shielded from annoying winds one can lie at ease in a hammock like this one at the right—it swings if you like or can be held firm by metal supports*

*Decorative and useful is the porch screen below with wicker frame and cretonne panels of design and color to harmonize with other furniture*

*A chair of reed or willow like the one above gives real comfort. It is soft and yielding—yet strong. The book pocket is convenient*

*The combination settle and table above has obvious advantages including a locker for the cushions. It is painted in bright colors*

*Cakes and tea come silently and easily—at the welcome moment—if you have a summer style service wagon like this wicker one*

*A well chosen lamp helps make the porch cosy in the evening*

*A porch blind of slats like this one on the left can serve as an attractive and efficient awning—letting in the breezes but keeping out the direct sun rays*

*The slat screen at the right gives very comfortable shade to the outdoor living room*

*Arched vista from the south*

"Bear Cliff" is a concrete proof of the superior value of inspirational and practical knowledge, by contrast with pure technic. Mrs. Sturdevant got her inspiration for it in Italy from the Pantheon, and the Colosseum, and the Basilica of Constantine, and the Arch of Titus, and especially from the Aqueduct of Claudius illustrated on this page. In other words, she came back across the Atlantic with her head full of round arches which she could not get rid of until she had shaped them permanently on American soil, in stone and mortar, concrete and wood.

Mrs. Sturdevant bought for a song from the New York house wrecker of a city residence that she had once occupied, the marble tiles and much of the woodwork, and employing local masons whom she herself instructed in the making of concrete blocks and in the use of hollow tile, and in the construction of round arches, and of walls upon a solid concrete platform. How delightfully the marble tiles adorn the concrete floors can be seen in the illustrations of the entrance hall and the loggia.

But it is the Roman arches, splendidly proportioned and skilfully placed which give the house its

## ROMAN ARCHES in the Catskills

*View from the entrance hall*

The villa "Bear Cliff," an architectural masterpiece created at Cragmoor, N. J., by Mrs. A. D. Sturdevant

*The Aqueduct of Claudius (above) inspired the architecture of this loggia*

distinctive character, and make it architecturally dominant over the mountain that towers behind, and the valley that crouches 1800 feet below, opening the vista for more than fifty miles on three-quarters of the horizon.

Just note the wealth of arches in "Bear Cliff": On the eastern façade, three arches blinded with wooden shutters, above the more massive arch of the porte cochère. To the left, a large round arch, the lower part of which is blinded with a concrete wall, the upper part illuminated with small windows at the side. Still farther to the left, one of the two end arches of the loggia, which on the southern side has five of the same size, all framed in stonework laid with fine appreciation of all the possibilities of "architectural refinement." Under the end arch of the loggia, another round arch that ties itself into the rhythm of the others. Note, too, one of the studio arches seen thru the entrance hall, and the one in the upper left corner of the page, thru which one looks south from the porte cochère. Even the chair in the den is arched. Mrs. Sturdevant has achieved in "Bear Cliff" the effectiveness of rhythm in architectural line arrangement as practised by the ancient Romans.

*On the left is the studio and on the right is the eastern façade of "Bear Cliff." The arches are predominant indoors and outdoors*

# GASSING THE GARDEN

BY J. HORACE McFARLAND

THERE is always war in the garden, peaceful as it seems to the unacquainted onlooker. Plants war on each other, the so-called "weeds" aiming to absorb all soil nutriment and to take all the space they want—just like the human weeds of the Germanic nations, which have gone far in a similar attempt.

Insects live on the leaves, the bark and the juices of plants, not because they have any objection to the plants, but because they feed in that fashion, and their prosperity is adversity, and eventually death, for their boarding places. Indeed, the cycle of unchecked plant-insect life is to feed on favored food until it has been destroyed, and then to die for lack of suitable food, a few hardy individuals usually persisting to start a new cycle.

More relentless, or at least more difficult—usually—to combat, are the diseases of plants which are either fungous (living on the surfaces of plants), or bacterial (existing within the plant structure, just as diphtheria exists in a human being). These are like the German propaganda of lies or of "peace when there is no peace," because they are insidious. They are both low forms of vegetable life.

But in 1918 there is sure to be more war in more gardens than for a long time. The reason is that in 1917 many new gardens were made by many new gardeners, few of whom were prepared for bugs and funguses, while the same bugs and funguses—or fungi, to be accurate in my plurals—being always prepared to possess new territory and to exploit it completely and ruthlessly, had many great victories. They went into winter quarters—for, unlike the Huns, they do not all fight all the year—in fine fettle for the 1918 spring and summer drive. There will probably be this year bugs, and more bugs, and fungi and more fungi.

But the situation is hopeful. It does not take a year to prepare to get after these bothers, and plants can be protected, or the troubles "controlled," as the pathologists (dealing with fungi) and entomologists (fighting the insects) would say.

Spraying has been effective in combating plant enemies for more than a generation. It is yet effective, and the Huns that threaten the garden can be held in check or abolished. But spraying for the amateur, the war gardener, is complicated and bothersome. I have had much perplexity in trying to get down to my size with formula and fixtures figured by the barrel and the acre. Spraying, too, especially in summer, has to be done just at the instant of weather, wind and opportunity, and the war-gardener is usually tied to some other job at that ticklish conjunction. Spray nozzles slobber instead of misting, when they don't clog entirely. "Lime-sulfur" is a stinking and disagreeable substance, and clothes it touches won't be popular even in a rummage sale; while the question as to whether the purchased Bordeaux mixture is fresh enough to do the business may mean success or failure as it is answered yes or no.

Therefore, when as editor of the *American Rose Annual*, I received some months ago from the able pathologist of the American Rose Society an article describing a means of *dusting* for diseases and insects

*The dust gun*

which had been found to be efficacious, I got after all the details.

It has been a rule of my writing to discuss only the things I have had personal experience with. I have little patience with the garden "authors" who cultivate the encyclopedias rather than the earth! If I now break my rule, and pass on what I do not have fresh and personal working data upon, it is with due notice, and because the war in the garden needs every fighting resource that can be mustered in this war of 1918. We must take chances for food!

DOCTOR MASSEY, in the rose article referred to, shows that the vicious powdery mildew which whitens rose leaves, prior to their untimely death, and the worse "black-spot," which quickly removes the leaves, have been controlled to the extent of 92 per cent by dusting the plants seven times with a powder made up of nine-tenths sulfur and one-tenth lead arsenate. He illustrates the "gun" that blows the dust, and as I went after such a gun in a hurry, I can pass on his illustrations herewith, showing it also at work. It is a simple but well-made device for driving very fine "dust" of any sort

*The "gun" is used for driving very fine "dust" of any sort in any direction not against the wind. It protects the plants from insects*

in any direction not against the wind. As Dr. Massey is a conservative, careful and scientific worker, what he writes is altogether worth respect and trial. I am just waiting for a mildew sign to shoot, and I will shoot also with other mixtures for potatoes, beans, cantaloupes, etc.

In a recent address to the Indiana Horticultural Society, Prof. Donald Reddick, another reliable worker, described in detail the dusting method of protection from bugs and fungous bothers. He commends it because it can be used many more days in a season than the spraying method, and used much more rapidly and conveniently.

To dust for potato blight, and to at the same time provide a poison meal for the potato beetle, there is needed no mixing and straining and solutioning, with a constant fear that the Bordeaux mixture will be past

its prime of efficiency, or that it will be so efficient as to burn the foliage. It is simply a matter of shaking together the desired powdered chemicals, of loading the gun with them, and of pumping the dust over the plants in a fine cloud which must—and does, it is insisted—reach every part and surface of leaves and stems. Done with the dew on, there results a more perfect adherence of the chemicals; or done in the afternoon or evening, before the dew falls, it is seemingly certain that the moisture will soon fasten the poisons to the plant surfaces. The war garden fighter can get into action in five minutes, with a good duster.

The spraying required to secure perfect apples and other fruits on the home trees does not always get done, or if done, is not often accomplished at the exact moment. "The records show that in practically every instance dusted apples were more free from the pest (the codlin moth) than the sprayed ones," says Professor Reddick. He proceeds: "It seems that the results can indicate only one thing, namely, that a better distribution of the poison is secured by dusting than by spraying."

Diseases of peaches and of small tree and bush fruits seem to have been readily controlled, and at the same "shoot" the insects are checked. Tobacco, which to my smoke-hating mind is a wasteful and hateful nuisance, is of real use in bug fighting, for it discourages the aphids or lice, mealy bugs, cabbage worms, leaf hoppers, and other pests.

The tobacco dust mixes easily with sulfur, lead arsenate, dry Bordeaux, and any other poison or fungicide that can be obtained in the necessary form of very fine powder.

It is the fineness of the powder which is at the basis of the dusting successes. The chemicals to be dusted should pass thru a screen with 200 meshes to the inch, in order to secure distribution and to prevent waste.

The dust people suggest dusting on bright days if possible, and when there is little wind, but the weather limitations are not so close for dusting as they are for spraying, as I have already said.

The first thought that occurred to me was that the men who applied the dust might be harmed by breathing it. Inquiry brings the statement that there is no such trouble, and the scientific writers do not even mention it. Consequently, there need be no both-

er or fear of using it on that account, as it appears to be harmless.

Inquiry of the authorities of the Pennsylvania Department of Agriculture also brings enthusiastic endorsement of the dusting method, which it is recommending to advanced orchardists.

So here is the 1918 "poison gas" for the garden!

I do not guarantee it to be a sure thing, but I have loaded up with dry powdered lead arsenate, sulfur, Bordeaux mixture and tobacco dust and a hand duster to apply them, which, incidentally, cost me but \$2.50 as compared with \$10 for a really efficient small spray outfit such as was once thought necessary.

Breeze Hill gardens will have to submit to the trials, of the efficiency of which I am very hopeful.

*The school garden soldier keeps his backbone straight while standing in the garden*

**A**MERICA expects every child to enlist in the National Army of Producers. Uncle Sam wants every one to help by carefully preparing the soil, planting the seed, caring for the plants, fighting plant diseases and insects and at last harvesting a crop of vegetables and flowers.

Do not try to plant the seed in a rough soil. These tiny seeds need all their strength to push their way above the soil and should a large clod rest on the seed the sprout will never reach the surface. The plant, as soon as it makes roots, calls for food and water. If you have added about two wheelbarrow loads of decayed stable manure to a plot 10x20 feet and worked it into the soil with the digging fork so that the manure and soil are well mixt the plants will thrive.

If you cannot get stable manure add 25 pounds of pulverized sheep manure which may be bought at any seed store. The manure not only supplies the needed food but it acts like a sponge to hold the moisture.

If the soil is a clay type add a little lime and mix it into the first 3 inches.

After getting your soil fine be sure to have the rows straight. Stretch a line the longest way of the garden and rake the surface soil following the line with the rake. If the rake has twelve teeth rake the soil so that four teeth are on one side of the line and eight on the side that you expect to draw the furrow on. Raking the soil makes it very fine, easier to draw a straight furrow and easier to cover the seed. This is not all, for when the weeds appear with the germinating seed the soil is more easily cultivated. Study from some good garden book, magazine, Government bulletin or on the package of seed the proper depth of planting. Cover the seed by drawing the soil into the furrow with the rake and then press the soil down with the flat side of the teeth, the handle of the rake being at right angles to the surface soil. This hastens germination.

After the seedlings appear, begin to cultivate. The soil should never be allowed to cake or form a crust over the surface. The plant roots need air and the weeds must be kept down.

Do not crowd the plants. Carrots, beets, parsnips and other vegetables should be thinned. This means that certain of the plants must be pulled out and destroyed so that others may have room enough to develop. This may

# THE SCHOOL GARDEN ARMY 6,000,000 STRONG

BY HUGH FINDLAY

first seem like a waste, but it is not. If you allowed the crowded plants to grow none of them would mature and the crop would be a failure, but if thinned the plants left in the ground will have sufficient room, air, moisture and sunshine to mature. Thinning is best done after or just before a rain so that the roots of the remaining plants may soon reestablish themselves in the moist soil.

If such plants as cabbage, tomatoes, etc., are bought at the store for transplanting, plant them out in the evening and water them. They then have all night to make new roots providing you have given them sufficient moisture. If the following day is very warm and the sun bright it might be well to shade the plants by a shingle on a slant on the east side of the plant in the morning and on the west side in the afternoon. Or make an inverted V-shaped house with two shingles over the plant. A newspaper is not objectionable, but placing an inverted flower pot over the plant will mean that in a few hours the plant is destroyed by the heat.

From June 1 to 5 is time enough to plant out such tender crops as peppers, tomatoes and eggplant. The soil and air should both be warm.

While plants should not be crowded the soil should be kept busy by a succession of crops. For example, sow two rows of dwarf peas, the rows 36 inches apart. Between these transplant the Grand Rapids lettuce

*A good gardener keeps his tools in good condition and puts them away carefully*

plants or sow radish seed. Both of these crops have matured and are harvested before the peas need the room. In cultivating the lettuce, which needs it frequently, you have also cultivated the peas. Early cabbage may be planted between the rows of early potatoes and there are many of these combinations, but remember that in intercropping no one kind of vegetable planted with another should rob the soil of food and moisture so that both suffer.

A good soldier always keeps his gun in perfect condition and when not in use he knows where he has left it, so a good gardener keeps his tools in good condition. In hoeing the weeds have the hoe sharp. And should the soil stick to the hoe strike the back of it slightly on a stone and the soil will fall off. After work hours see that all the tools are cleaned and put in their proper place. When the rake or hoe are not in use in the garden leave them with the teeth or edge down so that no one may be injured by stepping on them. When the spade or digging fork are not in use stick them up in the soil.

Keep a record of each day's effort and of the germination of seed, the bloom and final harvest.

Plan now to raise the best vegetables in your community so that you may exhibit them in the fall. This will not only show that you have done your patriotic duty but it will encourage others to do better next year.

Keep all waste papers, stones, dried weeds, etc., out of the garden. Some one may be watching you and you want your garden to look neat.

Do not try to lift a heavy shovel of soil, carry a heavy watering pot filled with water or wheel a heavy barrow filled with stones or soil. While weeding do not bend over so that the blood rushes to the head and your body gets tired and aches and your face very red. Sit on one heel or kneel. If you kneel in the garden to thin or weed, place a burlap pad under your knees in order to keep them from getting wet. Don't forget your toes and see to it that they do not dig into the row back of you and destroy the plants.

You may have an opportunity to work with others in a community or school garden. Raise some flowers along with your vegetables that the bloom may not only gladden the hearts of your co-workers, but may be carried along to some shut-in soldier, big or little, and even cheer the heart of some mother whose boy is on the great battlefield.

## A Message from President Wilson

Every boy and girl who really sees what the home garden may mean will, I am sure, enter into the purpose with high spirits, because I am sure they would all like to feel that they are in fact fighting in France by joining the home garden army.

They know that America has undertaken to send meat and flour and wheat and other foods for the support of the soldiers who are doing the fighting, for the men and women who are making the munitions, and for the boys and girls of western Europe, and that we must also feed ourselves while we are carrying on this war.

The movement to establish gardens, therefore, and to have the children work in them is just as real and patriotic an effort as the building of ships or the firing of cannon. I hope that this spring every school will have a regiment in the Volunteer War Garden Army.

WOODROW WILSON

*A well made, well kept lawn, properly framed by the planting, not cluttered by it. Don't put anything in a space that ought to be open*

**F**OR the Man with a Lot on the Street, the man who has made neither a business nor a hobby of laying out his grounds, but who is interested in making the most of a small place, this article is written. Most of the things herein discussed should have been done already. But there is still time for them this season. All operations of construction except sowing and planting can be carried on at any time except when the ground is frostbound, and it is a very good idea to spend the summer in leisurely grading and preparing the ground for planting in fall or spring. Then again, if you should use your land for a war garden this summer, it will be in all the better shape to make a lawn next year.

Where the lot lies above or below the street, the grading or adjustment of levels is likely to be of primary importance, because everything that is done afterward must depend upon it. If the house is above the street, as happens so commonly in hilly localities, the problem of grading is likely to be difficult, and to be complicated by the fact that every other lot on the block is probably graded differently and without regard to the levels of its neighbors. It is not possible in a small space to discuss this complex subject; but the owner of a steep or humpy lot is recommended to look up and down the street and take note of the various excrescences and angles that form (or deform) his neighbors' property. He may thus get some light on what to avoid. The local grader, left to his own devices, usually shapes the ground into an ugly convex protuberance reminding one of a vast green pincushion; this is because it is easy and takes less thought. But if the difference between two levels (for instance, those of the house and street) is too great

## CITY LAWNS

BY HAROLD A. CAPARN

FORMER PRESIDENT OF THE AMERICAN SOCIETY OF LANDSCAPE ARCHITECTS

to be disposed of in an even slope, it will look best if flat or approximately flat on top with a bank or wall or both down to

*Trees placed along the boundaries and near the house, so as not to interfere with the openness of the lawn. An attractive brick walk, straight yet without rigid lines*

the lower level. Convex shapes without a corresponding concave below are ugly, and should be avoided, which is getting back to Hogarth's line of beauty, the ogee or S curve. These simple principles, applied consistently, will solve many an awkward grad-

ing problem. Another simple principle commonly overlooked that will help out a good deal on occasion, is to try to harmonize the grades of one's own lot with those of the next instead of making them studiously different.

Next in order, tho not less in importance, is cultivation, which means getting as much fertile topsoil as possible where it belongs, and that is, on top. When the grades are formed, they should be formed with this purpose in view, enough below the finished levels to allow for the topsoil. All topsoil from foundations, from roads and paths, should be saved and put where it can be used when wanted, and when in place, the more digging and upsetting you do in it, and the more barnyard manure and decayed leaves you can incorporate in it, within reason, the better. Certainly, barnyard manure is likely to introduce weed seeds, but they will be few in proportion to those in the soil already.

What to do on one's property line is often an anxious matter. There are favored districts where all the front yards on a block run together into one common spacious lawn frontispiece of six or eight houses, a very handsome thing, but too often, alas! impracticable. It is impracticable for more reasons than one, but especially because of the trespass of the Predatory Boy, who will overrun any place where there is no barrier, and often when (or because) there is one. So the average citizen feels that he has to put up a fence of some kind to fend off intrusive bipeds and quadrupeds. What kind of fence shall he use? In these days the high cost of fences is but an incident in the high cost of living; they require, moreover, just the kind of labor and material that civili- [Continued on page 224]

Mr. Antoine Wintzer out among his acres of Cannas which he has developed into rivals of the lily and the orchid

# CHEERING THE GARDEN WITH CANNAS

**H**ARDY perennial plants have been strongly emphasized—and properly—in the recent garden years of America. Candor compels the statement, warranted by my own experiences, that many excellent plants so-called are not dependably hardy and therefore not always perennial. I have had to conclude, with certain of them, that I would treat them as annuals, planting newly each year, to avoid disappointment.

But there are tender perennial plants, which, where so treated, are not only dependable but permanent, and as self-continuing as the potato. Of these the Canna is not only chief, but it provides a distinct and different garden resource, altogether desirable.

The old "Indian Shot Plant" of my boyhood was a rather weedy plant with inconspicuous red flowers, becoming ragged in a day, and quickly followed by the dark red seed-sheaths in which ripened the round black seeds which served excellently as boys' buckshot. This Canna was mostly used for its foliage, the flowers being no asset of value.

But in the generation of time since my blow-gun days the plant wizards have been at work, and several better than Burbank have wizarded among Cannas. A Frenchman, Monsieur Crozy, turned it into a showy flowering plant, flaunting scarlet and gold blooms of appreciable size above foliage of green in some sorts, and bronze in others. It has remained for an Alsatian-born, now a wholly unhyphenated American, to develop the Canna into a rival of the lily and the orchid, with color range, bloom qualities and ease of management posessed by neither.

Antoine Wintzer has done this work, at first as an aside to his rose-growing successes, and later because he saw magic following the hybridizing efforts of his acute brain and his skilful fingers.

The lovely Flag of Truce

BY J. HORACE McFARLAND

Grouping Cannas in all one color or in steps of contrasted hues against a green background produces a splendid effect

September I spent an afternoon with Mr. Wizard Wintzer, roaming among acres of Cannas, with scores of new seedlings having their first field trial. The views of the broad Canna fields at West Grove across easy slopes to the rich green of forest backstops for the bands of color, with the exquisite light upon the flowers reflected from white clouds in a sky of Italian blueness, were such as gave a hint of the yet unworked decorative possibilities of this easy summer perennial. But I confess that my delight was divided between the beauty of the flowers and the landscape and the keen and loving appreciation of the man who had literally made them out of the crude and undeveloped natural basis upon which he began.

These newer Cannas have immense flowers, up to six inches and more across, and these flowers are of colors both showy and delicate. There were scarlets that dazzled, and some sorts laced with gold reminded me of the old Crozy sorts. More pleasing by far were the shades of pink, rose, salmon, apricot, lemon and primrose, even to the near-white which Mr. Wintzer has attained on the way to the pure white he hopes for.

The foliage also has changed for the better, both in the green and the bronze hues,

and the height and habit as well, for now there are Cannas growing to two feet and those topping a six foot man.

That September day gave me the idea I want to set down here as to the way in which the Canna can introduce a new note of garden advantage. Grouping it, either in all one color or in arranged steps of contrasting or blending hues, against a background of green—the bright green of deciduous trees or the deeper note of conifers—there appeared an entirely worthwhile effect. Then I remembered what pleasure I had in growing some of the lower-growing sorts against the varied greens of a Thunberg barberry hedge, and I realized that I had casually stumbled on a good way to use Cannas.

Part of the pleasure of the Canna day was in hearing Mr. Wintzer tell of the "break" to the orchid-flowering type, which occurred in the work of another Canna lover, Mr. John Kemp. These very different, distinct and admirable blooms are usually infertile, so that getting seeds after the most careful "cross" is a happy adventure rather than a definite outcome. His ideals, too, are worth noting here; they include the hoped-for, pure white, petals of wind-enduring substance, and the quality of self-cleaning or dropping of the dead flowers. Foliage, too, is to be varied and improved.

Now these new and altogether lovely Cannas are not dainty in their desire or difficult in their demands. They come from the plantsman as lusty subjects from pots, after the ground has warmed up to the corn-planting stage, and are then set in well-manured ground, with a good watering to start them off. Not many days later the upstarting of new leaves shows that the roots have accepted the situation and gone to work. Soon flowers come, and keep coming all summer, and until Jack Frost blows his breath

Development by hybridizing

[Continued on page 219]

# What to Do in May

A GARDEN GUIDE BY HUGH FINDLAY

PROFESSOR OF HORTICULTURE IN SYRACUSE UNIVERSITY COLLEGE OF AGRICULTURE

## FRUITS AND BERRIES

**Timely Warnings** This is the month to clean up the orchard. It is the last call. Burn all brush. Spray with lime sulfur and arsenate of lead after three-fourths of the petals fall. This will hold in check the apple scab and destroy the codling moth. Spray on calm days. A beehive is of greatest benefit to the peach, cherry or plum orchard. If the orchard is cultivated, this is the month to keep the implements busy. Do not allow the weeds to grow up around the trunks of the young trees. Don't forget that the young orchard should be inspected at least once each week. Because the trees are not bearing is no reason why they should not be sprayed for scab and insects. Use care in intercropping. Do not shade the fruit trees or rob the soil. If in doubt about treatment of trees or land, call into council a practical orchardist and follow his advice relative to your conditions.

**Currants and Gooseberries** Keep the currant worm in check as soon as it appears by spraying with arsenate of lead. Defoliating the plant means a complete failure of the crop. Paris green, London purple and hellebore are sometimes used in dust form.

**Blackberries and Raspberries** Do not fail to stake these plants in such a way as to allow clean cultivation. All suckers appearing between the rows should be destroyed. Cultivate freely until the flower appears. After the fruit is set and before a rain, a liberal sprinkling of bone dust in the rows will result in larger berries. The fertilizer must not get on the fruit or foliage.

**Strawberries** All cultivation should cease with the coming of the bloom. Spread straw or grass under the bloom to prevent the soil from washing on the fruit. Mulch early that it may hold the moisture. Pot runners early so that they may be transplanted in August. To produce extra fine berries keep the plants in single hills and cut off all runners.

## THE FLOWER GARDEN

**Perennial Asters** This is the month to plant the perennial asters for fall bloom. The soil should be rich in humus. They precede the Japanese anemones and late chrysanthemums and fill in a gap between the summer bloom and that of the late fall.

**Seed and Seedlings** For midseason bloom, sow the seed of ageratum, alyssum, antirrhenum, African daisy, balsam, candytuft, cockscomb, cosmos, nasturtium, mignonette, verbenas, phlox drummondii, zinnias, marigolds, and poppy. The seedlings of the tender plants may be set out the last of the month. Shade the plants with boards, shingles, paper or strawberry baskets, especially if the sun is high. Never use flower pots for shading, since there is always a danger of scalding the plant. Transplant in the evening or on dull days. Water the plants as soon as they are set in the open. If the pot seedlings of sweet peas are transplanted to the open, begin to cultivate as soon as possible. Do not feed seedlings liquid manure or nitrate of soda. Allow the plant to become established before feeding.

**Bulbs** Tuberous begonias, caladium, canna, calla, dahlia, and tuberose may be planted out this month. Gladioli bulbs planted this month will bloom in September. The soil for all bulbs should be rich in humus and nitrogen. Start to cultivate as soon as the tops appear

above the surface. Stake and tie such plants early to prevent breakage by wind. Never use fresh manure for bulbs. Feed a little liquid manure after the plants are well formed.

**Lupins and Rhododendron** Do not use lime on the soil of lupins or rhododendrons. The lime causes the plants to sicken and in some cases kills them. The bloom is always poor and weak.

**Stocky Plants** On transplanting antirrhenum, coleus and other plants of a similar nature, pinch back the leader bud and this will cause the plant to branch and become stocky.

**Carnations** Pinch back and remove all field carnations. Cultivate freely and spray with Bordeaux if any sign of rust appears.

**Invisible Supports** All supports should be painted the color of the foliage and made invisible. Wire painted dark green and placed so that the foliage partly covers it makes a most satisfactory support. Use green twine in tying up golden glow, etc.

**Flowering Shrubs** All flower clusters should be cut as soon as the bloom begins to fade. This prevents the strength of the shrub going to the formation of seed. It also assures a bloom each year. Remove all suckers of the lilac which appear early in the spring about the parent plant.

**Roses** Start feeding the hybrid perpetuals with liquid manure. Mulch the plants heavily with a compost of decayed manure and decayed sod chopped up fine. As soon as the buds swell, watch for aphids (green fly), and spray with whale oil soap, Black Leaf 40, or dust with tobacco dust. Rose nicotine or sulphotobacco soap are both good checks in controlling the aphids. One-half ounce of arsenate of lead to five gallons of water will control the rose beetle.

## THE GREENHOUSE

**Easter Plants** Azaleas should be packed in peat and set out in some protected place. Pots of rhododendron should be plunged out-of-doors. Hyacinths and tulips which have been forced, may be dried back a little and planted six inches deep in the garden. The bloom the following spring will be small.

**Roses** The resting plants should be free from leaves. Ventilate freely. New benches to be used for roses later should be white-washed. The solution of lime should be fairly thick, containing some carbolic acid and sulfur mixt in. This will keep in check insects and disease. Scatter dry lime under the benches. Turn over the

*My garden shall be a friend.  
I will not complain against the elements but make the best of all conditions.  
I will study to supply the needs of each vegetable, flower and tree.  
I will not allow anything to enter my garden that might defile, discourage or destroy the best efforts in plant life.  
It will be my purpose to encourage every man, woman and child to have and care for a garden.  
With every move of my garden tools I will save time, energy, and space.  
I will give away all surplus plants or vegetables, stick to the garden trenches, and tolerate no thought of defeat.*

rose compost heap and chop up the sod fine. Pot plants should be kept moist and free from bloom.

**Cyclamens** Shift the cyclamens into 5-inch pots and plunge in the cold frames in a shaded place. Water freely.

**Fern and Palm-house** All foliage plants should be washed with Whale Oil soap and sprayed with clear water previous to placing out of doors in June. Cut back the Adiantum ferns and apply a little lime to the soil. Sprinkle lime and salt freely under the benches to keep the slug in check. Keep the house moist. White-wash the glass. Ventilate freely on clear days.

**General Advice** Ventilate early and close before sundown. Do not have the plants or walks moist late in the day. Do not let the fire go out. Be prepared for a cold night. Harden off all bedding plants. Wash all pots before storing them away. Soak them in water over night and use a piece of coarse burlap in washing them. Soil taken from the greenhouse should be scattered on the garden, but never applied to the compost heap. Remove hose from faucet when not in use, and keep in straight on the side of the walk. Water plants thoroughly before transplanting.

## THE VEGETABLES

**Staple Crops** Eliminate novelties this year. Plant only the vegetables that have established themselves in every practical garden. "Haste makes waste" in planting out tomatoes, eggplant and peppers. The air and soil should both be warm before the tender vegetables are set out.

**Salads and Greens** Feed the head lettuce and parsley a little liquid manure. Do not wet the foliage with this food. Cultivate freely. Fill in all misses with radish or Grand Rapid lettuce. Keep the garden ranks filled.

**Hardy Vegetables** It is a good practise to buy such plants as Early Jersey Wakefield cabbage, Early Snowball cauliflower, Big Boston or Early May King lettuce, Golden Self-Blanching celery, Long Island Improved brussels sprouts, and plant them out. Insist on healthy, stocky plants, free from disease and insects. Do not buy plants where the leaves are sickly and yellow. Keep a succession of planting of peas, carrots, beets, etc., every two weeks.

**Late Potatoes** Plant the main crop of potatoes. Plant five to six inches deep in a light soil and do not hill. In a clay soil the tuber must be planted nearer the surface. Spray the early crop the last of this month, if sufficiently grown, with Bordeaux mixture plus arsenate of lead.

**Seedage** Sow the seed of the late crop of cabbage, cauliflower and celery. This may be done in the cold frames or in the open. Late Brussels sprouts and kale should be sown early in the month.

**Onion Seedlings** Transplant onion seedlings in a very rich soil. Cut back the roots and top a little before transplanting. Seedlings should be from three to four inches apart.

**Rhubarb** Feed a little nitrate of soda bone-meal or liquid manure. Do not rob the plant by removing too much foliage. Never pull the seed stalk; there is a danger of injuring the heart. Cut the seed pod off as soon as it appears.

# Our Boys

## *Their Tremendous Potentialities*

A vital, serious subject especially just now, this message to 16, 17 and 18 year old boys and their parents:

*On a delightfully located and extensive farm in Marblehead, Mass., twenty miles from Boston—fifty carefully selected boys will be received and taught farm life and work in connection with nature study. The course includes elementary military training, and all forms of healthful outdoor work and sports.*

ON this wonderful farm, owned and developed by the A. E. Little Co., manufacturers of Sorosis Shoes, everything is provided for the moral, mental and physical development of boys.

Boys who spend the summer on Sorosis Military Farms will return to their homes in the Fall realizing the fondest ideal of parents—rounded out into junior men—vital, strong, ambitious—with a foundation built into body and character which will give them

power and success through life.

Marblehead is one of the old and quaint New England towns, full of historic interest—and just at this time a Summer spent there will touch a patriotic chord in a boy's nature.

Sanitary and hygienic conditions are perfect at Sorosis Military Farms, the boys living in houses or tents as they prefer. Not a case of illness was reported last year among the many boys there.

Full information and terms may be had by addressing

**SOROSIS MILITARY FARMS**

MARBLEHEAD, MASS.

# HASTE MAKES WASTE

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT  
MOTOR SERVICE

**I**N beginning its annual campaign designed to impress upon motorists the need of greater caution at railroad grade crossings, the Long Island Railroad has just issued a statement which incorporates the fact that during 1917 there were one hundred and nine cases where automobiles were driven thru the gates placed at grade crossings along its lines when these gates were lowered because of the approach of trains. In other words, one hundred and nine cases where automobile drivers smashed thru the comparatively light wooden gates, risking the breaking of their headlights, the puncturing of their radiators, and injury to themselves and their passengers from flying splinters, to say nothing of the imminent danger of being hit by a fast moving train. And for what purpose—to save a few moments of time, or to have something to boast about at the next inn?

To fully understand what these figures mean, let us consider the situation on Long Island, which is one of the best known automobile touring sections in the United States. As the name implies it is a long, narrow stretch of land, with the principal highways and railroad lines running lengthwise, and parallel to each other. Consequently crossings of railroads and motor travel are, comparatively, infrequent. Again at the Western end within the limits of New York City, where the lines of travel are congested, railroad grade crossings have been largely eliminated, while thruout the island there are many more railroad grade crossings without protecting gates than with. Thus the case against reckless automobile driving is stronger than the mere figures in this instance indicate.

The term generally applied to reckless automobile drivers is that of speed maniacs. These gentry by no means limit their activity to such stunts as smashing thru railroad gates. Altho they constitute but a small minority of the total number of motorists, their behavior on the roads is the bane of present day motoring and is the sole excuse for most of the laws and regulations restricting the use of city streets and country highways by automobiles. Thus are motorists in general punished for the sins of a comparatively few of their number, for motor vehicle laws, as with the rain, fall on the just and unjust alike.

The principal sufferers from speed maniacs are their fellow motorists, both from the standpoint of actual danger as well as inconvenience. Every user of the highways recognizes the pest on sight. He

comes tearing along in the opposite direction holding to the middle of the road hoping to scare you into the ditch so he may pass without slacking his speed. If you hold your place on your half of the roadway he will swerve out at the last instant, brushing by so close that the least miscalculation or skidding on his part means an inevitable collision, in which you are the innocent sufferer. He is generally found on the wrong side of the road as you swing into a sharp curve, and turns out suddenly from behind the car you are about to pass, seeming always to delight in hair-breadth escapes. His inclination to drive at unsafe speeds is just as noticeable at congested city street corners as on the open highway, and the observation of other rules and regulations is apparently just as obnoxious to him. Unfortunately, in too many instances, he seems favorably known to the police, who for one reason or another wink at his behavior. Altho so few in number the perniciousness of the speed maniac, or road hog as he is also called, seems to multiply his numbers. Often a single experience with one of this breed will take most of the pleasure out of an afternoon's ride.

In the springtime the mania for speeding spreads. Perhaps it is the opening of flood gates on pent up proclivities, stored during the winter when weather and road conditions do not invite free riding and touring. At any rate when toward the end of spring the weather is settled and warm, the roads dry and hard, and all nature in its loveliest garb leads the motorist far afield, the speed maniac is found at his worst among the increasing motor travel. Also at this time not a few who ordinarily are to be classed as safe and sane drivers, yield to the temptation of "stepping on her" and letting the old car, or the new one, fly over the roads at risk to themselves and others. During this time of year the Monday morning newspapers carry a list of "casualties" which attest the foregoing facts, and it offers no excuse that the injuries and damages are largely confined to motorists.

A few years ago under the initiative of Dr. H. M. Rowe, a veteran worker in the cause of improved conditions for motoring and now president of the American Automobile Association, the Automobile Club of Maryland undertook what is known as monitor committee work.

The progressive Hoosier Automobile Club of Indianapolis was next in line, while the new but powerful Detroit Automobile Club, largely thru the able efforts of Secretary Gilbreath, is achieving, perhaps, the best results in this direction. Monitor committee work may be defined as a movement on the part of organized motorists to curb that small minority among their number, who, by their manner of driving on city streets and country highways, endanger and inconvenience others, and furnish an excuse for the strict regulation of the use of streets and highways by automobiles.

In the case of the Detroit Automobile Club there are over two hundred members serving on the monitor committee, including a number of the most prominent people in the city. Henry Ford, for example, is one. Each member of the committee is expected to report on blanks provided for the purpose, the details of any infraction of an automobile ordinance which he may witness, including the number of the offending car. The club sends a letter to the owner of each car thus reported, giving the reasons why the broken ordinance was enacted and urging the need for compliance with all the regulations. A second infraction by the same offender brings a somewhat stronger letter, while the third is turned over to the police department. A pronounced feature of this work in Detroit is the fine spirit of coöperation which is generally met with from owners whose cars are reported. In many cases it develops that the infraction occurs when the owner is not in the car. At any rate conditions attending motor travel in and around Detroit have been materially improved since the monitor committee was formed nearly a year ago.

The added wear and tear on the roads resulting from automobile speeding, makes it important to curb this evil. The road problem threatens to become acute at a time when motor travel and transportation must increase in the interests of national efficiency. Scarcity of labor, high cost of materials and lack of railroad transportation for road making and mending materials, coupled with a tendency on the part of municipalities, townships, counties and even states, to extend their practise of economy to highway maintenance, are resulting in a widespread neglect of road improvement. Add to this the heavy wear of increasing motor truck usage and the seriousness of the highway problem becomes apparent. Sooner or later the Federal Government must take drastic action, but meantime the motorist must help conserve the highways.

## Words of the Week

**COMMUNIQUÉS**—Official announcements issued by the war office of the belligerent nations giving information about military operations in the field.

**BUREAUCRACY**—A state in which the nominal rulers are dominated by a group of permanent officials (heads of bureaus) who dictate the policies of the state.

**ARMY OF MANEUVER**—A term used to designate the reserves and mobile forces of an army as distinguished from those which are immediately engaged in battle.

**COUNT SIXTUS OF BOURBON-PARMA**—Elder brother of the Empress of Austria to whom the famous letter of Emperor Charles was addressed. Count Sixtus is now in the military service of the King of Belgium.

**LA REVANCHE** (ra vanch)—Revenge. Since 1871 this word has been associated with the determination of France to obtain satisfaction from Germany for her actions at the end of the Franco-Prussian War.

**VLADIVOSTOK** (vla de vos tok')—The chief Russian seaport and naval station on the Pacific Ocean. It is the terminus of the Trans-Siberian Railroad and of other lines which run into the interior of Russian Asia.

**"ACES"**—Aviators who have been officially credited with the destruction of at least five of the enemies' aeroplanes. The aviator holding the highest record is called the "ace of aces." The designation probably has its origin in the slang expression "ace high."

**RHEIMS** (remz or Rans)—Before the war one of the chief manufacturing and commercial cities of France, the center of the French champagne trade. It was captured by the Germans in their advance in 1914, but evacuated after the Battle of the Marne.

**WILHELMSTRASSE**—On this street in Berlin are located some of the principal Government offices of the German Empire, including the Foreign Office and the residence of the Chancellor; hence, by a figure of speech, the word is often used to designate the controlling influences in the Government of the Empire.

**KULTUR**—A German word meaning the customs, usages, laws, institutions, language and literature of a people. In its narrower sense it is now applied to the aspirations of the German ruling class who hope thru their military organization to impose the things for which Germany now stands upon the rest of the world.

**EMBUSQUÉ** (em bus kay)—Literally, "in hiding" or "in ambush." It is used as a noun to describe men in service in France who thru influence have received military assignments well away from the firing line. An investigation was made recently at Washington for the purpose of unearthing such embusqués in this country.

**CHAUVINISM** (sho vin nizm)—A blind, unreasoning patriotism which seeks to exalt national purposes at the expense of the rights of other nations. The term is French in origin and is derived from the name of one of Napoleon's soldiers, Nicholas Chauvin, who was notorious for his extravagant belief in the mission of his emperor.

**WEBB EXPORT TRADE BILL**—An act of Congress setting aside the Sherman Anti-trust Act in so far as it interferes with combinations of industries which may be formed for engaging in export trade. The act was passed to allow American industries to enter into combinations for carrying on export trade on equal terms with similar combinations which exist in European countries.

## Electric Light in Town and Country at Half City Cost

**T**HE HEALTH of your family demands that oil lamps be discarded. They are unhealthy, unsightly, odorous and hard to keep clean. Tests prove that eleven people use less oxygen than one large lamp. Lamps, too, are dangerous.

WITH ELECTRICITY you simply screw a bulb into an electric light socket and instantly a brilliant, restful light is available. No lamps to clean, gas tanks to explode or danger from fire. One or a dozen lights may burn any time you choose.

WHEREAS AN OIL LAMP needs attention daily, an electric light bulb will last for months without attention. Then only a few seconds are required to make the change to a new one.

THE SAME POWER PLANT used for lighting purposes will supply current for fans, vacuum cleaners, washing machines, sewing machines, etc., as well as run the farm machinery and pump water anywhere you want it.

## Fairbanks-Morse Electric Light and Power Plant

1 to 200 H. P. for Cottage or Mansion  
in Country or Town

IT GIVES a powerful current at half the cost of city electricity. Burns cheap kerosene, requires little attention and stays in order.

PLAN NOW for a brighter, healthier, more comfortable home. Take the first step today and write at once for our catalog 406E.

## THE POULTRY YARD IN MAY

BY E. I. FARRINGTON

**T**HE fact that hundreds of cases of eggs have been imported from China during the past few weeks gives point to the appeal of the Government that more poultry be kept in this country. If every family with a back yard should keep ten hens, the number of eggs produced would be increased by millions, and much red meat would be freed for export.

It is getting late for hatching eggs of any but the smaller breeds, but day old chicks may be bought any time this month. It is estimated now that three billion day old chicks will be handled this year.

With fifty chickens and a lamp heated brooder, it will be a simple matter to raise enough pullets to make a good laying flock for the winter, and enough roosters to supply the table for many months. It will not be wise to carry these roosters thru the winter, but they can be put into glass jars when large enough to kill. This is a very easy way to help solve the food problem.

Perhaps it will be possible to buy chickens that are six weeks old. Then it will not be necessary to have a brooder, and the mortality should be low, as the dangerous period of chickenhood will have been past. Some poultry raisers are finding a profit in selling chickens with a hen to care for them. Such a purchase is often advisable when one does not care to bother with a brooder, and is going to raise only a few chickens.

People who are making a start with chickens this season are advised to write to the Department of Agriculture at Washington, asking for the new bulletin No. 889, entitled "Back Yard Poultry Keeping." This bulletin has been issued with a desire to stimulate poultry work in cities and towns, and contains detailed instructions which will be of great help to the novice.

It must be remembered that growing chickens need plenty of green food. At first their coops may be placed on grass land, and moved frequently, but as the summer advances, the grass will get too tough for the birds to eat it. If no grass land is available, lawn clippings may be given the youngsters. Most poultry keepers, however, will have a garden, and the surplus lettuce, spinach, and other green crops can be fed to both chickens and hens profitably.

It will be a good plan to plant a row of rape immediately to provide an abundance of green food later on. Rape grows quickly and renews itself as fast as the leaves are broken off, so that a single row will often be sufficient. A second sowing made late in June will provide an unbroken succession until fall. Late this month or early in June a row of Scotch curly kale seed should be

planted, for this very hardy vegetable will last until Thanksgiving, and if the season is mild, until Christmas. The plants grow very large, so that they furnish a liberal amount of green food late in the season.

It has been found that hens will lay well even when fed a much larger percentage of vegetables and less grain than has been the custom in the past. It is not probable that grain will be very cheap next winter, so that the poultry keeper who has a little land available will do well to plan for a generous crop of mangel wurzel beets, which grow to large size and are easily stored in sand for winter. Feeding bills can be greatly reduced by the use of this and similar vegetables, like turnips, kohlrabi and red beets. The hens like cabbage, but it is hard to keep, and has a tendency to make the eggs thin.

If the poultry house was not given a good cleaning last month, the work should not be neglected. A dirty house is sure to harbor vermin. The walls of the house should be brushed down and the perches given an application of carbolineum or some similar product. The ideal house is one which has all of its furnishings so arranged that they can be removed in a few minutes. Then a thoro job can be accomplished by spraying the whole interior with kerosene or a liquid lice paint.

**T**HE argument is being advanced by many poultry keepers now that it is impossible to make a profit with grain selling at present prices. As a matter of fact, profit is not the first consideration at present.

The Government is asking people everywhere to raise chickens as a patriotic duty in order to help in meeting the present abnormal food situation. Yet it is possible to make money, even now, and poultry keepers all over the country are doing so.

As an example, the experience of Mrs. Anna J. Warren, of New Hampshire, may be cited: Mrs. Warren has kept twenty-three hens the past year, and has kept an accurate account with them. From these two dozen hens, lacking one, she has made a profit in twelve months of just \$62.08. This profit was entirely from eggs, those

used on her own table being figured at the same price as those sold.

Mrs. Warren's methods are simple. She keeps her hens in a commodious, dry, well-ventilated house, but never lets them out of doors. This no-yard plan is one which can be adopted by city people everywhere if the house has an open front. Mrs. Warren feeds a hot crumbly mash in the morning, whatever table scraps there may be at noon ("there's mighty little these days," she says), and cracked corn at night.

If more people would start fifty chicks with a lamp heated brooder, it would be a simple matter to raise enough pullets to assist radically in solving the food problem

# CUTTING OUT THE DEAD WOOD

(Continued from page 195)

the Department of The Other. Each such consolidation requires a separate act of Congress, with all therein implied. An example from history is that of the Bureau of Foreign and Domestic Commerce, now in the Department of Commerce with the mission of promoting the interests of American trade abroad. An act of Congress removed this bureau from its point of origin, the Treasury, to the State Department. Some years later, in spite of certain bureaucratic opposition, another act of Congress removed it to Commerce. Under the Overman bill, this transfer could be effected by common consent, or rather by majority vote. An example from more recent history is more illuminating:

A comprehensive plan for labor service was agreed on and announced by the Administration early this year. This plan contemplated putting all labor problems for all departments under the Secretary of Labor. The plan was a good one and is generally so regarded. Estimates were submitted and appropriations requested. Nothing has been done—not even such of the work as could be done without more money. The President "lacked authority from Congress." Such authority is given in the Overman bill.

It is not a perilous prediction to make that the Overman bill will pass, eventually. It is in line with similar legislation enacted by the other belligerents, notably England. It is common sense. It is good business. "Now, why," asked Senator Hollis during the discussion a few days ago, "should we waste our time over this? . . . I do not believe in any one turning white over this proposal. Some of the attacks that have been made on this bill remind me of the opening stanzas of Kipling's poem, 'Danny Deever':

"What are the bugles blowin' for?" said Files on Parade.  
 "To turn you out, to turn you out," the Color Sergeant said.  
 "What makes you look so white, so white?" said Files on Parade.  
 "I'm dreadin' what I've got to watch," the Color Sergeant said.

WILLIAM LEAVITT STODDARD

# CHEERING THE GARDEN WITH CANNAS

(Continued from page 213)

upon their brightness. The plants become strong and decorative, and only ask, for their continuing prosperity, an occasional soaking if the season be dry.

Insects? They pass by the Cannas. Diseases? None bother these easy plants. Of attention little is needed save to pinch off the spent flowers occasionally so that seed may not form, or so that the big bloom head may continue at its best.

After frost has cut the tops, the clump of roots may be dug out, slightly dried, and stored in a cellar where the temperature falls not below 50 degrees and where they are not exposed to a drying atmosphere. So kept, every up-pointing root-bud is a potential plant for next year.

But if keeping is bother, forget it, and buy some new plants next season. As each good Canna makes full as much flower-noise as a dozen hybrid tea roses, the expense of renewal is not serious, and there is the opportunity to follow the new fashions and the real advances.

The gardens of 1918 can be made braver and more American by the Cannas. Try them; place them cannily; they will surprise and please the planter.

# RUG BEAUTY -at a Reasonable Price

Good taste in the home is not a matter of money, but rather of care in the selection of appointments that are appropriate and harmonize with each other. CREX Rugs, beautiful in designs and tasteful in colorings, help to beautify and embellish the home.

Beauty, however, is not the only requisite—in these days of economy. You need service, too. CREX Rugs are durable, practical, as well as artistic—and economical.

CREX Rugs are all the year 'round floor covering for every room. Whether in the hall, livingroom, bedroom or diningroom, CREX will brighten the room, heighten the decorative effect and lighten labor.

Look for name CREX in side binding

## Pebbles

The infant Bolshevik Government is a precocious child. Inside of two months it began to crawl.—*Brooklyn Daily Eagle.*

Are you aware, Lemuel, that alligators' eggs are so big that it only takes nine to make a dozen?

Wife—I attended the mammoth sale today.

Hub—Where are you going to keep the darned thing?—*Boston Transcript.*

One of our able Senators was arguing a momentous naval question with an opponent.

"You know I never boast," the opponent remarked during the argument.

"Never boast? Bully!" exclaimed the Senator. Then, in a more reflective mood, he added, "No wonder you brag about it."—*St. Louis Globe-Democrat.*

A correspondent writes, with reference to the late Canon Knox Little's oratory: "I remember many years ago he was addressing an audience in the Free Trade Hall and alluded to them as 'my dear Manchester souls.' A witty dignitary of the church whispered to me, 'Vox et preterea Little,' and I wonder whether if we had been in Cork he would have addressed us as his dear Cork souls."—*Manchester Guardian.*

He had been fishing patiently for several hours without a bite when a small urchin strolled up.

"Any luck, mister?" he called out.

"Run away, boy," growled the angler, in gruff tones.

"No offense, sir," said the boy, as he walked away, "only I just wanted to say that my father keeps a fish-shop down to the right, sir."—*Pittsburgh Chronicle-Telegraph.*

## Dreer's Roses for the Garden

The bulk of our Roses are field grown in 1917; then carefully dug, planted in pots and stored in cold frames. Under this plan the stock is strong and ready to start blooming, and much superior to stock forced by high temperature.

### The Dreer Dozen Hardy Everblooming Hybrid Tea Roses

will furnish a constant supply of blooms throughout the summer and autumn—include the best of every color.

**CAROLINE TESTOUT**—One of the most popular bedders. Bright satiny-rose, very free and fragrant.

**DUCHESS OF WELLINGTON**—Intense saffron-yellow low stained with deep crimson changing to a deep coppery saffron-yellow. Fragrant and very free-flowering.

**OPHELIA**—Has made such a record for itself that qualifies it to be classed with the very best, a Rose that is admired by everyone, its flowers are held erect on long stiff stems, are of perfect form, large size, and of a delicate tint of salmony-flesh, shaded with rose, very floriferous.

**LADY URSULA**—The flowers produced on every shoot are very large, and a delightful tone of flesh-pink, delicately tea-scented.

**LAURENT CARLE**—Large, deliciously-scented, brilliant carmine flowers throughout the season, nearly as good in hot, dry weather as under more favorable conditions.

**PRINCE DE BULGARIE**—Large full double flowers of which are produced abundantly throughout the season, a good reliable bedder of a silvery flesh color, deepening to the center with delicate salmon-rose shadings, a soft, pleasing color.

**MME. JULES BOUCHE**—While not a pure white, it being at times slightly tinted with blush on the reverse of the petals, we consider it one of the best white bedding Roses; very free-flowering.

**MRS. WAKEFIELD CHRISTIE-MILLER**—As a pink bedding Rose there is none better, and particularly so for massing, the flowers are distinct and novel in shape, the petals having wavy or crisped edges not unlike a Pæony. The flowers, which are of large size, remain perfect on the bushes for a long time and are produced very freely; bright pink color with lighter shadings.

**ECARLATE**—Produces a greater number of flowers than any other Hybrid Tea Rose in our collection; the flowers while not large are of an intense brilliant scarlet color and of perfect form.

**LADY ASHTOWN**—Flowers are large, double with high-pointed center, produced on long stems.

**MME. LEON PAIN**—Silvery-salmon, with deeper orange-yellow, shaded center, the reverse of the petals being a salmony-pink; flowers large, full and well formed; very free-flowering.

**MRS. AARON WARD**—A remarkably floriferous variety of strong, vigorous, but compact growth; a rich bronzy-green color, the flowers, which are of splendid form, full double, are equally attractive when full blown as in the bud state; in color a distinctly Indian-yellow, shading lighter towards the edges.

### DREER'S GARDEN BOOK

besides describing and illustrating Roses for every purpose is the best guide for your War Garden. Its articles for both planting and caring for vegetables were written by experts. The varieties listed are dependable in quality and germination. It is quite as much a Garden Book as a catalogue.

## SKY PILOTS OF THE U.S.N.

(Continued from page 203)

ropes having been cast off the crew marched her out and round on a wide circle into the center of the flying field. "Let her rise!" The Commander gave the word from his station in the bows.

They slacked the ropes and gave her a few feet. "Lower!"

They pulled her down again. She had floated in perfect balance with just enough buoyancy to carry her up to cruising height. A pull at a lever would release water ballast and send her higher in an emergency. But she raises and lowers for ordinary cruising by the power of her engines driving the "elevators" into the wind.

"Port engine! Starboard engine!" They both went off with a puff of black smoke. Satisfied with their even purring, the Commander gave the final word. "Let her go."

Simultaneously the dozen ropes that held her slipt thru the rings of her permanent stays; then, slowly but with increasing speed, she rose and moved off on a wide circle that presently brought her heading back down the center of the field.

In the meantime we had all moved back from the white-washed lines that marked the deck of a submarine. At her height, nearly seven hundred feet, it could not have appeared any larger than a turtle's back. A bomb, too, has the initial speed of the ship when released; describes a flat curve as it falls; may be deflected by a side wind. The commander said, afterward, that he shot them two hundred feet short of the mark.

While it was falling, the bomb looked astonishingly large. A dead rifle shot like Doctor Carver, or any of the experts that tour our vaudeville circuits, could easily explode one in midair. At first it just tumbled, turning over and over; then as the wooden arrow feathers caught the wind, it righted and shot true the target. The ship had passed a hundred yards before it struck, well away from the concussion blast of a real bomb. Now she described another circle, came back and dropt a second, third and fourth. All but the last struck square on the target; a side wind carried it a few inches to one side. But tho technically a miss, it would still have damaged a submarine. While the French had the station, they sank two U-boats; and judging from that day's practise, our lads can be depended upon to carry on the good work.

Each time she had come down the field, the ship's great bulk had cloven the air with a sough like a rising wind. On the last round she was going at a pace that put her in a few minutes low down on the horizon; but just before she went out of sight, she passed a second speck that enlarged almost as quickly as she had diminished.

"It's the V——! from B——!"

The Lieutenant's face could not have lit up more brightly had it been his best girl instead of the second ship of the four that would make up the complement of the station. He added as she dipped her nose to alight. "If that's little D—— at the wheel, you are in luck. He's the boy that can give you real stories."

It was and he did as we two sat with him at a late luncheon. A small dark eyed Frenchman, he spoke English so perfectly, moreover, that his narrative lost nothing in matter or spirit by translation.

"Oui, M'sieu," he confirmed the Lieutenant's assertion. "We sank two submarines at this station. With another we fought an artillery duel. Oui! the little V——, out-fought a Boche U-boat with only her little pop gun."

"This way it was, M'sieu. We had sighted her steaming on the surface, and had

she kept her course we could easily have come down the wind and bombed her as we passed. But she was wise, that U-boat—wise as a woman whom, as you know, M'sieu, is wise without knowing it. Instead of waiting for us, the U-boat headed into the wind, which blew so strongly that with our engines at their best we could make only fourteen kilometers the hour. That was the U-boat's speed, and while we hung astern, she fired fifteen shells at us. Some burst close—so close that the little V—still bears the scars on her body. But luckily for us and she, they were not incendiary; did not set her on fire. We answered and hit her, too. But our one pound shells glanced from her curve like peas from a bald man's pate. *Oui M'sieu*, just so!

"It was suicide to persist, so we struck a wide tack across the wind to outsail and come back at her from the other side with the sun in the eyes of her gunners. But when we came about, she was gone, that U-boat; submerged and fled from our little V—. But such is your Boche. A cunning coward unless the odds are his."

I took another look at that little Frenchman—he had spoken so quietly, as though hanging on the tail of a submarine, a mark for its gunners, was all in the day's work. He could not have been more than five feet high. He probably weighed in the neighborhood of one hundred and ten pounds. But the spirit that looked out of his dark Latin eyes was big as Mont Blanc. The soul of him could not be weighed in tons. He shrugged when I mentioned the danger.

"Is war ever safe, M'sieu? We do not always escape. Out there"—a fling of his thumb indicated the flying field—"we watched the Admiral—fly off on a far mission. She was seen, here and there and yonder, flying south over the land. A ship reported her well along the Mediterranean, a gallant sight between the sun lit sky and deep blue sea. Then—" his shoulders rose to his hair—"she vanished. Perhaps a submarine got her with an incendiary shell? A flash of flame between sea and sky, the splash of her charred body in the water, it would be over! Or she may have been brought down. It is, perhaps, that some day her crew will come back to us from an interior German prison."

Just as he said, a dirigible offers an immense target, just how large I did not realize until our ship came sliding out of the sunset's gold. The huge bulk of her, shining and ethereal, looked as big as the hangar.

While she was still a fly speck on the red face of the sun, the lone sentry away up on top of the hangar had sounded the bugle blast that brought the men from the huts; a swarm of black bees. As she slowed and dipped down with engines cut off, the quarter-mile trail rope thudded on the ground. It was seized by a hundred hands and quickly bent to a "dead man" anchor. The guy ropes were as quickly slipt thru the stay rings then, on a wide circle, they marched her around to the hangar.

She loomed larger than ever, going in; "some target," as the boys would say, for the U-boat they are going to flush one of these days. Personally, I hope they catch her under water—at least before she can unship her guns. But these flying sailors of ours show no mental disturbance at the thought of a give and take duel. On the contrary, like the "Heavier than Airs" I had flown with, the "daily bread" in their prayer has been changed to "submarine." They will get it, too—let us hope in the slang sense of the term.

Meanwhile, they are carrying on. Daily they go forth on the patrols, escorting convoys up the coast, keeping the U-boats out of the French ship channel.

## Some Saving Sense on Heating Being Some Facts on Steam and Water Heating Compared with

**T**HE KELSEY is a direct heating heat; which feature by itself is a great economy.

By direct heating, we mean that the direct heat, directly from the Kelsey Warm Air Generator, down in the cellar, directly heats your rooms.

To say it another way; the burning coal does not first have to heat up a volume of water, or convert it into steam, before it starts flowing through pipes to separate heaters or radiators in each room.

But even then such heats do not actually begin to heat, until the numerous separate heaters, all over the house, are first heated.

You at once see what a decided loss there must be in all that "heating up," before you actually get any heat.

The Kelsey loses none of its heat, by converting heat from one form to another.

It is practically as direct and as quick in results as is the heat from a camp fire, that you hold your hand over.

The difference is, that instead of so much escaping unused, into the air in every direction, it is all caught, sent to a gathering dome and then distributed in large volumes, at high speed, to any or all your rooms.

But that isn't all—the warmed air it sends, is fresh air. Air full of tonic oxygen. Air automatically mixed with just the right healthful amount of moisture.

Further than that, it is leakless, noiseless and dustless.

Send for Saving Sense Booklet.

Make us prove our coal saving claims.

## De Lue's GOLDEN GIANT New Early Hybrid SWEET CORN

Furnishes the sweetest and most luscious creamy nutriment you can imagine. Acclaimed the most important horticultural acquisition of recent years. Awarded the only medal given for sweet corn by the Mass. Horticultural Society in nearly 100 years.

DeLue's Golden Giant is the result of 12 years' selection from the product of Howling Mob crossed with Golden Bantam and combines all the good points of both parents—and then some.

Stalks very short and stout near the ground. Two to three ears; 8 to 9 inches long; cob of small diameter, carrying from 12 to 18 rows of long, thick kernels of deep orange color. Remains tender until nearly ready for seed.

It excels all other early varieties in size, productiveness and quality, and all the late varieties in quality and early maturity while equalling them in size.

It is the one corn for the home or market gardener who wants the greatest amount of highest quality corn in the shortest period of time from the smallest piece of land. Illustrated booklet, "How to Know and How to Grow Medal Sweet Corn," sent with order. Price 35c per 1/2 oz.; 50c per oz. (about 120 to 130 seeds).

Beware of substitutes. The genuine seeds are for sale only by the originator.

## LAWN BEAUTY

### With Economy and Conservation of Labor

THE lawn beautiful must be cut often and well and today hand mowing is not equal to this task where the lawn area is greater than two acres. Unless labor out of all reasonable proportion is employed.

THERE is however one solution, one lawn-cutting mower that solves the labor problem and at the same time assures a perfect lawn at the minimum of expense. That mower is the

## FULLER & JOHNSON MOTOR LAWN MOWER \$275 F.O.B. FACTORY

THE Fuller & Johnson combines large cutting capacity with flexibility and lightness. In one day's time one man can perfectly cut five acres of lawn. He can cut it so perfectly that no after-trimming with a hand mower around trees, shrubs or driveways will be necessary.

WHERE you find the most beautifully cared for estates, parks and cemeteries there too you will find the Fuller & Johnson Motor Lawn Mower. This machine is fast replacing hand mowers, horse mowers and the heavier types of motor mowers. It should replace them on your lawn.

Let us give you the full facts. Let us send you our book entitled "A Better Lawn." You owe it to your lawn and to your pocketbook to investigate the Fuller & Johnson.

## CITY LAWNS

(Continued from page 212)

zation most needs for its defense. I speak of the elaborate, handsome, professional fences of iron or wood, the makers of which could be employed in the making of (say) ships or airplanes.

But there are other kinds of fences, first and foremost being the handsomest of all fences, the hedge, especially the one made of that wonderful plant the California privet. There is no space here to discuss its manifold merits, but as a hedge plant it is in a class all by itself, its naturally upright growth and close glossy foliage fitting it admirably to the making of a living green wall such as a hedge should be. Its one defect is that it gets less and less hardy as one travels north of New York City. Set the plants one foot apart using a stick to measure with and measure from center to center of the plants. Before planting cut out the trench for the roots just wide enough to allow them to be set in without crowding; it will thus be easy to keep the plants in alignment. Set plants with lower branches just under the surface so that they will take root. Shake well so that soil becomes well mixt with the roots, and tread firm. Cut the plants down to about six inches above the ground, but do not cut them again in the year of planting. In the following spring cut them back to six inches above the previous cutting, and again in July to six inches higher still, thus allowing the hedge to get about a foot higher every year until it is as high as you want it to be. The object of this persistent cutting is to make the plants branch so that the hedge will be solid all the way up, not thin and spindling below and bushy at the top.

If your hedge is trampled and raided you can put up a simple and effective fence of wood posts and chicken wire outside of the hedge. The posts may be made of 2 by 4 inch lumber or even smaller, say, of 3 by 6 inch or 2 by 6 inch lumber sawed down the middle. They should be run thru the planing mill and cut into lengths before you get them. If the soil is sandy, they need not be set so deep. Lacking a post hole digger, you could make a hole with a shovel, say 18 inches deep, and then make a hole in the bottom with a crowbar to the required depth and hammer the post down. Be sure to cover the post underground and three or four inches above ground with tar or other waterproof preparation sold at the paint shop. Set posts seven or eight feet apart. You can adjust the height of the fence to the width of chicken wire obtainable. Paint the whole thing green, and you will have an inconspicuous, neat and efficient barrier.

A very pretty and impenetrable hedge can be made of Japanese barberry, but as this is a plant of rather squat habit, the hedge should be about as wide as high. If you have room for a hedge five feet wide or more, you can let the barberry grow without trimming, and it will become a very handsome hedge fence. Set plants eighteen inches or more apart, and they need not be trimmed, if at all, until they reach the height required.

The lawn is the most important part of almost every place, being not only an indispensable ornament, but a floor to walk on. Having decided the important matter of grading, the lawnmower should reflect that a lawn is a crop of grass and that to raise a good one, he must proceed in much the same way as to raise a good crop of anything else; that is, he must have a sufficient depth of good soil (say eight inches and upward) for the grass plants to root in, otherwise his crop will be a failure, partial or complete, and the failure will appear in the form of patches of bare earth

## HOTELS

where there ought to be a good sward, and patches of brown grass that ought to be green in dry weather. Before seeding, roll well, the object being to find out the soft places in the new surface. They can then be corrected with a rake, and the resulting contours will be much more true.

Weeds are sure to appear, the worst of these being usually the dandelion. Probably the best way to tackle this handsome yellow flowering nuisance is with one of those appliances for giving it a hypodermic injection of kerosene to be bought at the seedsman's. Next in pestiferousness are commonly the two plantains, the greater and lesser, but these can be cut off under the ground with a knife or broad chisel. Other weeds just about as bad such as creeping jenny (one of its names) are found in certain localities, and the best way to fight them is to turn the sod over and reseed, which sounds like a heroic remedy to the tyro, but is really a small and simple matter, unless the weed infection has spread very far. In eradicating weeds, be sure to do the work before they flower and scatter seeds for a new crop. These processes are not nearly so forbidding and tedious as they sound. Try destroying say twenty weeds a day (better still forty) and see how much progress you make in a week.

Fertilizing the lawn is important, and one of the best ways of doing it is to leave the cuttings of the lawnmower where they fall, thus restoring to the ground what came out of it, which is nature's method of fertilizing. To do this without making your lawn untidy, the grass should not be allowed to grow too long, nor cut too short; it should be pruned, not amputated, within an inch of its life. Remember that grass is a plant and to keep on growing, needs some leaf surface. If you insist on removing the clippings, they can be put on the compost pile or used as a mulch for plants or shrubs. If you do take off the clippings, the lawn should be fertilized artificially; for mowing a lawn is about the same thing as taking two or three crops of hay from the soil in a single season, and such a tax on it must be made good if the soil is to go on producing. This may be done by periodical applications of sheep manure or other fertilizer. Bone meal and wood ashes together are also good.

In planting about a lawn, do not forget that the object should be to display the greensward, to give it a frame or setting, not to clutter or obliterate it. Set trees and bushes so as to leave generous open spaces of grass.

The flower bed should be in a flower garden or at the house, and the planting should in a general way be put along the borders, in corners and in relation to the house or other buildings.

In planting a tree or bush do not forget to find out about how large it is likely to grow, and in placing it, imagine you are putting in one of mature size instead of the little naked insignificant nursling in your hand. Then if your planting looks too scattered and lonesome for patience, additional trees and shrubs may be put in as temporary fillers to be gradually taken out as they grow together. It is good for remembrance that the handsomest and most dignified small places are furnished with a few well grown trees and bushes in well-disposed relation, rather than with masses of crowded "scrubbery" as I have heard it called. For the commonest varieties of trees and shrubs (barring the variegated ones) consult the nurseryman or your neighbor who has them, the commonest being the most generally satisfactory. For others, and further discussion of the planting problem, consult *The Countryside* for April, May and June, 1917.

*"Not the name of a thing, but the mark of a service"*

No lamps can ever be marked  
MAZDA unless they embody  
MAZDA Service standards of  
excellence

4632

#### The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

tubs and immense pots of plain or tinted cement in which to grow palms, hydrangeas, box and ivy, all the way to plant boxes of carved Italian marble, hanging baskets of many materials, pottery bowls and jars to hold cut flowers, and gaily painted wall holders for vines or blossoms.

Other colorful aids to the development of the decorative scheme are: enameled furniture, brilliantly striped and painted with knots of posies; screens and cushions of flower strewn chintzes, cretonnes and linens; awning stripes; quaint and amusing door stops; bits of pottery; and great bubble-like Oriental lanterns of oiled silk or paper. Because of the imminence of grass and trees and, in many cases, the blazing rivalry of flower beds, the colors employed for porch decoration can scarcely be too intense; for, at least, dead pigments mingled in the dye-pot are dull and lusterless compared with the glowing hues of nature's palette. Like the dazzling patterns nowadays used for sport clothes—which taken alone are often almost shocking in their primitive rawness, yet when viewed against a background of sward on the fairway of the links, appear as sprightly accents against the green expanse—so the most gorgeously tinted fabrics cease to be unpleasantly assertive when placed against the cool grays, browns and whites of stucco, shingles and painted wood, and interspersed with the living green of vegetation.

Rugs, tho not an absolute necessity, are nevertheless a desirable addition. On a wood floor they supply color and variety, and on one of tile, brick or cement they also afford comfort to the feet. The most satisfactory porch rugs come from the Orient. Those of cotton, made in China, are particularly thick and soft, and the dyed rush mats of Japan, woven in squares which may be fitted together to form a rug of any size, are interesting in color and texture. Grass rugs of domestic manufacture are low in cost and give good service. Woven or braided rug mats also are well adapted to porch use, being adaptable to any color scheme, light and easy to clean.

Discussion of porch furnishings would not be complete without mention of lighting fixtures. For general illumination on the open porch, pendant electric bulbs dropt into Chinese lanterns of the better grades are extremely effective, as are the various lantern shaped lantern fixtures of leaded glass. When electric current is not available, candles may be substituted for the bulbs. For reading, sewing, or playing games, floor or table lights must be provided, and where electricity is out of the question, oil lamps will answer the purpose satisfactorily, if shielded from strong drafts.

In the glassed-in porch, which has the advantage over the open type of being an all the year round affair, painted lattice may appropriately be featured. Used either as trellises for vines, or frankly for its decorative value, it will aid in overcoming the indoor suggestion inseparable from the presence of windows. A fountain, even of the simplest, is another help in this regard, as is flooring of brick, tile or cement in place of wood. Where the porch is used for breakfasting or dining, a fireplace is one of its most valuable assets. Thus equipt, the service of meals may be continued thruout the year. In warm weather, however, the pleasure in its use will be vastly increased by removing the sashes altogether unless they are arranged to slide down into the thickness of the wall.

The breakfast or dining porch need not be large, as the only essential furnishings

are a table and chairs and a wheel tray, but it must be conveniently situated with reference to the service portion of the house. Where space permits, its functions may be combined with those of a living porch.

Whatever the purpose to which it is devoted, the comfort of its occupants requires that shades of some description be provided. On the open porch, these may conveniently take the form of awnings, or of curtains of awning cloth, split bamboo or other material, which hang from the eaves and can be rolled up or lowered as occasion demands. The glassed-in porch obviously requires a more formal treatment, and usually is supplied with draw curtains and valances of some neutral colored fabric—such as English casement cloth or natural pongee—supplemented, perhaps, by roller shades of glazed chintz which have all the depth and brilliancy of stained glass when the sun shines thru them.

In a home where there are small children, a second story porch opening from the nursery and fitted up as a playroom is a great convenience, especially in rainy weather. It should be enclosed with wire screening for the restraint of venturesome souls who might otherwise be moved to practise war dances on the railing, or try the waterspout route to the ground. Here the sand box, seesaw, swing, and other apparatus too bulky for the nursery may be installed, and here, too, the little folk may sleep as well as play if there is room to hang the requisite number of small hammocks or to set up tiny cots. The latter can be folded away by day.

In the fashioning and furnishing of a sleeping porch proper, the widest possible latitude may be enjoyed. Many, perhaps the majority, of such porches are no more than a jog in the house wall, or a small excrescence suspended, like Mahomet's coffin, twist earth and heaven, with a row of windows along the front. If the windows are kept wide open, these answer the purpose very well, but the drawback is that the windows can *only* be kept wide open in dry weather, unless there is an ample awning that can be lowered to deflect the rain.

The ideal, then, is a porch large enough so that the rain will not drive in under the roof far enough to reach the bed unless there is a veritable gale blowing, and without sashes or other enclosure unless screen wire is necessary for the exclusion of mosquitoes. If the requirements of privacy demand some sort of screen, it is infinitely more enjoyable to ensconce oneself behind a fragrant tangle of honeysuckle, white clematis, or climbing roses, or a living curtain of woodbine or kudzu, than behind prosaic roller shades of dark green holland.

What the future of the porch will be, who can prophesy? Having begun as a mere appendage to the main structure of the house, it has become more and more vitally associated with the intimacies and activities of daily life until, viewed collectively, the porch is hardly less important than the interior of the house. How often some person is heard to exclaim, "Why, we simply *live* on the porch all summer long!" Perhaps its evolution is destined ultimately to reach a point where, instead of a series of tight-walled rooms with porches grouped about the exterior, every suburban or country house will be mere congeries of porch-rooms enclosed with sliding or swinging or pivoting panels of glass that can be opened wide to the sun and air, or securely shut against storm and cold.

## The Dutch West Indies

On July 21 and again on November 24, we ventured the suggestion that the United States might well make an offer to the Netherlands for the purchase of Surinam and Curaçao. They would be vastly more valuable acquisitions than the Virgin Islands that have been just purchased from Denmark and we believe that the transfer would be equally welcomed by the inhabitants. Our opinion is confirmed by the following letter from a resident of Dutch Guiana:

In the American Independent of 21st July, 1917, a remarkable article entitled "Let Us Buy the Dutch West Indies" appeared, and was universally read with the greatest satisfaction when it was reproduced in the local papers. For myself, I am convinced that every Surinamer would hail the day when the Stars and Stripes should wave over Dutch Guiana.

The more educated, at least the thinking ones, in the colony are not "too sweet," or shall I say too keen, on Holland's rule. They are kept down by the Hollanders and not given a fair show. Other matters, which could not be written, play also an important part in causing this great feeling for United States annexation. The United States would do well in securing this piece of South American soil and, I repeat as I have so often done in other writings, America for Americans. Let the entire Western Hemisphere be under American rule.

BARKLEY PERCIVAL

Paramaribo, Surinam, Dutch Guiana, S. A.

Mr. Percival encloses a translation of a pamphlet, *De Verkoop van Ned. West-Indie, een algermeen Nederlandsch Volksbelang*, published at The Hague by a retired West Indian official approving of the project and showing how American capital and enterprise would revivify Guiana and bring an abundant reward by developing its untouched resources. The transfer would also, he argues, benefit the mother country by enabling her to concentrate her energies on her East Indian possessions in which she is more interested. We quote a few passages from the pamphlet:

If Netherland transferred West India to the United States, the exchange would not be bad for the inhabitants. They would remain under a just, enlightened government. And if the contract of sale contained a clause, whereby the United States guaranteed to Netherland the undisturbed possession of Netherland East India against any aggression from outside, the transaction should become for Netherland and for Netherland East India one of the greatest importance.

With the purchase price Netherland could cover the expenses of the crisis and the taxes, under which our people bend and stagger still further, could be diminished.

In contrast to our East Indian possessions there are no serious Netherland interests involved by retaining the colony of Surinam.

The agricultural productions form in the world a very small factor. Industry is there unknown. Trade by ships between our land and the colony restricts itself to the Koning West India mail service, which with high state subsidy, keeps up in normal circumstances a fourteen-day service.

The big as well as the small trade in the colony itself is largely in the hands of Germans (the *Hernhutters*) and in the last years the number of Surinamers appointed in government service has so much increased, that the sending out of Hollanders only happens sporadically.

The purchase would give equal satisfaction to Hollander, American and Surinamer.

B. BOEKHOUDT  
Retired District Commissioner  
of Dutch West Indies

The Hague

We should add, in order to remove a misconception that has arisen in certain quarters, that our suggestion for the purchase of the Dutch possessions was purely spontaneous and had no official inspiration.

We have no knowledge of the opinion of any one connected with the Government in regard to the project. All we know is that it would be a good thing for all three parties concerned, the Netherlands, the United States, and the inhabitants of the territories to be transferred. We see no reason why President Wilson's principle of self-determination should not apply to America as well as to Europe.

# Every Office Needs

a clean, pure, *non-gummy* oil to keep typewriters, adding and billing machines, cash registers and other office mechanisms in perfect working order.

## 3-in-One

is the right oil to use. Instead of collecting dirt in the delicate bearings as inferior oils do, 3-in-One works all dust and dirt out. Minimizes friction. Wears long. Never gums or dries out.

Try 3-in-One on stubborn locks, squeaky revolving chairs and hinges. Prevents rust.

Put a few drops of 3-in-One on a damp cloth to clean and polish office desks and filing cabinets. Brings back the "new" look.

Sold at all stores—in the Handy Oil Can, 25c, and in 15c, 25c and 50c bottles.

**FREE** Generous sample of 3-in-One Oil and Dictionary of Uses—both sent **FREE** on request.

**Three-in-One Oil Co.**  
165 UG. Bdway., New York

**SALESMEN WANTED:** Large investment house has opening for a number of high class salesmen between age of 20 and 35. Prefer men of experience who have been successful in other lines. Splendid opportunity if you can qualify as to character and industry. Personal or written applications can be made to any of the following addresses: W. F. Thurmond, 27 Pine St., New York; C. E. Jenkins, Room 425, 108 So. La Salle St., Chicago, Ill.; C. Fred Grundy, Merritt Bldg., Los Angeles, Cal.; W. J. Thurmond, 1520 Candler Bldg., Atlanta, Ga.

**SPEAKERS, LECTURERS:** We assist in preparing material for special articles, papers, speeches, debates. Expert, scholarly service. E. B. WEST, M.A., Authors Research Bureau, 500 Fifth Avenue, New York.

## HODGSON Portable HOUSES

Spring is here! And it's just the time to buy that small house you've always wanted.

Why not build it the Hodgson way! First send for a catalog. It's just chuck-full of pictures of bungalows, cottages, garages, playhouses, poultryhouses, etc. Look them over and select the one (from actual photograph) that fits your fancy.

Then write us and we do the rest. We build your house for you at the Hodgson factory and ship it to you in sections all neatly finished, fitted and painted. Unskilled workmen can put it up for you in one day. No fooling with complicated blueprints—no dirt, no extra expenses. No long, tiresome conferences with contractors and builders. Nothing for you to do but to order the house and put it up yourself in a jiffy.

If you want to order the house now and have it delivered later, send us 25% of the cost. We will build your house and hold it for you until you want it. Could anything be fairer or easier?

But first send for the catalog. Do it today.

E. F. HODGSON CO.  
Room 230, 116 Washington  
Street, Boston, Mass.  
6 East 39th Street,  
New York City

## WILL YOU SANCTION THIS?

CONGRESS—or a sufficient majority of it—has voted to destroy magazine reading.

It has accomplished this by passing a simple law re-establishing a postal "zone" system for all publications—zone system and postal principle that was abolished by President Lincoln in 1863, and by establishing through a complicated system postal rates that mean increases of from 50 to 900 per cent postage increases to all periodical readers.

By this "zone" system American readers of periodicals—home, educational, scientific, business, or religious—are to be penalized by enormous postage increases on the weekly or monthly papers they read, and the greater their accidental remoteness from the city of publication the greater is the penalty that is placed upon them.

Magazines have been a slow growth. In the process of their development and evolution it has happened that publishing is chiefly concentrated in the East. This large magazine increase in postage, therefore, discriminates unfairly but with great force against the entire West—beginning even with western New York and Ohio and increasing rapidly until such States as Washington, Oregon, New Mexico, and California are to pay *nine times the amount of postage* formerly paid on the advertising pages alone of their magazine. What this increase means in cost to readers is incalculable.

It means that hundreds of thousands of readers will be compelled to give up their periodicals owing to the terrific increase in their postage cost.

And the tragedy of this increase postage law lies in the fact that this loss of readers will come from classes and from sections of our nation where widespread reading should be most encouraged—from people in remote sections where life is a bitter struggle on the margin of subsistence—where the habit of reading is just forming

and the little weekly or monthly budget for magazines has but so very recently become recognized as an important item in family life. The terrific magazine postage increase will wipe these out. That is the real tragedy to this nation.

We could do no better than quote the fine words of a Western woman, Miss Armina Wood, president of the Woman's Club of Racine, Wis.:

"The many splendid magazines published to-day," she wrote in an appeal to Eastern women from the women of the West, "are a means of education to many a home where other opportunities are lacking. And many of these homes are remote from publishing centers—many even remote from city life. It is the magazine combined with rural delivery that has brought to the door of the countrywoman material which helps her solve problems needing advice more easily obtained by her city sister. Through this medium she has known current events, has guided her children by the educational influences offered, and has been able to keep herself in harmony with the world from which she was separated. Periodicals and newspapers are as essential as food to the country home."

"Then again the attractive magazines in every city home means keeping together the family circle. To make the magazine prohibitive by excess postal rates would be to take away from mothers one of the means whereby they have battled against outside attractions."

"Now just because a woman lives in a Western State remote from publishing centers—and of course home interests affect the woman most—is she to be made to pay a penalty in order to bring opportunities to her door? To enforce the 50 to 900 per cent periodical postage law would be causing mental starvation to many who have only this means of keeping abreast of the times."

"Every thinking Eastern woman should put her full strength into a drive which will give her Western sister the same advantages which she enjoys."

It is not too late to have the condition changed. Do your share—but do it at once! Write to your Congressman and register your demand that the law be repealed. (If you don't know the name of your Congressman, enquire at Post Office.)

### WILL YOU HELP?

Write to your Congressman, protest against this destructive law, and demand its repeal.

Get your club or association to adopt resolutions demanding its repeal.

Will you enroll to help repeal this law that penalizes periodical readers with heavy penalties?

If so, send your name and address—and a copy of any resolutions adopted—to

CHARLES JOHNSON POST  
200 Fifth Avenue, New York City

## The New Books

### Facing Kaiserism

BARON VON GUZZLER was once Minister to Sweden. Now he has retired to his Brandenburg estate of a thousand acres, with its cobblestone courtyard, its farming lands and parks and shooting preserves. Baroness von Guzzler's mind is neatly divided into four compartments consisting of Kaiser, Kirche, Kinder and Kuche. The five young von Guzzlers hold prominent public positions; the five von Guzzler girls have married wealth. Except for two weeks in February, when they go to a cheap hotel in Berlin for the court ball, they live all the year on their estate. The stone house is plain and solid, the food is plain and solid, the beer is plain and solid.

The von Guzzlers do not associate with the minister or the schoolmaster or other worthy but lowly folk. When they crave excitement they arrange a visit with the von Vealorvursts; they arrange it by letter, for German hospitality is seldom spontaneous. After driving eighteen miles in their carriage, they arrive at the Vealorvursts in time for lunch. They eat and drink as long as they are able. Then, while the women discuss family photographs, the men discuss politics. They wonder how America, without King or Kaiser, can expect to organize for war; they condemn the German Social Democrats. Baron von Vealorvurst tells how his son cut down a Social Democrat who was slow in getting out of his road. This adds to the pleasure of the von Guzzlers, who now drive back to their own estate.

Such is a typical family of the Prussian autocracy; such is their life. A wholesome, kindly family, a simple, peaceful life? Not at all. They are among the causes of the Great War. They must keep Germany safe from democracy or it will not be safe for them. Says former Ambassador James W. Gerard in *Face to Face with Kaiserism*:

I can understand the feelings of the typical Prussian family of the ruling class. If Germany should be democratized, what place would be left for them? The offices of the Government thrown open to all classes in fair election, places in the army and navy and diplomacy open to competition in great academies like West Point and Annapolis? Deprived of the aroma of power given now by diplomatic or military place and noble birth, the sons and daughters could no longer make rich marriages with the sons and daughters of the rich business men and manufacturers. No more would the civil offices of Prussia be open only to appointments among the noble or Junker class.

It is such sweet and harmless families as the von Guzzlers that are fighting tooth and nail to hold the common people in a serfdom almost as complete as that of the Dark Ages.

The only excuse for the existence of the Prussian ruling class today, as much out of place as chain armor or robber barons, is its supposed honesty and efficiency; but no class which has brought this war on the German people can be described as competent; no sane governing class would have plunged into disastrous war a country that by peaceful penetration, by thrift and manufacture, by financial and commercial ability was in process of acquiring much of the wealth of the world. The first aim of the German autocracy is to keep its own political position at home. The dawn of constitutional government will be their twilight, the twilight of the Gods of militarism, of privilege, of caste. Prussian autocracy made the war in a last desperate endeavor to bribe the people into continued submission.

The one hope of the common people, then, is in a democracy; the one hope of the von Guzzlers and von Vealorvursts is in the Hohenzollerns.

If the German people insist on being ruled by some one and on being occasionally dragged out to be shot or maimed in an unnecessary war, they could not find more capable rulers than the Hohenzollerns. Should the German people fail to take unto themselves the war-making power, they will, before long be decimated again for the amusement of the Crown Prince.

Contrary, however, to the popular idea of the Crown Prince as a libertine, a pillager, a kind of monstrous idiot, the author finds him "a good sport, a clever man, a charming companion," with his fondness for war the only defect in his character.

In his chatty, vivid pictures of home life and public life in Germany, Mr. Gerard always defines the shadow of war, war necessary to feed the ambition of the Hohenzollerns and to secure the power of such Junker families as the von Guzzlers and the von Vealorvursts.

*Face to Face With Kaiserism*, by James W. Gerard. George H. Doran Company. \$2.

### Russia's Crisis

BEGINNING with the events in Petrograd in August, 1917, and the overthrow of the Kerensky government, the author gives a sympathetic and constructive survey and criticism of the Russian situation, its dangers, its possibilities, its needs, both as seen by himself and by various types of the people themselves. In the vast masses of peasantry—the Dark People—he sees the final arbiters of Russia's destiny, and he calls on America to help them to work out Russia's salvation and not her ruin.

Remember (said a Moscow manufacturer) we own one-sixth of the globe: and except for a few materials, we have everything we need in order to be independent. But we have even deeper resources in the hundred and eighty million minds of our common people. I come from the peasant class and I know. Such a people cannot be spoiled by a short debauch of wild ideas. It is a dangerous illness, but Russia will recover, and her recovery will be . . . by the laborious process of industrial education. Hitherto we have been a nation of peasants, but now we shall turn to industrial life.

Russia needs democracy (said Miliukov). We shall never return to the Old Régime. A constitutional monarchy is just possible; but I am doubtful even of that, for I know our people so well. They love republics and congresses. . . . I hope that after this terrible war all peoples will be brothers in Christ. And yet I want to see each nation keep its self-hood. . . . I see for Russia a future now that may spread its influence over the world . . . simply by the power of a religious brotherhood so vast that all the world will feel how good it is to be our friends.

The author says:

If we in our impatience of muddle and confusion leave Russia to her fate, then we shall

## Best Reference Work for You Whatever Your Walk of Life

Nowadays it isn't safe to *think* that we know *all* about any subject even the subject to which we give most thought.

In every walk of life those who rise superior to others are the ones who *actually* know more.

Now the only way to *know* more is to *learn* more, and to *learn* more about any subject in which we are interested, the best aid is

24 Volumes  
80,000 Articles

### STRONG POINTS

1. **Accuracy:** all important articles written by specialists.
2. **Authority:** can be quoted on any subject without fear of successful contradiction.
3. **Comprehensiveness:** covers a wider field than any other general reference-work. It contains 80,000 articles—30,000 more than any other encyclopædia.
4. **Lucidity:** written in language so plain that even the young folks can understand.
5. **Illustrations and Maps:** carefully prepared to illuminate and explain the text.
6. **Convenience:** printed on thin paper—not too thin but easy to handle and to leaf.
7. **Arrangement:** all subjects alphabetically arranged and easy to find.
8. **Pronunciation:** all except the most common words made clear by a simple phonetic system. Derivations also indicated.
9. **Bibliography:** every important subject supplemented by a full list of books that may be consulted.
10. **Courses of Reading:** afford specialized help toward self-instruction in leading branches of knowledge.
11. **Attractiveness:** monthly prizes stimulate use of the volumes thus increasing their interest and value.

Dodd, Mead & Co., Inc., N. Y. City

## THE NEW INTERNATIONAL ENCYCLOPÆDIA

Second Edition; Just Completed  
Revised, Rewritten and Reset from A to Z  
Size of Page Enlarged  
Number of Volumes Increased  
Printed Throughout from New Plates

EDITORS:  
FRANK MOORE COLBY, M.A.  
TALCOTT WILLIAMS, L. L. D., L. H. D., Litt. D.  
More than 500 Contributors and Office-Editors

To test THE NEW INTERNATIONAL take the subject—any subject—about which we *think* we know the *most* or about which we would most *like* to know; look it up in those treasure-volumes and the new knowledge spread before us will prove a surprise and a pleasure.

Ask the more than seventy-five thousand owners and they will tell you how well THE NEW INTERNATIONAL pleases them, and with reason, for they find it best because it thoroughly treats so many subjects—80,000 all told, being about 30,000 more than any other encyclopædia.

Here are a few of them from Volume I of THE NEW INTERNATIONAL:

Accident	Alaska	Ammunition
Aqueducts	Alcohol	Angling
Adirondacks	Alsace-Lorraine	Annuity
Administration	Aluminium	Antiseptic
Advance Guard	America	Anthrax
Adulteration	American	Antwerp
Aeronautics	Literature	Apartment House
Agriculture	Amundsen	

These widely varied themes, all treated in scholarly yet readable fashion, give a hint of the wide field covered, making the work a genuine

### Aid to Success

People in every walk of life find THE NEW INTERNATIONAL a work of vast interest and immense utility. To learn all about it and how it will help along the road that leads to success, it is only necessary to

be blind indeed to the cause of world democracy. . . . Both in actual relief supplies, and much more in the work of organization, the Russians need help; and they will get it—either from us or from Germany. No other nation among the Allies is so well liked in Russia as ours. We are in a position to help them. . . .

And because we are in this war to make the world safe for democracy, we should help them. . . . For if we don't do it, Germany will.

*The Dark People*, by Ernest Poole. The Macmillan Company. \$1.50.

## The Earthquake

**A**T first sight this book may have a rather comic aspect to the man in the street, beginning as it does with the story of a respectable American family's reduction, by the war, to the abject poverty of \$25,000 a year, and their brave struggle to cope with this appalling situation.

There are many valuable lessons, however, of wide application, wrapt up in the lively, journalistic style, and while the book does not begin to take its place beside "Mr. Britling," it gives an optimistic picture of much human interest of the moral awakening which the call of national and international need has brought to various types of people in the United States—bond-brokers, financiers, fashionable women, their sons, daughters, and friends.

Why, you know—he's given up a hundred-thousand-dollar salary to go down to Washington for a dollar a year. There are dozens of 'em. They didn't seem to think the money amounted to a row of pins. It set me thinking. Was it? I asked myself. What was my kind of success worth if fellows just tossed it away like that when something bigger came along? Then it occurred to me that, war or no war, there were bigger things coming along *all the time*. Get me? It's fine to drive the bosches out of Belgium, but it would be fine, too, to drive poverty and crime and disease out of America.

The author's enthusiasm leads him at times into a tacit agreement with Treitschke's view that war ipso facto is a good thing—"a medicine for the human race," and he is inclined to exalt obedience into a virtue in itself, and to plead for compulsory military training after the war, forgetting that this would be to establish the very military system which he deprecates, and which we are fighting to destroy, in order, as he says, that "freedom shall not perish from the earth."

*The Earthquake*, by Arthur Train. Charles Scribner's Sons. \$1.50.

## The House of Conrad

**T**HE ills of our country, the ills of our age and of every age, in the final analysis resolve themselves to this one thing: the lack of understanding on the part of the various classes of society. The policeman clubs the alien strikers with gusto not solely on account of the command he has to preserve order . . . but because he does not understand them and what one does not understand one is hostile to.

"What one does not understand one is hostile to." Just this expresses in a nutshell the idea of the *House of Conrad* and sums up also the most important aspect of our immigration problem. Assimilation demands first sympathy. Sympathy requires understanding and understanding means a common tongue and ideals in common. The ideals of the immigrant, worth while tho they may be in themselves, must be discarded if they do not fit in with true Americanism, in all that it implies.

This is, in brief, the idea of a book tremendously convincing in its simple but vividly drawn picture of an immigrant family and its development in a new land.

*The House of Conrad* by Elias Tobenkin. Frederick A. Stokes & Co. \$1.50.

## You Can Be So Well

Do you know, ill health or chronic ailments, in nine out of ten cases, are due to improper food, poor circulation, insufficient exercise, incorrect breathing, and incorrect poise?

Remove those unnatural conditions and your ailments vanish.

This may surprise you, but I am doing it daily: I have done it for eighty thousand women.

### Without Drugs

I will send you letters of endorsement from eminent physicians and tell you how I would treat you.

Physicians endorse my work—their wives and daughters are my pupils.

Don't let writing a letter stand between you and good health, animation, correct weight and a perfect figure. Write me now—today—while this subject is uppermost. If you will tell me in confidence your height, weight, and your ailments, I will tell you if I can help you.

**Susanna Cocroft**

**Rupert Hughes**

than the "Fighting Sixty-ninth" for these delightful Irishmen who take their whimsical way thru the pages of *Long Ever Ago*, ten deliciously humorous tales of the New York Irish, in whom even life under the "L" tracks cannot kill the spirit of "long ever ago"?

*Long Ever Ago*, by Rupert Hughes. Harper's. \$1.40.

## Books In Brief

THE SPORT OF KINGS, by Arthur S. Roche. (Bobbs Merrill, \$1.40.) A non-conventional love affair, the excitement of the race and detective-story element combined into a swift moving novel.

THE FLYING TEUTON, by Alice Brown. (Macmillan, \$1.50.) Group of well written and interesting short stories of good variety by a supreme interpreter of New England rural life.

THE WOMAN VOTER'S MANUAL, by S. E. Forman and Marjorie Shuler. (Century, \$1.) A course of instruction in the technique of citizenship.

AFTER, by Frederic P. Ladd. (Duffield, \$1.50.) Sacrifice, unity, intelligent patriotism and spirituality is the motive of this interesting story of American life.

THE HOUSE OF WHISPERS, by William Johnston. (Little Brown, \$1.40.) A real mystery story with an original plot laid in novel surroundings.

THE HOUSE OF INTRIGUE, by Arthur Stringer. (Bobbs Merrill, \$1.50.) Mixture of detective and adventure story of eager interest, with a lively thread of romance running thru it.

MRS. MARDEN'S ORDEAL, by James Hay. (Little Brown, \$1.50.) The atmosphere is tense thru-out this mystery story and the denouement unexpected.

THE MAN WHO LOST HIMSELF, by H. DeVere Stacpoole. (John Lane, \$1.40.) Originality, whimsicality and sheer bubbling humor mark this entertaining novel.

THE UNWILLING VESTAL, by Edward L. White. (Dutton, \$1.50.) Present in fiction, an account of the Vestal Virgins, their powers and privileges and many strange Roman beliefs and customs.

STEPHEN'S LAST CHANCE, by Margaret Ashmun. (Macmillan, \$1.50.) Story of Montana ranch life which boys will find absorbingly interesting.

BRANDED, by Francis Lynde. (Scribner's, \$1.35.) Exciting story of the rough life of labor camps and gold fields.

THE BOARDMAN FAMILY, by Mary S. Watts. (Macmillan, \$1.50.) A novel whose heroine is emancipated by her work and art and native common sense.

THE STUCCO HOUSE, by Gilbert Cannan. (Doran, \$1.50.) Novel whose latest significance is in the conflict between the Industrial Revolution and the romantic movement in literature—forces dividing the England of the time.

THE ADVENTURES OF ARNOLD ADAMS, AMERICAN ACE, by Laurence Driggs. (Little Brown, \$1.35.) Vivid descriptions of the various thrilling exploits of the air fighter at the western front.

## This New Range Is A Wonder For Cooking

Although it is less than four feet long it can do every kind of cooking for any ordinary family by gas in warm weather, or by coal or wood when the kitchen needs heating.

There is absolutely no danger in this combination, as the gas section is as entirely separate from the coal section as if placed in another part of the kitchen.

Note the two gas ovens above—one for baking, glass paneled and one for broiling, with white enamel door.

### Gold Medal

# Glenwood

The large oven below has the Indicator and is heated by coal or wood. See the cooking surface when you want to rush things—five burners for gas and four covers for coal. When in a hurry both coal and gas ovens can be operated at the same time, using one for meats and the other for pastry—It

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

##### I. Patriotism and Loyalty.

A. A MESSAGE FROM PRESIDENT WILSON. You have been sent to a nearby school to encourage war garden work. Answer the following questions as you would answer them in the school assembly: 1. What may the home garden mean to our country? 2. How can a boy or girl "fight in France" by joining the home garden army? 3. Why should we feel any interest in the boys and girls of western Europe? 4. How can children's garden work be as patriotic as building a ship or firing a cannon? 5. What is your own school doing in war garden work?

B. THE SCHOOL GARDEN ARMY 6,000,000 STRONG. 1. Write a paragraph of comparison, showing the resemblance between the work of a good gardener and the work of a soldier. 2. Write a public poster giving emphatic, simple-sentence rules for the making of a war garden. 3. Write an original story based on the work of one of the children in the pictures given with the article. 4. Give a spirited speech in which you encourage the members of your class to take part in War Garden work.

C. MY BROTHER'S KEEPER. 1. Write a composition of contrast on "American Narren Politik in the Eyes of a German, and in the Eyes of an American." 2. Write a composition on "Culture in Germany and in the United States." 3. Give orally an explanation of the Monroe Doctrine.

D. SKY PILOTS OF THE U. S. N. 1. Write an original story based on the life of Herman Whitaker. 2. Give a talk on "Lighter-than-Airs" and "Heavier-than-Airs." 3. Explain what technical knowledge a "Lighter-than-Air" pilot must have. 4. Show what part narration plays in the article. 5. Show what part description plays in the article. 6. Write an original story based on the work of a sky pilot.

E. CUTTING OUT THE DEAD WOOD. 1. Give an oral explanation of the purpose and nature of the Overman bill. 2. Select from the article a series of sentences that give its principal points. 3. Write an argument for or against the Overman bill.

F. THE LICHNOWSKY REVELATIONS. 1. In a few clear sentences tell what is meant by "The Lichnowsky Revelations." 2. As if in a public speech show how the Lichnowsky revelations place the full blame of the war upon Germany.

II. Special Articles.  
A. ROMAN ARCHES IN THE CATSKILLS. 1. Explain why the title is peculiarly effective. Give rules for the writing of titles. 2. Write a composition explaining what is meant by "inspirational knowledge." Which of your school studies are especially inspirational? 3. Write a paragraph on "The Beauty of Roman Arches." 4. You are editor of a "Question Column." Write very short answers to questions concerning the Pantheon, the Coliseum, the Basilica of Constantine, the Arch of Titus, and the Aqueduct of Claudius.

B. THE OUTDOOR LIVING ROOM. 1. Write, as if for a dictionary, a definition of "an outdoor living room." 2. Write a pleasing description of any of the outdoor living rooms represented in the pictures. 3. Write a paragraph of contrast on "The Old and the New Piazza." 4. Write a series of short sentences giving directions for furnishing a modern porch.

C. GASSING THE GARDEN. 1. Tell why the author selected the present title. 2. Write a paragraph on the topic: "There is always war in the garden." 3. In a few short sentences give directions for the protection of a garden.

D. CITY LAWNS. 1. Imagine that you are writing a novel in which part of the action takes place in one of the scenes represented in the pictures. Write the description you would wish in your novel. 2. Write a series of rules for the care of a city lawn.

E. WORDS OF THE WEEK. 1. Challenge any one of your fellow students to a test before the class on the pronunciation and the definition of all of the words in the column.

III. The News of the Week.  
1. Give a clear oral explanation of the present situation on the western front. Use a black-board diagram in order to make your talk entirely clear. 2. Narrate the events in which American soldiers have recently taken part. 3. Tell what northern projects are now attracting the attention of Germany. 4. What is the value of Spitzbergen? 5. What new interest is attaching to movements in Russia? 6. Explain recent movements at sea. 7. Give a clear explanation of the present situation in regard to Holland. 8. Give a summary of the important news of the week concerning events in the United States.

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. The United States and the Western Hemisphere—"My Brother's Keeper."  
1. Why did the Germans referred to in the first paragraph regard the President's actions in the Vera Cruz incident as an example of *Narren Politik*?

2. What was the incident referred to in the sentence: "That was the method which the Germans used in 1897," etc.?

3. Why did Prince Bismarck regard the Monroe Doctrine as "an international impertinence"?

4. Prove that the Germans were "concocting deep-laid schemes of 'peaceful occupation' in Latin America."

5. "It [the Monroe Doctrine] was meant rather as a declaration that the American continents," etc. Has the history of our relations with the Latin American countries justified the idealism here expressed?

6. Discuss in detail the history of our treatment of the people in the territories annexed to this country as the result of our wars.

7. Prove that President Wilson's proposal of January 22, 1917, is a logical outcome of our American policy.

II. Congress and the Executive—"Cutting Out the Dead Wood," "Now for the Third National Army," "In Congress," "On the Court-Martial Bill," "Secretary Baker Reports."

1. Can you find in this article material for a discussion of the advantages and disadvantages of our national political theory of "checks and balances"?

2. Summarize the article as an answer to the three questions: "What is this proposal, why is it important, what will its adoption accomplish?"

3. "It is in line with similar legislation enacted by other belligerents" etc. Discuss the circumstances which led to such legislation in England and the result.

4. What evidence do you find in the news items of lack of harmony between Congress and the Executive? How do you account for this?

5. Why, since it increases the power of the Executive, does the President object to the court-martial bill?

6. Is the Executive and Congress agreed on our military program? Which is right?

III. Our Changing Educational Ideals—"The Educational Foundations."

1. "Education is no longer conceived as primarily useful to train clergymen," etc. Show how this sentence sums up the history of American education.

2. Why are (a) domestic science, (b) training in mechanic arts, (c) elementary biology and (d) social education, regarded by the author as the "four fundamental things [which] are accepted as imperatively necessary" in American education?

3. How far are the schools of your community living up to the author's educational ideals?

IV. Naval Warfare—"Stopping the Rat Hole," "Bottling Up the Belgian Ports."

1. Use the news of this recent action of the British fleet as an occasion for discussing: (a) the effect of submarine warfare, (b) naval warfare of the past, present and future.

V. Causes and Results of the War—"The Lichnowsky Revelations."

1. What is the significance of the first sentence of the editorial?

2. "It [the Memorandum] is a complete justification of Sir Edward Grey and Lord Haldane." Do you agree?

3. Give the historic background of one or more of the twelve propositions contained in the sentence, "Among other things it proves:" etc.

4. Do these twelve propositions justify Lichnowsky's statement, "It was wrecked . . . by the perfidy of our policy"?

VI. Behind the German Battle Front—"The Situation in Siberia," "On the Arctic," "The Dutch in Danger."

1. In what way, if at all, will conditions in Siberia affect conditions in Europe and America?

2. What is the purpose of the German advance northward in Finland? Explain briefly the author's idea: "An all-rail route from the North Cape to Bagdad or to Herat is being talked of."

3. "The situation [in Holland] is one which very closely concerns the United States." In what way?

*The Annual*  
**Roll Call**  
*of* WHITE TRUCK FLEETS

ACCORDING to its custom for a number of years, The White Company is publishing its annual Roll Call of fleet installations (ten trucks or more) in national magazines and metropolitan newspapers.

The following summary for each year indicates the rate of growth of the installations which comprise ten trucks or more:

1910 . . . 54 trucks	1914 . . . 1747 trucks
1911 . . . 191 trucks	1915 . . . 2594 trucks
1912 . . . 508 trucks	1916 . . . 5118 trucks
1913 . . . 1021 trucks	Now . . . 7446 trucks

There is now a total of 2,153 White fleets in active service, aggregating 23,226 trucks, exclusive of all single installations.

The company takes a just pride in issuing this annual statement. Its year-to-year growth is so much more convincing than any argument—so much more extensive than any other figures presented in the industry.

*A copy of the 1918 Roll Call will be sent to anyone interested on request*

## REMARKABLE REMARKS

**ED. HOWE**—I don't care what some people think: they're wrong.

**GLEN BUCK**—Advertising's highest function is reputation-building.

**CHANNING POLLOCK**—Our crying need is an institution of unlearning.

**EZRA POUND**—Her fingers were like the tissue of a Japanese paper napkin.

**LADY READING**—The English women are far too busy to think about their nerves.

**EMPEROR WILLIAM**—The people who wish to destroy us are digging their own graves.

**RABBI STEPHEN WISE**—Anti-Semitism was made in Germany and exported to Russia.

**BARON VON WAGENHEIM**—What we have lacked hitherto has been a healthy national selfishness.

**PRESIDENT WILSON**—All private interests must for the present give way to the public necessity.

**COUNT VON REVENTLOW**—Without a German victory the German monarchy will soon cease to exist.

**HERBERT KAUFMAN**—Find a way to stretch the day and 'most any organization will give you its pet job.

**LORD MILNER**—It is not now a question of destroying Prussian militarism but whether Prussianism will destroy us.

**LEON TROTZKY**—The Allies must understand that we did not overthrow Czarism to bend the knees before the Kaiser.

**GERALD STANLEY LEE**—I prophesy a school of prophets, of trained experts in the science of changing men's minds.

**FRANK W. WOOLWORTH**—I was brought up under the strictest discipline, for my family on both sides were Methodists.

**VISCOUNT NORTHCLIFFE**—America will not sacrifice its blood and treasure to incompetent handling of affairs in Europe.

**DR. CHARLES E. JEFFERSON**—The glorification of one's country can be carried too far, and the vituperation of a hostile nation can be overdone.

**SENATOR OLLIE JAMES**—President Wilson holds in his hand the richest treasure ever lodged in the keeping of one man since God said, "Let there be light."

**SENATOR HARDING**—There is not a newspaper in the country that could not cut down the size of its Sunday edition without reducing its value to the reader.

**SIR JOSEPH COMPTON-RICKETT**—Idealism plays a great part in the common life of every one, but we are compelled to interpret it in the terms of common sense.

**UPTON SINCLAIR**—I have always had a dream that I could some day become my own publisher. Therefore I am starting a magazine without being able to afford one.

**EX-AMBASSADOR GERARD**—Of the six sons of the Kaiser there is not one who is unable or unworthy, from the autocratic standpoint, to carry on the traditions of the house.

**HENRY VAN DYKE**—But down below all the great big heart of the true American

people throbs deep and strong with one conviction, one feeling—we have got to win this war.

**HERR VON OLDENBURG**—The last picture must be put up to auction in Rome and the last franc must be taken from the French before we undertake to pay the costs of the war ourselves.

**RUDYARD KIPLING**—We are fighting against eighteen hours a day of forced labor under the lash or on the point of the bayonet with a dog's death and a dog's burial at the end of it.

**CARDINAL GIBBONS**—Unless I am much mistaken when the peace congress assembles the final verdict of the nations will be based on the general principles pointed out by the Holy Father.

**MARQUESS OF CREWE**—I believe that when the final history of the war comes to be written the successive speeches made by President Wilson will prove to be the most notable milestones in the whole of its history.

## JUST A WORD

The editor of The Independent is in Europe now, staying a short time in England and then going to France to visit the front line trenches and the training camps and hospitals behind the lines. As the guest of the British Government, Mr. Holt is being given unusual opportunities of observing actual war conditions. He will share his experiences with the readers of The Independent in a series of articles written from the battlefield. "Going Over There" begins the tale of his adventures with the story of the voyage across—full of dangers and excitements. The following paragraph describes one of the numerous crises incidental to transatlantic travel nowadays. In the next issue of The Independent we shall publish the whole story.

At sunrise we were all up on deck. Off in the distance the faint purple of land could be seen. Our fleet, still intact and unscathed, was proudly riding the waves toward the shores, three of our sturdy protectors leading the way, and the others covering our flanks. But a wireless message was picked up to the effect that a ship just ahead of us had been torpedoed in the channel leading into the harbor, and that we could not possibly get in for the present, so we turned sharply about and put to sea again to wait for further orders. The passengers were now in a state of excitement bordering on consternation. Everywhere, little groups on deck were vehemently discussing the meaning of it all.

100%

The Independent hung out this honor flag on Monday morning, April 29 to announce that five days before the end of the Third Liberty Loan campaign every employee of the Independent Corporation had subscribed for one or more bonds.

# B&B

## Adhesive Plaster Tape

*In mending  
torn clothing  
apply Adhesive  
underneath*

**The Universal Mender**

# It Will Serve You In a Thousand Ways

**M**ILLIONS of people use B & B Adhesive Plaster Tape almost daily. Every home has countless uses for it.

It is a strong tape, so it holds. It is rubber-coated and thus practically waterproof. It sticks without wetting to anything that's dry. And it stays stuck.

Applied to rubber or metal it stops leaks. One great use is in mending leaky lawn hose. Applied to wood or other things it repairs almost any break.

Even tires and tubes can be temporarily mended by it.

On golf clubs and tennis rackets it makes an ideal grip. And it clings like glued-on canvas.

Applied to hands or heels it prevents blisters or chafing. It seals fruit jars—insulates electric wires. Millions of yards a year are used by folks who know it.

This is the same adhesive tape that surgeons use to hold splints, for attaching bandages and for supporting sprains.

Get a spool today. You will wonder how you ever got along without it. For economy's sake get a 5-yard spool.

Sold by all druggists.

We have a book which pictures many uses—full of good suggestions. Write and we'll send it to you free.

# The Man with a Million Dollar Memory

How Any Man Can Improve His Memory in a Single Evening of Solid Fun

A MAN must have a pretty good memory to have it assessed at a million dollars. And yet this is what I have heard business men say was a small valuation of the memory of one of our big industrial leaders.

The man I refer to is one of the giants of American Business. He is the president of one of the largest corporations in the world and one whose employees run into the hundred thousands.

Ask this man anything about the history of his business—about the details of production in any one of his plants—about the characteristics of his thousands of important employees—or in fact ask him anything you can think of in relation to his business and its complex ramifications, and he comes back with the figures and facts without an instant's hesitation.

All who know this great man—and there is not a man in America who doesn't know him—say that perhaps the greatest factor in his marvelous success is his *memory*.

## Memory and Good Judgment

Good judgment is largely a matter of memory. It is easy to make the right decisions if you have all the related facts outlined in your mind—clearly and exactly.

Wrong decisions in business are made because the man who makes them forgets some vital fact or figure which, had he been able to summon clearly to mind, would have changed his viewpoint.

## The Power of Memory

A man's experience in business is only as old as his memory. The measure of his ability is largely his power to remember at the right time. Two men who have been in a certain business will vary greatly in their experience and value.

If you can remember—clearly and accurately—the solution of every important problem since you first took hold of your work, you can make all of your experience count.

If, however, you have not a good memory and cannot recall instantly facts and figures that you learned years ago,

you cannot make your experience count.

There is no asset in business more important than a good memory. The man referred to at the beginning of this article, whose memory is said to be easily worth a million dollars, knows more about his business than any other man in his field because he has been able to remember everything he has ever learned.

## Mr. Roth's Amazing Memory Feats

Any man, woman or child of average intelligence can easily and quickly acquire a sure and exact memory.

When David M. Roth, the famous memory expert, first determined to cultivate his memory he did it because he had *poor* memory. He actually could not remember a man's name twenty seconds. He forgot so many things that he knew he could not succeed unless he did learn how to remember.

Today there are over ten thousand people in the United States whom Mr. Roth has met at different times—most of them only once—whom he can name instantly on sight. Mr. Roth can, and has, hundreds of times at dinners and lectures, asked from fifty to one hundred people to tell him their names and telephone numbers, and business connections, and then, after turning his back while they changed seats, has picked each one out by name and told him his telephone number and business.

These are only a few of the scores of other equally "impossible" things that Mr. Roth does—and yet a few years ago he could not remember a man's name twenty seconds. You too can do these wonderful things.

## A Better Memory in One Evening

Mr. Roth's system, which he has developed through years of study, and which he has taught in class to thousands of business men and others throughout the country in person, is so easy that a twelve-year-old child can learn it, and it is more real fun than any game you play solely for pleasure.

Not only will you enjoy every moment you spend on this wonderful Course but so will your entire family—even the small children can join in the fun.

You get results in the first few moments. Fifteen minutes after you start the first lesson you will see an amazing difference in your power to remember. And a single evening spent on the first lesson will absolutely double your memory power—and may do even more, just as it has for thousands of others.

Just think what this will mean to you—to have twice as good a memory—to have a memory that will enable you instantly to see a new world of facts, figures, faces, addresses, phone numbers, selling points, data and all kinds of mental pictures with less than one hundredth of the effort you now spend in trying to remember without success.

The reason Mr. Roth can guarantee to double your memory in one evening is because he gives you the boiled down, crystallized secret right at the start—then how far you care to go in further multiplying your ability to remember will depend simply on how far you want to go—you can easily and quickly develop your memory to such an extent that you can do everything

Mr. Roth can do. He makes the act of remembering an easy, natural, automatic process of the mind.

## Try Before You Buy

So confident are the publishers, the Independent Corporation, of the remarkable value of the Roth Memory Course to every reader of this magazine that they want you to test out this remarkable system in your own home before you decide to buy. The Course must sell itself to you by actually increasing your memory before you obligate yourself to spend a penny.

## Only \$5 if You Keep It

Mr. Roth's fee for personal instruction to classes limited to fifty members is \$1,000, but in order to secure nation-wide distribution for the Roth Memory Mail Course in a single season the publishers have put the price at only \$5. The Course contains the very same material in permanent form that is given in the personal \$1,000 class.

And bear in mind—you don't have to pay even the small fee asked unless after a test in your own home you decide to keep it.

## Send No Money

Don't send a single penny. Merely fill out and mail the coupon. By return post, all charges prepaid, the complete Roth Memory Course will be sent to your home.

Study it one evening—more if you like—then if you feel that you can afford not to keep this great aid to more dollars—to bigger responsibilities—to fullest success in life, mail it back to the publishers within five days and you will owe nothing.

If a better memory means only one-tenth as much to you as it has to thousands of other business men and women, mail the coupon today—NOW—but don't put it off and forget—as those who need the Course the very worst are apt to do. Send the coupon in or write a letter now before the low introductory price is withdrawn.

DAVID M. ROTH

"I have examined and used the Roth Memory Course, and I wish to tell you how pleased I am with it. I have seven systems of memory training, every one of them of some value, some of very great value; but the Roth course introduces a new principle which excels them all. It is as simple as it is effective."

FRANK W. COLLIER,  
The American University,  
Washington, D. C.  
"Memory Course received. Learned lesson No. 1 in one evening. Enjoyed it as much as I did 'Oliver Twist' or 'Mary Pickford' and have more as a result to think about and a better thinker to think with to boot."

W. H. C. JOHNSON,  
Macon, Ga.  
"I received your Course late Saturday afternoon, April 6, and after looking it over I sent Five Dollars by registered mail on Monday, April 8. The course is nothing less than wonderful and is everything as represented."

ALEXANDER CHRISTIE,  
Philadelphia, Pa.

## SECRETARY BAKER IN A FRONT LINE TRENCH

During his recent visit to "the frontiers of freedom" the Secretary of War lost no opportunity of observing first-hand war conditions in the trenches and at the training camps. An American officer is pointed out to him here part of the line our troops have held

## WE SHOULD HAVE A GREAT ARMY

**M**R. TAFT has stated the army proposition courageously and unequivocally. He tells his countrymen that we should organize and train an army of from five million to seven million men. Mr. Taft is right.

The Administration, in giving forth the statement that it intends at once to prepare an army of 3,000,000 men, has spoken none too soon and is acting none too promptly. The statement that the United States should have under arms more than 2,225,000 men by December 31 of this year, and that "a goodly proportion of these should be in France," does not convey an impression of reprehensible precipitateness.

More cheering is the assurance that we shall send American soldiers across the Atlantic as fast as they can possibly be transported; probably a hundred thousand a month.

Without assuming that a Washington correspondent who signs his articles, and who is understood to speak at least approximately for the Administration, does in fact always speak by authority, we regret to read from such a source the assertion that "to create an army of 5,000,000 is just as fanciful as 7,000,000." This is too obviously a retort to Mr. Taft to be permitted to pass unchallenged. The reason given for the assertion reveals an unfortunate failure to grasp the whole situation and all its elements. In substance it is that we need not, or should not, and in any case will not, create a larger army than we can send across the water by our present and our prospective facilities for transportation.

This assumption, if it is made at Washington, we venture to criticize as not sound judgment; and we hope it will not be made by the American people. We are slowly learning to think of war in terms of military experience. We are slowly learning to think of the position of the United States in world affairs in terms of what has hap-

pened since July 31, 1914. We have not yet become proficient in either process.

It is time to face unflinchingly two very big facts: the first, that we must keep, to the letter, the solemn promise made for the nation by our President, that we will devote all our resources of food power, money power and man power, to the task of helping to vanquish the militaristic enemy of civilization; the second, that when the war is over the United States must be prepared to play its full part henceforth in a league of free nations united to prevent by force fresh militaristic aggression in any quarter of the world.

How long it will take to make the world certainly safe for freedom and justice, no man now alive can predict. When the great nations agree upon an extensive disarmament and carry out the agreement, mankind will breathe more freely.

But until that dream becomes reality, every free nation must stand ready to put the fear of God into the hearts of devil nations by the one argument that devil nations understand.

It is not therefore common sense to talk about the size of an American army in terms of the number of men that we must try to send across the ocean within the next twelve or eighteen months. We profoundly hope, but we do not know, and no human being can possibly know, that the Central Powers will be forced to their knees before the armies now ready or soon to be ready for action are exhausted. We must be ready for whatever fate has in store.

For every million men at the front we should have another million men in reserve, fully equipt and trained. This is but elementary prudence. Less than this will be negligence or folly.

Mr. Taft is right. We should organize, equip and train an army of from five million to seven million men.

## FREEDOM OF LANGUAGE

**O**NE of the freedoms for which we are fighting is freedom of language. It has been America's proud boast that she always permitted the alien immigrant to speak, write and read in any language he likes, and verily America has her reward, for never has a nation of such diverse strains shown such loyalty and unity as America shows in the great crisis of today. This is a principle that has been peculiarly dear to the heart of Americans and they have hotly resented and often circumvented the efforts of the tyrannical governments of Europe to suppress minority languages.

One of the chief indictments that we have brought against Germany is the interference with the use of French in Alsace-Lorraine, Danish in Schleswig and Polish in Posen. Daudet's heart-rending story of "the last lesson" of the French schools in the conquered provinces has inspired us to fight for their transfer to France so that the people may under this democratic government teach and learn in either French or German. The punishment by the Germans of the little Polish children for reciting their catechism at the public schools in their native tongue aroused deep indignation not only in America but even in Germany. When the Czar prohibited the Lithuanian press it was America that came to the rescue by printing papers and books in Lithuanian for smuggling into Russia. The apologists for Kaiser and Czar argued that Poland and Lithuania were disloyal and that the language was used to cultivate the nationalist spirit. This was true, but the American people rightly refused to consider it a justification for the denial of one of the primary rights of humanity.

When Kossuth came to America to plead for the right of Hungarians to their native tongue he was received with enthusiastic welcome, but when the Hungarians took their turn at tyranny and tried to suppress Rumanian in school and court and church American sympathy turned against the Hungarians.

In the same spirit Americans have taken an active part in the movements for the cultivation of the Czech, Irish, Ukrainian, Hebrew, Finnish, Serbian, Armenian and other languages threatened with extinction. Some of us have been skeptical of the advantages of multiplying languages, but we were all agreed that it was wrong to interfere with them and we pointed to Switzerland and the United States as examples of the actual benefits of toleration.

Americans are now fighting in Italy to take Gorizia from Austria. Why? Because Gorizia, once a Slav city, has now by immigration from Italy become largely Italian and the Austrian Government, tho it does not go so far as to prohibit Italian papers, interferes in various ways with the free employment of the Italian language. We believe that if Gorizia were transferred to Italian rule the rights of the Slavic and German minority would be better protected than the Italian population is now. Because of Austrian repression of the Serbian language in Bosnia and Croatia we favor the annexation of these provinces by Serbia. We do not deny that the Serbs in Bosnia and Croatia have been disloyal to Austria and that the language has been used to cultivate a spirit of enmity, but we Americans insist that disloyalty cannot be cured by suppressing

the tongue in which it finds expression. We have never questioned the right of a government to teach the dominant language in its state schools and to require it in official business, but we have always condemned any government which attempts to prevent the free use of other languages in conversation, newspapers, churches, public meetings and private schools.

This is one of the primary principles of Americanism which we hope to extend thruout the world by our participation in the war. In the minimum program for a durable peace, it is stipulated that "the states shall guarantee to the various nationalities included in their boundaries equality before the law, religious liberty and the free use of their native languages."

The United States is a union of all nationalities, the greatest the world has ever known, and the best proof of the practicality of this principle. But while we are trying to convert the rest of the world to our idea we must not be false to it ourselves. That is why the Administration has opposed the movement to suppress enemy languages, why Commissioner of Education Claxton has come out against the abolition of German in our schools and colleges.

In Germany even during the war English, French and Italian books, plays and operas are popular and these languages are more studied than ever. Newspapers continue to be published in French and English, subject to the same censorship as the vernacular, and in a Berlin café one may ordinarily take his choice between the *London Times*, the *New York Times*, the *Paris Temps* and the *Frankfurter Zeitung*. We must beware lest in our reaction against our extreme liberty we become more Prussian than the Prussians.

Against sedition in any language we must defend ourselves, against separation in any form we must take precautions, but let us not be false to our own principles of freedom and equality for every race and tongue.

## IF WE WERE AUSTRIA

ON sundry occasions we have asked our readers to imagine the political conditions and social problems of such countries as Germany, Russia or Mexico reproduced in our more fortunate land. But an even bigger leap of the imagination is required to realize the complex difficulties of the crazy-quilt Empire of the Hapsburgs. The attractive exterior of Austrian life is familiar to tourists; it is not hard to think of spacious, dignified Washington as a second Vienna, to people the Catskills with the sturdy, bare-kneed peasants of Tyrol, or to fancy the elaborate etiquette of a royal court superimposed upon the simpler social formalities of the White House. But to touch the deep-seated evils that are barely hidden by these brilliant feudal trappings is not easy for those who have from birth breathed the free air of the western world.

Picture to yourself an America where the "melting pot" has left unfused each racial element, where there is no common sense of citizenship and where the only bond of unity is an ancient dynasty which has collected a haphazard empire by a series of strategic marriages. New York speaks Dutch, with strong minorities who stick to their ancestral Italian, Yiddish or Gaelic. In the Middle West the Germans and Swedes are rivals for supremacy with English a poor third; Louisiana a solid block of Frenchmen; Arizona as Spanish as Mexico; Pennsylvania a blend of Slavic racial fragments, and Oklahoma a Cherokee nationality. What patriotism would America have beyond a common loyalty to the Wilson dynasty and its present representative, "Woodrow, Emperor of the Eastern States, Apostolic King of the Mississippi Valley, Archduke of Florida, Duke of the Virgin Islands, Count of Texas, Lord of San Francisco,"

and so on, to the end of the chapter? Nor are these provinces and peoples given equal rights. Some of them are granted special privileges so long as they prove useful to the bureaucrats of Washington; only to find their ascendancy exchanged for subjection as soon as a new political combination has been formed.

Take the recent history of Beantown, New England, as a small example of what has been going on all over the country. In 1913, when William J. O'Brien was Secretary of State, special favor was shown to the Irish. A Gaelic university was founded in Beantown; English and Italian were forbidden in the schools and newspapers printed in those languages were banned by the censor; the Roman Catholic Church was granted a heavy subsidy, and Bishop McCarthy appointed Superintendent of Education. Three years later, under the Premiership of Lansinghi, the Government threw its influence to the side of the Italians. All the Irish-American leaders were thrown into prison on the charge of sedition; their newspapers were suppressed and public funds withdrawn from their schools; Bishop McCarthy was replaced by an Italian prelate, and Italian was declared to be the language of the courts of Justice. During the present year Beantown witnessed another revolution. Premier Lansinghi resigned on learning that his Imperial Master had offered Canada to France without informing either his own Premier or the British Government. Senator Lodge, who took his place, restored English to the schools; suppressed all the Irish and Italian athletic clubs; disestablished Roman Catholicism, and gave the revenues of the Cathedral to build a new Congregational meeting house.

Such are the methods by which the Washington bureaucracy retains the helm in spite of paper constitutions and all the squabbles of Congress. While Democrats and Republicans are throwing inkstands at each other across the floor of the House of Representatives, Emperor Woodrow keeps his hold on the army, the spy service and the federal courts. There is no real limit to his power except the need of conciliating the wealthy Dutch patroons of the Hudson valley, such as the Roosevelts and Vanderbilts; the landed magnates of the Mississippi states, and other local aristocracies. His only way of dealing with these high-well-born noblemen is to invite them into the cosmopolitan social circles of Washington where life may be spent more pleasantly over the gaming table or in the ballroom than in the council chamber. How often may one not see a von Lafolletten, a Vardamanski or a Hylanovitch wagering the wealth of a South Dakota county on a single throw of the dice, or buying a diamond necklace for some queenly neck at the price of a Colorado forest!

But, if the music stops for a moment, the attentive ear can catch the murmurs of a distant storm; the ever increasing cry of the millions who have hungered long for bread, for freedom, for the dignity of manhood.

## CAMOUFLAGE CONSTITUTIONS

IT is a common complaint that the little red schoolhouse, however great its merit in other respects, has failed to give the American people an adequate knowledge of foreign nations and of the realities of modern international politics. When the Great War struck the world in 1914 it found many of us lamentably ignorant, not only of such distant issues as the racial problems of Hungary and the recent colonial developments in central Africa, but even of our best known neighbors, England, France, Germany and Latin America. We have "read up" since, and today the average citizen of the United States knows more about Europe than the average European will ever know about America; unless, indeed, he comes over here to find out. But we still feel cheated and not a little bewildered that so little of the world described in the newspapers fits in with

the world which we studied in the geographies and school histories.

Reading over the text-books from which we got our first ideas of the outside world, we do not find their deceptiveness to lie wholly, or even chiefly, in patriotic bias, altho this is the charge most commonly brought against them. The eagle screams a little, but there is less distortion of fact to flatter national vanity than in many books used in European schools. Nor are there many cases of inaccuracy or bad scholarship.

Rather the trouble is that the scholarship is too good; that the books are written from the standpoint of the constitutional lawyer or the compiler of encyclopedies instead of being written from the standpoint of the teacher who has to bring home to the minds of little children the basic facts of our modern civilization. The child who studies his lessons gets the labels correctly, but he is not told that the labels are lies.

To make the matter specific, let us picture a curly-headed ten year old studying his geography lesson at the chapter called "Systems of Government." Would it not run something like this:

Governments are of three kinds: absolute monarchies, constitutional monarchies and republics. . . . Germany and Great Britain are examples of constitutional monarchy; the United States, France and Mexico are republics. . . . The government of Great Britain is by King, Lords and Commons. . . . Australia, India and Gibraltar are British colonies.

Now, every word of this is true in legal theory, but every word of it is misleading in point of fact. Most "absolute monarchies," like the old Russian Czardom, are bureaucracies run by an official caste even against the will of the sovereign. Germany is actually an oligarchy run by a *Bundesrat*, or council of feudal princes, and the elected *Reichstag* is no more to be compared with a parliament of western Europe than a school debating society is to be compared with a board of education. The government of the French Republic is much more like that of the English Kingdom than like ours, because both have "parliamentary" rule; that is, the elected legislative body controls the executive. We should find things very different in this country if President Wilson, like a British King or French President, could take no action except by the advice of his cabinet and if that cabinet had to step out of office whenever the House of Representatives voted its disapproval. The British King is really a cross between Grand Master of Ceremonies and a minor diplomat attached to the Foreign Office. The British "Lords" are not the descendants of the ancient Norman barons but a club of wealthy country gentlemen whose titles usually date back anywhere from one to one hundred years, descendants of that eminent aristocrat, the Lord Knowswho. Australia and Canada, tho they are called "colonies," are in practise independent republics allied to Great Britain, and should never be classed with such dependencies as India or a mere fortress like Gibraltar. Mexico is not really a republic but a military dictatorship. These are the facts; why is the child taught nothing but the forms?

## KITCHENER LEGENDS

A recrudescence of superstition is one of the customary accompaniments of war so we have no reason to be surprized at the crop of legends that have sprung up in the last three years. Every few weeks a new marvel is rumored, always substantiated by circumstance and attested by a cloud of witnesses—tho rarely eye-witnesses. But the 70,000 Russians who were speeded across England from Scotland to the Channel early in the war were said to have been seen by many. One man heard them talking Russian—altho he had never heard the language before. Another knew they were Russians "because they had their cossacks on." St. George came in person to the aid of the English in the

retreat from Mons and Jeanne d'Arc again headed the French army. Drake's drum that was to sound in England's hour of direst need has been distinctly heard on the coast of Devon.

But most curious of all is the group of legends that have gathered about the memory of Kitchener. The official version, that he was drowned when the cruiser "Hampshire" was sunk off the Orkneys the night of June 5, 1916, was all too prosaic to suit the populace who thereupon proceeded to construct their own versions. Since no one could say he saw him die it could not be proved that he was not alive. Therefore he must be alive. But where? Here the versions vary. According to one legend he was picked up by the Germans while afloat on a fruit box and is now imprisoned in Helgoland. Some have seen him there and messages from him have been smuggled thru to England. That the British Admiralty, as is alleged, should have concealed so ignominious a capture is quite conceivable, but that the Germans should not have boasted of it is quite too much of a miracle to believe.

But if this legend does not suit there is the tamer story, that the great Earl, overburdened by the strain of carrying the responsibility of the war and attending to all the details of his office, broke down under the strain and is immured in an asylum in the north of Scotland.

But the most picturesque of all the Kitchener legends are the theories of his posthumous career in Russia. It is known that he embarked upon the "Hampshire" with his staff for the purpose of going by way of the Arctic Ocean to Archangel in order to brace up the Russian army and prevent the Czar from selling out to the Germans. So, they say, the ship was not sunk and the report to that effect was given out by the Admiralty in order to throw the Czar off his guard. Kitchener, however, reached Russia in safety and in disguise, but finding that there was imminent danger that the Czar would conclude a separate peace, Kitchener instigated a revolution to overthrow him. Unfortunately the revolution went too far, as revolutions have a way of doing, so instead of seating the Grand Duke Nicholas on the throne the Socialists and anarchists got control and put Kitchener into prison or else, according to another and equally authoritative account, he was slain in a Petrograd riot while trying to restore order. But this last theory appears to be incompatible with the latest report that he has been seen disguised as a vodka pedlar endeavoring to revive the courage of the soldiers and start a new attack on the Germans. But we will believe any of the other legends rather than that the great K. of K.—the pictured hero of O. Henry's best story—should descend to boot-legging in violation of the prohibition law even as a measure of camouflage.

But whatever version comes to be the orthodox legend it is evident that Kitchener of Khartum has joined the immortal band of national heroes whose return is expected by their faithful admirers, Barbarossa, Arthur, Roland, Drake, Charlemagne, Dmitri, Quetzalcoatl—we know there are some others but we can't think of them just now. That some of his countrymen believe Kitchener still lives is shown by their willingness to put up money on it. Lloyd's is said to have issued hundreds of policies insuring against his return, which is a roundabout way of betting—against odds of twenty-five to one at latest quotations—that he was not drowned.

What is Austria doing now? Soldiering or "soldiering?"

And so Prinzip, whose Browning at Serajevo on June 28, 1914, set off the 42-centimeter and 75-mile guns, dies peacefully in bed of prosaic T.B. Austrian law was too tenderhearted to impose capital punishment for his crime but millions of men have been put to death in consequence of it. And yet his act was not the cause, but merely the occasion of it all. A greater, blacker crime, not his, lay back of all.

# THE STORY OF THE WEEK

## The Capture of Kimmel

Mont Kimmel, which has hitherto been called the key position of

Ypres, was taken by the Germans on April 26. It was held by the French troops sent by Foch to the rescue of the British, when they after their defeat at Armentières seemed likely to be forced back to the Channel. The French arrived in this sector on the 18th and by the occupation of Kimmel Hill, three miles south of Ypres, held the enemy in check. In order to overcome this obstacle General Sixt von Arnim brought up a hundred thousand of his best men, including the Alpine Corps and Bavarian and Prussian storm troops. Following the plan that proved so successful at St. Quentin and Armentières the German attack was directed at the junction of the British and their allies. A body of Scottish and English troops held what was left of Wytschaete Ridge, which was undermined and blown up by the British on April 9 of last year. In the valley between this and Kimmel Hill, where the French were stationed, the Germans penetrated on the 25th and so prepared the way for a grand assault from all sides on the following morning. The bombardment began at midnight and at dawn the Germans charged under the eyes of the Kaiser, who from a commanding position near by, possibly the famous Hill 60, watched the battle all day long.

The German columns that had been sent to the right and left of Kimmel soon met behind the hill, but the regiment of poilus who had been ordered to hold the hill to the last obeyed their orders literally, for until late in the afternoon Allied aviators reported that a gradually lessening band of blue heroes were still stationed on the crest, firing in all directions against the gray masses that were overwhelming them. On the following morning the Germans were in possession of Mont Kimmel, but they have not been able to make any use of it, for it is raked by the Allied artillery.

It has been regarded as unsafe to drive a salient forward for more than half its width, but the Germans in this case reversed the rule, for they advanced about 2000 yards on a front of only about 1200 yards. They claim 7100 prisoners, including 181 officers, as well as the capture of 53 cannon and 233 machine guns in the two days' fight.

After Kimmel The next hills to the west of Mont Kimmel are the slightly lower heights of Mont Rouge and Mont Noir, the red and black hills. In the valley between them and Kimmel is the hamlet of Locre, which has been the scene of as bloody a combat as any in this hard-fought field. It was taken by the Germans when they surrounded Kimmel,

## THE GREAT WAR

April 26—Germans take Mont Kimmel. Dr. von Seydler, Austrian Premier, resigns.

April 27—Holland concedes German demand for transportation of sand and gravel for roads. French and Germans fighting for Locre, just west of Kimmel.

April 28—"Oronsa," carrying fifty-eight Y. M. C. A. workers, torpedoed but no passengers lost. Anti-German riots of Slovenes at Laibach.

April 29—Finnish White Guard take Viborg. Overman bill, granting increased powers to President, passes Senate.

April 30—Americans at Villers-Bretonneux repel German assault. Gavrio Prinzip, whose assassination of Austrian Archduke precipitated the war, dies of tuberculosis in Austrian prison.

May 1—Savannah liner "City of Athens" sunk by French cruiser off Delaware with loss of sixty-seven lives. Prussian Diet discussing franchise bill.

but the French quickly countered and recovered it. Five times during the next few days Locre changed hands, and at last accounts the French held it and so barred the way to the hills beyond.

But while the Germans have been held south of Ypres by the French they have closed in on Ypres from the northeast, east and southeast, for here the British have abandoned, appar-

ently without a struggle, almost all of the ground they had gained at terrible cost during the last three years. Hill 60, which was captured by a mine explosion on April 17, 1915, is now in the possession of the Germans. So also are Zillebeke and Hooge, still nearer Ypres.

**Counting the Cost** It is said that at a secret session of the Reichstag before the present offensive began Field Marshal von Hindenburg promised victory over the British at a cost of 1,500,000 casualties. According to an estimate of the French staff he has already suffered a loss of 1,300,000 with no victory in sight. The estimates of German losses by the British correspondents generally range between 350,000 and 500,000. Their estimates of the number of troops so far employed by the Germans in Picardy and Flanders vary between 1,750,000 and 2,000,000.

The Allied figures for German losses are vastly in excess of those given out by the German Government. General Schulze is reported as having told the Reichstag main committee recently that the total German losses since the war began amounted to 2,000,000. Of the sick and wounded 750,000 had been returned to the front and 629,000 had been discharged as unfit for further service. Among these are 70,000 cripples.

General von Risberg is said to have told the same committee that the total number of "missing" up to the end of March amounted to 664,104, of whom 236,676 were prisoners in France, 119,000 in England, 157,000 in Russia and Rumania and the rest were doubtless dead. If these figures are correct it is no wonder that Germany has been able to keep up her forces, for her annual increment of young men coming of military age is over 500,000.

On the other side, M. André Tardieu, the French High Commissioner to the United States, stated in a New York address last week that the total French losses since the war began amounted to 2,600,000, of whom 1,300,000 had been killed. France has mobilized altogether 9,000,000 men, of whom 7,500,000 had gone into the army and 1,500,000 had been employed in munition factories.

General Haig reports that the British captured 1061 German prisoners in March and 5241 in April.

**College Girls Under Fire** The nineteen members of the Smith College Unit who sailed last August to help the work of rehabilitation in the devastated towns of northern France found themselves during the recent weeks of the Great Battle in the front lines of defense. A despatch sent by courier to Paris tells the story of their bravery under fire, commend-

## THE STRUGGLE FOR YPRES

During the week the Germans have advanced on Ypres from the east and taken Mont Kimmel on the south, but are held by the French at Locre. The shaded area shows ground gained by the Germans in April

### THE AMERICANS' FIRST BIG CHANCE

American troops held the Allied line at an important point near Amiens in last week's fighting. The white cross on this map near Villers-Bretonneux shows their approximate position. The Germans attacked the American line with three battalions on April 30th and were driven back

ed publicly by both French and British commanders:

On March 20 they were at Grecourt. On the 21st the battle had advanced so far that the windows of their houses began to rattle with the tremendous thunder of the oncoming guns. The next day the civilians evacuated the place hurriedly, and the girls the same day escaped by automobile—one party to Verlaines and another to Esméry-Hallon. They took milk and food for old refugees and children. They were everywhere, and there is many a French family that will never forget them.

That night they were warned to leave quickly, but, as they were going, a number of British officers, who had been two days without food, came into the town, so the American girls stayed another twenty-four hours and fed all that came, earning their everlasting gratitude. Finally they arrived at Montdidier, by way of Roye, which was being evacuated.

They set up a temporary children's hospital in a Montdidier hotel, borrowed a stove, and installed it in the courtyard, cooking for and serving every hungry refugee and soldier who passed by.

At the end of the second day conditions were such that the unit was forced to move, but meanwhile the Red Cross asked for some helpers for Amiens. All wanted to go, but only five were chosen. Their first night in Amiens the town was bombed again by the Germans. The American girls spent half the time in cellars and the other half doing what they could to help the people. More than once they were forced to leave off work and jump for safety.

The following day conditions became so bad that the girls were forced to leave, and eventually they reached —, after helping the refugees streaming along the roads on the way. On their arrival they immediately offered their services to the French authorities, who asked them to help feed the wounded passing thru. The girls scoured the town and got stoves, cooking utensils and food, for some of which they had to walk far into the country. Within a few hours they were feeding hundreds of wounded on every thru-going train.

Americans at the Post of Honor The American troops whom General Pershing has put under the command of Generalissimo Foch have been stationed in the middle of the most important front, at the apex of the German wedge that is pointed at Amiens. Their exact position is not given, but they are said to be near Villers-Bretonneux, a village

about nine miles east of Amiens on the railroad leading to La Fère.

On the afternoon of the last day of April the Germans opened fire on the American trenches, and after a two-hour bombardment launched an attack of three battalions of infantry. The struggle was long and hotly contested with severe losses on both sides, but finally the Germans were driven back to their own lines. The Americans took five prisoners.

The American soldiers are receiving high praise from their French comrades in arms. A letter written by a French officer to a friend and published in the Paris Temps shows their feeling:

Infinitely interesting is our contact with the American troops. They have occupied the sector immediately beside ours. We have seen them at work, and it should be told and retold that they are marvelous. The Americans are soldiers by nature, and their officers have the desire to learn with an enthusiasm and an idealistic ardor very remarkable.

There is the same spirit among the privates. They ask questions with a touching good will, setting aside all conceit or preju-

dice. Naturally they have the faults of all new troops. They show themselves too much and expose themselves imprudently, letting themselves be carried away by their ardor, not knowing when to spare themselves or to seek shelter or when to risk everything for an end. This experience will be quickly learned.

As for bravery, activity and discipline, they are marvelous. They absolutely astonished us one morning of attack. The cannonade, suddenly becoming furious, had just thrown me out of my bunk. No doubt about it, it was a Verdun attack. Taking time to seize my revolver, put on my helmet and gather up several documents, I descended to the streets. When I arrived there they were already filing by with rapid, easy, decided steps, marching in perfect order, in silence, with admirable resolution, and above all with a striking discipline, to their fighting positions. It was fine. You can have no idea how cheering it was to my poilus.

Their artillery will be and already is of the first order. The officers are intelligent and filled with zeal, and the greater part of the service functions without a hitch. Too much praise can never be given their sanitary automobiles, swift, strong, comfortable, a veritable godsend to us.

The Zeebrugge Raid Further details as to the British attack upon the German naval base at Zeebrugge prove that this was one of the most brilliant exploits of the war, but do not show in how far it was successful in its aim of blocking the port. The Germans claim that the channel is still open to the exit of destroyers and submarines, but it is evident that German pride was shocked to learn that four British cruisers and a host of smaller vessels could enter their carefully protected harbor, remain there for over an hour, destroy stores, blow up the mole and depart with the loss of only one destroyer besides those vessels that were intended to be sunk. Vice-Admiral Schroeder, who was in command at Zeebrugge, has been removed because he was taken by surprise. The Socialists of the Reichstag accuse the Government of giving out erroneous reports of the Zeebrugge affair.

The submarine which was designed to make a breach in the mole, succeeded in getting under the viaduct

MARCH 1917	ALLIED and NEUTRAL SHIPPING 1,619,373	BRITISH 911,840
JUNE 1917	ALLIED and NEUTRAL SHIPPING 2,236,934	BRITISH 1,361,370
SEPT 1917	ALLIED & NEUTRAL SHIPPING 1,494,473	BRITISH 952,938
DEC 1917	ALLIED & NEUTRAL SHIPPING 1,272,843	BRITISH 782,880
MARCH 1918	ALLIED & NEUTRAL SHIPPING 1,123,510	BRITISH 687,576

### THE U-BOATS' RECORD

The tonnage of British and of the total Allied and neutral merchant shipping sunk by submarines in the quarters ending with the month named on the left

connecting the mole with the shore before it was discovered and a German force sent to man the viaduct. The crew of six got safely off in a dinghy, when the submarine blew up and showered the British with the debris of dead Germans. A breach twenty yards wide was made in the mole here, and it is expected that this will cause the current to silt up the harbor. One of the submarine men says: "I can't tell you what the submarine was filled up with, but it was something much worse than TNT."

The cruiser "Vindictive," which carried the landing party, remained for an hour and a half on the inner side of the mole, pushed up against it by two Liverpool ferryboats. The mole is of stone 40 feet above sea level and 15 feet above the top deck of the cruiser. Two of the three gangways that had been prepared to reach the parapet of the mole were carried away by the German shells, but the landing party of 500 men charged up the remaining gangway with hand grenades and Lewis guns. Then they had to jump 16 feet from the top of the parapet to the mole in the face of the fire of German machine guns. The "Vindictive" and her attendant ferryboats were subjected to a heavy and continuous fire from a battery of 11-inch guns on the end of the mole only 300 yards away as well as smaller artillery at closer range. But she maintained her position alongside the mole until the cement-laden cruisers had made their way to the channel leading to the Bruges canal and had been sunk. Then the "Vindictive" blew her siren as a signal of departure, and all the landing party except those who had been killed were safely re-embarked. The total British losses in the Zeebrugge and Ostend raids were 588, of whom 188 were killed.

**Russia in Turmoil** A rumor came this week by way of Finland and Sweden that a counter revolution had broken out in Petrograd for the reestablishment of the imperial government. It is said that the Grand Duke Alexis Nikolaievitch, the fourteen year old son of Nicholas II, had been

Central News

#### THE HERO OF ZEEBRUGGE

Admiral Sir Roger Keyes of the British Navy has been given the Order of Knight Commander of the Bath in recognition of his services in command of the recent operations against Zeebrugge and Ostend. Five obsolete cruisers filled with concrete were sunk at the entrances of the two ports to block their channels for U-boats and the Zeebrugge mole was raided

proclaimed Emperor with the Grand Duke Michael Alexandrovitch as Regent. This was the arrangement proposed by Nicholas when he abdicated, but it was not then acceptable either to his brother Grand Duke Michael or to the Russian people. Now, however, the disorders brought upon Russia thru the class war of the Bolsheviks are so great that many Russians favor the restoration of the monarchy or even a German protectorate. But as yet we do not know how much foundation there is for the rumored counter revolution nor even which side of the conflict it favors. According to one report it is the intention of the proposed imperial government to repudiate the treaty negotiated at Brest-Litovsk by the Bolsheviks and to check further German aggression. According to another it is a German scheme.

The Bolshevik government at Moscow has resumed formal diplomatic relations with Germany. The new German Ambassador to Russia, General Count von Mirbach, has gone to Moscow with a staff of more than seventy persons, while on the other hand Adolph Joffé, who headed the Bolshevik deputation at the Brest-Litovsk conference, has gone to Berlin as the Russian Ambassador. But this resumption of relations serves only to emphasize the increasing antagonism between Russia and Germany. Ambassador Joffé has presented to the German Government a strongly worded note of protest against the German aggression and atrocities in Russia. In the Ukraine the Germans have advanced as far as Kursk, but they have not confined themselves to the Ukraine, which they claim to have entered upon the invitation of the Ukrainian Rada. These protests have been echoed even in the German Reichstag. Mathias Erzberger, the leader of the Central party, declared the German military procedure in the Ukraine to be "simply shocking." The Government defended them on the ground that it was necessary to get food from the Ukraine and only the military could get it. German bands have repeatedly crossed the frontier into Russia proper to confiscate food and when opposition is offered they have burned villages and massacred the inhabitants without sparing women and children. The Russian Foreign Minister, M. Tchitcherin, also protests against the German invasion of the Crimea as a violation of the rights of the Tauridian republic, which desires to remain in federation with the Moscow government. If the Germans occupying the Crimea are able to gain possession of the fortress of Sevastopol they will get the Russian Black Sea fleet, unless indeed this is sunk to escape capture.

On the other hand, the Germans protest that the landing of 6000 British and French troops on the Murman coast of the Arctic Ocean is a violation of the Brest-Litovsk treaty. It is denied by Berlin that the Germans took part in the raid of the Finnish White Guards

## THINGS THAT ARE NOT WHAT THEY SEEM

In the modern war of hide and seek camouflage has become a regular branch of army service. This squad of American camoufleurs is demonstrating the art of concealing on a miniature hillside which presents problems of several different sorts. High lights and shadows have been painted on to change the contour, trees cover fortifications, and a battery of guns has been made to look like a pile of rocks

upon Kem in order to get the railroad leading to Kola on the Arctic Ocean. Leon Trotzky, the Bolshevik Minister of War and Marine, is said to have gone to Kola to arrange for coöperation between the Bolsheviks and Allied forces for the defense of the railroad leading from Petrograd to the Arctic Ocean.

Viborg, the last important town in Finland before getting to the Russian border, has been captured by the Finnish White Guards in coöperation with German troops. It appears that the White Guards are taking bloody revenge for the massacres perpetrated by the Red Guards during their control of Finland. They refused to accept the terms of surrender by the Red Guards at Viborg and most of the 6000 Reds who were holding that city perished in its capture. Viborg is only seventy-five miles from Petrograd, but Bolshevik troops have been placed upon the frontier with orders to resist the Finns and Germans if they should attempt to advance. Professor H. C. Emery of Yale, who was captured by the Germans when they took the Aland Islands and imprisoned at Danzig, has been released and will be permitted to leave Germany.

The German and Russian governments have also come into conflict over the question of the prisoners in Russia. There are over a million of these and Germany needs them badly to replenish her depleted ranks in France and Flanders, but many of the Austrians and Germans are unwilling to return to their homes or participate further in the war. A congress of these prisoners was recently held in Moscow in spite of the protests of the German Government, and at this meeting plans were arranged for the promulgation of the plans of the Russian Revolution when they returned to their own countries.

## Germany's Bid for Victory

Taking as accurate Count Röder's recent statement on the progress of the eighth German war loan, the German people have just paid in 14,500,000,000 marks (about \$3,625,000,000) as a final bid for an early and victorious peace. No other German war loan has reached so great a sum; it seems unquestionable that the overthrow of Russia and the prospect of crushing the Allied armies in the west has greatly improved the credit of the German Government among its own people. The Government did not, however, rest everything on popular enthusiasm; by various ingenious devices it assured itself in advance that there would be a large subscription. Since the middle of last December the Reichsbank issued treasury bills at preferred interest rates, providing the buyer would pledge the use of the sum due on them for war loan subscription. German banks also accepted deposits at increased interest on condition that the sum so deposited would be invested in the war loan. All taxes of the Empire and the several German states are payable with war loan scrip, which is accepted everywhere by the Government's cashiers at par. The farmer's savings were brought into play by announcements in the German agricultural papers that the Government would sell this summer some of the plunder taken in Russia, including horses, seeds, and farm carriages. The military authorities then made it known that payment for booty taken from Russia could be made only in war bonds.

The German Finance Minister estimates the present war expenditure of the Empire at no less than \$935,000,000 a month, and the total war expenditure of the Central Powers to date at \$45,000,000,000. Many have wondered how Germany, which is by

no means as wealthy as Great Britain or the United States, could endure the burden of so great a war debt. But it should be remembered that Germany's eight war loans have been almost wholly subscribed within the Empire, so that Germany has practically escaped the risks and difficulties of international finance. What the German people did not voluntarily contribute could be taken from them by stringent taxation or even by "conscription of wealth," the latest polite equivalent for confiscation. It is thus evident that Germany cannot be defeated by the accumulation of war debts, since these debts are owed only to herself; if financial collapse should in the end overwhelm the Empire it must come as the result of the exhaustion of the natural resources necessary for the maintenance of the people and the prosecution of the war.

**Prussian Suffrage Reform** The Prussian Diet is having a hot fight over a reform of the franchise. Last July the Emperor in his desire to conciliate all parties declared that the three-class franchise system by which the Prussian lower house has been elected must be abolished. Chancellor von Hertling is pledged to carry out the reform or resign. But the bill which has been introduced to that effect is meeting with strong opposition from the conservatives who are trying to prevent its passage by imposing amendments and appealing for postponement until after the war. Count Spree, of the Center party, made a motion to adjourn decision until after peace had been declared, but Herr Friedberg, vice-president of the house, said that such an unlimited postponement would endanger the country's internal peace. Adolph Hoffmann, of the Independent and Socialist party, declared that if this motion was adopted he would appeal to the soldiers to stop fighting. This was greeted with shouts of "Traitor!" Count Spree's motion was rejected by 333 to 60.

Speaking in favor of the bill Count von Hertling then said:

Plutocratic suffrage, which gauges political rights according to wealth, is today no longer possible in our nation. The Government therefore cannot countenance plutocratic suffrage. Equal suffrage must be fundamentally adhered to. The promise given must be redeemed.

In all modern states political and social life is being directed toward this goal. In many states equal suffrage already has gone far beyond what this bill proposes, and in the long run it is impossible for Prussia to escape this movement. It is, of course, possible to arrange certain safeguards to remove too far-reaching and radical consequences.

The Center or Clerical party is favoring a movement for equal manhood suffrage, but wishes to have a guarantee introduced providing that the existing relations between Evangelical and Roman Catholic churches and the schools of Prussia shall be maintained. Under the reformed franchise the lower house of the Prussian Diet would have at least 150 Socialists in place of the present ten, and the Clericals fear

interference with their present privileges. The radicals of the chamber oppose any such limitations on the future powers of the Diet.

It was generally acknowledged long before the war that the Prussian franchise was so antiquated and undemocratic that it must eventually be abolished, but the wealthy and aristocratic classes have clung to it as the last citadel of their power. The question is one that concerns the German Empire, as well as the Kingdom of Prussia, because the Prussian Minister President, who must be supported by the majority of the Diet, is *ex officio* the Imperial Chancellor. At present the lower house of the Prussian Diet is elected by the three class franchise, according to which those persons who pay one-third of the taxes are entitled to vote for one-third of the deputies. As this works out it sometimes happens that the wealthy taxpayers of a Prussian city comprising less than five per cent of the population elect one-third of the members of the lower house, and the second class of taxpayers, comprising some ten per cent more, elect another third. The proposal now is to do away with this system altogether and substitute the principle of one man one vote.

In Congress last week the passage of the Overman departmental reorganization bill by the Senate marked the conclusion of the first stage of this important administration measure. The vote, 63 to 13, was sufficiently decisive to afford basis for prediction of speedy and favorable action in the lower chamber, where the measure now goes for consideration. To the Senate for confirmation the President sent the names of W. P. G. Harding, Allen B. Forbes, Eugene Meyer, Jr., and Angus W. McLean to be directors of the new war finance corporation, the \$500,000,000 corporation to aid in the financing of essential war enterprises. Nominations for the capital issues committee were also made. Following a conference with the President, Senator King, author of the resolution declaring that a state of war exists between the United States and Turkey and Bulgaria, announced that he would not press it at this time. Arrangements were made by the Senate Military Committee to hear A. C. Townley, president of the Non-Partisan League, charged with disloyal utterances. The post office committee voted to reopen the question of second-class mail rates, parties interested to be given an opportunity to be heard.

The House continued debate on the bill giving the Government control over the production of ores essential to the war, amending it in several particulars. The bill was subsequently sent to the Senate in modified form. Two of the banking reform bills were passed and sent to the Senate. Progress was made in the appropriation bills, and the Senate resolution providing registration for military service of young men who have become twenty-one since June 5, 1917, was adopted and sent to conference. Considerable

time was given to criticism of the War Department for failure to identify American soldiers killed, wounded or missing in France.

A joint sitting of the House committee on education and the Senate committee on education and labor began consideration of the Smith-Sears bill for the vocational rehabilitation of disabled soldiers and sailors.

The housing bill struck a snag in the Senate. The War Department advised the Senate military affairs committee that it is not prepared to pass at this time on the question of universal liability to industrial service.

#### More Men and More Ships

"Ours is the imperative duty of providing replacement units for the armies in France. We must be able to put fresh men in the field thoroly and methodically trained. In addition to those already called to the colors and now training at our cantonments, or already selected for service, very large quotas will be required in the immediate future to fill the gaps."

This is from the War Department's weekly statement, and, pending later announcement concerning the exact or estimated size of the "very large" quotas, this statement is to be taken as the official Administration announcement of what must be our policy for the next few weeks or months. That the number which can be raised, trained and shipped abroad will not exceed 3,000,000 is the generally accepted estimate in Washington. Last week Major General McCain, adjutant general of the army, told the military affairs committee of the House that it would be quite possible to put 3,000,000 in the fighting line in France before the year runs out *if the ships are ready*.

The War Department's view of the present situation is that the struggle has now come down to a question of man power. When the United States entered the war the Allies, realizing that it takes time to organize and train an army, asked us for supplies. The supplies were furnished, and the stream continues. Now it is men, and every report coming from committee room and conference chamber is to the effect that each agency of the Government is thinking and planning how to get the men, equip them and send them across.

In Congress there is every disposition to authorize the utilization of man power to the limit. None of the opposition to any of the military bills has been opposition to increasing man power. The opposition which has so far manifested itself has been rather the opposite. According to statements of Senate and House leaders, Congress is ready and willing to give all the authority and money that may be needed when Secretary Baker says the word.

The sending to France of more men, however, depends on ships. This does not mean necessarily the building of more ships, tho that, of course, is needed and is going on. It means in part the diversion of ships otherwise engaged and able to be spared to the temporary duty of carrying troops and their immediate supplies. Without running risk of censor, it can be assumed that every vessel which can be used for this purpose is already being used.

And the new ships are coming off the ways at a faster rate than before the shipping board's recently begun intensive drive for immediate increased tonnage. In the week which ended April 29, American shipbuilders launched over 40,000 tons, making a total ton-

© Central News

#### A RECORD IN SHIPBUILDING

One minute after the U. S. S. "Accoma" had left the ways at a Jersey shipyard, workmen started laying the keel for another hull, and eighteen minutes later work was started on the construction of a new vessel. The "Accoma" is a 3500 ton wooden cargo vessel of the "Ferris" type, 281 feet long, with a beam of 46 feet. She is the second of this type of vessel launched at this New Jersey yard, which has a contract to turn out these vessels at the rate of one a month. The photograph shows the "Accoma" just after she had left the ways; in the foreground is the first beam of the new keel being lowered into place.

nage of 1,405,000 since the building program got under way. Nearly 50,000 tons of completed ships were delivered during the week mentioned. Four of these launched were wooden ships.

**The Railroads** Closely connected with the whole question of man power and mobilization is the land transportation problem. For many months the car shortage has been an acute actuality. Much of this shortage has been attributed by officials of the Government and of shippers to the alleged policy of the railroads of neglect to maintain rolling stock. However this may be, it is a fact that during the time since the Government took over the carriers, the existing cars have been adjusted, so to speak, to the demand with a view to making the most of what there is. Now comes the railroad administration with an order for 30,000 box and coal cars, the first to be placed by Uncle Sam as director of the rails.

The aggregate of the contract is somewhere between \$80,000,000 and \$90,000,000, and the American Car and Foundry Company, with which it is placed, will get a net profit of about five per cent. The cars will be of two styles. All will have steel bases and frames, but will contain a maximum of wood so as to conserve steel for other war purposes. The order is to be filled within six months, thus supplying transportation space for the fall and winter hauling. A few days later contracts for over a thousand freight and passenger locomotives, to be identified by numbers and the lettering "U. S.," were let by the railroad administration. Deliveries are to be begun in July.

During the last week another step has been taken in the direction of improving land transportation. Railroad administration officials and representatives of express companies have been conferring on terms of a tentative contract under which the companies would be merged with a capital of some \$35,000,000 to act as a Government agent in the express business, but without direct government control. The underlying purpose of the proposition, of course, is the simplification of the parcel-carrying service.

### To Establish Free Ports

New York, New Orleans, San Francisco and the Canal Zones are to be proposed as "free ports," according to advance information published last week concerning a forthcoming recommendation of the Federal Trade Commission. As was indicated in these columns recently, the passage of the Webb law permitting the combining of exporters to capture and hold foreign trade, was an important step in the "war after the war." The establishment of "free ports" is another step in the same struggle.

A free port is a portion of a port or a waterfront zone into which goods may be shipped without the payment of duties or customs inspection. In these free ports, commodities may be rehandled, repacked, mixt, cleaned, or even manufactured and then exported to other countries.

Tariff schedules are not affected by free ports, because when goods landed in free ports are shipped inland they will be of course subject to the regular rates as determined by law. The purpose of free ports is to enable the nation creating them to handle its share of the gigantic world business of transshipment. According to the present proposal, Congress will be asked to designate certain ports as "free" and then to permit any city having a water front to build and operate a free port as a public utility.

### More Schools for the Army

From every quarter of the country come reports of the conversion of school buildings and equipment from peace-time uses to use as training centers for the army. At least half a dozen of the large vocational, manual and technical high school buildings in New York City, according to an announcement last week, will be turned over to the military authorities this summer for the education of nearly a hundred thousand enlisted men in mechanical trades. Chicago, Pittsburgh, Washington, Boston, St. Louis—wherever facilities are to be found—there the insatiable United States Army is running human beings thru various mills designed to perfect them in occupations necessary in or back of the lines.

Some five thousand selected men are in continuous training in evening schools in radio and buzzer work thru-out the United States. The course is a short one, and the man who completes it is immediately replaced by another student.

Over ten thousand men, according to recent estimates, are taking evening school instruction near the shipyards where they work during the daytime. Uncounted thousands are learning to drive motor trucks as for the battlefield, repair the same, operate oxy-acetylene blowpipes, handle and care for carrier pigeons, and so on to an infinity of tasks, each essential to the winning of the war. From a nation of untrained men we are becoming fast a nation of men and women pupils in useful jobs.

The discipline of war involves a return to a kind of discipline of which every one of us has had a taste—that of the school.

### The Labor Board's Work

The National War Labor Board, with former President Taft presiding, has organized itself and is taking steps to avert strikes. One of the first big cases was that of the paper mill workers, who threatened a general strike unless granted a wage increase. Pending settlement, the labor board has asked the workers to continue at their old wages, with the understanding that a new scale, if adopted, will be made retroactive. To the same board James O'Connell, president of the metal trades division of the American Federation of Labor, made a plea for negotiations between employees and employers in the iron and steel industry. Mr. O'Connell claimed that thousands of men are being thrown out of work because of failure of the employers to meet them on common ground. An increase in the wages granted last November to long-shoremen in New York was never paid, according to the claim of the men, who are now asking for a settlement.

Such is a brief sketch of the first few cases before this important tribunal. Preliminary comments both from employers and employees indicate general satisfaction with the attitude of the new board.

# THE ONE-MAN TENDENCY

STAFF CORRESPONDENCE FROM WASHINGTON

**T**WELVE months ago many patriotic persons, eager to serve the Government in that capacity which might seem the most useful, hurried to Washington intent on fitting themselves into the new scheme of things. With what happened to most of them we are tolerably familiar: they were passed from one official

to another, from bureau to commission, from department to board, from hand to hand. Probably the majority who were thus treated went back home and, profiting from this lesson, threw themselves into the work of organizing local committees and mobilizing municipal or state machinery, commenting the while somewhat rudely on the general inefficiency of the great Government at Washington.

Six months later the profferer of expert services could find plenty of bureaus who could tell him definitely and completely what he could or could not do, where he could best fit. The game of passing the buck was no more.

Six months later still we find the Government looking for the man instead of the man looking for the Government. And we also find in addition to the accumulation of executive agencies with cabinet ministers and directors at their head, an entirely new series of "administrations," easily identified by mentioning the names of Hoover, Garfield, Schwab, Ryan, McAdoo, Baruch. Of these the end is not yet.

What has happened? Judged by what *has* happened, what is *likely* to happen before we get thru this war?

Clearly what has happened is that power and responsibility have been centered in the hands of powerful and responsible individuals, each reporting directly to the President. Think of food and you think of Hoover; Baruch means war industries; Schwab means ships; Garfield is fuel—or days that are fuelless; McAdoo is railroad transportation; Ryan stands for airplanes; soon, apparently, another name will signify labor. And so on. As the war develops and as one great necessity after another emerges and takes its place, so to speak, on the program of the Nation, one new agency after another springs into being clothed with authority to control and execute. Outside of the cabinet, which, by the way, is an extra-constitutional institution, is growing another cabinet with more departments and committees under its several branches. Seemingly we are soon to be the possessors of a double-

barreled system of Government, a confusion confounded, a "regular" Government plus an unusual, war-time-only Government. The patient bystander may well be asking his friends, "Where are we going to with all these new creations down at Washington? Aren't we running the risk of becoming top-heavy?"

The risk is, naturally, great, but the real answer to these questions is to be found in the little fact mentioned above, namely, that the Government is now calling to men, instead of leaving it to men to call to the Government; and in the further fact that if you go down to Washington and visit the offices and talk with men at the clubs, you find everywhere that the "general sense" or "feel" of the situation is that the vast mechanism is actually delivering the men and the goods, and that, in spite of failures to connect in many places, the whole tendency and desire is to coordinate and coöperate.

What is really happening, to put it another way, is that Woodrow Wilson, aforetime student and teacher of government, is actually remaking the Government of the United States. We have been witnessing only the first stage in this process. With the passage by Congress of the Overman bill, the second stage may begin. The first stage was to start something which could be used in the emergency, for every one agreed that the Federal Government as organized and operating on April 6, 1917, was not suited to the task which confronted it. A possible exception might be cited in the Council of National Defense, created by law before the war, and chiefly serviceable as a proving ground for the experiments of this democracy with war administration. The second stage is to take that thing or those things which have been started, and remold and refashion them, ripping out the non-essentials and adding new as the occasion demands. The third stage—but we have not reached that yet, and cannot forecast it plainly.

In addition to what we might call the logical or mechanical reasons for remaking the Government at this time and in the ways just described, there are political reasons. Let us use the

of Ryan and Schwab and Stettinius at the head of important war work. Such action would have been protested by a large part of the general public and by Congress on the ground that this was a capitalists' war and that the making and sale of war munitions had been placed in the hands of the munition makers themselves. What has brought about the change which makes possible the placing of war plans in the hands of such able men is the fact that our boys are no longer in the training camps, but are actually in the battle line side by side with the English and French. Now that we are in the fight and the French are showing their confidence in our men by placing them in charge of part of the bitterly contested ground at Hangard-en-Santerre, we all feel that there is nothing we can do to help which we are not anxious and ready to do."

This opinion is interesting because it is a sample of the kind of outside opinion which interprets Washington to itself. Events move in the capital according to the laws of nature, and it is not always possible for those most immediately concerned to understand or grasp the laws at the time. Undoubtedly, however, the President knew—and knows—at any given moment just what sort of response he will get from the public from any given act. By some miracle the President escaped a share of the criticism which only a few months ago was leveled at the Council of National Defense, the ground being that it was composed of nothing but business men who were doing very little but award each other some highly profitable contracts. That criticism represented the instinctive reaction of inexperienced democracy to purely capitalistic control of public affairs. The criticism passed, and with it the situation which called it forth. The public temper has changed. Something of the old hero worship for strong, sturdy, rich, self-made Americans has been revived, and we are setting up new idols to do our work for us.

Here and there in Washington one hears grumblings against this one-man tendency. For example, an official who has occupied [Continued on page 257]

word political in its best English sense, not in the sense of small, personal political maneuverings. To illustrate: "Only a short time ago," declared an international banker, according to the Wall Street correspondent of the Philadelphia *Public Ledger*, "it would have been politically impossible for the Government to have placed men of the type

# GIRLS WHO WANT TO GO TO FRANCE

**N**EXT to being in battle, staunching the wounds of men who have

BY HENRY NOBLE McCRACKEN

PRESIDENT OF VASSAR COLLEGE

plement of 15,000 nurses with every million soldiers. The firing line, moreover, so far as the nurse is concerned, extends to the cantonments thruout the country, to the sick of city slum and isolated country district, to the girl in the factory, the man in the shipyard, the hundreds of thousands of men and women whose productive efficiency stands behind the fighting forces. National efficiency depends largely on the health of the people; and the trained nurse is the pivotal factor in the fight

just been carried off the fields is the most direct form of participation in war. That is why so many women "want to go to France." Unless they are experts at mending broken soldiers, however, they are even less desirable over there than are untrained recruits in the front line trenches. Nursing is the front line trench for women.

*Laboratory at Vassar College where college women will be trained in scientific nursing*

Out of the medley of more or less successful attempts to transmute the admirable but inchoate impulse to do something patriotic into various forms of effective energy comes a movement of unique significance. The "Plattsburg" for college graduates is the first practical effort to enlist women who are by instinct and education as peculiarly fitted for nursing as they are desperately needed in that branch of their country's service.

It was the very gravity of the national emergency in this respect that impelled the trustees of Vassar College, at Poughkeepsie, New York, to offer the institution to the Government for use this summer as a training "Camp" for nurses. The plan was eagerly adopted by the Council of National Defense and the Red Cross, the latter allotting \$75,000 for operating expenses. Thus on June 24, when the camp opens, some five or six hundred young women, all graduates of standard colleges and selected from a country-wide canvass of applicants, will begin a three-months' course in theoretical nursing. They will not, however, then be ready to go to France. The road to the glory and glamour of service under fire is longer and harder than that. For France and Britain and that part of America which is over there now do not want "theoretical" nurses. No matter how intelligent and charming one is, one has to have scientific skill and a great deal of experience, if one is to play the role of hospital heroine successfully. In fact, the authorities decline to accept any one who is not an "R. N." The initials mean registered nurse, and they stand for, in most cases, three years' hospital training. The short course at Vassar, however, is designed to take advantage of the previous education of the college woman, so that when she leaves the "camp" she faces only two years' training, instead of three.

But two years' training means immediate service none the less. For arrangements are under way to affiliate all first class civil hospitals with the local base hospitals which will receive the sick, wounded and "reconstruction" cases brought back from France or "criginating" in this country. The student nurse learns while doing. Under expert direction, she helps care for even the most serious cases and thus takes a large part of the burden from overloaded shoulders. Moreover, she releases from civilian service some graduate nurse whose experienced hands and trained mind are urgently needed at the front.

How badly the trained nurse is needed, both at home and abroad, becomes very clear upon realization of the importance of the part she plays. Modern military requirements demand a com-

against disease. Indeed, the public health aspect of the nursing problem is regarded by the authorities as hardly less important than the military.

Consider, then, that from the less than 70,000 nurses who were registered in this country when the war began, some 5000 have gone to staff hospitals of our allies, some 19,000 are enrolled in: the Red Cross, in active service or awaiting call, and an effort has just been launched to enlist 35,000 more by January. An army of two million men will take practically all the nurses we have. Under the circumstances the normal output of the regular training schools is almost negligible. The answer is that thousands of women—literally, thousands—who never before thought of nursing as a career must now take it up as war service.

Women who have collegiate or university education are especially needed. Their previous acquirements enable them to assimilate "intensive" instruction more readily than women of elementary education; and their presumably higher aspiration are in line with the administrative and executive positions which it is more difficult to fill. Nursing will one day occupy a position of equality with the other learned professions. The picture of the trained nurse as a sort of bedside servant is a misconception today. Successful care of sick and wounded depends almost as much on her scientific knowledge as on the skill of the physician or surgeon; and the great strides in social welfare work, in sanitation and the other disease preventives, have been made mainly by the "visiting nurse." Nursing is preëminently and exclusively women's work. It is, moreover, a form of service in which, other things being equal, the best educated woman qualifies highest.

Just as Plattsburg attracted into military life the men of higher education who [Continued on page 258]

# IN DARKEST RUSSIA

BY EDWARD ALSWORTH ROSS

"I consider my half year in Russia, in 1917, the richest experience possible to a sociologist since the summer of 1793 in France," writes Professor Ross of his travels thru revolutionary Russia. He was sent over from the United States to investigate social and economic conditions in Russia. In "A Talk with Trotzky," published in The Independent of March 9, Professor Ross reported verbatim the economic and administrative aims of the Bolshevik leader

THE faces of the crowd on the dock at Vladivostok—the first Russians I had seen *en masse*—made a painful impression. Five out of six are dull, unlit, mouth a little open, eyes askint, peering as if vainly trying to understand what they see. Rare is the alert, comprehending look of the American dock laborer. Looking at these poor fellows deliberately kept in darkness by their Government when mind-lighting is so cheap, I perceive where the roughs of the "black hundreds" are recruited from. Fill such ignorant men with whiskey and lies and they are capable of any atrocity.

Surveying a Russian crowd, you are struck by the rarity of eyeglasses; not over one in sixty or seventy needs aid to vision. You are puzzled until you remember the small number of readers among the masses. In the cities the provision shops hang out the image of a sheep, a fish or a loaf in order to guide the unlettered servant girls and the poor. In the "hut" the Y. M. C. A. maintains for Russian soldiers every sign has its companion-picture for the benefit of the illiterate. "Wipe your feet" is accompanied by a sketch of a pair of boots. "Tea, 3 ko-pecks," by a drawing of a glass of tea and three small coins. A man reading aloud a placard or a newspaper to those who cannot read is a very common sight in the streets. In the hospitals the convalescents are taught to read and you will see a big whiskered man with the sweat running down his face in the anguish of his effort to spell out the meaning of the simplest words! About ten years ago the Russian census reported eighty-three per cent of illiterates above nine years of age, and this figure is given even by Russian professors. But, thanks to the *zemstvo* schools, the rising generation is better off, and only a third of the recruits are illiterate. Still, at least three-fifths of all the adults in Russia cannot read.

The printed word is the sun that illuminates for us the world. Limited to his eyes and the spoken word the Russian peasant is like a man with a lantern who can see only four paces about him. This is why peasants whose heads are screwed on right will nevertheless burn the crops in the fields of the experiment station which some of the great estates main-

tain for the purpose of showing how to get more out of the soil, why they will tear down the village school house, deeming it a useless thing.

In the workmen at times one comes upon the petty cunning of the slave. An American manager told me how in their conferences with him they will keep tab and if he restates his thought in different language, they will catch him up eagerly, "Ah, but you said thus and so last week!" They note a change of words and imagine he has changed his position. It is pitiful.

Until the lamp has been turned up awhile one must not be surprized to come upon childish political ideas. Thus an old peasant after listening to an orator commented, "Yes, it'll be fine to have a constitution and a republic provided always they give us a wise Czar." A member of the Duma tells of going down to his home in the country and meeting there a friend of his, a fine young peasant, who had been in the Kronstadt revolt. He said, "What are you doing down here, you a sailor in sailor's uniform?" The peasant parried with the stock phrases of the Bolshe-

viks—how the war was started by the capitalists and the capitalists were sucking the people's blood. But as his friend continued to look fixedly at him, he fell on his knees, covered his face with his hands and sobbed, "Oh, Nicolai Andreevitch, these things were told me, but I am so ignorant I don't really know what it all means!"

All the six presidents of Councils of Workmen's and Soldiers' Delegates I talked with were intelligent men, but one of them, a mechanical engineer, graduate of a German technical school and with three years' experience in America, said, "My constituents are two regiments of soldiers and 600 workmen. But the workmen lack the intelligence to use their new won liberty so as to benefit themselves. They become so discontented with their delegates, who understand how impossible it is that the workmen should have all that they ask, that sometimes they murder these delegates.

General Korniloff told of a regiment on the front which was so impressed with the "separate peace" idea that they formally drew up a treaty with the Ger-

mans opposite them, agreeing to give up the sector which they held and to pay the Germans two hundred rubles apiece!

Or take this incident. Last August a Russian regiment at the cost of considerable losses made itself master of an important strategic high on the Galician front and threw back the Germans into the valley seven miles away. While they were fortifying themselves German envoys arrived and asked to speak to the committee of the regiment. "Well, what is it?" "Why, comrades, you aren't dealing fairly with us. The Russian democracy has come out against annexations, hasn't it?" "Certainly." "Nevertheless, you have just occupied Austrian territory to a depth of seven miles, haven't you?" "Yes, that's true," responded the committee meditatively. So a meeting of the regiment was convoked and it was voted to abandon the position because it involved annexation. Deaf to the pleadings of the officers and unmindful that Germany was holding tens of thousands of square leagues of Russia, the simple-minded Russians retired from the ridge that had cost them so much blood and two hours later the Germans [Continued on page 261

## KIND O' HANKERIN' FOR YOUR FOLKS

**H**E was a big, broad-shouldered, brawny man with a rugged manner of speech. He described himself very well when he said to me: "I can think as pure white as anybody, but I want to talk like a he man."

He had been wounded by a burst of shrapnel and was not badly hurt, altho one side of his face looked as if it had been raked by the claws of a leopard. He had told me that for a day after the accident he had heard a sound in his head "like two skeletons rassling on a tin roof."

Who but an American soldier in France would talk like that? Indeed, I found that he was from Kansas City and had the mixt dialect of the mid-country.

"You think it makes ye better or worse—this game of war?" I asked.

"Well, sir, I'd say better," he answered. "Ye get things measured up right, over here. Ye learn how to use yer thinker. Nobody knows what peace and home and friends are worth 'til they're gone and ye don't know whether you're ever going to see 'em again or not. It ain't a bad thing to live the all he life, a while, and see the family in dreams. They look so gol durnably different. I reckon it's helped me. Maybe I better tell ye a little story and you'll see what I mean. It'll be a Christmas story."

"We were in the ruined city of Peronne that Christmas Day. My friend and I were homesick and had tramped across country from the camp of our engineering corps to send a message to our wives in Kansas City, and to blow ourselves to a good dinner with a bottle of wine and cigars if money could buy them. We were a little over-beaned—and tea!—gosh! we were soaked in it, and that French tobacco reminded me of my father's cure for the epizootic. We had been gander-dancing on a new railroad for weeks. We were shovel tired and kind o' man weary. By thunder! we hadn't seen a woman in three months."

"You who see women every day don't realize that they're a pretty necessary part of the scenery. Oh, you don't miss 'em for a week or so, but by and by you

## A Tale of the Great War

BY IRVING BACHELLER

The author of "Eben Holden," "The Light in the Clearing," "Keeping Up With Lizzie," recently visited the battle lines in France as the guest of the British Government

begin to find out there's something wrong. Things don't look right. The hole in the doughnut is too big. You'd be kind o' glad to hear what somebody said at the Woman's Club, and all about Betsey Baker's new pink silk, and how shabby that one old dress of your wife's was getting to be. You'd like to see a set o' skirts come along—I guess. It would kind o' comfort you. If you didn't have pretty good self control you'd get up and wave your hat and holler.

"Then—*children*—that's another thing you miss. We don't see 'em on the battle front—ne'er a one! What a hole they make in the world when you take 'em out of it!—especially if you've got some of your own. They come to me in my dreams—the wife and babies! I'll bet ye there's more'n a thousand of 'em crowding into that big camp every night, about dream-time, and looking for theirs."

"Oh, I wouldn't have ye get the idea that we set and sob and talk mush and look sorrowful there. If you just grabbed a look at us and went on you'd say we were no Hamlets. Gosh no! We play cards and joke and laugh and tell stories a-plenty. You wouldn't get what's down under it all unless some feller kind o' confest and turned state's evidence. No, sir—I don't believe you would."

"I'm just telling ye enough to make ye understand why we went out to Peronne that Christmas day and what happened to us there. I speak French pretty glib—that's another reason why we went. My mother was a Louisiana French woman. I got it from her when I was a little chap—never forgot it—

and I bossed a gang of Frenchmen for two years.

We found a man who ran a little grocery shop and restaurant down in one of the old cellars. He had had a fine big café upstairs before the German army swatted the town with dynamite.

He was a sad little man who lived down there in the lamplight with his wife. The Huns had carried their two daughters away with them. He had cleaned the litter out of his cellars and repaired their walls and so they had a home and something to do.

"I asked him if he could get up a good dinner for us."

"Oui, Monsieur," he answered promptly. "I can get you some chickens or a fine duck and celery and salad and preserved strawberries, and I could make you a little pastry."

"How about wine?" I asked.

"Wait a minute," he answered, with a smile, as he went into the back room.

"Soon he returned with a bottle covered with dust."

"It is old Burgundy of 1902. I have only a little of it, Monsieur."

"He said this as only a Frenchman can who knows old wine and respects it."

"It looked good to us."

"One bottle will do," I said. "How much for the dinner and the wine?"

"Thirty francs—I cannot make it less."

"Make it forty and we'll call it a bargain," I urged.

"You should have seen the smile on his face then."

"Les Americains! They always talk like that—God be with them!" he said. "Trust me, Monsieur, I will make you happy!"

"Dinner would be ready in two hours and we went out for a walk and a look at the waste of ruins. It seemed as if there were miles of them—honestly! You see they loaded every basement with dynamite and wired the whole place and then touched the button. Down it came. There isn't a roof standing. We tramped about looking for relics. It was a pretty day and warm in the sunlight."

Presented each week in The Independent by George Creel, Chairman of Committee on Public Information, appointed by President Wilson

## A WARNING TO FOOD PROFITEERS

**O**UR food problem, like our fuel problem, is a transportation problem. It is a question of ships.

There is plenty of food in the Far East and in Australia, and in South America, but the world no longer has ships for the long haul. It has to go to the nearest market—which is North America. If we had not a government control of price and distribution, we would be paying famine prices for our own breadstuffs and struggling against all the domestic disorders that famine prices bring to a country.

The Food Administration agreed upon a price for wheat in arbitration with the farmers. It undertook a campaign to persuade the nation to save food so that our allies might be fed. And it established a system of licensing by which the middleman was prevented from profiteering.

We have heard a great deal about the price-fixing. The food-saving campaign has reached every home. But very little has been said about the measures against profiteering, and the consequent ignorance has fostered much discontent.

Nevertheless, the food act of August, 1917, gave President Wilson power to deal with profiteers and speculators in food, and the power has been exercised by the Food Administration. It has seized hoarded food. It has prevented the destruction of foodstuffs and blocked combinations to restrict the supply or raise the price. And by licensing the wholesalers, it has regulated the retailers and governed the consumers.

Here are some typical cases:

Three unlicensed retail grocers of Pittsburgh—M. Shapiro, B. Block and Sam Gelman—had their supplies of licensed food cut off because they had been selling sugar at exorbitant prices.

The Clio Oil and Fertilizer Company, of Clio, South Carolina, lost its license for hoarding cottonseed and speculating in it.

B. Baff & Son, of New York, dealers in poultry and eggs, were put out of business for profiteering, and three other firms in which Baff was active were also closed.

The Boston Sugar and Jobbing Company had its license revoked for selling sugar in unreasonable amounts to individual consumers and exacting an exorbitant profit.

Marcus & Rothman, of New York City, were deprived of their food license for taking advantage of the sugar shortage to charge exorbitant prices. Moses Newberger, of Amsterdam, New York, similarly had his license suspended for a month.

The Hyatt Grain Company, of Waelder, Texas, was deprived of its license as "a mere speculator and a menace to legitimate dealers."

For selling wheat flour without substitutes, the A. F. Takamine Company, a Japanese wholesale firm of Denver, Colorado, was ordered to cease all transactions in flour for the period of the war.

The Connecticut Fruit and Commission Company, of Ansonia, Connecticut, was ordered to close its business for failing to accept a shipment of potatoes. This case is typical of many investigated by the Food Administration, "in which consignees of perishable goods shipped from a distance refused to accept shipments or allowed the goods to rot on the tracks because of unexpected market declines in price."

The Kansas City Market, of Des Moines, Iowa, was compelled to pay \$200 to the war fund of the Y. M. C. A. for violating the regulations regarding the sale of dressed hens.

J. Habit, a grocer of Edenton, North Carolina, was put on the blacklist and all wholesalers and food handlers forbidden to deal with him because he profiteered in flour and sugar.

The Johnson-Earl-Myers Company of Pittsburgh was ordered to suspend business for sixty days for selling goods to blacklisted retail dealers.

David Straus of Amsterdam, New York, lost his license because of profiteering in sugar. So did Antonio Morano of South Seventh street, Philadelphia; I. Swinsky of New Haven, Connecticut; Louis Hoffman, Ludlow street, New York City; W. A. Hodges & Co., of Bald Knob, Arkansas, and so forth.

The Food Administration has been equally active among millers and bakers. Here is the record for one week in April:

As the result of charges brought in Raleigh, North Carolina, against six North Carolina flour mills, one license was indefinitely revoked, four mills were closed for at least a week, and one that had been operating without a license was put out of business.

The Chaska Flouring Mill of Chaska, Minnesota, was closed for thirty days.

The Pasadena Milling Company of Pasadena, California, was closed for twenty days.

The license of Albert B. Bauss of Conneaut, Ohio, was revoked because he used only five per cent substitutes in his bread instead of the required twenty per cent.

The E. A. Brown Company of Luverne, Minnesota, was ordered to sus-

pend its flour business at Little Rock, Iowa, because the manager of its Little Rock elevator made sales of flour in excessive quantities and disregarded the "50-50" rule. The company was also required "to get back all excessive flour sales made after November 1, 1917, and to secure the sale of substitutes omitted from its February sales."

Two companies in Brownsville, Texas—the Walker-Craig Company and the George McGonigle Company—lost their licenses for selling large quantities of sugar that was smuggled across the Rio Grande into Mexico.

Marquez Brothers, of Arecibo, Porto Rico, were found guilty of charging excessive prices for flour, compelled to refund their profits and to donate \$150 to the Porto Rican chapter of the Red Cross.

John Haller, of Butte, Montana, was ordered to close his shop for two weeks because he had failed to use the necessary amount of wheat substitutes in baking Victory bread.

These are cases reported by the Food Administration from April 10 to April 16.

As a result of such work, as Mr. Hoover has reported, "the price of food commodities has increased eighteen per cent to the producer and at the same time it has decreased twelve per cent to the consumer." The margin of profit for the middleman "is thus smaller by thirty per cent—in fact, it is now so narrow that prices charged to the producer directly reflect to the consumer, and the Food Administration has to take all the curses of both sides."

"I am confident," Mr. Hoover says, "that profiteering has, from a national point of view, disappeared in the regulated food trades, and in consequence my belief is that it should be applied generally to all business in this community, and it is also my belief that before we are finished with this war, that will have been done. To me, this goes much further than the mere case of the individual and the blame that may be attached to him. As I have seen this war develop, from an active participation in its backwash and misery since its first day, I have seen growing out of the masses of people in every country aspirations for a great economic change. That change, broadly, will be, in the view of extremists, that those who work with their hands will obtain a larger portion of this world's goods, and those who work with their brains will obtain less, while those who do not work will probably obtain nothing."

## EIGHT STORIES OF GOOD CHEER

With Introductions by Frederick Houk Law

## WHAT HAPPENED AT SCHOOL

BY JEAN WEBSTER

"I think that everyone, no matter how many troubles he may have when he grows up, ought to have a happy childhood to look back upon."

So writes Jerusha Abbott in one of the letters in "Daddy Long Legs," a book by Jean Webster, a brilliant and delightful contemporary writer whose early death has brought a sense of loss to all who know her work.

We first make the acquaintance of Jerusha Abbott as the oldest orphan in an orphanage managed with unfeeling discipline. Jerusha, as general drudge, works from morning to night doing housework, and taking charge of eleven small orphans. She had finished her studies in the orphanage school at fourteen, and had attended the village high school for four years. At the beginning of the story we learn that an orphanage trustee, a young business man, attracted by the originality of Jerusha's essay on "Blue Wednesday"—shown to him by the angry matron whose management it satirized—agrees to send the friendless girl to college. He will pay her board and tuition, and will give her \$35 a month, all on condition that the payments shall be made by his private secretary, and that the girl shall not even know her benefactor's name. He makes the further condition that Jerusha shall write to him at least once a month in order

September 25th.

Dear Daddy-Long-Legs,

Behold me—a Sophomore! I came up last Friday, sorry to leave Lock Willow, but glad to see the campus again. It is a pleasant sensation to come back to something familiar. I am beginning to feel at home in college, and in command of the situation; I am beginning, in fact, to feel at home in the world—as though I really belonged in it and had not just crept in on sufferance.

I don't suppose you understand in the least what I am trying to say. A person important enough to be a Trustee can't appreciate the feelings of a person unimportant enough to be a foundling.

And now, Daddy, listen to this. Whom do you think I am rooming with? Sallie McBride and Julia Rutledge Pendleton. It's the truth. We have a study and three little bedrooms—*voilà!*

Sallie and I decided last spring that we should like to room together, and Julia made up her mind to stay with Sallie—why, I can't imagine, for they are not a bit alike; but the Pendletons are naturally conservative and inimical (fine word!) to change. Anyway, here we are. Think of Jerusha Abbott, late of the John Grier Home for Orphans, rooming with a Pendleton. This is a democratic country.

Sallie is running for class president, and unless all signs fail, she is going to be elected. Such an atmosphere of intrigue—you should see what politicians we are! Oh, I tell you, Daddy, when we women get our rights, you men will have to look alive in order to keep yours. Election comes next Saturday, and we're going to

to gain facility in composition. She is to tell him all the details of her college life, but is to address him simply as "John Smith" in care of the secretary. He is in no way to answer any of her letters.

The lonely, inexperienced eighteen-year-old girl leaps into college life as into a new existence. Before, everything had been barren: now, all is joy. She writes highly original, jubilant, naïve letters to her unknown benefactor, calling him "Daddy Long Legs," because all she had ever seen of him had been the lengthened shadow of his legs when he turned away from the orphanage.

Here are some of her letters written at various times from the beginning of her second college year to the Springfield Day. They are nonsense, it is true—simple, perhaps you will say "silly"—but they are full of the fun of a new life, new room-mates, college elections, studies, talks, basket ball, a Christmas vacation in an old family home, and a happy field day.

Here is the spirit of youth, eternally happy. Live yourself into it, for, as Jerusha says: "I think that the most necessary quality for any person to have is imagination. It makes people able to put themselves in other people's places. It makes them kind and sympathetic and understanding."

have a torchlight procession in the evening, no matter who wins.

I am beginning chemistry, a most unusual study. I've never seen anything like it before. Molecules and Atoms are the material employed, but I'll be in a position to discuss them more definitely next month.

I am also taking argumentation and logic.

Also history of the whole world.

Also plays of William Shakespeare.

Also French.

If this keeps up many years longer, I shall become quite intelligent.

I should rather have elected economics than French, but I didn't dare, because I was afraid that unless I reëlected French, the Professor would not let me pass—as it was, I just managed to squeeze through the June examination. But I will say that my high-school preparation was not very adequate.

There's one girl in the class who chatters away in French as fast as she does in English. She went abroad with her parents when she was a child, and spent three years in a convent school. You can imagine how bright she is compared with the rest of us—irregular verbs are mere playthings. I wish my parents had chucked me into a French convent when I was little instead of a foundling asylum. Oh, no, I don't either! Because then maybe I should never have known you. I'd rather know you than French.

Good-by Daddy. I must call on Harriet Martin now, and, having discussed the chemical situation, casually drop a few thoughts on the subject of our next president.

Yours in politics,

J. ABBOTT.

November 12th.

Dear Daddy-Long-Legs,

We beat the Freshmen at basket ball yesterday. Of course we're pleased—but oh, if we could only beat the Juniors! I'd be willing to be black and blue all over and stay in bed a week in a witch-hazel compress.

Sallie has invited me to spend the Christmas vacation

Judy and some of the orphans from the John Grier Home

with her. She lives in Worcester, Massachusetts. Wasn't it nice of her? I shall love to go. I've never been in a private family in my life, except at Lock Willow, and the Semples were grown-up and old and don't count. But the McBrides have a houseful of children (anyway two or three) and a mother and father and grandmother, and an Angora cat. It's a perfectly complete family! Packing your trunk and going away is more fun than staying behind. I am terribly excited at the prospect.

Seventh hour—I must run to rehearsal. I'm to be in the Thanksgiving theatricals. A prince in a tower with a velvet tunic and yellow curls. Isn't that a lark?

Yours,

J. A.

"STONE GATE,"

WORCESTER, MASS., December 31st.

Dear Daddy-Long-Legs,

I meant to write to you before and thank you for your Christmas check, but life in the McBride household is very absorbing, and I don't seem able to find two consecutive minutes to spend at a desk.

I bought a new gown—one that I didn't need, but just wanted. My Christmas present this year is from Daddy-Long-Legs; my family just sent love.

I've been having the most beautiful vacation visiting Sallie. She lives in a big old-fashioned brick house with white trimmings set back from the street—exactly the kind of house that I used to look at so curiously when I was in the John Grier Home, and wonder what it could be like inside. I never expected to see with my own eyes—but here I am! Everything is so comfortable and restful and homelike; I walk from room to room and drink in the furnishings.

It is the most perfect house for children to be brought up in; with shadowy nooks for hide and seek, and open fireplaces for pop-corn, and an attic to romp in on rainy days, and slippery banisters with a comfortable flat knob at the bottom, and a great big sunny kitchen, and a nice fat, sunny cook who has lived in the family thirteen years and always saves out a piece of dough for the children to bake. Just the sight of such a house makes you want to be a child all over again.

And as for families! I never dreamed they could be so nice. Sallie has a father and mother and grandmother, and the sweetest three-year-old baby sister all over curls, and a medium-sized brother who always forgets to wipe his feet, and a big, good-looking brother named Jimmie, who is a junior at Princeton.

We have the jolliest times at the table—everybody laughs and jokes and talks at once, and we don't have to say grace beforehand. It's a relief not having to thank Somebody for every mouthful you eat. (I dare say I'm blasphemous; but you'd be, too, if you'd offered as much obligatory thanks as I have.)

Such a lot of things we've done—I can't begin to tell you about them. Mr. McBride owns a factory, and Christmas eve he had a tree for the employees' children. It was in the long packing-room, which was decorated with evergreens and holly. Jimmie McBride was dressed as Santa Claus, and Sallie and I helped him distribute the presents.

Dear me, Daddy, but it was a funny sensation! I felt as benevolent as a Trustee of the John Grier Home. I kissed one sweet sticky little boy—but I don't think I patted any of them on the head!

And two days after Christmas, they gave a dance at their own house for ME.

It was the first really true ball I ever attended—college doesn't count where we

dance with girls. I had a new white evening gown (your Christmas present—many thanks) and long white gloves and white satin slippers. The only drawback to my perfect, utter, absolute happiness was the fact that Mrs. Lippett couldn't see me leading the cotillion with Jimmie McBride. Tell her about it, please, the next time you visit the J. G. H.

Yours ever,

JUDY ABBOTT.

P. S. Would you be terribly displeased, Daddy, if I didn't turn out to be a Great Author after all, but just a Plain Girl?

May 4th.

Dear Daddy-Long-Legs,

Field Day last Saturday. It was a very spectacular occasion. First we had a parade of all the classes, with everybody dressed in white linen, the Seniors carrying blue and gold Japanese umbrellas, and the Juniors white and yellow banners. Our class had crimson balloons—very fetching, especially as they were always getting loose and floating off—and the Freshmen wore green tissue-paper hats with long streamers. Also we had a band in blue uniforms hired from town. Also about a dozen funny people, like clowns in a circus, to keep the spectators entertained between events.

Julia was dressed as a fat country man with a linen duster and whiskers and baggy umbrella. Patsy Moriarty (Patricia, really. Did you ever hear such a name? Mrs. Lippett couldn't have done better.) who is tall and thin was Julia's wife in an absurd green bonnet over one ear. Waves of laughter followed them the whole length of the course. Julia played the part extremely well. I never dreamed that a Pendleton could display so much comedy spirit—begging Master Jervie's pardon; I don't consider him a true Pendleton though, any more than I consider you a true Trustee.

Sallie and I weren't in the parade because we were entered for the events. And what do you think? We both won! At least in something. We tried for the running broad jump and lost; but Sallie won the pole vaulting (seven feet three inches) and I won the fifty-yard dash (eight seconds).

I was pretty panting at the end, but it was great fun, with the whole class waving balloons and cheering and yelling:

What's the matter with Judy Abbott?

She's all right.

Who's all right?

Judy Ab-bott!

That, Daddy, is true fame. Then trotting back to the dressing tent and being rubbed down with alcohol and having a lemon to suck. You see we're very professional. It's a fine thing to win an event for your class, because the class that wins the most gets the athletic cup for the year. The Seniors won it this year, with seven events to their credit. The athletic association gave a dinner in the gymnasium to all of the winners. We had fried soft-shell crabs, and chocolate ice-cream molded in the shape of basket balls.

I sat up half of last night reading "Jane Eyre." Are you old enough, Daddy, to remember sixty years ago? And if so, did people talk that way?

The haughty Lady Blanche says to the footman, "Stop your chattering, knave, and do my bidding." Mr. Rochester talks about the metal welkin when he means the sky; and as for the mad woman who laughs like a hyena and sets fire to bed curtains and tears up wedding veils and bites—it's melodrama of the purest, but just the same, you read and read and read. I can't see how any girl could have written such a book, especially any girl who was brought up in a churchyard. There's something about those Brontës that fascinates me.

Their books, their lives, their spirit. Where did they get it? When I was reading about little Jane's troubles in the charity school, I got so angry that I had to go out and take a walk. I understood exactly how she felt. Having known Mrs. Lippett, I could see Mr. Brocklehurst.

Don't be outraged, Daddy. I am not intimating that the John Grier Home was like the Lowood Institute. We had plenty to eat and plenty to wear, sufficient water to wash in, and a furnace in the cellar. But there was one deadly likeness. Our lives were absolutely monotonous and uneventful. Nothing nice ever happened, except ice-cream on Sundays, and even that was regular. In all the eighteen years I was there I only had one adventure—when the woodshed burned. We had to get up in the night and dress so as to be ready in case the house should catch. But it didn't catch and we went back to bed.

Everybody likes a few surprises; it's a perfectly natural human craving. But I never had one until Mrs. Lippett called me to the office to tell me that Mr. John Smith was going to send me to college. And then she broke the news so gradually that it just barely shocked me.

You know, Daddy, I think that the most necessary quality for any person to have is imagination. It makes people able to put themselves in other people's places. It makes them kind and sympathetic and understanding. It ought to be cultivated in children. But the John Grier Home instantly stamped out the slightest flicker that appeared. Duty was the one quality that was encouraged. I don't think children ought to know the meaning of the word; it's odious, detestable. They ought to do everything from love.

Wait until you see the orphan asylum that I am going to be the head of! It's my favorite play at night before I go to sleep. I plan it out to the littlest detail—the meals and clothes and study and amusements and punishments; for even my superior orphans are sometimes bad.

But anyway, they are going to be happy. I think that every one, no matter how many troubles he may have when he grows up, ought to have a happy childhood to look back upon. And if I ever have any children of my own, no matter how unhappy I may be, I am not going to let them have any cares until they grow up.

(There goes the chapel bell—I'll finish this letter sometime.)

Saturday morning.

Perhaps you think, last night being Friday, with no classes to-day, that I passed a nice quiet, readable evening with the set of Stevenson that I bought with my prize money? But if so, you've never attended a girls' college, Daddy dear. Six friends dropped in to make fudge, and one of them dropped the fudge—while it was still liquid—right in the middle of our best rug. We shall never be able to clean up the mess.

I haven't mentioned any lessons of late; but we are still having them every day. It's sort of a relief though, to get away from them and discuss life in the large—rather one-sided discussions that you and I hold, but that's your own fault. You are welcome to answer back any time you choose.

I've been writing this letter off and on for three days, and I fear by now *vous êtes bien* bored!

Good-by, nice Mr. Man,

JUDY.

Mr. Daddy-Long-Legs Smith.

SIR: Having completed the study of argumentation and the science of dividing a thesis into heads, I have decided to adopt the following form for letter-writing. It

contains all necessary facts, but no unnecessary verbiage.

I. We had written examinations this week in:

- A. Chemistry.
- B. History.

II. A new dormitory is being built.

A. Its material is:

- (a) red brick.
- (b) gray stone.

B. Its capacity will be:

- (a) one dean, five instructors.
- (b) two hundred girls.

(c) one housekeeper, three cooks, twenty waitresses, twenty chambermaids.

III. We had junket for dessert to-night.

IV. I am writing a special topic upon the Sources of Shakespeare's Plays.

V. Lou McMahon slipped and fell this afternoon at basket ball, and she:

- A. Dislocated her shoulder.
- B. Bruised her knee.

VI. I have a new hat trimmed with:

- A. Blue velvet ribbon.
- B. Two blue quills.

C. Three red pompons.

VII. It is half-past nine.

VIII. Good night.

JUDY.

## THE ONE-MAN TENDENCY

(Continued from page 247)

an important though not a conspicuous place in the Government for over a year, and who, in addition, is quite capable of doing many of the things which may be given to more notable men to perform, put it this way, "After all, you must remember that it's the rank and file that do the work, have done it and will do it. I recognize the value of leadership, of course, but why don't we look for our leaders among ourselves? The French make generals out of privates. We have made a few high Government officials out of stenographers. We could make more. Get all the Ryans you can, the more the better, but do not count too much on the talismanic value of a name. After all, this is a democracy."

Such criticism as this tends to distort the plain, demonstrable fact, which is that the one-man tendency, so alarming to narrow-minded persons who have done much in other ways to hamper the winning of the war, is the most democratic tendency of many democratic tendencies at present visible. In default of the British system of a ministry responsible to the people, the next best thing is a ministry responsible to the man who is directly responsible to the people for the administration of the affairs of the Federal Government.

Such a job as running a war calls for coördination, for gathering up the odds and ends, big and little, for rearranging them and then arranging them so that the civilian and military commander-in-chief can see them all and direct the handling of them all. "Then if it doesn't go right, blame the President," said a Senator who was arguing for the Overman bill. "But for heaven's sake, let's have some one whom we can blame. No more of this business of 'The other fellow did it' or 'It wasn't my mistake.'"

And, wholly apart from the fine distinctions which arise in a discussion of political and economic theory, the broad fact remains that the President wants the blame, has asked for the blame, and is going to get the chance to have the blame. The one-man tendency will find its epitome and test in Woodrow Wilson.

WILLIAM LEAVITT STODDARD

## Fancy Linens from Italy at McCutcheon's

We are pleased to announce the recent arrival of several large shipments of Italian Art Embroidered Linens.

A notable feature of the goods is that they come largely from Art Needlework Schools which in normal times catered to an exclusive clientele, thus insuring originality of design and distinctiveness in workmanship. The following list will indicate some of the more popular sizes and prices:

Tea Cloth of sheer Ecu Linen Embroidered in White, Blue, or Brown. 45x45 inches, \$25.00. Napkins to match, 14x14 inches, \$30.00 per dozen.

**Tea Cloths**, 36x36 inches, 45x45 inches, and 54x54 inches. \$8.50 to 47.50 each.

**Tea Napkins**, \$17.50 to 42.50 dozen.

**Luncheon Sets**, square and oblong; 13 and 25 pieces. \$25.00 to 57.50 set. Several styles in the above sizes Embroidered in Tan and Blue at same price.

**Sideboard Scarfs**, Table Runners, Chiffonier, Dressing-table, Bureau Scarfs. \$8.50 to 35.00 each.

**Library Table Covers**. Ecu Embroidery. \$20.00 to 25.00 each.

**Refectory Table Covers**, 54x90 inches, and 54x108 inches. \$35.00, 40.00, 47.50, 57.50 to 90.00 each.

*Orders by mail given special attention*

## "It Wears Well"

How much satisfaction do you get from a newspaper?

Do you put it down with a confident feeling you have learned the exact facts of the principal recent occurrences that have taken place throughout the world?

Do you find therein information of sufficient interest to warrant passing your newspaper along or cause you to save it to read again?

Do its statements speak with authority?

The readers of *The Christian Science Monitor* can answer these queries in the affirmative because this great international daily newspaper has its own reporters all over the world gathering true stories of daily events, which are published uncontaminated by personal opinion or biased conclusion.

*The Christian Science Monitor*, 3c a copy, is on general sale throughout the world at news stands, hotels and Christian Science reading-rooms. A monthly trial subscription by mail anywhere in the world for 75c, a sample copy on request.

## What New Thought Does

ELIZABETH TOWNE  
Editor of NAUTILUS

### Ella Wheeler Wilcox Knows

the value of New Thought and she tells about it in the little booklet "What I Know About New Thought." More than 45,000 persons have sent for this booklet.

For 30c (war stamps accepted) you can get the above booklet and three months' trial subscription to NAUTILUS, magazine of New Thought, Elizabeth Towne and William E. Towne, editors. Send now and we will include "The Gist of New Thought" in eight chapters, a common and interesting hand-book, complete in itself and different. The Elizabeth Towne Co., Dept. D-13, Holbrook, Mass.

## GIRLS WHO WANT TO GO TO FRANCE

(Continued from page 248)

could officer the untrained drafts that were to come, so the Training Camp for Nurses at Vassar will serve to enlist the better educated women in the nursing profession. The idea of a "Plattsburg" for college women seems such a feasible means of preparing to meet the emergency that it is already taking hold elsewhere. Movements to establish similar summer courses leading to shortened hospital-training periods have been inaugurated in California and New England. Numbers of colleges may be expected—if not this year, then next—to turn their great educational plants to this patriotic use for the months when buildings and equipment are ordinarily idle. The hospitals of the country have proved their willingness to coöperate.

To be eligible for admission to the Vassar "Camp" a woman must be a graduate of a standard college or university, member of any class from 1909 to 1918 inclusive, and in sound health. The student fee of \$95 provides for tuition, board, room and laundry—everything but the uniform. A number of scholarships are available for special cases. The entire facilities of the college will be open to members of the camp, the dormitories just as they were left by the regular students, the outdoor theater, the tennis courts, lakes and all manner of aids to relaxation and amusement between the intervals of study.

The subjects in which the student nurses will be thoroly grounded include anatomy, bacteriology, hygiene, psychology, materia medica, dietetics, social economics, and the history and ethics of nursing. Specialists loaned from Johns Hopkins, Yale, Harvard, Columbia and other schools have charge of the courses, and supplementary lectures will be given by visiting scientists. This not only makes available to the student a remarkably wide range of subject and personnel, but also takes from the hospitals the expense and trouble of a great deal of the preliminary instruction. In addition to the work in the science laboratories, theoretical ward and diet kitchen, there will be practical demonstrations thru the co-operation of the large public hospitals situated near Vassar.

Upon graduation from the "Camp" the student nurses will be admitted in groups of from ten to fifty into standard hospitals in different parts of the country. The eagerness with which these young women will be welcomed into service is indicated by the fact that the hospitals had already applied for more than 200 before even the recruiting campaign, which is now about to close, had been started. These hospitals are adjusting their own programs to allow the college graduates credit for approximately one year's work.

Mention of a year, or two or three years, of training for war work naturally gives rise to the question. "But isn't there something I can do now? The war may be over in a year." The war indeed may be over in a year. The United States Government, however, and its several Allies, are not considering any such possibility. For instance, numerous huge factories that we are building to produce destructive instruments of one kind or another, will not be ready to begin production inside of a year. In fact, informed opinions are practically unanimous that it's going to take considerably longer than a year to bring victory; and Americans are resolved to stick at it, if it takes a century! But entering training as a nurse is, most emphatically, something to do now!

## Bethlehem Bach Festival

## KIND O' HANKERIN' FOR YOUR FOLKS

(Continued from page 250)

a woman, drest in black, with a little girl about six years old—spick and span and pretty as a picture—came along. They looked like angels to us. Didn't seem so they was exactly human. We stood watching 'em.

"I reckon I'd have give about a year o' my life for a day's use o' that kid—honest. I'd just like to have got down on the ground and rolled and hollered and tickled and tossed her just as I used to play with my own kids. My hands itched to get hold of her. We followed along behind 'em and kind o' hankerin' and a wishin'. She was a pretty little thing as ye ever looked at, with curly hair hangin' down on her shoulders and shiny, silver-buckled slippers and white stockin's. I just wanted to frame up some kind of excuse to speak to 'em, but I suppose they wouldn't have understood me.

"They stopped and looked around a minute and then the woman opened an iron gate and they went into one of the old door yards. When we came along we saw that the woman was sitting amongst the rubbish and crying.

"It's her home—dummed if it ain't," I whispered.

"I reckon 'twas natural for 'em to come back to it on Christmas Day—plumb natural to come back to where they had been happy once with all the family around. What a place! You'd think that an earthquake and a cyclone had gone into partnership for about a minute and done a smashing business. About half the back wall was standing and there hung a little corner of the attic floor and the wind had blown the dirt up there and some flowers and grass all withered by the cold had sprung up in it, and beyond that was an old baby carriage with a ragged top and a spinning wheel. The little girl didn't seem to notice her mother. She was running around on the ruins and picking up broken dishes. I reckon that kid had got used to the crying of men and women. The sight of grief didn't worry her any more—not a bit. She was flying around like a bird on the ruins.

"We sat down behind some bushes by the iron fence just to see what happened.

"By and by I heard the little girl call in a voice that kind o' made me swaller—honest, it was as sweet as the first bird song in the spring.

"Mother! Mother!" she called.

"What is it—little one!" the mother answered.

"Dinner's ready."

"Talk about silver bells! Say, mister, never again! Honest I never heard a sound like the voice of that kid. It kind o' floored me—sure thing! Up there at the front we just hear the growling of cannon and the whinnying of horses and the swearing of men day and night. Maybe that's why the kid's voice took hold of us that way. I don't know. After I had heard it I felt as if I could walk to Kansas City. Honest Injin!

"We peeked thru the bushes and saw that the little girl had dragged a board between her and her mother and covered it with broken dishes. Then she began to chitter-chatter.

"Here's some lovely soup and there's a fine goose and a great bowl full of the best jelly that ever was and potatoes and celery and spinach and everything that you like, mother. It's a Christmas dinner, you know. Papa will sit here and Henri will sit there and we are going to have the grandest time."

"So the little chatter-box went on—good deal like a fine lady—and her mother said:

## "Lafayette, Here We Are"

Through remote French villages resounds the unaccustomed tramp of American soldiers. But a little while ago and these men were in the quiet of their homes in a peaceful country. Today, in a strange land, they are facing the world's bloodiest struggle.

Pershing at the tomb of America's old time friend months ago reported, with true soldier eloquence, "Lafayette, here we are." And it is for us of the great American democracy to rally all our might to the support of our army and our allies.

From our shores to the battlefields of France are thousands of miles which must be bridged with ceaseless supplies to our troops. Every day calls for action here, no less than there. Cooperate! Sacrifice! These are the watchwords sent over the land by the Government.

In this national effort the Bell System has served with every other essential industry in order that communication, manufacture and transportation may be kept at the peak of efficiency to provide the munitions, ordnance and supplies so urgently needed.

THE INDEPENDENT, 119 W. 40th St., New York

"Papa! Henri! They are not here! They will eat no more with us."

"Why?"

"Mort pour la patrie—both of them! my child."

"No, mother, they are here. I can see them just as plain! Come, mother, they are waiting!"

"Oh, by thunder! If I only had a mind like that. I said to myself—a mind that hadn't got so kind of stiff and sore and muscle bound—a mind that was so clean and supple and that hadn't forgotten how to believe in the things I do not see. Or do ye suppose that the clear eyes of a kid can really see things that we can't?"

"God bless you—my little savior! You know how to make me happy—don't ye," said the mother with her handkerchief at her eyes.

"Then they both sat down there and began to eat that ghostly dinner with the ghosts of the dead."

"Gosh all hemlock! I just shut my eyes and heard a sound like a wind blowing in my head. I turned and whispered to my pal:

"You stay here. I'll be back right away."

"Then I sloped on my tip toes. Went to the cellar and found that man and brought him with me. I told him to invite them to dinner and that I would pay for it. I didn't care if it took the last sous marquee in my breeches."

"When we got back they were both singing the 'Marseillaise,' that my mother taught me when I was a kid, as they sat at their Christmas dinner:

Amour sacré de la patrie  
Conduis, soutiens nos bras vengeurs.  
Liberté, Liberté, chérie,  
Combats avec tes défenseurs!

"They heard us coming and stopped. Can you beat it? Say, mister, the boches might as well try to conquer the birds of the air."

"Our host knew them. They had been well off and respectable folks in Peronne before the war. Now they were refugees living on charity in a distant village."

"We gave them a part of our dinner but I do not think they were as happy in the cellar as they had been with the ghosts. They were very glum but we—well, ye know, sir, I reckon they helped our Christmas a lot. You bet I do."

"Ye know I had him put three extra plates at our table—one for Mary and one for little Kate and one for my roguish boy Bill. Say, I had learned something from that kid—you bet. It isn't necessary for me to fall asleep to have 'em with me now."

"The eats! Say, Fred Harvey wouldn't be deuce high with that little Frenchman."

"We had some dinner don't you doubt it, my friend, and forgot that there was a war and walked home in the cool of the evening as we say out West."

"And ye know the funny part of it is this: Mary wrote me of her dream that she and the kids had had dinner with me on Christmas Day."

Horseflesh may be, we understand, either à la cart or table d'ot.—London Opinion.

The landlady bustled up to her new lodger as he came down to breakfast the first morning.

"Good morning, sir," she wheezed.

"Good morning," said the lodger.

"I hope you've had a good night's rest," said the landlady.

"No," said the mild-mannered little man.

"Your cat kept me awake."

"Oh," said the landlady, tossing her head. "I suppose you're going to ask me to have the poor thing killed."

"No, not exactly," said the gentle lodger. "But would you very much mind having it tuned?"—Pittsburgh Chronicle-Telegraph.

## IN DARKEST RUSSIA

(Continued from page 249)

occupied it and proceeded to fortify it to the utmost!

The masses know their lack and hence the passion for listening to speeches, which so amused foreign observers of the Revolution. Many would spend all their Sunday going from one meeting to another and pass every evening quaffing the heavy wine of discussion. No wonder they were intoxicated. They were called upon for the first time in their lives to make up their minds as new fledged citizens and this is why they spent so much time at meetings. They were trying to equip themselves in a few months with the political convictions the citizen of a free country has been accumulating ever since he was a boy.

To look for a national consciousness among people who have no mental image of Russia, never saw a map of the world and could not locate their country on such a map would be folly. There is a tale of how a number of Russian soldiers running away last fall from the enemy's advance were stopped by an officer with the question, "Do you want to let the Germans have this province?" One replied, "But I am from Samara"; another, "I am from Siberia," and so on. Their patriotism was local, not national. In another case a fugitive reproached for letting the Germans draw nearer Petrograd, replied, "What difference will it make to me? I'm from Astrachan." Formerly, the Russian masses were held to their duty to the nation by certain instincts and habits associated with "God" and "Tsar." Now that these ideas are broken down, before the idea of *my country* has formed itself in their minds, they run the risk which, as Darwin pointed out, any creature runs in passing from the guidance of instinct to that of consciousness.

The Russian is one of the most tolerant of beings. The anti-Jewish pogroms have not been spontaneous but have been stirred up by designing persons or officials. The persecution of dissenting sects has been inspired by the machine of the Orthodox Church, not by its laity. The secret of the wonderful solvent power of the Russians upon the Babel of peoples and races they have met in their expansion is their large-hearted toleration of alien ways and faith. The steam-roller methods of Pobyedonostzeff and other violent Russifiers interrupted unfortunately the quiet natural process which was knitting up Poles, Armenians, Ukrainians, Letts and Jews with the Russians and would in the end have assimilated all but the Finns and the Germans, who warm their hands at other fires.

This tolerance is that of an individualist who wants to be let alone himself and who sympathizes therefore with the other man's desire to be let alone. This is all very well in most matters, but, carried too far, it interferes with society's control over the conduct of its members on behalf of the general welfare. Russian jurors are too much inclined to let the malefactor off and do not see in him a menace to society. Since Dostoevsky there has been a maudlin toleration of the criminal as if the poor fellow were victim rather than trampler on other men's rights. Russian merchants whose practises are honorable are slow to condemn the shady ways of a fellow merchant. The trader who refuses to fill his contract when the price of the goods has unexpectedly risen will hardly be boycotted by his fellows as he ought to be. In other words, the Russians are over-charitable with the wrongdoer and hence fail to brace one another morally as they might. Thus, ignor-

## SETH THOMAS CLOCKS

### The PEER

An artistic mahogany case, dull-rubbed finish. Fifteen-day pendulum movement. Cathedral Bell. Four inch white porcelain dial, convex beveled glass. Eight inches in height with a base of seventeen and one-half inches.

## The Service of the Clock

The faithful, unfailing service of Seth Thomas clocks symbolizes the spirit of accuracy which permeates the entire Seth Thomas organization. You will find your Seth Thomas always accurate, reliable and worthy of your utmost confidence. Its mechanical supremacy is reflected in the artistic perfection of its housing.

Your jeweler will be pleased to show or procure for you the PEER, pictured here, or any of the other clocks illustrated in our new catalog.

antly, they throw away one great lever for moral progress.

The Russians' over-wide tolerance is partially due to lack of standards. Did they apply definite standards to themselves they could not help applying them also to the other man. The masses lack *economic* standards, i. e., a standard of decency or standard of comfort, such as rules most American rural communities. They lack *moral* standards, e. g., the average peasant is a free and artistic liar, while men and women conduct themselves pretty much as they please with little heed to marriage vows. There is little sign of the existence of *hygienic* standards. One notes the tendency toward excess in eating and drinking, the neglect of systematic exercise, the shutting out of fresh air and the irregular habits of life. The American dining car serves meals at stated times, whereas the Russian "restaurant car" caters all day and half the night. Much more than with us, circumstance and whim determine the time of going to bed or getting up.

Again, the educated classes are little ruled by *intellectual* standards. Not often are their scholars mastered by the ideal of continuous advancement and unflagging scientific productivity. After he has "arrived" the professional man engages no further in research. Successful doctors do not read much in medicine. Mendeléeff, the discoverer of the immortal periodic law in chemistry, did little the last thirty years of his life but expertize. It is said that when a famous Russian chemist, author of a classic text on his subject, died, an English chemist attended the auction of his library, hoping to pick up rare works or scarce volumes of chemical journals. To his disgust he found that the library consisted of textbooks on chemistry.

In other words, the virtues of the Russians are to be credited to the goodness of their nature, rather than to their acquired standards. In the language of an American, long resident in Russia, "It seems as if this race has in some mysterious way fallen heir to the chief Christian virtues save chastity. They are kindly, forgiving, tolerant and charitable." Talking with Lutheran pastors who insisted that the *moujiks* were superstitious but not religious, I asked, "How about their kindness and brotherliness." "Oh," was the reply, "that's a matter of race, rather than of indwelling Christian spirit."

It is a discernment of these precious traits in the Russian nature which causes all Americans who know them well to prophesy a great future for the Russians. In some ways their instincts are better adapted to a coöperative and democratic social order than ours are. Their backwardness is attributable not to race but to specific causes such as isolation, autocracy, serfdom, ignorance and the communal system of landholding. If Russians are vouchsafed a peaceful democratic development and speedily employ such agencies as private property in land, free institutions, schools and libraries, the grandchildren of today's children may attain any level of character and culture now in the world.

As regards the enlightened class, it would be a mistake to suppose that up to the Revolution, it was seriously hampered in its cultural development. Under autocracy there existed in private an extraordinary freedom in criticizing the Government. It was only when you tried to bring your criticisms to the attention of any portion of the great dark exploited mass—the people—that you got into trouble. Within the governing element itself intense oppositions developed and in Government reports one can find abundant material proving the extent of misgovernment, corruption and brutality.

PUBLICATION OFFICE

42 Broadway New York

Struggles were constantly going on between high officials, and investigating committees delighted to expose the wrongdoing or inefficiency of this or that branch of administration. No baleful régime ever left better materials for its own indictment than the autocracy. But all this damning information was for the exclusive use of the upper two or three per cent of the population. To communicate it to the general public was held as reckless as to throw lighted matches into a powder magazine. Hence the newspaper which circulated the findings published in an official document by some board of investigation which he suppress for dangerous agitation!

The educated class is extremely individualistic in method of action. Lacking practise in association they have never learned the lesson of compromise. Moreover, they looked to the Government to do whatever needed doing and never formed the habit of combining to do it themselves. I noticed in December that the higher class felt keenly their country's plight, but they were always canvassing the possibilities of the English, the French or the Americans coming to save them from the rule of the "dark" people, instead of considering what they might do themselves. In self-reliance and initiative, they were by no means so advanced as in cultivation. Said to me an eminent educator, "Our upper classes are educated *intellectually*, but not physically, morally and socially."

Denied the opportunity to apply to ideas the test of practise, the Russian intellectuals gave rein to their bent for the newest ideas. Just because Russia was looked upon as a backward country, they felt in honor bound to keep up with the latest fashions in social reforms. Some time before the middle of the last century, Russian disciples of Fourier planned to reorganize their country on communistic lines and nowhere has Karl Marx dominated the opinion of the educated as in Russia. In vain will one plead the necessity of following the upward path that has been trodden by the more advanced peoples like the Americans and the Swiss.

Because the British speak the same language as we, read the same masterpieces and inherit a few common political traditions, we look to them for our closest national friendship, forgetting that the British are insular, imperial and industrial, whereas we are continental, federal and agricultural. Ought we not rather discern in the many similarities between the Russian people and the American people the natural foundation for our firmest friendship? In both, agriculture leads and rural life predominates, altho, of course, Russia is far more rural than the United States. Both peoples are accustomed to grapple with rude Nature, have a frontier and have had to contend with wild animals and savage races. Both are subject to a continental climate and the sharpest contrasts they experience are in seasons rather than in scenery. In both countries land is cheap, streets and roads are wide and little improved and towns sprawl. Both Americans and Russians are used to space and vast horizons, think in large units and overlook fine distinctions. Both are easy-going, democratic and familiar. Neither has known feudalism and the caste sense it inspires. Neither has grown up amid historical buildings and monuments nor feel much reverence for the past. Individual Americans and individual Russians have always found themselves drawn toward one another, and now that such stumbling blocks as autocracy, a state church and a landed nobility are removed, why should not the two people feel the pull of sympathy and become like brothers?

## "Unquestionably the Best"

**THE BOSTON TRANSCRIPT:** Of all the books that have come to our notice, works dealing primarily with the problem of Bagdad, Prof. Morris Jastrow's "The War and the Bagdad Railway," with its illustrative map, is unquestionably the best.

## THE WAR AND THE BAGDAD RAILWAY

By MORRIS JASTROW, Jr., Ph.D., LL.D.

**Hon. Oscar S. Straus, Ex-U. S. Ambassador to Turkey:**

"My purpose was to congratulate you upon this excellent study and valuable contribution to possible terms of peace."

**Prof. H. Morse Stephens, Head of the Department of History, University of California:**

"I regard it as one of the most valuable books that has appeared on the war."

**THE NEW REPUBLIC:** "Hard to match for brevity and clearness. As an Oriental scholar, Prof. Jastrow is singularly well equipped to set forth in the light of history the conditions that have made Asia Minor such a disastrous breeder of strife, and this is, in fact, his most interesting contribution."

In the words of President Wilson, the Bagdad Railway is "the heart of the matter" of the present conflict. This is a war book of the utmost importance by an authority on Eastern civilization. It is the story of Asia Minor and its relation to the present conflict.

14 ILLUSTRATIONS AND A MAP. CLOTH, \$1.50 NET.

## THE WAR AND THE COMING PEACE

By MORRIS JASTROW, Jr., Ph.D., LL.D.

A companion volume to the author's "The War and the Bagdad Railway," which has taken its place among the valuable books called forth by the war. Prof. Jastrow in this book, carrying out the spirit of his other work and applying himself to the deeper aspects of the war, the "undercurrents," as the author puts it, shows how both the great conflict and the coming peace must be looked at from the angle of the moral issue.

The book will be found to be full of suggestion and stimulating in its thought, illuminated by the author's wide knowledge of the great movements of the world, ancient and modern.

It is written for those who wish to pass from a consideration of surface events to a deeper interpretation of the great conflict; it aims especially to provide a basis on which a structure of enduring peace can be directed.

\$1.00 NET.

## JOSEPH PENNELL'S PICTURES OF WAR WORK IN AMERICA

Secretary of War BAKER and Secretary of Navy DANIELS, in letters to the artist, praised and endorsed Joseph Pennell's lithographs of Munition Works, Shipyards, etc., made by him with the permission and authority of the U. S. Government. With Notes and an Introduction by the artist. 35 PLATES, LITHOGRAPH ON COVER.

\$2.00 NET.

## THE VIRGIN ISLANDS

**Our New Possessions and the British Islands**  
By THEODORE de BOOY and JOHN T. FARIS.

In the most interesting manner this volume tells the general reader, the intending visitor to the islands, and the investor looking for possible business openings what they wish to know regarding these new possessions of ours, formerly the Danish West Indies, purchased for \$25,000,000. PROFUSELY ILLUSTRATED AND WITH FIVE MAPS.

\$3.00 NET.

## OVER THE THRESHOLD OF WAR

By NEVIL MONROE HOPKINS, Ph. D.

A remarkable diary of the author's exciting experiences during the first months of the great world war, carrying the reader into the feverish atmosphere of Europe shortly before and after the outbreak of the war. The proceeds from the sale of this book will be donated to the Belgian Scholarship Fund. 70 ILLUSTRATIONS, DRAWINGS, DOCUMENTS, ETC.

\$5.00 NET.

## OVER HERE

By HECTOR MacQUARRIE  
Lieut. Royal Field Artillery

Author of "How to Live at the Front"

This highly spiced, diverting volume of snapshots of America is a species of camouflage on the part of a British officer for a desire to interpret America to his fellow-countrymen; he confesses also to "a definite hope that I shall succeed just a little in helping to cement a strong friendship between the two great nations." PRICE, \$1.35 NET.

### DIVIDEND

#### PACIFIC GAS & ELECTRIC COMPANY

FIRST PREFERRED DIVIDEND NO. 15.  
ORIGINAL PREFERRED DIVIDEND NO. 49.  
The regular quarterly dividend of \$1.50 per share upon the full-paid First Preferred and Original Preferred Capital Stock of the Company for the period commencing February 1, 1918, and ending April 30, 1918, will be paid by checks mailed May 15, 1918, to stockholders of record at 3:30 o'clock P. M., April 30, 1918.

A. F. HOCKENBEAMER,

Vice-President and Treasurer.

San Francisco, California, April 30, 1918.

### MEETING NOTICE

#### BROOKLYN RAPID TRANSIT COMPANY

##### NOTICE TO STOCKHOLDERS.

A special meeting of the stockholders of Brooklyn Rapid Transit Company will be held on Thursday, the 23d day of May, 1918, at 12 o'clock noon, at the office of said Company, at No. 85 Clinton Street, in the Borough of Brooklyn, City of New York, State of New York, for the purposes and objects of:

Considering and acting upon the proposition to consent to the execution and delivery by the Company of a mortgage limited in principal amount to not exceeding one hundred and fifty million dollars, in substantially the form to be submitted at such special meeting (or at any adjournment thereof) and covering all the property and franchises of the Company now owned (except such as may be expressly excluded by the terms of said mortgage) or hereafter acquired in exchange for, or with the proceeds of, the bonds issued under said mortgage, to secure the payment of the obligations of the Company contracted or to be contracted for the transaction of its business, or for the exercise of its corporate rights, privileges or franchises, or for any other lawful purpose of its incorporation. Such of the bonds issued under said mortgage as may be determined by the Board of Directors shall be convertible into stock of the Company under such regulations as the Directors may adopt.

Considering and acting upon any and all matters germane to the foregoing purposes and objects. The stock transfer books will be closed at 3 o'clock P. M. on Wednesday, May 8, 1918, and will remain closed until 10 o'clock A. M. on the day immediately succeeding the final adjournment of said stockholders' special meeting. The polls will remain open for one hour.

By order of the Board of Directors,

**BROOKLYN RAPID TRANSIT CO.**

By J. H. BENNINGTON,

Secretary.

Brooklyn, N. Y., April 29, 1918.

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

##### I. Patriotism and Loyalty.

A. THE MESSAGE OF THE UNITED STATES GOVERNMENT TO THE AMERICAN PEOPLE—"A Warning to Profiteers." 1. In a single paragraph show what the Food Administration is doing to stop food profiteering. 2. In a convincing subject show the harm that food profiteers can do in lessening our war efficiency. 3. Write a short story in which you describe the experience of a neighborhood where a storekeeper was convicted of profiteering. 4. Give a four-minute talk on some phase of the subject "Food Will Win the War."

B. GIRLS WHO WANT TO GO TO FRANCE. 1. Give a talk in which you explain the nature of women's war work in France. 2. Write a paragraph summing up the characteristics needed by a woman who wishes to be a war nurse. 3. Write a paragraph of detail concerning the number of nurses needed for our troops in France. 4. Explain why educated women make the best nurses. 5. You are a Government agent speaking at a girls' school. Explain the course of study a young woman must take in order to become a nurse. 6. Write an original story in which you introduce many details of the ordinary life of a war nurse.

C. THE ONE-MAN TENDENCY. 1. Explain orally what is meant by the "one-man tendency." 2. Tell why the changes summarized in the article are in the direction of efficiency.

D. IN DARKEST RUSSIA. 1. Write a detailed contrast between the people of Russia and the people of the United States. 2. Write a paragraph of cause and effect showing what has made the mass of the Russian people what they are. 3. Prove, by anecdote, that many Russians lack ordinary intelligence. 4. Explain orally the reasons that enabled the Germans to deceive and overcome the Russians. 5. Give a spirited speech showing what we can do to prevent the United States becoming in any degree like Russia. 6. Explain orally what is meant by saying that the Russians lack economic, moral, hygienic and intellectual standards.

E. IF WE WERE AUSTRIA. 1. Give a talk showing the many ways in which the United States is superior to Austria. 2. Show how the method and style of the article add to its clearness and force.

##### II. The News of the Week.

1. Draw a blackboard diagram to illustrate the recent fighting on the Western Front, and give a talk explaining the diagram. 2. Give a talk summarizing the recent important events in the United States. 3. Prove, orally, that the Zebrugge raid was "one of the most brilliant exploits of the war." 4. Imagine that you were one of the participants in the Zebrugge raid. Write an emotional letter telling definitely of your experiences. 5. Explain the methods by which Germany made her war loans successful. 6. Tell what may bring about the failure of Germany's finances. 7. Give a talk suitable for your school assembly, explaining the war use that is to be made of school buildings.

##### III. Literature.

A. KITCHENER LEGENDS. 1. What are legends? How do they arise? What famous legends are mentioned in your English textbooks? 2. Tell some legend concerning any one of the following: Barbarossa, Arthur, Roland, Drake, Charlemagne. 3. Tell, as tho you believed it, any one of the legends concerning Kitchener, or the Great War.

B. WHAT HAPPENED AT SCHOOL. 1. Without using notes, give an introduction to the reading of the "Daddy Long-Legs" letters. 2. Contrast the life of Jerusha Abbott before and after her arrival in college. 3. Select and explain proverbial expressions in the article. 4. Show why Jerusha's letters are unusually interesting. 5. What rules of letter writing may be deduced from Jerusha's letters? 6. Sum up the characteristics of Jerusha Abbott.

C. KIND O' HANKERIN' FOR YOUR FOLKS. 1. What is the general effect of the story? 2. What is the character of the speaker? How does his dialect help the story? 3. Why is the story set on Christmas Day? 4. Point out pathos in the story. 5. How does the story help us to be proud of the American spirit? 6. Point out effective description. 7. What is the climax? 8. Why is the climax so affecting? 9. How does the story make us proud of the spirit of France? 10. Explain the last paragraph. 11. Prove the following: "This is an exquisitely tender and touching war story."

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

##### I. News of the Week.

1. Summarize the "Story of the Week" under the following headings: (a) National war measures—executive and legislative; (b) American and German war finance; (c) Fighting on the West front; (d) European politics.

2. What do you regard as the most important domestic occurrence described in this week's issue? the most important event in Europe?

3. Discuss the news of the week as it relates to the proposition that "We Should Have a Great Army."

##### II. Growth of the National Executive—"The One-Man Tendency."

1. "Woodrow Wilson . . . is actually remaking the Government of the United States." Prove this statement by citing cases where he is doing this. Could this have happened in times of peace?

2. Study the history of the executive in the time of the Civil War. Do you find any evidence of a similar growth of the executive at that time?

3. "With the passage by Congress of the Overman bill the second stage may begin." What will this second stage be? Forecast, as clearly as you can, the third stage hinted at in the same paragraph.

##### III. A Comparative Study of Governments—"Camouflage Constitutions."

1. What is the significance of this title?

2. Show how the "labels" indicated in the paragraph printed in small type "are lies."

3. Explain one or more of the following quotations: (a) "Most 'absolute monarchies' . . . are bureaucracies," etc. (b) "Germany is actually an oligarchy," etc. (c) "The government of the French Republic is much more like that of the English kingdom than like ours," etc. (d) "The British 'Lords' are . . . a club of wealthy country gentlemen," etc. (e) "Australia and Canada . . . are in practise independent republics," etc.

##### IV. The Future of Russia—"In Darkest Russia."

1. Quote five sentences from this article which justify the title.

2. Quote another five which justify the following: "It is the discernment of these precious traits . . . which causes all Americans . . . to prophesy a great future for the Russians."

##### V. A Warning to Profiteers—The Message of the United States Government to the American People.

1. Outline the activities of the Food Administration in preventing and punishing food profiteering.

2. Discuss the message from Mr. Hoover in the last paragraph of this article.

3. Explain why the work of our Food Administration is of primary importance in winning this war.

4. "There is plenty of food in the Far East and in Australia, and in South America." Why, then, are the Allies dependent to so large an extent upon North American production?

##### VI. The Melting Pot—"Freedom of Language."

1. What is the conclusion of the editorial writer? Do you agree with him?

2. What is there that is reprehensible in the suppression of languages under German, Austro-Hungarian, and Russian rule? Can we, in this country, move for the suppression of other languages than English without being guilty of "Prussianism"?

##### VII. The United States and Austria: An Analogy—"If We Were Austria."

1. What does the author mean by (a) "the crazy-quilt Empire of the Hapsburgs," (b) "the only bond of unity is an ancient dynasty which has collected a haphazard empire by a series of strategic marriages"? Be specific in your answers.

2. What are the fact elements back of the supposed history of "Beantown, New England"? behind the fanciful statements contained in the last paragraph?

##### VIII. Historic Basis for National Legends—"Kitchener Legends."

1. Discuss the general proposition that legendary history in most cases has some basis in fact. Illustrate this by examples drawn from ancient and modern history.

2. Why should (a) "St. George come to the aid of the English," (b) "Jeanne d'Arc again head the French army," (c) "Drake's drum be heard on the coast of Devon"?

# GMC Trucks Are Solving Big Problems of Distribution

TODAY'S SHORT CUT BETWEEN SUPPLY AND DEMAND

**G**ETTING the things of commerce from the source of supply to the place of present need is a big problem in today's economic program.

Lumber must go from forest to the builder's scaffold; farm products to market; raw materials from the source of supply to the mills.

Blockades hamper the work of railroads, but fortunately there is an outlet through motor trucks.

Fortunately, also, GMC Trucks were ready to meet the demands of haulage on a wider radius—GMC engineers had seen to that.

Oversize and overstrength in every vital part and greater engine efficiency combine to guarantee the widest range of utility.

No matter what your line of business may be there is a GMC Truck for you. Every GMC is road tested.

## JUST A WORD

"Torpedoes, Mines and Men," first of the articles by Herman Whitaker, war correspondent of The Independent at the battlefield, has brought many letters of approval from our readers with requests for more. Here is what Mr. Julian M. Solomon, Jr., of the Famous Players-Lasky Corporation, wrote to us about it:

After reading thru the article in the April 20th issue entitled "Torpedoes, Mines and Men," I feel that this is such an inspiration that it should be reprinted in a booklet or leaflet and distributed broadcast thruout the country. I happened to read it on my way home the other night, or rather morning, and when I got into the house it was two a. m. Before going to bed I made my wife sit up and read it, because I was so much impressed personally.

In my opinion, this should prove a great inspiration to every one who reads it, and will help more than anything I have seen yet to "sell" the American public, not only on the war, but on the value and efficiency of "Our Navy."

Articles of this caliber should not only help to build up the value of your splendid publication, but should go far toward helping to win the war.

Cordially yours,

JULIAN M. SOLOMON, JR.

The next article of Mr. Whitaker's to be published in The Independent describes our war against the U-boats and explains the merits and limitations of the convoy system. His story of Captain McGregor, "a Scotch skipper, upright, courageous, self-reliant, the finest of seamen, but unfortunately hard in the mouth," points a forceful moral of the need of naval teamwork.

In a later issue we shall publish Mr. Whitaker's impressions of the civilian war reactions in London and in Paris—an answer to the American plea, "Let us know the truth when you get over there."

Let the little "slavey," who lit my first fire in London, give answer. She was small, insignificant, almost dwarfish. She sniveled from the chronic cold one contracts in these isles. Her snub nose and weak, watery eyes were not improved by a periphery of coal dust. Not by any stretch of imagination could she be considered a heroic figure, yet Lloyd George himself, nor President Poincaré could not have answered more to the point.

"Yes, sir, we are tired of the war. But we can't stop now. It's too terrible a thing to ever 'ave 'appen again. We 'ave got to fight it out to a proper finish. That's how we working folks feel."

"How the Bolsheviki Got on Top" is the title of an article soon to be published in The Independent by Edward Alsworth Ross, professor of sociology at the University of Wisconsin. Professor Ross was sent over to Russia in 1917 on a commission appointed to investigate the social and economic conditions attendant upon the Russian revolution. In "A Talk with Trotzky," published in The Independent of March 9, he reported verbatim the economic and administrative program of the leader of the Bolsheviki. His analysis of the attitude of the Russian people, presented in The Independent, May 11, is an illuminating explanation of recent events "In Darkest Russia."

## ARKABLE REMARKS

EZRA POUND—Go out and defy opinion. AMBASSADOR PAGE—The Germans are as dull as they are strong.

ANON—Anonymity in journalism is as wrong as secret diplomacy.

CARDINAL GIBBONS—The Holy Father has faced a terrible ordeal.

JOHN GALSWORTHY—We are awakening to the dangers of Gadasening.

LADY READING—There is no nerve specialist in England any more.

GENERAL FOCH—A battle is never lost until its loss is acknowledged.

GOV. FRANK O. LOWDEN—Illinois is the keystone of the new United States.

PROF. GILBERT MURRAY—It is not wise to speak confidently about the future.

ED. HOWE—It has always been the way of poets to say a man of sense has no soul.

W. H. TAFT—A moral people like us will die sooner than give up our high ideals.

CLARENCE REX—It is all right for a girl to marry for money if she is worth the money.

HERR HAASE—It is intolerable that German soldiers should be the executioners of the Russian Revolution.

RUDYARD KIPLING—Nine tenths of the atrocities that Germany has committed have not been made public.

BILLY SUNDAY—Germany lost out when she turned from Christ to Krupp and from the cross of Calvary to the iron cross.

HERR WILDGRUBE—What is all this hubbub about democracy, seeing that our monarchical state has proved its efficiency?

BISHOP FOGARTY—The Sinn Fein movement is nothing more than the national spirit of Ireland purified from English dross.

LIEUT. PAUL DAVIDOVATZ—The Kaiser will go down to posterity as the greatest robber and murderer the world has ever known.

EMPEROR WILLIAM—If I order you to shoot down your relations, brothers, yes, even your parents, you must obey me without murmuring.

LLOYD GEORGE—There is no time for ease, delay or debate. The call is imperative, the choice is clear. It is for each free citizen to do his part.

HERR LANDSBERG—Our love for the fatherland goes so far that we will not endanger Germany by seeking to annex Courland and Longury-Briey.

OTTO H. KAHN—It is too little realized that the leaders of business are elected by the business community at large, and hold their position subject to "recall."

T. C. O'DONNELL—A stanza or two from "America" sung whenever opportunity and time permit, will bring oxygen into your lungs and strengthen the muscles of the abdomen and breast.

THEODORE P. SHONTS—The greatest inducement for saving will always consist in offering a rate on return on invested money which will serve as an effective compensation to a man for the sacrifice involved.

# How I Invested \$2.00 that Netted Me a Clean Profit of \$900.00 in One Year

The experience of a man who for years could not seem to make both ends meet. Now has saved \$5400.00 and is going to buy a home for his family in the suburbs.

Told by **GEORGE P. ELLIOT**

"My wife and I were in a state of desperation. It was the end of the year and we sat down and figured that we hadn't saved a single penny of my \$3000 salary—worse than that, here upon the table was a sheaf of unpaid bills amounting to about \$300.

"Where *could* the money have gone?" I said, puzzled.

"I can't imagine," my wife answered. 'It's certain we haven't spent much on pleasure. And I've not been extravagant in any way that I can think of in managing the house or providing for the children. And none of us have gotten any more clothing than we really needed.'

"And yet the money was gone. Neither of us knew why or where it had gone. There wasn't a single article in the house that we could point to and say, 'Well, there's \$50, or there's \$100 accounted for, anyway.'

"My wife and I had just cleared the unpaid bills from the table, and half-heartedly agreed to meet them 'some way or other' when William Jordan, my assistant at the office, rushed into the room.

"What do you think!" he cried, excitedly. 'My wife and I have saved enough money and we've just made arrangements to buy a little home in the suburbs.'

"My wife gazed at me in astonishment. She knew as well as I did that Jordan only made \$2000 a year and, like us, he had two children. 'How could *they* manage it?' we asked ourselves. Jordan and his family enjoyed all the pleasures of life even more so than we, because we never went to the theatre without having an unpleasant doubt as to whether we could really afford it and wondering what necessity we would have to cut down on after having that luxury. But Jordan went to the theatre frequently, entertained regularly, had all of the necessities and many of the luxuries of life. All his family were always well-dressed and his children were known as 'two of the prettiest-frocked' children in the neighborhood.

"I decided to put the question squarely up to Jordan and find out how he could manage affairs so that

his \$2000 income would go so much further than my \$3000.

"Well, Mr. Elliott," he answered simply, 'my wife and I long ago came to the conclusion that a home must be run in the same way as a business if one wants to make any money out of it. So we just kept a record of all our expenditures—stopped up all the expensive leaks—laid away a certain amount every week on the budget basis for regular annual bills, such as insurance—determined upon 30% of my yearly salary as the amount that we would bank each year—and then deposited 1/52nd of that amount each week. You can't imagine, Mr. Elliot, what fun it was! We didn't miss any pleasures because we always knew exactly how much we could afford to spend and we spent that amount for pleasure with a free mind. At the end of the first year we had a bank balance of \$500 to pay us for our fun. And every year since we've saved from \$500 to \$600—just by not letting our money dribble away as most couples do. That is how I have the money to buy a home!'

"After Mr. Jordan left that evening, Mrs. Elliot and I talked about applying the same plan to our own affairs. We became enthusiastic about it. We decided to try it out immediately. All that next evening we bent over the dining-room table and made figures talk. We have conducted our home on this plan now for six years and have saved from \$800 to \$1000 each year—despite the high cost of living and without depriving ourselves of one bit of pleasure or any of the conveniences of life. We now have about \$5400 in the bank—or an average of \$900, or 30% of my salary for every year since my wife and I became partners in the fascinating money-saving game. This summer finds me hot on the trail of William Jordan in selecting a beautiful home of my own."

The Ferrin Money-Saving System is built upon the experience of people like the Jordans and the Elliots. It is intended for people who want to save money and have money and yet do not want to tie themselves down to stringent economy and denial of the little pleasures and luxuries which sweeten life. This new Money-Saving System

is for those who realize how money dribbles away into nothingness unless some track of it is kept.

The Ferrin Money-Saving System is simplicity itself. It is all in a handsome and handy blue imitation leather bound account book prepared by the Independent Corporation. It is the only device of its kind—because it is based on the budget idea and provides for the income as well as for the classified items of expense. No knowledge of bookkeeping is required to use this new System. Any child able to read will be able to keep the account accurately. Three minutes a day will suffice to attend to the matter. No red tape or technicalities—so efficient that it is automatic—simple to understand and easy to apply.

Make the Ferrin Money-Saving System *your* automatic accountant—give it only three minutes' attention each day. It will keep a watchful eye on your income—check up your expenses—tell you to a penny where your money goes—enable you to put money in the bank regularly and surely—keep you out of debt—free your mind from worry and doubt regarding luxuries, because you will know just how much you can afford—will answer for YOU that tiresome question, "Where does the money go?"—and will prevent you from letting your money dribble away without leaving any trace of itself. Send *now* for the Ferrin Money-Saving System—the Automatic Accountant of Every Income. Examine it—without cost.

## Examine It—Without Cost

Mail the coupon NOW for this "Watch-dog of the Home Treasury." See how efficiently this Ferrin Book works. Examine it thoroughly and if you feel that you can afford *not* to own this remarkable money-saving device, return the book and owe us nothing. But if you feel that you would like to stop up the leaks which prevent you from saving money, if you want to check up your expenses and have a tidy bank balance to show each year, then retain the Ferrin Book and send us only \$2 in full payment.

Send for the Ferrin Book NOW! It's a big step taken toward a tidy bank account.

## *for the best examples of Truck Operating Efficiency*

---

Attention is called to the following announcement recently made by the Council of National Defense:

*"The Council of National Defense has given its formal approval to all measures designed to facilitate the use of the motor truck in transportation wherever it can be utilized. It is urging all communities as far as possible to adapt the motor truck to their local needs and encourage its use in any way to help existing transportation problems."*

To promote maximum results in motor transportation, the Packard Motor Car Company offers a total of \$5,000 in awards to owners and drivers for greatest efficiency in hauling. The awards will be based on certified records of Packard truck operation over a period of three months, beginning June 1. Best results are obtained through full loads, careful routing and proper maintenance of the trucks. To win the awards records must be kept in accordance with the National Standard Truck Cost System. Transportation experts not connected with the Packard organization will be the judges. Full particulars will be furnished by us or any Packard dealer. Every Packard truck owner and driver is invited to compete for the awards.

EFFICIENT HAULING is now a patriotic duty. It will release railway cars for government use.

## BUILT IN TWENTY-SEVEN DAYS

The 5500 ton U. S. collier "Tuckahoe," launched at the Camden shipyard of the New York Shipbuilding Company on May 5, has established a world record for speed in shipbuilding. About three hundred men worked twenty-seven days to build her.

## DO IT AGAIN!

THE American Red Cross needs another hundred million dollars. The first hundred million has been wisely and effectively spent. Next week a great drive will be made the country over to raise the second Red Cross War Fund.

There is no question that it will be raised. The American people are learning how to give. They have not yet failed to meet any call that has been made upon them in the name of democracy, humanity and victory. The War Fund will be raised.

The only question to be asked is, What will *your* part in it be?

A year ago the country gave \$105,000,000 to the Red Cross. It will do it again.

Did you give last year? Do it again!

Did you give all that you could? Do it again!

Did you have a share in the glorious work of caring for the wounded, comforting the suffering, rehabilitating the homeless, succoring the victims of ruthlessness and barbarism? Do it again!

Did you give till it hurt? Do it again!

If every one who gave then will do it again, the thing will be done. If any one for any reason failed to give then, let him do it now, and then—do it again!

## LLOYD GEORGE STAYS ON TOP

THE debate in the British House of Commons on the evening of May 9 excited more attention in America than many a debate in Congress. Under ordinary circumstances English politics arouses curiosity but not concern in the minds of Americans. But now when the lives of millions of our young men are dependent upon the action of Parliament we follow its proceedings with intense interest and must endeavor to get a clear understanding of the forces involved in the present crisis. This is not easy, partly because of the censorship—which for instance held up for a day the transmission of General Maurice's letter to America—and partly because of the peculiarities of the British system of government. It is, for instance, hard for Americans to understand how it is that a Parliament whose legal term expired on January 31, 1916, is still in power and how it is that the Home Rule act, which was passed three times by the House of Commons and duly signed by the King, has never been executed and is never likely to be, and how it is that a country which gave a Liberal majority at the last election is now governed by Conservatives. Imagine the like happening in America. Suppose the Democrats after having elected Wilson by an overwhelming majority in 1912 should now find that the country was ruled by a cabinet composed of Taft, Root, Roosevelt and Bryan, and that the measure on which the election had been won, an act granting Home Rule to the Philippines, had been suspended and a military régime substituted. Would not the Democrats feel sore about such a situation?

This accounts for the attitude of certain liberal and radical elements of England toward the administration. Premier Lloyd George is still nominally a Liberal, but he is now as much disliked and distrusted by some in the party as he used to be by the Conservatives. He was put into power in December, 1916, in the place of Asquith because it was thought that he could "win the war"—and he has not done it. On the contrary, the war has gone against the Allies in Europe ever since and he is accused of so weakening the British armies in France as to lead to the present serious reverse.

His right hand man, Bonar Law, the Unionist Chancellor of the Exchequer, is also charged with over-confidence and misrepresentation. If the reader will refer to the parliamentary report of March 8 he will find that Bonar Law reported to the House of Commons that the British lines were more strongly fortified than ever before and that "I am justified in saying with certainty that both as regards men and guns we have, if anything, a slight superiority." He found that most of the British soldiers and officers of low degree did not believe the Germans would dare start their long heralded offensive and he added: "I am myself still a little skeptical about it." (Laughter and cheers.) A fortnight later the British line had been broken and Amiens would have been taken if the French had not come to the rescue.

It is then natural, however unjustifiable, that the British

Parliament and public should be critically disposed toward those in authority who fed them with false hopes. This feeling was brought to a focus by the "Where is Blücher?" interview of General Maurice, hinting that the army which was supposed to be held in reserve for such an emergency was fictitious. As a punishment for this breach of discipline or of confidence, General Maurice was removed from his post of Chief Director of Military Operations to the General Staff and sent to France on active duty. But from there he sent a letter to the *Chronicle* accusing Lloyd George and Bonar Law of prevarication before Parliament. These charges were seized upon by the opponents of Lloyd George, and Mr. Asquith, who must now be counted among them, demanded an investigation by a committee of the House of Commons. The Premier met the crisis with his accustomed boldness and overcame it with his usual success. He brought the question at once before the House as a whole, challenged his critics to support the Government or take its place, and at the end of his speech he received a vote of confidence of 293 against 106. He pointed out that it was a breach of the King's regulations and destructive of all military discipline for a soldier, whatever his rank, to make a public attack upon those in authority. He showed that his statements as to the strength of the British army came directly from Maurice's own department and that General Maurice himself stated on March 22 that "the forces on the whole front are as nearly equal as they can be." General Maurice did not find any fault with the figures adduced by the Premier until after he had been dismissed from his position.

Premier Lloyd George did not go into the fundamental issue of the disposition of the British forces during the spring, but he brought out the fact that the extension of the British line was due to the insistence of Premier Clemenceau. The French held 336 miles and the British 100. The French had been bearing the brunt of the fighting for three years and had put a larger proportion of their young manhood into the line than any belligerent country in the world. In regard to the attitude of Field Marshal Sir Douglas Haig the Premier said:

Of course, the Field Marshal was not anxious to extend his line. No one would be having regard to the great accumulation of strength against him, and the War Cabinet were just as reluctant.

There was not a single meeting between the French generals and ourselves when we did not state facts against the extension, but the Pressure from the French Government and French Army was enormous.

In response to this demand from the French, General Gough with the Fifth Army took over a portion of the French line to the south. This was the sector thru which Hindenburg was able to break and General Gough has been removed pending investigation. The Premier closed with a plea to the critics to stop finding fault aimlessly and let the Government get on with its business.

This is really a sort of remnant of the controversy over individual command, which lasted practically for months. Unity of command, the national unity, is threatened. The army unity is threatened by this controversy. Days have been occupied in hunting up records, minutes, letters, proces verbals, interviews, and in raking up what had happened over the whole twelve months in the War Cabinet, and this at this moment!

I have just come back from France. I have visited some of the generals, and they were telling me how now the Germans are silently preparing perhaps the biggest blow of the war, under a shroud of mystery. They asked me for certain help. I have brought home a list of the things which they wanted done. I want to attend to them and I beg, I really beg, for our common cause, the fate of which is in the balance, now in the next few weeks—I beg and implore that there should be an end to this sniping.

Americans will agree with this as good sense and we are glad that Parliament supported the Premier upon this point. What mistakes were made and who made them may be left to the courts martial or the historians. It was due to American support that Mr. Lloyd George has at last secured the unity of command for which he has long been insistent.

## ON MISTAKES AND THEIR REPETITION

NO war was ever conducted without mistakes. The human machine fails to function smoothly from time to time, especially when the grit of human greed gets into the bearings. No government ever went thru a war without blundering. It is the way of the world. The secret of success lies in recognizing the blunder promptly, correcting it speedily, and not letting it happen again.

The United States has thus far been no departure from the rule. We have blundered and we have come near to failure, not once, but several times. We bungled our shipbuilding; we mismanaged our aircraft construction; it now looks as tho we had botched our production of artillery.

It is particularly humiliating that these failures should all be in the industrial field, where the United States would be loath to acknowledge itself second to any nation in the world. We should be able, with our great wealth, our boundless resources, our overflowing energy, and our Yankee wit, to surpass anything that any other people can do in the way of large-scale construction and production. But in three great tasks in our own special field we have not succeeded with the requisite speed and completeness.

It is of no use to spend time bewailing our failures. But one thing can atone for mistakes—repairing them. This the Government seems eager to do. Whatever criticism may justly be brought against the Administration's conduct of the war, it must be admitted by any judicial mind that there exists in the White House a readiness to alter methods that have been proved ineffective, to make changes in personnel where the men intrusted with a task have proved inadequate. That is, after all, the ultimate test of effective administration.

The President made change after change in the management of our shipbuilding program, until he seems to have found the right man for the work at last. He has made changes in the management of the production of ordinance. It remains to be seen whether he has put it in the right hands yet. He has made changes in the direction of the aircraft production program. The result remains to be disclosed.

This willingness to discard instruments that have proved inadequate is admirable. It should not be allowed to lie dormant for an instant. The nation must see to it, by frank, unvarnished, good-tempered expression of the popular judgment and the popular will. The nation must be satisfied with nothing less than the best. If it has reason to believe that it is not getting that, it must speak out clear and loud.

The war must be won. It cannot be won without the full measure of American industrial achievement. We must do greater deeds than any people has ever done before. Those to whom their doing is entrusted must succeed or stand aside. We the people can pardon mistakes; we cannot permit their repetition.

## UNWANTED NOBILITY

IN many respects the British dominions beyond the sea are more like the United States than they are like the Mother Country. One is their aversion to titles. And that is something that the Mother Country cannot understand. Every little while she is seized with a generous desire to reward some "colonial" who has distinguished himself in her eyes and so the King hits him a whack with the flat of the sword on the shoulder—and thereby cuts off his political head. For a politician ceases to be honored in his own country when he gets honors in Britain.

For one thing, the King seems dreadfully careless about whom he slaps with his sword or pins ribbons on. It reminds one of the story told of Russia in the early days of the war. The French Government desiring to show her gratitude to the gallant troops of her ally asked the commander to furnish a list of the soldiers who had distinguished themselves for bravery in battle in order that they might receive the French War Cross. The list was furnished by the Russian military authorities, and the French general, appearing before the army on dress parade, had called up to him a dozen or so bearded muzhiks whom he duly decorated and kissed on both cheeks. After the ceremony the French general inquired of the Russian commander what he thought of it. The Russian expressed his appreciation of the honor done to his men, but suggested that the impression might have been better if greater care had been taken in the selection, that some of those who had been crossed and kissed were not noted for their courage, but quite the contrary. This led to an investigation and it was found that thru some carelessness in the bureaucracy a list of the soldiers who needed vaccination had been sent to the representative of the French Republic.

This was a mere mistake, but the British Government is not so innocent. It has been proved in Parliament before the war and since that titles are sold or given for party services. An Australian music hall manager has recently published the statement that he has four times been offered a knighthood at prices ranging from \$50,000 to \$75,000. What is worse, a peerage in England may be gained by what would bring a man to the penitentiary in Kansas, that is, running a brewery.

Now the dominions are revolting at the attempt of Great Britain to fasten upon them her own detestable system of hereditary nobility. In Australia the papers are openly rejoicing that their "Lord" Forrest has no son and heir to hand down his new title to posterity. The Canadian Parliament, at Sir Robert Borden's suggestion, has petitioned the Home Government to be less lavish and indiscriminate in its bestowal of honors and decorations and to stop giving hereditary titles as antagonistic to the spirit of Canadian institutions. From the other side of the house Sir Wilfrid Laurier approved of the protest and added that he would gladly return his title if he could do it without disrespect to the Crown.

## THE MYSTERIOUS DISAPPEARANCE OF ZIAN KALI

SOME of our readers may not have noticed that one of the prominent personages concerned in bringing on the Great War has absolutely vanished as completely as tho he had never existed. This is Zian Kali who, according to various official documents, was one of the leading spirits in the Serbian conspiracy to assassinate the Austrian Archduke Francis Ferdinand. Thus the version of the French Yellow Book as "translated and prepared for Parliament by the British Government" and published in this country by the American Association for International Conciliation says of the leaders of the conspiracy, Major Tankosic, of the Royal Serbian Army, and Milan Chiganoc, ex-brigand,

that after providing the assassins with revolvers and hand grenades:

They therefore suborned Zian Kali, pointing out that the two culprits must commit suicide after the crime, a precaution which was to be specially advantageous to them because secrecy would relieve them of the slight danger which they themselves were incurring in this enterprise.

That is all that is said about Zian Kali. We are not told his nationality or what became of him or why he had to be bribed. One of those queer Balkan names; sounds sort of Turkish. But the British text is translated from the French; let us turn to that and see how it reads:

Ils apostèrent Zian Kali avec l'indication que les deux auteurs, après l'attentat, devaient se tuer, acte de précaution qui devait leur profiter en première ligne, car le secret leur enlevait le faible danger qu'ils avaient assumé dans cette entreprise.

Evidently the official British translation is correct altho clumsy. But the French version is a translation from the Austrian Red Book. Turning to the original, now accessible, we find that it says:

Sie stellten Zyankali mit der Weisung bei, dass sich die Täter nach vollbrachtem Anschlag damit entleiben, ein Akt der Fürsorge, der in erster Linie ihnen zugute kommen musste, da die Wahrung des Geheimnisses sie auch noch den geringen Gefahren entrückte, die sie bei dieser Unternehmung auf sich nehmen mussten.

Now a man who did not know anything about the Balkans but did know a bit about chemistry would be likely to translate the passage in this fashion:

They therefore supplied cyanide of potassium, telling the two culprits to commit suicide after the crime, a precaution which was to be specially advantageous to themselves, as secrecy would thus relieve them of the slight danger which they were incurring in the enterprise.

This in fact is the version we find in Edmund von Mach's "Official Diplomatic Documents." But the joke of it is that Mach's volume is not now purchasable, having been withdrawn from circulation by the publishers, Macmillans, on the ground of inaccuracy! The French Foreign Office missed a cue when they turned cyanide of potassium into a Serbian assassin, for if they had remembered that "Zyankali" *alias* KCN is a derivative of "Prussic Acid" it would have aided them in their effort to trace to Berlin the responsibility for the crime of Serajevo.

## TO CORRECT A "MISCHIEVOUS BLUNDER"

WHEN Woodrow Wilson was Governor of New Jersey it was proposed in Congress to increase the postal rates on magazines and periodicals. Governor Wilson's opinion of the proposed change was asked by an interviewer and the reply was unequivocal:

It must be that those who are proposing this change of rates do not comprehend the effect it would have. A tax upon the business of the more widely circulated magazines and periodicals

would be a tax upon their means of living and performing their functions.

They obtain their circulation by their direct appeal to the popular thought. Their circulation attracts advertisers. Their advertisements enable them to pay their writers and to enlarge their enterprise and influence.

This proposed new postal rate would be a direct tax, and a very serious one, upon the formation and expression of opinion—its more deliberate formation and expression just at a time when opinion is concerning itself actively and effectively with the deepest problems of our politics and our social life.

To make such a change now, whatever its intentions in the minds of those who propose it, would be to attack and embarrass the free processes of opinion.

Surely sober second thought will prevent any such mischievous blunder.

Curiously enough, in the Presidency of Woodrow Wilson, precisely this "mischievous blunder" has been perpetrated by Congress. A law has been enacted making drastic increases in the postal rates on second-class mail matter—newspapers, magazines and periodicals—and, what is worse, establishing a zone system of rates. It is to go into effect July 1. It provides for increases in rate averaging two hundred per cent, and running as high as nine hundred per cent in some cases.

This is, as Mr. Wilson said, "a direct tax, and a very serious one, upon the formation and expression of opinion." It comes at the time of all others when the formation and expression of opinion needs to go on, unhampered and unpenalized, for the common good.

The Great War cannot be won unless the great republic of the West thinks and feels and acts with that unity which is strength, that unanimity which means national might irresistibly applied. As the President has said in these bitter days, "We must all speak, act and serve together." In order to do this we must all be informed together, think together, understand together. This can only be accomplished thru the "free processes of opinion." The zone system applied to national organs of opinion, by which those living at long distances from the publishing centers must pay more for their reading matter than those more favored in residence, attacks and embarrasses these indispensable free processes.

It is never too late for Congress to correct a "mischievous blunder." It is never too late for the people to let their representatives in Congress know that they believe a blunder has been made.

If you agree with Mr. Wilson that "sober second thought" should prevent such a blunder, will you not write to your Congressman and to the Senators from your state and tell them that you believe that the zone system as applied to newspapers, magazines and periodicals is unwise and unsound? Ask them to use their influence to have Congress reconsider this discriminatory, sectional, "mischievous" law. Why not write now?

## NOON FALL-OUT

BY S. FOSTER DAMON

There!—flat on my back!

The light wind brushes my cheeks  
and curls under the visor of my cap.

From here one might drop into the sky.  
—But the clouds are too dazzling.

Distant calls and clickings,  
distant murmur of voices,  
far from me  
as I from the world.

The smell of the grass is sweet  
as arbutus in the spring.

The heat of the earth is pleasant  
as the marble bath of the sybarite.  
The hands of the breeze as soothing  
as pale Italian wine.

"Fall in! Fall in! Lively, you, there!"

My rifle across my knees  
reminds me it is there.

# THE STORY OF THE WEEK

## Preparing for the Next Shock

The first week of May showed no map changes of importance,

but both sides were actively engaged in preparing for the next German offensive. Such engagements as there were went altogether in favor of the Allies and they improved their position at several points. For instance, near Hailles on the Avre River southeast of Amiens, where the point of the German wedge had been brought within three miles of the trunk line leading to Paris, the French regained Hill 82 with the adjoining wood, and took over a hundred prisoners.

On the northern side of the German wedge, which here rests upon the Ancre River, the Australians hit the line hard and made a gain of five hundred yards on a two thousand yard front. This advance brought them nearly to Morlan-court, south of Albert.

Still further north the Canadians, who hold a three mile sector about Arras, made several gallant raids into enemy trenches. Arras is the one point on the western front that has held, while both the south and north of it the Germans have made considerable advances.

On the whole the British find the situation more encouraging than it has been at any time since March 21, when the German offensive started. The German losses in men have become increasingly greater and their territorial gains less in each successive week. According to an official estimate by the British Mission in America the British army has lost about 250,000 since the drive began. The losses of the Germans are supposed to be two or three times that. The Germans claim to have taken over 100,000 prisoners which, if not exaggerated, would leave about 150,000 for the British killed and wounded. The British took 1061 prisoners in March and 5241 in April.

The aircraft have been more active during the past two months than ever before. According to British reports 1059 German and Allied airplanes were brought down in March and 585 in April. Of the April score the Allies claim 470 and credit the enemy with 170. British guns brought down 278 of the 470 machines. In Italy the British airmen brought down 22 machines in April.

The Supreme Inter-Allied War Council met at Abbéville, northwest of Amiens, on May 2 and 3. Premier Clemenceau presided and there were present Premier David Lloyd George, of England; Premier Vittorio Orlando, of Italy; Viscount Milner, British Secretary of State for War; General Foch, Commander in Chief of the Allied armies in France; General Sackville-West; General Tasker H. Bliss, American representative at the council; General Belin, of the Versailles Committee;

Darling in the New York Tribune

**TIRED OF GIVING? YOU DON'T KNOW WHAT IT IS TO BE TIRED**

Major General Henry H. Wilson, British Chief of Staff; Field Marshal Haig; General Pershing; General Pétain; Vice-Admiral Wemyss, British First Sea Lord; and Vice-Admiral De Bon, Chief of the French Naval Staff. It was announced at the conclusion of the conference that an agreement was reached on all military questions of moment and that General Foch's authority had been extended over the Italian field as well as the French.

## Maurice Challenges the British Cabinet

In our issue of April 27 we referred to the sensational interview of Major General Maurice in which he asked "Where is Blücher?" and implied that the Government had invited disaster by unduly weakening the western front. In consequence of this letter General Maurice

was removed from the position of Director of British Military Operations, which he had occupied since 1915, and sent to the front. But on May 6 he published a letter in the *London Chronicle* in which he directly charges the Premier and the Chancellor of the Exchequer with making false or misleading statements. He specified as incorrect the parliamentary declarations of Mr. Bonar Law that the question of the extension of the British front was not dealt with by the Versailles War Council, and of Mr. Lloyd George that the British army in France was considerably stronger in 1918 than in 1917 and that the white troops in Mesopotamia amounted to only one division and to three in Egypt and Palestine. General Maurice concludes:

My reasons for taking the very grave step of writing this letter are that the statements quoted above are known to a large number of soldiers to be incorrect, and this knowledge is breeding such a distrust of the Government as can only end in impairing the splendid morale of our troops at a time when everything possible should be done to raise it. I have therefore decided, fully realizing the consequences to myself, that my duty as a citizen must override my duty as a soldier, and I ask you to publish this letter in the hope that Parliament may see fit to order an investigation into the statements I have made.

These accusations from a military critic of the highest standing and admitted to the inner councils of the nation forced the Government to appeal to the House of Commons for a vote of confidence. Chancellor Bonar Law announced that the breach of discipline committed by General Maurice in writing such a letter would be dealt with in the ordinary way by the Army Council and proposed that the question of veracity should be referred to a Court of Honor composed of two judges. But ex-Premier Asquith objected and demanded a parliamentary inquiry.

## The Premier Wins Out

Mr. Asquith's motion for a parliamentary investigation of the charges made by General Maurice against the Government was voted down by 293 to 106 after the Premier had made an explanation before the House of Commons. Mr. Lloyd George reaffirmed the accuracy of his statements, which, he said, had come to him from General Maurice's own department, and had not been questioned by the latter either publicly or privately. The Premier said that, counting in the non-combatants, who must fairly be regarded as an essential part of the fighting strength of an army:

There was a great increase in the man-power of the British Army throughout the world in 1918 as compared with 1917, and the increase of man-power in France in 1918 as compared with 1917 was greater than the average throughout the whole area.

General Maurice was not in the council chamber at Versailles when the extension of the British front was

## THE GREAT WAR

*May 2*—Germans take Sevastopol. British airmen drop 70,000 pounds of bombs on French railroad stations behind German lines.

*May 3*—French take Hill 82, three miles from Amiens-Paris Railroad. Germans complete conquest of Finland, taking 20,000 Red Guard prisoners.

*May 4*—Austrian Parliament prorogued. Prussian franchise bill defeated.

*May 5*—Field Marshal Viscount French appointed Lord Lieutenant of Ireland. Increased activity on Italian front.

*May 6*—Rumania signs peace treaty with Germany. General Maurice accuses British Cabinet of prevarication.

*May 7*—Nicaragua declares war against Germany, the twentieth nation to take such action. Australians take Es-Salt, Palestine.

*May 8*—Germans again attack south of Ypres. Slavic revolts and mutinies in Austria.

considered. This action was taken at the urgent insistence of Premier Clemenceau, "and he is not a very easy gentleman to refuse." Sir William Robertson, chief of the Imperial Staff, and Field Marshal Sir Douglas Haig were mistaken in their first assumption that the decision had been taken by the council without regard to the military authorities. The extension of the British line to Brissy was the result of a personal conference between Sir Douglas Haig and General Pétain.

#### The Disintegration of Austria-Hungary

Under stress of famine and the disappointment over the long duration of the war, the antagonism between the races and classes in the Austro-Hungarian monarchy has become intense and menacing. The Austrian Premier, Dr. von Seydler, was unable to suppress the factionalism of the Austrian Parliament, and after several times proffering his resignation without acceptance, he was authorized by the Emperor to suspend Parliament during the war. The Hungarian Premier, Dr. Wekerle, is equally insecure in his position, for besides the racial complications, the working classes are demanding a reform of the franchise which will give equal fighting power to every man, a similar change to that demanded in Prussia. The demonstrations in favor of this franchise reform were held one day last month, when for three hours in the afternoon all work stopped, and all street traffic was suspended in the factories and cities of Hungary. Resolutions demanding in strong language the passage of the franchise bill, were passed by 250,000 working men.

The Germans of northern Tirol and Bohemia accused Premier von Seydler of neglecting them, and favoring the Slavs in the distribution of food. Mass meetings were held at which it was re-

solved to make a direct appeal to Kaiser Wilhelm for help. After a conference with the German leaders lasting six hours, Premier von Seydler was compelled to concede to their demands and to allow northern Tirol to be attached to Bavaria and northern Bohemia to be attached to Saxony for food distribution purposes. This very astonishing movement may possibly lead to political annexation by Germany. The hatred of the Bohemians for the Germans is now openly manifested in riotous demonstrations at Prague, where the crowds in the streets cheered for President Wilson and the Allies. The Czechs and Slovaks, the kindred races who form the Bohemian nationality, are now allying themselves with the Jugoslavs of southern Austria and the Balkans in a movement against their common enemy, the Austrian Government. Czecho-Slovak regiments formed by deserters and emigrants have appeared upon the Italian front. Other Austrian subject nationalities, such as the Rumanians and the Slovenes, have also been organized in Italy to fight against Austria. Even inside the empire the Serbs, Croats, and Slovenes have held an informal plebiscite in favor of joining the independent state of Serbia. The Archbishop of Carniola has given his support to this revolutionary movement, and anti-German revolts have been reported in various parts of this province.

#### The Capture of Sevastopol

The famous fortress of Sevastopol, which the Russians in 1854-5 defended against the combined forces of Great Britain, France, Turkey and Sardinia for a year, has been occupied by the Germans without opposition, on May 1. This gives the Germans full command of the Crimea and consequently of the Black Sea. The Russian fleet in the Black Sea, consisting

of five battleships, six cruisers and smaller vessels, has also fallen into German hands. The German expedition into the Crimea led by General Kosch met with no resistance except guerrilla fighting on the part of bands of Bolsheviks.

The Russian Foreign Minister, Mr. Tchitcherin, sent a protest to Berlin against the German invasion of the Crimea, which, he asserted, was a violation of the treaty of Brest-Litovsk, since the Tauridian Republic was desirous of forming part of the Russian Federation, but the German Government appears to have paid no attention to this protest.

The Russian Government or province of Taurida—familiar to classical students as the scene of Euripides' "Iphigenia in Tauris"—is about the size of West Virginia. The Crimean peninsula constitutes more than a third of it. It was not claimed by the Ukrainian delegates at Brest-Litovsk as part of their new nation, or at any rate it was not conceded to them. But the Ottoman Government asserted a claim on the ground that the Crim Tatars formerly paid tribute to the Sultan.

The Black Sea port of Batum was by the treaty of Brest-Litovsk ceded by Russia to the Turks and has since been occupied by them. The Black Sea coast between the Caucasus and the Crimea is not contested by the Bolsheviks and the Don Cossacks. With this possible exception the Germans and Turks are now masters of the entire circuit of the sea, for the surrender of the Dobrudja by Rumania shuts off that country from any access to salt water except by way of the Danube.

#### The Overthrow of the Rada

The Germans having now obtained control over the whole of the Ukraine and the Crimea have displaced the phantom government which gave them entrance. It will be remembered that when Trotzky was playing for time by protracting the negotiations at Brest-Litovsk in the hope of inciting the revolutionary movement in Germany his plan was defeated by the appearance at Brest-Litovsk of the delegation purporting to represent the Ukrainian People's Republic with the Rada or national assembly at Kiev. The German Government promptly recognized the Ukrainian delegation and concluded a treaty with it as an independent power. The German Government also proposed to give the same recognition to other border nationalities, the Lithuanians, the Finns, the Kurlanders and the Esthonians. The Bolsheviks, since they had renounced all intention of ruling over any people without their consent, were thus left without any logical grounds of protest as well as without any power of resisting, so Trotzky accepted the German terms without protest in order to save what was left of Russia.

The Ukrainian Rada never commanded the support of the Ukraine as a whole. The Bolsheviks denounced it as bourgeois, altho it contained a large majority of radical Socialists and had

A BIG BRITISH BARKER

One of the deciding factors in the turning point of the Great Battle

declared the abolition of private property in land. This measure alienated the conservative peasants as well as the wealthier classes. Even while the Ukrainian delegation was negotiating at Brest-Litovsk the Bolsheviki gained control of their capital, Kiev, and they were obliged to call upon the Germans for aid in recovering it and in establishing their authority thruout the Ukraine. The German troops in small detachments were sent thruout the country confiscating grain wherever it could be found and thereby arousing the resentment and frequently the armed opposition of the peasantry. The anti-German movement took the form of a League for the Liberation of the Ukraine. The Germans were disappointed at not getting as much grain as they expected from the Ukraine and finding that the peasantry were not planting for next season General von Eichhorn issued a decree ordering spring sowing to be undertaken and suppressing public meetings and newspapers. At last even the Rada began to show resentment at these high-handed proceedings, whereupon the building was surrounded by German troops and a lieutenant at the head of a file of soldiers marched into the hall and taking possession of the platform commanded the members of the Rada to sit still and hold up their hands. He then read out the names of the Ukrainian ministers whom the Germans regarded with suspicion and ordered them under arrest. The Minister of War, the Minister of the Interior and his wife, and the Foreign Minister were seized and taken before a German court martial.

On the following day, April 29, a congress of Ukrainian peasants convened at Kiev pronounced in favor of a dictatorship. At this psychological moment General Skoropauski appeared in the hall and was proclaimed hetman or commander of the Cossacks. He then proceeded to the square in front of the Sophia cathedral and was consecrated to his office with due ceremony by the clergy. He immediately issued a manifesto dismissing the old Ukrainian Government and reestablishing the right of private property.

**Russian Protest** Foreign Minister Tchitcherin of the Soviet Government at Moscow has filed formal charges against the British, French and American consuls at Vladivostok for interfering in the internal affairs of Russia and has requested their recall. He states that documents found on the person of Kolodoff, who was arrested in Vladivostok, "establish incontrovertibly that the consular representatives of Great Britain, France and America participated in this plot and that the diplomatic representatives of those powers in Peking negotiated with the counter-revolutionary organization calling itself the 'Siberian Government.'"

Mr. Tchitcherin also accuses the American Legation at Peking with complicity in this conspiracy and asks the American Government to declare its attitude toward the Soviet Republic.

DON'T GRUMBLE. THE BOCHE IS LISTENING  
The morale of civilian Paris is exprest in this cartoon by Hermann Paul from *La Victoire*

The State Department at Washington announces that the American Consul at Vladivostok, John K. Caldwell, has done nothing improper. "Of course all the warring factions come to him and it is his duty to report. He has not given any encouragement to any of them."

President Wilson has never approved of the landing of Japanese troops at Vladivostok, but the British and French Governments have endorsed it. Ambassador Francis has kept silent on the subject, but M. Noulens, the French Ambassador, in a newspaper interview justified it as necessary on account of "the state of prolonged anarchy and insecurity at that place."

This excited the indignation of Moscow and the Bolshevik paper *Pravda* says that it should be remembered that M. Noulens is not Ambassador to the Soviet Government but

Ambassador to some future, to some possible Russian Government which shall better suit the refined taste of the French bourgeois.

The occupation of Siberia, cutting it off from European Russia, could mean the condemnation of the people of the Soviet Republic to death by starvation. Without Siberian bread and other products Russia, deprived of Ukraine, would be doomed to destruction. This the French, Japanese, English and American enemies of the Russian workers' revolution perfectly understand.

**A Helping Hand to Russia** Semi-officially the United States, thru a conference of representative men, has organized itself to extend the hand of sympathy and co-operation to Russia. The "American League to Aid and Coöperate with Russia" is the name of this new body, and its officers are: President, Dr. Frank J. Goodnow, of Johns Hopkins University; first vice-president, Col. William Boyce Thompson, of the Red Cross Mission to Russia; second vice-president, Oscar S. Straus; third vice-president, James Duncan; fourth vice-president, Frederic C. Howe; treasurer, George P. Whaley; chairman of execu-

tive committee, Herbert L. Carpenter. The first meeting was held in the offices of Senator Robert L. Owen of Oklahoma. At this meeting there were present men of diverse interests and views, united, however, in the desire to take steps to express in word and deed to Russia the idea that the people of the United States are with her in her struggle for democracy and overthrow of Russianism and Prussianism. Some of the names on the executive committee are as follows:

Senator Borah, of Idaho; H. Ralph Burton; Charles H. Boynton; Senator Calder; Herbert L. Carpenter; Charles A. Coffin; Henry A. Cooper; Prof. John Dewey; James Duncan, of American Federation of Labor, and a member of the recent American mission to Russia; Congressman Henry D. Flood, of Virginia, chairman of the House Committee on Foreign Affairs; George Gibbs; Samuel Gompers; Dr. Frank Goodnow; Gilbert H. Grosvenor; Prof. Samuel N. Harper, of the University of Chicago; Samuel B. Hill; Frederic C. Howe; M. A. Odin; Senator Owen, of Oklahoma; Thomas Nelson Perkins, who accompanied Colonel House on his mission to France; Mrs. Raymond Robins, who has been doing some remarkable work in Russia with the Red Cross; Prof. V. G. Sinkhovich; John W. Slaughter; Henry L. Slobodin; Lincoln Steffens; Melville E. Stone; Oscar Straus; Col. William B. Thompson; Dr. William H. Welch, of Johns Hopkins; Daniel Willard; Senator John Sharp Williams, of Mississippi, and George P. Whaley.

The movement which has culminated in this league has been brewing for some time, and many Russians resident in America have been active in promoting it. Propaganda and education will be the chief instruments of the league.

**Prussian Suffrage Reform** The whole world is interested in the equal suffrage bill now before the Prussian Diet, for if defeated it means that the Junkers are permanently in the saddle in spite of the efforts of the Kaiser, the Chancellor and Center and Left parties to overthrow them. The present three class franchise by which those who pay one-third the taxes elect one-third of the

© Galveston Daily News

IT GETS HARDER ALL THE TIME

deputies in the Diet is designed to keep the plutocracy and aristocracy in power regardless of popular opposition. How it works may be seen from the election of 1907, in which it took on the average 77,500 votes to elect a Socialist and only 10,500 to elect a conservative. The first class, composed of the heaviest taxpayers, forms only three to five per cent of the voters, yet controls a third of the lower house.

Last July the Center, Radical and Socialist parties of the Reichstag combined and passed the peace resolution that President Wilson has commended. Last February Chancellor von Hertling, who belongs to the Center party, declared his approval of President Wilson's four principles as a basis for peace. It was then the hope of the anti-militarist majority of the Reichstag that peace negotiations might be begun before the launching of Hindenburg's offensive, but in this they were disappointed and now the apparent success of that offensive has greatly strengthened the reactionaries, who are demanding greater conquests than ever.

How strong was the anti-annexation sentiment as late as February 25 may be seen by the following quotations from the Reichstag proceedings, a report of which we have just received thru Switzerland. Herr Scheidemann, leader of the Socialist majority which supported the war, said:

By saying that he accepts the four principles put forth by President Wilson, the Chancellor must have made clear to the whole world what he really meant by his statements on Belgium and the West. He who accepts Mr. Wilson's four points is bound to repudiate annexations and violations of any kind. The Chancellor said yesterday: "As to Belgium, we want to resume peaceful and friendly relations with her." It goes without saying that one can only do this with a nation whose independence is secured. Therefore let us declare straightforwardsly: "Let the Flemish and Walloons settle their political conflicts between themselves; it is their business, not ours."

For somebody actually said during the discussions on the suffrage bill in the committee for the constitution: "Uproars, which might break out if the suffrage bill were not passed, do not bother me; they will be crushed." . . . There are Eng-

lishmen and Frenchmen who only shoot at Germans because they are ordered to, but on this side there are Germans who could jump for joy at the idea of Germans shooting at Germans. . . . It is precisely because we want to cut down the influence which those feelings might have on our home policy and because we must cut it down, that we attach vital importance to the struggle for equal suffrage in Prussia. When equal suffrage is introduced in Germany, when the state of siege has come to an end, when the nation is treated at the elections as it deserves a thousand times to be treated, then your game will be played and not till then, till your glory belongs to the past, will the road be paved for a free Germany which has a chance of free development at home and of living on friendly terms with her neighbors. . . . Of course there are men in Prussia who would like to have a Royal doll to play with just as the Russians had a doll they called "Tzar" and with which they played till it got broken at last. . . . The future which lies beyond this unprecedented war belongs to democracy, to the laborers and to socialism, in Germany as well as in the world.

Dr. Wiener of the Radical party concurred in these sentiments:

We consider the four principles of Mr. Wilson to present a basis for the establishment of a general peace and for the prevention of future wars. The whole world is longing for peace and the German nation wants it with all its heart. The Chancellor said that the world is facing one of the most important decisions of destiny, and the world knows what he is alluding to when he said this.

Dr. Erzberger, the leader of the Center (Catholic) party, declared emphatically against the annexation of Belgium:

Do you believe that an oppressed Belgium would assure peace and quietude in Europe? I, for my part, do not think so. Before the war Germany was great and strong without possessing Belgium. If we succeed in preventing the economic war, then one nation will redress itself thru its energy and activity, without having to tyrannize any neighboring state. . . . It is no longer "words" that our soldiers want. They want to war under the suffrage of the three classes: they do not want to find a suffrage of six classes when they return. Therefore we hope that a satisfactory solution of the suffrage problem may soon be found.

Unlimited Congress acceding, the  
Man Power authority and funds will  
be made available to the  
War Department to use the man power  
of the nation to the utmost limit in the  
prosecution of the war. "Let us avoid  
specific figures," Secretary Baker is  
reported as saying. "They imply limits.  
There is no limit. We will call out  
enough men to make victory certain.  
We will call them as rapidly as they  
can be trained and sent forward."

Up to the time of this declaration, discussion centered around the proposition to raise 3,000,000 or 5,000,000 men to send to France to fight the Hun. All that is changed. "The lid is off," and the Administration has pledged itself to furnish men as fast and in as great numbers as it is physically possible to do so. From this time on discussion will center around means and methods of carrying out this program. It is not expected that there will be any opposition to the principle of unlimited force.

Possibly the last big job of the current session of Congress is the job of determining the details of this mobili-

zation. At the committees last week the War Department began its elucidation of what it desires to secure. So far as can be determined by the meager reports of the early steps in this new drive, the body of the discussion will concern, first, money and the authority under which it will be granted; second, whether the War Department should be given power to determine the size of the quotas; third, whether existing cantonments should be enlarged, or new ones created, or both.

Each of these matters raises a number of vital issues, and the best estimates in Washington are to the effect that, even with unusual speed, it will require some weeks for Congress and the War Department to work out a thoroly satisfactory solution. In the meantime, of course, drafted quotas are going forward to the camps, and completed organizations are being fitted into the overseas transportation system. It is regarded as likely, for example, that the April and May drafts will be used largely to fill up divisions at home, while the seasoned personnel from those divisions will be sent overseas to fill the gaps.

Speaking at Philadelphia last week Secretary of the Navy Daniels echoed the Administration's decision in this matter when he said: "Let us not think in terms of fixed numbers. . . . If there are not enough men between twenty-one and thirty-one to win the war, the age limit will be changed, and men of forty and fifty, if need be, will respond to the colors."

**Speeding Up Shipbuilding** Twenty-seven days, the best record yet for constructing a ship of over 5000 tons, is what it took to launch the "Tuckahoe" at the yard of the New York Shipbuilding Corporation in Camden, New Jersey, last week. The boat was ninety per cent complete when it was put into the water, and the total time for its completion is placed at forty-two days. The launching of the ship was made the occasion for quite a ceremony, no insignificant feature of which was a letter from the President to the workmen and executive staff of the yards.

From other sections of the country come reports of progress in shipbuilding. "Amazing" is the word brought to the offices of the Emergency Fleet Corporation by Naval Architect Prior, on returning from an inspection tour of the southern yards. "Swamp regions," he says, "have been transformed into thriving industrial communities, tyros in shipbuilding developed into efficient workmen, and wherever there are ways the new prosperity makes a striking impression. . . . Men who a year before knew nothing about shipbuilding had become experts, and there was no evidence of labor turnovers."

The largest steam-propelled wooden ship ever put into trans-Atlantic trade is being fitted for overseas service in one of the southern yards. She is to be called the "War Marvel" and is 4800 tons. The Emergency Fleet Corporation has determined to place in southern

yards contracts for two hundred new ships of the general "War Marvel" type.

**In Congress** The grist-mill of Congress has ground out many important measures. The sedition bill, completing the legislative program desired by the Department of Justice, is one that has gone through both houses. The Senate passed a bill outlawing the I. W. W. and all organizations which use or advocate violence to bring about "any governmental, social, industrial or economic change." The Overman departmental reorganization bill, already through the Senate, was reported by the House Judiciary Committee. The passport bill, giving the President broad powers in restricting entrance to and exit from American ports, progressed toward its final stage. The fixing of the price of wheat remained a matter of conference. The House earnestly set to work on the army appropriation bill, with the post office bill having the right of way on the floor. The Senate committee considering the matter of second class mail rates, after listening to representatives of publishers, refused to recommend the repeal of the new classification and increases. Recognizing the high cost of living, the House passed the Sherwood bill giving a minimum pension of \$25 a month to Civil War veterans.

**Sedition Bill Passed** After some days lying in conference, the sedition bill was passed by the Senate last week by a vote of 48 to 26. As adopted, the critical clause reads that the severe penalties of the bill shall apply, during the war, to persons wilfully uttering "disloyal, profane, scurrilous or abusive language about the form of the government of the United States, the constitution, the military or naval forces, the flag or uniform of the United States, or any language intended to bring the form of government of the United States, the constitution, the military or naval forces, the flag, or uniform of the United States into contempt, scorn, contumely or disrepute." Language "intended to incite, provoke, or encourage resistance to the United States, or to promote the cause of its enemies," is penalized also, and mail violative of the espionage laws as amended by the bill may be held up by the Post Office Department.

**Aircraft Investigation** At the same time that the War Department is asking Congress for a billion dollars to build aircraft, the smouldering charges brought by Gutzon Borglum against the administration of the aircraft program came to such a point that President Wilson ordered an exhaustive investigation by the Department of Justice. Thus begins another chapter in the history of the conduct of this arm of the war service. In spite of the big headlines, the news despatches from Washington do not reflect a state of alarm or intense excitement. General Squier joins with How-

ard Coffin in asking for the investigation so that, in Mr. Coffin's words, "the reputations of innocent men may not be ruined." The Senate committee, as well as the Department of Justice, will conduct investigations.

#### A Vote on Woman Suffrage

A vote in the Senate last week on a motion proposing that that body proceed on a certain date to consider the House woman suffrage resolution showed that there was only one vote lacking to make the two-thirds necessary for passing the resolution. In other words, there were 40 for adoption and 21 against adoption. A number of senators were out of the city at the time, and in spite of the defeat of the motion to consider the measure, it is bound to come up for serious debate sooner or later. The House adopted the measure in January by 274 to 136.

#### Wholesale Saving

Matters which in normal times would attract the widest attention are now recorded without comment in the daily news. For example, since the 1st of May the United States Government has commandeered both wool and steel. The entire stock of unsold wool in the hands of growers and dealers, plus the

entire wool clip for the year, declares the War Industries Board, has been taken over by Uncle Sam at a price which will stimulate further production. Incidentally, this action will eliminate speculation in wool for the period of the war, if not longer. Similarly the War Industries Board has told the steel men that they will be required to devote their entire capacity to war orders. Whatever the Government does not need it will distribute to essential industries. It is feared that this will mean a cut in the supply going to the passenger automobile factories, whose product may be classed as luxury.

Conservation of materials necessary to our success continues progressively. Last week in Washington conferences on the conservation of paper discussed with representatives of publishers of text books the desirability of printing fewer new editions of school books. These, as well as newspapers, are properly regarded as essentials. The need for saving or rather avoiding extravagance in the consumption of sugar was emphasized by the estimate of the Department of Agriculture to the effect that since the war began there has been recorded a shortage of over two million tons of this foodstuff, due primarily to the destruction of sugar mills and the

#### THE LATEST FAD IN PARISIAN SHOP WINDOWS

The military authorities of Paris have advised all shopkeepers to paste paper strips over their windows to keep them from being broken by the concussion caused by the shells from Germany's long range gun. The French have made the most of the artistic possibilities of the requirement by pasting the strips to form various designs

© Kadel & Herbert

#### A MORE SERIOUS RESULT OF THE HUNS' LONG RANGE GUN

This hospital for women in Paris was badly damaged during one of the German bombardments of the city

devastation of a great area of sugar producing lands in Europe. A possible shortage in cotton is forecast by the National Association of Cotton Manufacturers, one of whose officials declares that the labor situation is acute. During the past year there has been a marked falling off in production, owing to the number of operatives drafted and the lack of men to take their places.

**Eat Potatoes** "Eat potatoes" is from now on till further notice as important as to mix flour and to save butter. The potato consuming campaign, as announced and explained by the Food Administration nationally and locally, springs naturally into being because of the fact that the surplus of last year's crop, amounting to some thirty million bushels, must be eaten soon or it will spoil. July 1 is the last date, tho in some localities the campaign may carry on for a week or two or three more.

**Idle Land** President Wilson last week set an example to persons with idle grazing ground in their possession when he purchased and turned loose in the back yard of the White House a flock of blooded sheep. The flock is expected to be profitable both for food and clothing. In addition it will conserve the labor of mowing the lawns.

In order to meet war needs, half a million more sheep will be grazed on the national forest lands this year. This will bring the total number up to 9,000,000. In addition, a quarter of a million additional head of cattle will be grazed on public lands. This increase is on top of an increase of 200,000 sheep and cattle made last year, when it was recognized that the country's need for beef, mutton, wool and hides called for the fullest possible use of the national

© Committee on Public Information

#### FRENCH GUNS FOR AMERICANS

These 155 millimeter guns, loaded on flat cars and sent out from the Gare d'Orleans, Paris, on February 18, for a United States artillery station, were built by the French Government for the use of the American army in France

forest ranges. The Department of Agriculture is controlling the ranges, increasing the stock to the limit of the capacity of the range to take care of it. The department is also encouraging individual, small-scale sheep raising.

#### Ready-Made Towns

We are learning how to build model towns. Had-don township, near Camden, New Jersey, is the latest. It will cost more than three million dollars, and while it is announced that it

will house three thousand workers in the shipyards, it is probable that more will be attracted later. Dividing one figure by the other, we arrive at \$1000 as the capital cost of housing and living facilities for one worker, presumably the head of the family.

The site chosen for this experiment or demonstration is the center of the shipbuilding activities of the New York Shipbuilding Company, the Pennsylvania Shipbuilding Company and the New Jersey Shipbuilding Company, which have furnished the land. The United States Government is furnishing the money to erect 907 houses, several school houses, fire stations, and the sewerage and water plant. Two and a half million out of the total of more than three will go to the houses alone, it is stated. This is the largest experiment of this sort ever undertaken.

**Who Owns the News?** Who owns news, is the question upon which the Supreme Court of the

United States is now deliberating, following the conclusion of arguments in the injunction suit of the Associated Press against the International News Service. "News," declared Frederick W. Lehmann, who appeared for the "A. P.," "is unlike any material commodity. In the field of general news, whether it is gathered and disseminated by a coöperative association of newspapers for pecuniary profit, it is obvious that the paper which is permitted simply to appropriate the news without payment of any kind would have a great advantage over its competitor who had paid for it or had shared in the labor and pains of getting it."

The issue at stake is really whether a news association may or may not become a distributing agency for news gathered by another association to which it pay no fee for the privilege of using it.

#### THE FRENCH AIRPLANES THAT DEFEND OUR TROOPS

America's tardiness in aircraft production makes it necessary still for French aviation to supplement our infantry fighting on the western front. This photograph of a French aviation camp behind the lines was taken for the official records by an army aero-photographer

# DEMOCRATIZING OUR DEMOCRACY

STAFF CORRESPONDENCE FROM WASHINGTON

"There now exist more than eighty separate organizations for the purpose of supplying some kind of war relief. Many of them have already applied and more doubtless will apply for permission to use the public schools to advance their various causes. It would be nothing short of a public benefaction if some device could be found to de-

THE United States Government wants every school in the land to become the center or capitol of the community in which it stands, and then to be linked directly to the United States Bureau of Education at Washington and to the National Council of Defense thru the state councils of defense. This is a large order.

It is a new order. Strictly speaking, it is not an order at all, but a request or suggestion. But it involves a scheme or system of organization of a people which, if perfected as the American people will be able to perfect it—democratically, completely, efficiently—will help as nothing else could help to win the war and at the same time to build on this continent a firm foundation for our future democracy.

President Wilson has given impetus to this movement in a letter address to all the chairmen of the state councils of defense. "Your state," writes the President, "in extending its national defense organization by the creation of community councils, is in my opinion making an advance of vital significance. It will, I believe, result when thoroly carried out, in welding the nation together as no nation of great size has ever been welded before. It will build up from the bottom an understanding and sympathy and unity of purpose and effort which will no doubt have an immediate and decisive effect upon our great undertaking. You will find it, I think, not so much a new task as a unification of existing efforts, a fusion of energies now too much scattered and at times somewhat confused, into one harmonious and effective power.

"It is only by extending your organization to small communities that every citizen of the state can be reached and touched with the inspiration of the common cause. The school house has been suggested as an apt tho not essential center for your local council. It symbolizes one of the first fruits of such an organization, namely, the spreading of the realization of the great truth that it is each one of us as an individual citizen upon whom rests the ultimate responsibility. Thru this great new organization we will express with added emphasis our will to win and our confidence in the utter righteousness of our purpose."

With the community center movement as a new thing in our social life, most of us are somewhat familiar. But with the implications and possibilities, both political and practical, of this mobilization of the school house, the

country as a country knows very little. Now comes the central government with a proposition which if launched in Russia would be hailed as an unexpected piece of wisdom emanating from idealists dreaming a dream which they could not fulfil. This is not Russia, for with much the same basic idealism, we can put democratic things thru.

For more than a year the slow processes of democratic organization of a people numbering a hundred million have been developing. Because of the nature of the emergency, much of the work of organizing had to be done from the top down, from the center out. Take for example the instance of the councils of defense. The national council was created by Congress and for some time existed alone. Then state after state, by one means or another, established state councils, localizing these further, so to speak, to cover important cities and separate communities. So far, so good; but as a community center specialist puts it: "Here is a complete system of electric wiring with no bulbs at the ends of the wires." To finish the job, to put bulbs on the wires, to round out the circuit and let the light of democracy shine so that all may see and know and be able to do that which must be done—this is the task which the Government is now proposing that the people perform.

The need for the performance of this task is immediate and in absolute harmony with the issues for which we are fighting. Our enemy is an autocracy and we are staking everything democratic on the outcome. It is fitting, proper and expedient that even in the midst of war we take steps to make ourselves more democratic. We accepted the gage because we believe that democracy is the best form of government, and that it can be made the most powerful and efficient.

To be concrete, here is what Dr. Henry Jackson, selected by the Bureau of Education as the first spokesman and field agent of the new movement, has to say on behalf of the school house as a conserver of precious human energy:

crease the present number of organizations and prevent the inexcusable economic waste due to the duplication of activities. It is because we have so many organizations that we need more organization as a cure for this needless waste.

"The community center is such a device. It can perform this function because it is a comprehensive organization. The center of any American community is the free public school, the only center it has. The community center is not a rival, but an ally, of other organizations. It is more; it is their foster mother; it is the matrix which gives them their setting. It embraces them as departmental activities. It is a coördinating instrument."

So much for the theory of what the Government, thru the Bureau of Education, is proposing. This theory is to be put into practise, and the practise ought to result in a coördination of the same kind as that which the Administration has proposed in the Overman bill for the departments and bureaus of the United States Government. One of the first suggested practical steps is the establishment of central service bureaus for cities and towns, such bureaus to consist of representatives of the numberless organizations which today are striving, more or less separately, for the common service. These service bureaus, it is argued, ought to be given a public status, either by the council of defense or by the board of education. Since, however, the councils of defense are temporary, the utilization of the board of education is suggested as preferable, this board being linked directly, as already stated, to the United States Bureau of Education, the chairman of the board being appointed a collaborator of the Bureau of Education in its community center organization.

There are 300,000 school districts in the United States, each a potential center of at least one community organization. To each of these districts from this week on will be address literature from the Government setting forth what is to be done and how it is to be done. It remains only to do it.

WILLIAM LEAVITT STODDARD

# GOING "OVER THERE"

BY HAMILTON HOLT

The editor of The Independent is in Europe now, staying a short time in England and then going to France to visit the front line trenches and to see the work that is being done at the training camps and hospitals behind the lines. As the guest of the British Government, Mr. Holt is being given unusual opportunities of observing actual war conditions.

**D**URING our first week out on an unnamed vessel from an unnamed port to an unnamed port, the weather was mild, the sea was gently rolling, and our good ships ploughed the main in friendly proximity, keeping their stately formation with almost perfect precision. The seagulls wheeled and circled about, the decks gently heaved, and life settled down to its restful and amiable sea routine.

We did not know, and of course we were not informed, whether we were going by the Halifax route, the southern route, or due east. All we knew was that our camouflaged escort led the way, that our slowest boat was going its fastest, and the rest were keeping even.

At first sight the first class cabin passengers looked uninteresting enough, as all people in the mass before one gets to know them. But as acquaintance ripened—and there is no place in the world like a sea voyage for that—we found we had an exceptionally interesting group aboard. All were people who had some special reason for traveling or the Government would not have issued them passports. They came from the ends of the earth, and most were on some Government mission. Of course the American regimental officers predominated, and what a clean, starchy, sturdy, modest set of soldiers they were! Pick out the best dozen young men you know and add to them twenty-five of the pick of the senior class of Yale or Harvard, put them all in trim uniforms, and you can visualize the men that were to lead the American army in France.

Whenever two or three of the passengers were gathered together there was always one subject that was sooner or later discussed—and that was submarines. I found that Judge Wadhams had provided himself with a \$60 rubber life preserver that when he got into it made him look like a deep sea diver all but the goggled helmet and air pipes. It was leaded at the feet and the hole in the top thru which he squeezed his head fitted so snugly about the neck that no water could leak in. It was lined with some material much lighter than cork and is said to keep both the head and shoulders well above the water line. Several of the officers had similar suits. I noticed that the Judge had put his flask in the rubber pocket that was provided, so I gave him one of the big cubes of chocolate my daughter stowed away in my valise in case I was captured by the Germans and had to subsist on prisoners' rations. I felt that the Judge would need something more than mere liquid refresh-

ment when he was bobbing up and down in the water after the submarine had done its work. Remembering the story of the fox and the sour grapes, I told him that those who had de luxe life preservers like his could of course not expect to occupy the lifeboats in case of emergency.

Except for the fact that we were convoyed and every member of our fleet but two was camouflaged to resemble chromatic zebras and all were darkened at night, I could not see that any other precautions were taken against submarines.

One of our fellow voyagers was a submarine inventor. He was most agreeably frank in answering our questions, but was anything but reassuring as to the potentialities of Germany's animated sharps. He told me that despite the assurances disseminated from authoritative quarters in England and America that the submarine menace was on the wane, the Germans had nearly two hundred of them now in use and were building them faster than they were being destroyed. Tho he thought the depth bombs were good, and speed on the part of the merchant ships was better, the best way of all so far employed was to hunt them with other submarines fitted out with special devices for detecting their presence. He said that if the submarine can only get within a thousand yards of the quarry undetected—and one instantly realizes when standing on the deck of a ship in the ocean how difficult it must be to see a periscope, especially if the

water is at all rough—a hit is almost certain. But in order to get near enough to discharge a torpedo the submarine must first be almost directly ahead of the approaching ship or else near enough to the side to head it off. As the submarine can only go about twelve miles an hour under water it of course cannot overtake a boat of the same or greater speed from abeam or astern.

A moonlight night is said to be most favorable for the submarine, for then it can see the dark outline of a ship from a much greater distance than its own periscope can possibly be detected. Camouflage is good in the daytime, especially when the camouflaged boat is on the horizon. But at night camouflage is no protection at all. Some of the boats in our convoy were so admirably camouflaged that in certain lights, near as they were to us, they seemed to be moving backward. Whether this effect was brought about by painting a bow on the stern of the boat and vice versa I cannot say.

One morning we woke up and found our convoy had been joined by another under the armed protection of the American flag. Our two escorting forces now divided the work between them. The camouflaged escort still led the procession, while the newly arrived escort steamed out to the horizon, sweeping it from left to right and from right to left in great arcs. It did our American hearts good to see an American convoy out in the vanguard ready to sweep the seas of any enemy daring to challenge it.

Looking for periscopes. Life preservers are worn continuously in the war zone

The first day out we had a lifeboat drill. It was a very simple affair. We were assembled on deck immediately after luncheon, with our life preservers on. We were then assigned to our respective boats, lined up in front of them and answered to the calling of our names. Immediately on the blowing of the foghorn five times, we were told we must take our stations, keep calm, and do what we were ordered. The boats, fully provisioned, were swung from their davits, ready to be lowered into the sea at an instant's notice. There was no attempt made to have us actually get into the boats, and we were never called upon to drill again. The purser, who was in command of the boat to which I was assigned, told me that if the weather was calm the passengers would enter the boats from the lower deck, and if the sea was rough the boats would be filled where they swung.

The soldiers took their drill more seriously. Every day of the voyage, on the sounding of the bugle immediately after luncheon, they assembled in front of their boats, each warmly clad, each with his life preserver carefully adjusted, and his water bottle freshly filled. Except for the boat drill and a setting up exercise in the mornings, no attempt at any regular drill was made. The boys boxed and skylarked and played games all day long except when they were lolling around the decks reading and sleeping.

In talking to many of them, I found that they one and all wanted to get to dry land. They seemed to have a real fear of the sea, tho I have yet to hear of a single one of them who would not welcome a chance of tackling alone the Kaiser and the whole German army.

The cavalry in all armies consider themselves superior to the infantry and in fact all other branches of the service. When I asked one of the colonels why General Pershing needed them, when the war was mostly an affair of

trenches, barbed wire entanglements, and shell holes, he replied, "We have to go over there to give tone to what otherwise would be nothing but a common broil."

The soldiers are a splendid, muscular, manly set of boys—lots of smiles and jokes like the English Tommy, and lots of squareness and fairness also like the English Tommy. The officers seem to have the respect and goodwill of the men, and altho the line is pretty rigidly drawn, the relationship between them is friendly and not undemocratic.

One of the lieutenants was a very fine pianist, and every night after dinner the younger officers gathered about the piano at the head of the darkened hall as he accompanied them in their singing. On both the Sunday nights we were at sea they spontaneously began to sing the old gospel hymns familiar and dear to us all. It gave one an added respect for these fellows, many of whom, alas, will never return to the United States again.

And so the days went by—one much like another. We all of us revelled in the rest, the good food, the tang of the salt air, and most of us improved the opportunity of reading a good book or making a good friend.

I wish there was space to quote at length the truly inspired address of an American war correspondent to the men of the regiment, packed to suffocation down in the second cabin dining room. I shall never forget that sea of sturdy, earnest, soldier faces as the speaker, who had been with the Allied armies in France thruout 1916 and 1917, portrayed the magnificent heroism of the "contemptible" little British army who saved the day and perhaps civilization while France was massing her armies for the Battle of the Marne, of the two hundred Canadian boys—real Americans every one—who died to the last man rather than surrender, and of the glorious women of France who with a smile upon their lips have

Here is a sample of the editor's copy when the censor has edited it. This page of Mr. Holt's article describes the American convoy

sacrificed their all with a fortitude and self-sacrifice that has been almost sublime.

I wish I could also tell something of those quieter talks I had, steamer chair to chair, with the officers who are cheerfully going to uphold American ideals on the blood-soaked battlefields of France, that democracy and liberty may be made a reality on this earth. One sees the hearts and minds of men naked on such a voyage as this, and human nature is good.

But at last we entered the submarine zone. Now our boats began to zigzag in their course, the lookouts and sentries were doubled and the passengers were required to don their life preservers or keep them at hand in whatever part of the ship they go. I noticed several varieties of life preservers aboard besides the remarkable rubber suits owned by Judge Wadhams and a few of the officers. The two English gentlemen who sat at our table appeared in very loose blue waistcoats which on closer inspection developed into camouflaged preservers which could be inflated by a rubber tube dangling out of one of the upper pockets. Sir George Reid, the ex-Premier of Australia, regaled himself with a khaki-colored inflated preserver which might easily be mistaken for a baseball catcher's chest protector. The only danger from these pneumatic preservers was the possibility of a puncture during the rough and tumble of leaving the boats, in which case they would of course be worse than useless. I was not sorry I had to stick to my regular cork preserver furnished by the ship. As a matter of fact, there is little or no danger from drowning when in the sea with a life preserver on. It is the icy chill of the water reaching the heart that causes death.

But as our good ship has crost the ocean every three weeks since the war began and has never yet seen a periscope I suspect our apprehensions were caused more by the novelty of our situation than by any knowledge of the real risks we were running. Still, going over at the slow speed we were making increased enormously the chances of a hit from a submarine. In fact, the speed of a merchant vessel varies inversely with the chance of being hit. The purser told me that he would prefer to go without a convoy at full speed rather than with a convoy at half speed. Besides, any submarine which cares to take a pot shot at a convoy as large as ours has about one chance in five of hitting some- [Continued on page 292]

Hay-making is more than vacation fun

# THE WOMAN'S LAND ARMY

BY MARY A. HOPKINS

Transplanting is easy, says the farmerette

**C**ONSERVATIVE farmers regarded at first the Woman's Land Army with the same initial scorn that they formerly turned on automatic working machines, incubators and other "new-fangled nonsense."

One New York State farmer last year hitched his suspenders with masculine superiority every time a truck-load of farmerettes drove by his fields in the early morning coolness on their way to work for his neighbors.

"Gals can't do men's work," was his verdict, unprejudiced by any experience in the matter.

Lack of man labor forced him one day to employ two of these same scorned women.

"I'll take 'em again tomorrow if you'll gimme the same two," was his decision when questioned that night.

He thought that by rare good fortune he had secured the only two capable women in the whole bunch. His education in female farm labor progressed week by week. He found that every member of the unit was a combination of busy bee and industrious ant with intelligence added. This year he voluntarily mans his farm with women.

The Land Army was an experiment last summer. It succeeded. As a result, it is being recruited this year on a scale to strike terror to the hearts of potato bugs and pussly-weed.

The purpose of the Woman's Land Army is to respond to the appeal of the Government for increased production by volunteering for farm work. This is a patriotic service.

"Any work which an unskilled farm hand can do, unskilled women did in our unit," a lithe, clear-eyed farmerette assured me. "Planting, hoeing and transplanting are easy. We thinned the biggest beet field I ever saw. We bundled rye and did all kinds of haying. Picking apples isn't as easy as it sounds. You find that out when you come down a ladder balancing a heavy basket on your shoulder. Assorting and packing apples is certainly women's work. Berry-picking we've always done."

Skilled women have proved themselves equal to handling both the traction and the two-horse plow, harrowing, mowing with scythe and machine, hay raking and reaping. Women are especially successful in dairying. They never kick the cows.

The first unit sent out in March this year pruned three thousand fruit trees. Among other chores they cleaned the farmer's barn. The owner treats himself to a look at that building every little while now. He says he never saw such a neat barn. In that unit were, among others, an artist, a pharmacist, a champion long-distance swimmer and a factory girl.

Another unit containing several college students was thrilled to excavate Indian arrow-heads among the bean hills. Rocks were always referred to as "glacial deposits."

"I took the 'Origin of the Species' with me," a farmerette remarked with a whimsical twist of her lips, "but I soon found that I could read only poetry. After a day in the fields I liked something so short that I could see the end when I began."

Teachers, college students and skilled workers in trades having long slack seasons, like millinery, dressmaking and machine-operating, fit in to this work especially well. No one goes for a period of less than three weeks. From six to eight weeks is by far the better period.

The essence of the unit plan is that the women workers live in a community under a captain and go out from this center in squads to work on the surrounding farms. No women are placed in farmers' families. Sometimes the girls live in a vacant house or school-house or barn and sometimes in tents. The catering and cooking is done by a dietitian hired for the purpose. When in a large community the workers go

out to distant farms they are carried in vehicles owned by the units or loaned by employers.

Workers for the Land Army receive \$15 a month, with board, lodging, washing of working clothes, and transportation one way. The uniform of the Land Army comprizes blue overalls and a blue shirt. The worker provides herself with strong stockings, stout shoes and a farmer's hat.

Unskilled male labor has the advantage of greater masculine strength, but these picked bunches of women have brains. Farm honors are not all to muscle.

Thanks to the eight-hour day, the carefully planned diet and the sanitary living conditions, farm work has turned out not so terribly difficult after all. It lacks the nervous strain of factory work and the appalling monotony of house work.

"If you can hold out till three o'clock in the afternoon, you are all right," my farmerette assures me. "Just as if the sun were watching for the minute-hand to pass the hour, the heat lets up. You can actually feel the coolness begin to come out of the earth."

"It was so hot one day that everybody else quit work at nine o'clock, but we were off on the top of a hill and no one thought to send word to us. So we worked right on."

"On the way home that night when we stopped at the village they told us that two men had fainted! That made us feel pretty good!"

"Our unit gained an average of nine pounds during the summer. One girl gained twenty. [Continued on page 303]

# THE CRACK IN GERMANY'S ARMOR

Eleventh message from the National Security League, Committee on Patriotism Through Education, of which The Independent is the official publication

**B**ECAUSE Germany has decided to throw her entire available forces into the struggle and has already called to the colors her 1920 class (boys of eighteen years of age) so that they may be in the line before the end of this season, it should not on this account be assumed that the war will end when her offensive has been defeated after unheard of sacrifices in man power. If her military offensive fails she will hope to launch successfully a "peace drive" now in preparation to be carried out by methods certain to be more diabolical than those which have preceded them. All the treasonable, pacifist, weak-minded and faint-hearted—the La Follettes, Hillquits, Nearings and Bergers—will be at work in an endeavor to undermine the morale of the Allied peoples. If Germany's military machine after unheard of sacrifices has availed merely to drive a wedge into the Allied lines, what hope can there be that the Allied armies will be able to advance a distance of 650 miles across difficult country and over three great rivers, so as to force their way into Berlin?

The argument will appear plausible and will no doubt be widely believed by the faint-hearted, who may not know how vulnerable the German Empire really is, once her army is thoroly overmatched in strength by that of her enemies.

As a matter of fact a drive eastward by the Allied armies a distance of but thirty miles from the hights of the Meuse near Verdun would bring Germany to her knees, as has already been frankly admitted by her leaders in a confidential memorandum presented to the German Chancellor as long ago as March, 1915. This secret communication was obtained and published in France in 1916. It represented the joint action of a deputation representing six of the most powerful industrial and agrarian organizations of the empire, and its conclusions will be accepted by all who are familiar with the relation which exists between available mineral sources and modern industries.

No one needs to be told that the sinews of land warfare today are guns and munitions, which for their production require developed resources of iron and coal. Tho with such vast resources in coal that she is out of her surplus able to compel the neutrality of neutral states thru threatening to refuse them their supply, Germany is without important bodies of iron ore outside those which she wrested from France in 1871.

Painfully aware that she was vulnerable at this point upon her frontier, Germany applied the Teutonic version of international law—necessity knows no law—and two days before war was declared (August 2, 1914) she violated the neutrality of Luxemburg to oc-

BY WILLIAM HERBERT HOBBS

PROFESSOR OF GEOLOGY AT THE  
UNIVERSITY OF MICHIGAN

cupy the ore fields of that country and even invaded France to seize those in French territory. On the same day M. Viviani, the French Premier, notified all French ambassadors, and thru them the world, of this ruthless and unprovoked invasion of France, notwithstanding the fact that to conserve peace French troops had scrupulously obeyed official orders by remaining ten kilometers behind the frontier. It should be added that on July 25, ten days before war was declared, Germany had occupied in great force her own ore fields and felled trees and mounted batteries ready for action.

With the German, French and Luxemburg fields of iron ore now firmly in her grasp, the armies were launched upon Belgium, and the Kaiser speaking to an immense throng from the

balcony of the royal palace in Berlin, declared that envious enemies had forced the sword into his hand, and puppet-like ninety-three of the most distinguished professors in Germany put their signatures to a statement that Germany had neither begun the war nor violated international law.

There is both interest and much encouragement in turning from these lying statements addrest "to the civilized world" to the unquestionably truthful confidential statement addrest to the barbarian Chancellor. In this memorandum, prepared after eight months of war, it was pointed out that:

The manufacture of shells has required quantities of iron and steel of which no one could have had an idea before. . . . If the production of pig iron and steel had not been doubled, since the month of August, the continuation of the war would have been impossible.

As raw material for the manufacture of these quantities of pig iron and steel, "the minette" (Lorraine ore) takes a place of greater and greater importance, because this ore can alone be extracted in our country in rapidly augmenting quantities. The

"minette" covers at this moment 60 to 80 per cent of the manufac-

ture of pig iron and steel. If the production of "minette" had been disturbed the war would be as good as lost.

The report goes on to say that if French troops had been able to advance five to ten miles into Lorraine, or had held the frontier, the war must have ended from Germany's lack of iron. Verdun is referred to as the bridge-head of the iron region, and it is concluded:

The security of the German Empire in a future war necessitates therefore imperatively the possession of all the mines of "minette," and comprizes the fortresses of Longwy and Verdun, without which this region cannot be defended.

M. Pichon, the former French Minister of Foreign Affairs, has recently asserted, and ex-Chancellor von Bethmann-Hollweg has confirmed his statement, that Baron von Schoen, the German Ambassador at Paris, had received instructions to demand of France, in case she should agree to remain neutral, that she hand over to Germany for the period of the war the fortresses of Verdun and Toul. The reader is asked to observe by reference to the map that Toul is the "bridge-head" to an outlying area of "minette" near Nancy in the same sense that Verdun is to the main area of Lorraine. Can there be any one so blind as not to perceive what acquiescence in this audacious demand would have involved? France would have been left at the mercy of Germany and would have been ruthlessly invaded by the German armies returning flushed from an easy victory over Russia. Fortunately for us all, the German Ambassador was informed that France would not agree to remain neutral, but would be guided in her actions by her own interests.

In the "minette" iron district is thus to be found the Achilles heel of the German monster. Once driven from this area, Germany will be forced to an unconditional surrender, as she has herself admitted.

Utilization of the iron ores of Ukraine will not be possible upon a scale commensurate with Germany's needs without several years of development, and the question of transportation across the 1200 miles which separates the district from the industrial section of Westphalia and Rhenish Prussia would have to be solved. Should the attempt be made to bring ore in sufficient quantities from the already developed but equally distant Kiruna mines of Swedish Lapland, means would have to be found by the Allies, as they have been found before, to interrupt the Baltic traffic.

A knowledge of these facts should be sufficient to meet the specious argument which will soon be put forward in the interests of a "German peace," that a decision in favor of the Allies is outside the realm of possibility.

*This is a poison gas attack along the front line trenches. In America the poison gas attack by gossiping tongues is just as dangerous*

## THE POISON GAS BRIGADE

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

**G**ERMANY has attacked us. The invaders are here. The strife on American soil has commenced.

In every city of the United States, a powerful battalion of German or Germanized troops now stand ready to hurl their weapons at us. These troops wear no uniforms. They bear no arms. They are never seen together in public. They fight from ambush. They are all snipers. And they hit us in the *brain or heart*, where no physician can dress the wound.

Without doubt there are several hundred thousand of them in the United States, and they are gaining new recruits every day. They are a secret order; we do not know them by sight; we do not know how, when or where they will sneak up on us and find us least prepared.

Moreover—and here is one of the worst aspects of the situation—we seldom know when they have hit us, because their weapon shoots into our veins the slow poison of a treacherous thought, or hopeless feeling, or selfish inclination; and the effect of such poison is to sap our energy, weaken our character, paralyze our will, before we realize the fact of our moral degeneration.

*The weapon of these German troops is the tongue. Their ammunition is the poison gas of gossip.* They hurl this gas in such a way as to cloud our eyes, unsettle our nerves, choke our patriotic feeling, rend us with doubt, cripple us with fear and put us out of action. The human tongue is the only weapon of evil that never breaks, never stops, never lacks fuel or ammunition, never loses point and punch, never can be destroyed. Furthermore, it is always concealed. It shoots a broadside and then retreats before you can send a volley back.

The way to knock a man out is to hit

him unawares at his weakest point. The strength of the Kaiser is his knowledge and use of the hidden powers of the mind; the weakness of the American people is their ignorance and the neglect of the hidden powers of the mind; whenever the Kaiser aims a lying tongue at our hearts he batters our weakness with his strength, and he knows it.

The greatest forces of life are the least visible. You cannot see the wind that blows your house down. You cannot see the gravitation that holds the world together. You cannot see the human will that produces a Washington or a Lincoln. You cannot see the energy with which you do the work of the day. You cannot see the public opinion that makes or breaks men, nor the loyalty that forms the invisible backbone of industrial organization. You cannot see the spirit of hate that has made the Kaiser look and act like the devil, and you cannot see the spirit of love that brought forth the Christian religion. Effects can be seen—primary causes and forces cannot. The big German gun that bombarded Paris could not do a millionth part of the damage done every day by millions of treacherous words that the Kaiser's agents here shoot forth on all sides. Merely because the gun could be seen, everybody marvels at it, while here a million deadlier guns of speech hit the mark and we never notice!

The worst enemy warriors meet is the Poison Gas Brigade. We must protect ourselves from the mental and moral ravages of the gossip gas in our neighborhood as effectively as our soldiers have learned to protect themselves from the chlorine or mustard gas of the trenches. Both kinds

of poison gas are fatal. But for every soldier on the field assailed by trench gas, a hundred Americans at home are assailed by

gossip gas.

The members of the Poison Gas Brigade are many and diverse classes of people. They are, first of all, the paid spies of Germany who are still Huns by nature, the unprincipled among our alien residents who despise and would betray the country that yields them safety, freedom and prosperity. They are the pacifists following the mental delusion and moral mirage of peace-at-any price. They are the socialists and anarchists frothing at the mouth with the ravings of revolutionism. They are the chronic pessimists who can see only failure and defeat ahead of the nation. They are the freaks and cranks with some wild theory to exploit for the sake of personal pride, wrath, greed or fanaticism. They are the war profiteers who want to block the machinery of the Government lest their graft be taken away by Federal control. They are the misers too selfish to do anything with their money but hoard it or spend it on themselves. They are the dissatisfied shop and factory workers in plants under war contract to the Government. They are the foreigners filled with race prejudice. They are the members of hyphenated and half-spoken societies whose German schemes and money bags are hid behind a velvet curtain of altruism. They are the underfed and underpaid salaried employees, jealous of the war wages now being earned by industrial workers. They are the devotees and dupes of strange religions out of line with the Christian church and in line with German diabolism. They are the super-feminized persons of either sex who would shriek loudly at the sight of blood and slink away in a criminal silence

from the presence of a murderer of souls. They are the habitual gossips and neighborhood news mongers. They are the ignorant, idle and thoughtless people everywhere who talk and act with no sense of personal responsibility but follow the crowd as vaguely and fitfully as sheep.

A total round-up of this motley crew will make a large proportion of the average community—perhaps 30 to 60 per cent. How is it possible, you ask, for the German Emperor to line up for Germany so many different classes of people in a community of the United States?

He first plants a nest of spies in every community large enough to pay for corrupting. There are said to be in the United States 400,000 of these traitors—a number as large as the total of our preachers, doctors and daily newspaper editors. The members of families of enemy aliens here number 4,000,000, according to the statement of Attorney General Gregory. One person out of 25 is thus pro-German, while one person in every 250 may be assumed to be a spy. We may count on the presence of 4 spies and 40 German sympathizers in every thousand population. This Poison Gas Brigade of 44 members to every 1000 people could tell enough lies in a week to penetrate the heart and mind of the whole community.

The Kaiser trains in deviltry these criminals who betray the country that enriches, protects and trusts them. The art of poisoning the mind is a dangerous, delicate process. It must not be left to ignorant people, however unprincipled. A manual of instruction is therefore supplied to each traitor before he starts to smirch, corrupt and deaden our thought and feeling about the war.

He must first gain the confidence of the persons he is paid to contaminate, by sympathizing with them in their war tasks, hardships and griefs, or by helping them personally in a way that means little to him but looks large to them. He can subscribe to a pet theory and eulogize a pet hobby of theirs; or he can claim to be righteously and excessively patriotic, even holding nominal offices in patriotic organizations. Being provided with an assortment of ugly rumors, he is to fit the lie he tells to the ignorance, weakness and worry of the listener. He will tell a mother whose boy has gone to the front how terrible conditions are in the camps and trenches; he will prophesy to the business man the commercial depression and financial loss that the war will mean if it continues; he will praise the religious devotee for being a "conscientious objector" and will affirm a sympathetic conviction about the horrors of sending American boys to kill their German brothers.

He must be careful to say nothing that you can quote against him. He must always have read or heard the statement that he drops apparently in good faith. He must never be himself the final source of any rumor that he puts into circulation. There are many ways to throw you off the track of suspicion. A favorite mode of concealment is membership in a club, league, society or even church organization where the pro-German poison can be spread secretly while the rules or doctrines of the association are spread openly. Even religion has been thus defiled—a so-called religious body of more than a million members thru the United States was recently convicted of publishing and scattering broadcast literature against the war in the guise of tracts and sermons!

The job of these talk mongers is only to start an ugly rumor in the neighborhood—gossip will do the rest. Merely to repeat something depressing or disquieting about

the war is all you need do to satisfy the German secret agents. Your intention may not be that of a traitor, but your action will be. Let us mention a recent case. Somebody told somebody else of hearing how one of our boys in camp was ill and unable to write home; mouth after mouth repeated the tale, which grew with repetition. By the time it reached the mother of the boy, he was at the point of death, had been shamefully neglected by the camp doctors, all the sanitary conditions were frightful, and every boy stayed in camp at the risk of his life! The boy chosen to suffer a fictitious death was one of the healthiest in the community, was very widely known, his father being one of the leading men of the city and having a host of friends. The rumor was a lie made out of whole cloth; but while it was being passed around, the minds of large numbers of people were being unconsciously prejudiced against the army training camp, whereas the official denial from headquarters reached only a few who listened to the tale.

The dealers in poison gossip magnify a small unfavorable occurrence until it resembles a cloud of evil covering the sky. It became noised abroad that a soldier in

Americans talking, thinking and feeling wrong about it. Hence the great military value to the Kaiser of the Poison Gas Brigade.

We talk too much, too frequently, and too lightly. We repeat gossip as tho it were truth. We give away professional and political secrets to almost anybody who asks for them. With most of our habits of talk we play directly into the Kaiser's hands. One of the strongest allies of the German army is the American tongue. And the hundreds of thousands of German spies among us have got this fact neatly and joyously tucked away in their consciousness. Ridiculing our habits of irresponsible, extravagant speech, they still rely on it as a powerful weapon which they subtly turn against our neighbors—while we talk on, oblivious and unconcerned.

A poisonous rumor is like a poisonous snake in your home—when you let it pass unchallenged you are guilty of a crime against the safety of your household. The way to kill a rumor is to stone it to death with facts. We have traced down a number of these rumors, and have obtained from official sources the facts with which to meet them. If you will regard every wild tale about the war as a poison gas bomb, or a deadly serpent, or some other form of sudden serious danger, and if you will go armed with facts like these, which you hurl back on the spies or dupes that are spreading the tale, you will be fighting and destroying the great enemy to liberty in this country—premature and artificial freedom of speech. Freedom is the consummation of discipline. Speech is not free until it is both trained and constrained.

The traitors who would poison our minds depend on our gullibility, childlike fondness for exaggeration, custom of repeating and magnifying gossip, racial disregard for exactness of statement. A rumor about the war should never be allowed to pass unchallenged. We should ask questions like these in the case of every rumor: Is it true? How do you know? Who started the tale going? Where did he or she get the facts? How can we trace the bit of gossip to its originator? How can we hold him or her responsible? How can we prove the falseness of the rumor? How can we stop its circulation?

Here is the simple test for any suspicious tale: "In repeating this or allowing it to pass without demanding proof, am I helping my country win—or helping Germany?" If you are not helping us, you are helping the Kaiser. And Theodore Roosevelt speaks truly when he says, "Any man in the United States who at this time directly or indirectly expresses approval of or sympathy with Germany in this war should be arrested and either shot, hanged or imprisoned for life." Abraham Lincoln said: "The man who stands by and says nothing when the peril of his Government is discussed cannot be misunderstood. If not hindered he is sure to help the enemy; much more if he talks ambiguously—talks for his country with 'buts' and 'ifs' and 'ands.'" According to Lincoln, the man who in time of war merely expresses doubt is a traitor! We must hammer this truth into our consciousness and let it be the first weapon that a lying rumor meets.

The first move is to find the source of the gossip. Make it your business to find out. Say that you have joined the army of Independent readers who have sworn to trace and expose all German propaganda, with the intention of turning over to the Government all German spies and tale-bearers in your vicinity. That will make the foolish talker think twice before handing the rumor on. [Continued on page 299]

The Passing Show, London

For Satan finds some mischief still  
For idle hands to do

camp had embezzled a large amount of money and eloped with an officer's wife, principally because the temptations in camp were too strong for a young man. The truth was that he had lost a little money during a mild game of gambling, had secretly borrowed a few dollars in the expectation of returning the money out of his next pay, and was caught in the borrowing process. A German spy will take a trivial misdemeanor of an American soldier, or a slight case of neglect by an army official, and in a few moments have a cardinal crime and fearful tragedy made out of it, for the use of the Poison Gas Brigade.

The tongue is still mightier than the sword. A group of German propagandists broke down the spirit of the Italian army and made General Cadorna lose 50,000 men in a single German drive. Another group kept Greece from coming to the help of the Allies when such action might have turned the issue of the war. Another group broke down the Russian army, bribed the rulers of the country, and paved the way for German possession of the land. To win the war, the Kaiser has only to get enough

*Motor trucks mobilized for military service*

# THE ABANDONED LIBERTY TRUCKS

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

OF more than passing interest and significance is the action just taken by the War Department at Washington in practically abandoning the so-called standardized or Liberty motor trucks in favor of the regular models of American manufacturers, and supplanting the two men who have been in charge of motor truck production for the army. The announcement to this effect reads: "Two of the three types of Liberty trucks have been abandoned for the time being. Christian Giff, of New York, formerly in charge of truck production, has resigned and returned to private life. General Chauncey Baker, in charge of production for the Quartermaster Corps, has been transferred from the National Army, resuming his rank as Colonel in the Regular Army. He has been sent to Chicago. A new department is being organized to take over the production of motor trucks for the army."

Without doubt this decisive action has in no small measure been influenced by the public discussion of the troubles of the Aircraft Production Board and of the Liberty aviation motor. Like the latter, the Liberty motor trucks were heralded as the result of intensive coöperative effort on the part of American truck engineering experts, and destined to revolutionize military motor transport. In both instances the products failed to come up to the predictions of their sponsors, either in performance or quantity production.

As a matter of fact only a small percentage of the something more than twenty thousand motor trucks which the army has placed in service since we entered the war, are of the Liberty truck types. About ten months ago, after the initial orders for several thousand trucks of the manufacturers' regular models had been placed, the truck makers were called together at Columbus, Ohio, and told by an officer claiming to speak for Secretary Baker, that all future orders would be limited to the standardized types, and that the manufacturers might as well make up their minds to build these types. Yet within forty-eight hours orders for about ten thousand trucks of regular models were placed by the War Department. Since that time the manufacturers have made every effort to produce Liberty trucks, altho there have been repeated orders on behalf of various branches of the service for their regular models.

As events have since proved, the disinclination at that time on the part of a number of the leading motor truck makers to take up the building of the Liberty types, was for sound reasons. One maker presented his case in something like these words. More than seven thousand of our regular models are now in the service of the allied armies. They are pronounced entirely satisfactory, as is evidenced by continued new orders. They incorporate cer-

tain features specified by the French Government early in the war. We can immediately begin turning out similar trucks for the United States Army at the rate of five hundred or more a month. It will take at least three months to get ready to build the new types, which may or may not be better trucks, and about a year to reach quantity production.

Colonel Baker, who for many years has been known as the army's motor vehicle expert, has long had the idea of a standardized army truck. About six years ago he drew up designs and specifications for such a vehicle, which would travel anywhere an army four-mule team could go. It incorporated among other innovations the principles of four wheel driving and steering. Out of all the American manufacturers of motor trucks only two undertook the building of this type and in a comparatively small way at that. Despite its advantages for tractor purposes and for traveling over rough ground this type is not largely used at present by the armies of the various belligerent nations. The creeping tread or caterpillar tractor has proved best for hauling heavy loads from hard roads, while the regular types of rear wheel driven trucks are quite satisfactory for other phases of military motor transport. The Italians have developed one of the best tractors, which readily hauls loads of twenty-five tons up stiff grades. It is driven thru the rear wheels only, and a bed-rail tread is provided for use on the rear wheels, when the vehicle is operated on soft going.

The design of the Liberty trucks was also influenced to some extent by the conditions experienced in the campaign on the Mexican border of two years ago. At the time of the raid on Columbus, which initiated that campaign, the troops stationed along the border were in part supplied by some seventy motor trucks, mostly hired. By the time General Pershing's forces reached their farthest point into Mexico, some five hundred trucks were owned and operated by our army, which number had been nearly quadrupled before the affair was entirely finished. Pershing's expeditionary force was entirely supplied by motor transport, in one instance at a point three hundred miles from the nearest available railroad. However, the conditions encountered, especially the lack of roads, were such that the regular types of trucks used required constant repair, for which proper facilities were lacking. The conditions under which these trucks were obliged to operate are well described in the following statement made by General Pershing at that time:

"The motor vehicles have done work which astonishes me. They have traversed roads which seemed impassable; they have

climbed hills where the rocks alone seemed sharp enough to cut the tires and smash the running gear; they have gone thru canyons where

a goat might hesitate. They have made faster progress than any branch of the service except the aeroplanes. The trucks have brought food for men and horses not only to advanced bases, but to points beyond these bases, sufficiently close to the cavalry columns to enable them to send back for supplies without losing the advantages of their early forced marches."

Thus the ideal in mind when the Liberty trucks were designed, was vehicles which could stand up to such severe and unusual conditions as were encountered in the Mexican border affair of two years ago. However, the conditions under which they were to operate were quite different, being largely confined to the construction and supply of the various training camps in this country, and to the transport service of our army in France. In both connections good, hard roads are the rule rather than the exception. It is only natural, then, that the regular types of motor trucks have proved satisfactory under the requirements of this war.

Further, the types of motor trucks regularly produced in this country for ordinary commercial uses are largely suited to the special needs of military service. This is because, as in the case of passenger automobiles, American motor trucks for many years have generally followed in design and construction the lead of European trucks, and the development of the latter has been influenced largely by military dictates. This resulted from the subsidy systems pertaining in France and Germany for many years, and established in the other countries abroad before the outbreak of the war. Under these systems the purchaser of a motor truck built according to Government specifications, and practically all complied with these specifications, received annually a sum of money amounting to as much as one quarter of the purchase price of the truck. In return the owner had only to keep the vehicle in good operating condition at all times, and to turn it over to the Government on demand in case of war. The purposes of these subsidies was twofold, to encourage the use of motor trucks by business interests and individuals, thus increasing the number available in case of need, and to have these trucks adapted to military requirements.

Thus with motor trucks, as with aviation motors, the War Department would have done better to have adopted at the outset proven types and proceeded at once to their manufacture in quantities, and meantime in an experimental way endeavored to develop better types with a view of their adoption for 1919 or later, when they had demonstrated superior merit.

# THE NEW BOOKS

## The Jazz Poet

MODERN music has bifurcated. On the one hand it has developed into shapeless sound, into vague entanglements of intangible melody, into the misty musical mazes of Strauss and Debussy. On the other hand, under the influence of African impulse, it is headed toward the tom-tom. Descending from the swaying masses of the camp meeting thru the negro minstrels and the Swanee River songs of our fathers on to the ragtime that carried all nations on to their feet, it has reached its culmination in the jazz band which sets the very chairs and tables dancing. Here the rhythm, the beat, has become the main thing, sometimes the sole thing. Melody is sacrificed to it. Discords are deliberately introduced. The traditions of musical composition are disregarded. It makes its own laws as it goes along and breaks its own precedents without compunction. It cannot be printed on five parallel lines. It cannot be put on a page anyway for it is spontaneous and individual, subject to change without notice. Some say it is not music at all, this latest product of the process of syncopation. Just as you please about that; at any rate it is something that makes the heart beat and the blood run and the limbs move. It is not music to be listened to but music to be acted upon. In this product music has completed the cycle of its wander-years and returned to the dance that gave it birth.

Modern poetry has split in like manner. By the long line of development that may be followed thru the serried shelf of English classics it has reached a perfection of form that is truly admirable. Never were poets more obedient to the laws of versification. Nine-tenths of the poetry that comes to The Independent nowadays is impeccable. Much of it also is unreadable. There is nothing in it to shock you—and often nothing to keep you awake. The metaphors are unmixed. The infinitives are unsplit. No barbarisms, solecisms or improprieties are permitted. The language is purely poetic, containing no words or expressions for which good authorities could not be cited as a precedent. The thought is etherealized. There is nothing gross, nothing earthy, sometimes nothing material to be found in it.

Then sometimes—and more frequently of late—we get poems of the opposite kind, wherein the tone is intentionally raucous, wherein there are no aphorisms worth putting on a calendar, where the language is that of the street or the scene is laid in a quick-lunch-room, where rimes are erratic or missing altogether, where the verses cannot be scanned and the meter cannot be measured by the foot-rule of iambs and trochees and pterodactyls, because it does not stay still long enough to be measured. Yet it has a rhythm of its own, a beat that beats its way into the brain as persistently as the famous "pink-trip-slip for a three-cent fare."

Once in a while we publish one of this sort of thing and then some of our dear readers write, more in sorrow than in anger, to lament that The Independent, which used to have a high standard of poetry, has so degenerated in these latter days. If we need bracing up after such a blow we turn back to our files and read the same letters of complaint and reproof when

we first published Swinburne and Riley. It seems, from these letters, that the poetic taste of The Independent has been degenerating for some seventy years.

When we published in our issue of September 29, 1917, Vachel Lindsay's "The King of Yellow Butterflies," we received some such remonstrances. It was not, said an old friend, what was to be expected of The Independent—as tho anything could be expected of The Independent except the unexpected. It was pointed out that Mr. Lindsay had cheated us if he had been paid by the word, for he had repeated many of the lines and there was not a single idea in the whole page anyhow and it was wicked to waste paper like that when the country was at war.

Yet the "Yellow Butterflies" turns up again in Vachel Lindsay's latest volume, *The Chinese Nightingale*, along with other "poem games" and it is evident that they are being bought voluntarily by people who do not have to have them thru having subscribed in advance for a periodical. Not only bought, but read, and not only read, but acted. Somehow they do have the power of setting folks in motion, just like a jazz band. We know because we have done it. We have tried out "King Solomon and the Queen of Sheba" on several roomfuls of old and young and had them all acting like four hundred sailors, swans, sons, shepherds and sweethearts, oxen and ponies, with the greatest enthusiasm.

Mr. Lindsay has gone to the negro revival meetings in search of new rhythms just as Dvorák found in negro hymns the themes of his "New World Symphony." Three of his negro sermons are included in this volume; one on Uncle Tom, one on John Brown and one on how Samson bore away the Gates of Gaza, the last very timely now that the British have just broken thru the Gaza Gate. We quote part of the sermon on Simon Legree which, the author kindly says, is "to be read in your own variety of negro dialect":

He beat poor Uncle Tom to death  
Who prayed for Legree with his last breath.  
Then Uncle Tom to Eva flew,  
To the high sanatoriums bright and new;  
And Simon Legree stared up beneath,  
And cracked his heels, and ground his teeth:  
And went down to the Devil.

He crost the yard in the storm and gloom:  
He went into his grand front room.  
He said, "I killed him, and I don't care."  
He kicked a hound, he gave a swear;  
He tightened his belt, he took a lamp,  
Went down cellar to the webs and damp.  
There in the middle of the moldy floor  
He heaved up a slab, he found a door—  
And went down to the Devil.

His lamp blew out, but his eyes burned bright.  
Simon Legree stepped down all night—  
Down, down to the Devil.  
Simon Legree he reached the place,  
He saw one half of the human race,  
He saw the Devil on a wide green throne,  
Gnawing the meat from a big ham-bone.  
And he said to Mister Devil:

"I see that you have much to eat—  
A red ham-bone is surely sweet.  
I see that you have lion's feet;  
I see your frame is fat and fine,  
I see you drink your poison wine—  
Blood and burning turpentine."

The Russian revolution has inspired various poems. But here is a different one:

The Russian Revolution is the world revolution.  
Death at the bedstead of every Kaiser knocks.  
The Hohenzollern army shall be felled like the ox.  
The fatal hour is striking in all the doomsday  
clocks.

The while, by freedom's alchemy  
Beauty is born.  
Ring every sleigh-bell, ring every church bell,

Blow the clear trumpet, and listen for the answer:—

The blast from the sky of the Gabriel horn.

Hail the Russian picture around the little box:—  
Exiles,  
Troops in files,  
Generals in uniform,  
Mujiks in their smocks,  
And holy maiden soldiers who have cut away  
their locks.

All the peoples and the nations in processions  
mad and great,  
Are rolling thru the Russian Soul as thru a city  
gate:—

As tho it were a street of stars that paves the  
shadowy deep,  
And mighty Tolstoi leads the van along the  
stairway steep.

We fear these samples will not convert those who see nothing in Vachel Lindsay, or at least nothing to admire. They are more likely, in fact, to confirm the suspicions of his critics that he is afflicted with echolalia. But they may be reminded that Bernard Shaw in his "Sanity of Art" proved that Shakespeare had the same disease and so must be classed, according to Max Nordau, among the degenerates. So, too, must all poets except the free versifiers—they have something else, not so easily diagnosed, but equally incurable.

*The Chinese Nightingale*, Vachel Lindsay. The Macmillan Company. \$1.25.

## The Challenge

THIS is the final passage in a little volume that sounds a trumpet call to Christian people to meet "the challenge of the present crisis" with the valiant, virile spirit of true Christianity:

An American visitor at the French front was allowed a three hours' conference with Marshal Joffre. He has said, in the writer's presence, that the most impressive incident of the conversation came when the Marshal drew from an inner pocket a well-worn letter, written by a French mother to her son in Canda, and, with unsteady voice, read this:

"My Dear Boy—You will be grieved to learn that your two brothers have been killed. Their country needed them and they gave everything they had to save her. Your country needs you, and while I am not going to suggest that you return to fight for France, if you do not return at once, never come."

Multitudes are living in that spirit today. He must have a callous soul who can pass thru times like these and not hear a voice, whose call a man must answer, or else lose his soul. Your country needs you. The Cause of Christ is hard bested and righteousness is having a heavy battle in the earth—they need you.

*The Challenge of the Present Crisis*, by Harry Emerson Fosdick. Association Press. 50 cents.

## Men in War

SKETCHES by an Austrian army officer full of all that is ignoble and loathsome and bloody in war. If this is the side of war you prefer to dwell upon, this is the book for you. The book is written with great skill and power; which makes the picture it presents all the more hideous.

There are two sides to war, just as the old god of war, Janus, was depicted by the Romans with two faces. War is Hell—of course. But the fact that men are willing and eager to go forth and suffer the torments of that Hell because something that they believe in is imperiled—that makes war a noble and a glorious thing. But one half the truth is set forth in this book, and that the gruesome half. Perhaps it is significant that the writer is an Austrian who has forsaken his country's fight; for there is little for men to believe in on that side of the conflict.

*Men in War*, by Andreas Latzko. Boni & Live-right. \$1.50.

*She draws it on a dark-blue stencil—and quickly Mimeographs it. A thousand tracings of a design or diagram ready within a few minutes! Think what that means. Pictures! What an opportunity to put punch into your sales letters, also organization and factory communications! Lots cheaper than blue-prints—and more effective. Typewriting on the same sheet. The Mimeoscope makes the Mimeograph immensely more useful—and important. Let us show you how it will help you. Get booklet "E" today. A. B. Dick Company, Chicago—and New York.*

*Caution: The Mimeograph, and our supplies for it, are made to work together. Upset that relationship, the work suffers, valuable time and materials are lost, and our responsibility for quality and output ceases.*

## GOING "OVER THERE"

(Continued from page 281)

thing. At sundown one evening the American escort, which had been sweeping back and forth across the offing, turned abruptly back and started for home, leaving us to the protecting care of the British.

After dinner the moon came out full and clear, and under her pallid beams the gently heaving ocean glistened like molten quicksilver. Not a whitecap flecked the broad expanse and the giant ships were silhouetted specters black against the ghostly night. What an opportunity for German frightfulness!

It was light enough to discern every shadowy ship in the convoy a mile away and yet too dark to see a periscope over a hundred yards.

The good ships crept along silently zig-zagging, while hundreds of pairs of eyes peered into the darkness for the dreaded glimpse of the V-shaped wake of foam.

I went down to the second cabin dining room, not five feet above the water line, where Judge Wadhams was addressing the soldiers on the moral aims of the war. A submarine torpedo striking us amidship would have killed the whole roomful. I waited till his peroration was over and the boys with three ringing cheers had elected him an honorary member of the regiment, and then went upstairs and looked in at the grand salon where the young people aboard were dancing to the accompaniment of the regimental band. After a few moments I betook myself to the hurricane deck, where sheltered from the wind I discovered a group of kindred spirits, and there we sat far into the night, now talking about the meaning of all that the world was going thru, now musing in silence as the round moon rode thru the heavens shedding her silver beams on the liquid expanse below.

I could not help recalling Roosevelt's description in one of his African hunting chapters of how unconcernedly the herds of deer and zebras on the plains go about their feeding and lovemaking tho the lion is near by. Only when his roar is actually heard does the stampede follow.

But the Germans were evidently not about, and I finally left my friends on deck and went to my cabin.

The next morning at a quarter to five o'clock, our mosquito fleet of destroyers arrived. They came up in a battle line of five miles abreast, tho the first we saw of them was the winking and blinking of their powerful flashlights thru the morning haze, as they signalled us of their approach. Rushing in at full speed, they surrounded us in the twinkling of an eye—a veritable pack of them—hurrying, scurrying and worrying about us like shepherd dogs about a herd of sheep. It would make you laugh to see them twisting, squirming, rearing and plunging thru the waves, the spray splashing far above their decks, and their screws churning the water into boiling foam. They would double on their tracks as abruptly as a hairpin; now racing forty miles an hour, to one side to see whether that old floating spar was a periscope, now darting back again right under our bows. Yet they looked so tiny compared with the leviathans they were guarding and they rode so low in the water, they almost seemed mechanical toys wound up to amuse us with their antics. But we could see their four-inch guns, and we knew they had plenty of depth bombs aboard to drop where the periscope submerged. They certainly were a jolly company, and we never tired of watching their superabundant vitality. More luck to Mr. Ferguson, Mr. Ford,

and all the other good American ship-builders who promise to turn them out jitney-wise by the hundred this year to keep the high seas free.

All that day our little friends skipped and charged and circled about us, and when finally the mists came up in the evening and the moon was completely hidden behind the haze, we went to our cabins feeling that the chances were pretty good that we would not be murdered in our sleep that night.

At breakfast the next morning it was reported that two vessels traveling just ahead of us had been sunk at sunrise. Our ships not only now began to zigzag more frequently, but they kept continually changing their formation, so that for the first time since we left America we saw the camouflage on the opposite side of our sister ships. The day wore on. There was a suppressed excitement on board. This was not allayed when the wireless announced that Germany had begun her Great Offensive along the whole British front, and was pressing the English line back. It was further intimated that some demon gun monster was shelling Paris from behind the German line—an almost incredible story.

We now hoped to reach our port at midnight. The captain of the ship, who had been on the bridge almost continuously for the past three days, was pacing back and forth, and the signal flags were being hoisted up and down the balyards incessantly. I thought to myself we are now in the ninth inning, the score is three to nothing in our favor, there are three men on our bases, two out and two strikes on Germany. Her only chance to win the game is to do the impossible and make a home run. We sat up till midnight, hoping to hear the good news that we had crossed the bar, but it was not to be. Just as we were about to achieve the goal it was announced that we would have to turn back and not make the harbor till daylight.

At sunrise we were all up on deck. Off in the distance the faint purple of land could be seen. Our fleet, still intact and unscathed, was proudly riding the waves toward the shore, three of our sturdy protectors leading the way, and the others covering our flanks. But again a wireless message was picked up to the effect that a ship just ahead of us had been torpedoed in the channel leading into the harbor, and that we could not possibly get in for the present, so we turned sharply about and put to sea again to wait for further orders. The passengers were now in a state of excitement bordering on consternation. Everywhere, little groups on deck were vehemently discussing the meaning of it all. Germany evidently still had a fighting chance.

We zigzagged on for a couple of hours, when without warning we turned about again and started for the shore. At last, after another long and anxious hour, a large number of little specks were discernible on the horizon which soon grew into a fleet of mine sweepers, evidently dispatched to clear away any obstructions that might be found at the entrance of the harbor. Victory was almost in sight, but we could not be sure, for was not a pilot boat recently blown to pieces right off the shoals which we were nearing, and every one of the thirty-two pilots aboard killed?

But at last we reached the bar, our good guardian angels turned aside, cast over the anchor, and we passed by in single file, giving three toots of our horn by way of a salute to the [Continued on page 294]

## Put the Care of Your Lawn on a Business Basis Fuller & Johnson Motor Lawn Mower

**Especially built to cut both open acreage and complicated areas without recourse to hand mower trimming. The least in first cost—the lowest in operating cost.**

Inquiry, observation, experiment and engineering experience have proved the following considerations to be essential in constructing a practical and economical power lawn mower:

1. That the mower should be easily operable by one man.
2. That the majority weight of the mower should be carried by a traction drum that would not, as a roller, crush and injure the lawn through too frequent rolling.
3. That the traction drum and the knives should be independently driven, so that the mower could be moved from place to place with the knives stationary, or hand pushed into corners with the knives revolving.
4. That the knives should automatically stop when meeting an obstruction.
5. That the power unit should connect directly with the driven parts to insure positive motion.
6. That the mower should be balanced to permit instant change of direction without strain upon the operator.
7. That in form and weight the mower could be easily lifted into a conveyance for transportation to distant points.
8. That the cost of operation be such that the saving should liquidate the purchase price within a very short time.

### Value of Purposeful Design

That the fundamental design of the Fuller & Johnson Motor Lawn Mower was correctly conceived, lies in the fact that no changes have been made except in minor details, which in each case have been important, but not of such an extent as to disparage the earlier models.

### Damage of Rolling Avoided

The traction drum is of the precise dimensions to distribute the weight of the mower so that it will not in any wise injure the first tender grass grown from seed or "pack" the turf.

### Sure and Easy Control

The Fuller & Johnson Motor Lawn Mower is controlled by simple clutches that work positively, without risk or chance of getting out of order, and with no more wear than any other part of the mower.

### Positive Drive Essential

The gear drive is absolute in action. There is no traction belt to stretch, slip and rot on the Fuller & Johnson Motor Lawn Mower, nor is there consequently any need for an idler, which at all times is of uncertain control.

### Moderate Weight a Necessity

The weight of the Fuller & Johnson Motor Lawn Mower is 245 pounds, just enough to hold the mower to its job, whatever the condition of the surface of the lawn. This moderate weight

also permits easy negotiation of grades up to 35%. The governor accurately controls and maintains the speed, which is regulated at will.

### Remarkable Flexibility

The Fuller & Johnson Motor Lawn Mower is well built in every particular. Its flexibility is extraordinary. It will cut underneath projections, close to walls, posts and trees, and immediately on edges without injury to hedges.

### Low Operating Costs

At \$3 a day for labor and 50c for gasoline and lubricating oil, the cutting cost is but 70c per acre. Where labor can be had for \$2 a day and gasoline and oil at 40c the cost per acre is but 48c. The proportions are four-fifths for labor and one-fifth for fuel in estimating the cost of cutting any lawn. Five acres a day is a usual day's work.

### Free Booklet of Information

The handsomely illustrated booklet, "A Better Lawn," contains lawn facts and full technical description of the Fuller & Johnson Motor Lawn Mower. Send for a copy.

The price must be advanced to \$295 on May 31st, so it will be to your interest to write us at once.

**GOING "OVER THERE"**

(Continued from page 292)

gallant escort that had led us so bravely and safely across the sea. The panting little sea dogs ceased their dashings and dartings and fell in behind the giants they had so valiantly protected, and in single file we wound our way up the channel, past the mine sweepers, the lightships, the buoys, the forts, the giant docks, and up to the noble city—the haven of our hopes these twelve days—where we dropt anchor. It was too late to disembark that night so the colonel ordered the ship's band up on deck. The soldiers left their posts and scrambled up the companion way and special emergency ladders to the roof of the ship, the officers raised aloft the stars and stripes and the beautiful yellow flag of the regiment, the soldiers swarmed over every point of vantage and the band played "Tipperary" and "Dixie" and a dozen other blood-stirring airs, while our sister ships as they passed beyond us to their anchorage, cheered us again and again. The harbor craft tooted their horns, each thronged ferryboat as it plied back and forth gave us three good English cheers, people collected along the river front waving handkerchiefs, and as the band ended with "God Save the King" and "Marsellaise" and "The Star Spangled Banner," every man on board our good ship, from the captain down to the smudge faced fireman who came up from his furnace below, and from the colonel to the rawest recruit, stood at attention. The passengers on the ferries bared their heads. And then when the last strains of our national air died away, a great shout went up from all over the harbor. I turned to the colonel, his eyes were full. Indeed there was not a man aboard who was not thrilled thru every fiber of his being.

I walked slowly to the cabin and there met the judge.

"I suppose I am foolish," he said, "but that reception America has just received from old England moved me to tears."

"Well," I replied, "you are not the only one who cried."

And the next morning we disembarked.

**Capital Copy**

Leading agriculturists are trying to make the South see that it can and must feed itself.

More than 700 privately-owned vessels have been purchased or chartered by the United States Navy.

A single thrift stamp will buy a tent pole or five tent pins, a waist belt or hat cord, shoe laces or identification tags; two will buy one trench tool or a pair of woolen gloves.

In order that there may be no doubt of the effectiveness of the serums and vaccines most in use both in the military forces and in civil life, the United States Public Health Service is now making tests of samples from every lot of these products.

One war savings stamp will buy 100 cartridges or a cartridge belt or a scabbard for a bayonet; two and a half will buy a gas mask. Three war savings stamps will buy an overcoat or two woolen service coats; three and a half will buy three pairs of woolen blankets; four will buy a rifle.

Representation for negroes in the Department of Labor was assured when Secretary Wilson announced his intention to appoint a special advisor on negro problems. No separate bureau will be established for the present. The expert who will be appointed will advise the Secretary with regard to the best course to pursue in order to insure the most effective volunteer cooperation of negro workers in meeting the industrial needs of the nation.

WAR

W.S.S.

SAVINGS

STAMP

Buy a

The Government Buys it Back from You

January 1st. 1923 for \$ 5.00

GO to any bank or post office, department store, drug store, cigar store or any store showing the W. S. S. sign.

Pay 25c. and you'll get a U. S. Government Thrift Stamp and a Thrift Card.

Paste your Thrift Stamp on your Thrift Card.

When you feel like saving another 25c., buy another Thrift Stamp and paste it on the same card.

When you have pasted sixteen of these Thrift Stamps on your Thrift Card, take this card, together with a few cents, to any bank or post office, or store that sells W. S. S. and exchange it for a \$5.00 War Savings Stamp and Certificate. If you do it in May, you pay 16c. in addition to the sixteen Thrift Stamps. If in June, 17c. The price goes up 1c. a month.

On January 1st, 1923, the U. S. Government buys this War Savings Certificate from you. It pays you \$5.00 for every stamp pasted on it.

Your profit is 4% interest compounded quarterly. This is more than 4¼ % simple interest.

It is a good profit and it is guaranteed to you by the U. S. Government — the safest guarantee in the world.

You can buy your second War Savings Stamp just as you bought your first one.

### You'll Help Win the War

Don't think your quarters will not help in this war. If each man, woman and child living under the Stars and Stripes will save and buy just one 25c. Thrift Stamp each day, this will give the Government nine billion dollars a year with which to help our fighting boys.

The W. S. S. is the finest way in the world to save money. W. S. S. cannot go down in value. The U. S. Government guarantees that they will go up—go up from \$4.12 to \$5.00. We do not often have the chance to buy investments guaranteed by the U.S. Government to go up in value. Pure self-interest alone should make every man, woman and child rush to buy W.S.S

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

##### I. Patriotism and Loyalty.

A. THE POISON GAS BRIGADE. 1. You are a Four Minute Speaker. Give a decisive talk on the work of "The Poison Gas Brigade." 2. Take for your theme "The greatest forces of life are the least visible." Show the full effects of "Poison Gas." 3. Give a classified list of the members of "The Poison Gas Brigade," and show in what ways every member is a dangerous enemy to the welfare of the United States. 4. As if in a public speech in your school show how school students may fight "The Gas Brigade." 5. Explain in full the reasons that led Abraham Lincoln and Theodore Roosevelt to speak as they did concerning traitors. 6. Write an original story in which you show how a student "chased a rumor down." 7. Sum up the common rumors spread by pro-Germans, and explain the folly of every rumor.

B. GOING "OVER THERE." 1. Consider the article as a letter. Point out its excellent characteristics. 2. Show how the article is like or unlike Irving's "The Voyage." 3. Point out examples of humor, description, contrast, comparison, suspense. 4. Write a composition describing the different characters mentioned. 5. Give the speech that the war correspondent may have given in the second cabin dining room. 6. Write a composition concerning different kinds of life preservers. 7. Show how the last part of the article has the nature of climax. 8. Show how the author gives the article personal interest. 9. Show how the author emphasizes the spirit of present-day ocean travel. 10. Show how the author unites his personal experiences with matters of national value.

C. DEMOCRATIZING OUR DEMOCRACY. 1. Prove that every school house in the land should become the capitol of its community. 2. Explain in full what is meant by "the creation of a community council." 3. Tell what your own school is doing, or might do, as the capitol of its community.

D. THE CRACK IN GERMANY'S ARMOR. 1. Prove that Germany is now acting in a spirit of desperation. 2. Show that "treasonable, pacifist, weak-minded and faint-hearted" people will aid the Kaiser's coming peace-drive. Tell what attitude we should take toward such people. 3. Prove that Germany planned the present war long before its declaration. 4. Explain the importance of ore beds to the German Empire. 5. Point out one way of crushing the German military power. 6. Explain why we must not listen to Germany's peace pleas until her military power is completely crushed.

E. THE WOMAN'S LAND ARMY. 1. Prove the worth of the Woman's Land Army. 2. Write an original story based on one of the pictures. 3. Show how the author uses direct discourse for emphasis.

##### II. Editorial Articles.

A. 1. THE MYSTERIOUS DISAPPEARANCE OF ZIAN KALI. 1. Explain in what respects the article is humorous. 2. Write an original story based on a misunderstanding of terms that are familiar to you.

##### III. The News of the Week.

A. 1. With the aid of a blackboard map give a clear account of the present situation on the western front. 2. Explain why the British find the situation encouraging.

B. 1. Give the history of Sevastopol. 2. Point out on a blackboard map the position of the Crimea, and explain its importance. 3. Tell how the Crimea has recently come into interest.

C. 1. Give a clear account of the present situation at Vladivostok.

D. 1. Explain what is meant by the overthrow of the Ukrainian Rada. 2. What does this show concerning the Germans?

E. 1. Tell what reasons are leading to the disintegration of Austria-Hungary.

F. 1. Explain in full why the United States should aid Russia.

G. 1. What inequalities have existed in Prussian suffrage? 2. How are these inequalities related to the present war?

H. 1. Give a talk in which you prove that the suggested German peace proposals should be rejected unless the German military power is crushed.

I. 1. Write a short oration on American Spirit as represented in "Unlimited Man Power."

J. 1. Write a letter such as an enthusiastic worker in a shipyard might write to his friends.

K. 1. Prepare a speech for your school assembly on the subject of saving as a war measure.

L. 1. Give an oral explanation of the charges made by General Maurice.

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Political and Economic Conditions in the United States—Story of the Week, "To Correct a 'Mischievous Blunder,'" "On Mistakes and Their Repetition," "Democratizing Our Democracy," "The Woman's Land Army."

1. What evidence of progress in the better organization of (a) our food problem, (b) our war industries, (c) our military forces do you find in this week's issue?

2. What evidence do you find to prove that the people are more completely behind the war than ever before?

3. Show that to allow the Postal Zone act to stand "would be to attack and embarrass the free processes of opinion."

4. How do you account for the fact that our failures have thus far been in the industrial field? What is the remedy?

5. Is your community falling into line in the way suggested in the article "Democratizing Our Democracy"?

6. What answer would you make to the farmer who said, "Gals can't do men's work"?

##### II. German Propaganda—"The Poison Gas Brigade."

1. What is the significance of the title of this article?

2. Make a list of the classes of society whose members belong to the "Poison Gas Brigade." Discuss the methods of defense which should be used against them.

3. Write out, as fully as you can, the answer to one or more of the eleven methods of attack indicated in the last paragraphs of this article.

##### III. The War at Sea—"Going 'Over There'."

1. After you have read this article, write a brief description of the conditions which surround ocean travel at present.

2. Describe, in as full detail as you can, the present methods of submarine attack and defense.

##### IV. Iron Will Win the War—"The Crack in Germany's Armor."

1. For the better understanding of this article, look up the word "minette" in an encyclopedia or a book on geology.

2. Summarize the article showing "how vulnerable the German Empire really is."

3. Why did Germany occupy Luxembourg and make a drive into northeastern France at the very beginning of the war?

4. In what way does the author give you new courage and hope as to the ultimate outcome of the war?

##### V. Political Unrest in Europe—"Maurice Challenges the British Cabinet," "Prussian Suffrage Reform," "The Disintegration of Austria-Hungary," "The Overthrow of the Rada."

1. Why did the Government in England feel that it was necessary to ask the House of Commons for a vote of confidence after General Maurice's attack?

2. Discuss the political results of a vote of lack of confidence in the House of Commons.

3. What is the composition of the various parties in the Prussian Diet? What is the present system of suffrage in Prussia and what are the reforms which were proposed? What are the chances of success for suffrage reform in Prussia at present?

4. How do you account for the fact that two premiers are mentioned in the news item about Austria-Hungary?

5. Make a list of the various race elements mentioned in this news item. What part does each play in Austro-Hungarian politics?

6. Explain, as far as you can, the political conditions which have brought about the present situation in Ukraina.

##### VI. Progress of the War—Story of the Week.

1. Analyze the news from the battle front in the West. Where will the next great attack probably be made?

2. Do you find any evidence that the American forces are taking a larger part in the fighting than ever before?

3. How do you interpret the German activities in the region to the north of the Black Sea?

4. What significance do you attach to the so-called German Peace Proposals?

Pebbles

German agents are still observing wireless days.—*Brooklyn Eagle*.

A profit is without honor unless it is decently small.—*Seattle Post-Intelligencer*.

Russia is welcome to her White Guards and her Red Guards. But why on earth can't she get rid of her Black Guards?—*Cassell's Saturday Journal*.

"What, Lucy! The baby crying for more than an hour, and you reading?"

"Oh! but, madame, he doesn't bother me!"—*Le Pêle-Mêle, Paris*.

Whether they intervene or not, the Japanese seem to us the ideal people for Nippon the Far-Eastern schemes of Germany in the bud.—*Passing Show*.

According to the German Press, "Sunday's dinner" in England now consists of two courses only—potato peelings and cheese-rind. Trust the Hun to keep a watch on the Rind!—*London Opinion*.

Judge—Have you anything to say before sentence is passed?

Burglar—The only thing I'm kicking about is bein' identified by a man that kep' his head under the bedclothes the whole time. That's wrong.—*London Opinion*.

"I met a real optimist the other day," said a physician, "a fellow to whom I certainly doff my hat. He had lost a leg in a railway accident, and when they picked him up the first thing he said was:

"Thank God, it was the leg with the rheumatism!"

A German farmer in Australia had a rather delicate wife who worked herself to death in a few years. After the funeral a neighbor was condoling with him on his great loss. "Yah," said August, "she vas a good woman—but a bit too light for my work."—*Sydney Bulletin*.

One often hears a great deal about the absent-minded professor, but it would be hard to find one more absent-minded than the dentist who said soothingly as he applied a tool to his automobile under which he lay: "Now this is going to hurt just a little."—*Globe*.

Mrs. Day, a young matron, was seated one spring morning on the piazza of her pretty suburban cottage, busily engaged in plying her needle. A coat of her husband's was in her lap. Looking up from her work, when her husband appeared in the doorway, the young woman exclaimed, somewhat fretfully:

"Really, Eugene, it is too bad, the careless way your tailor put this button on. This is the sixth time I have had to sew it on for you."

Two Irishmen in Maryland decided that they would enjoy a bit of sport on the occasion of the "opening of the reed-bird season." They were provided with tremendous game-bags, and, as it was their first experience, they were very enthusiastic.

Suddenly Callahan spotted a bird, and, taking very careful aim, prepared to fire the fatal shot. But Casey seized him by the arm, crying, frantically:

"Don't fire, Callahan, don't fire! Ye've forgotten to load your gun!"

LAZY LINES

After that there  
Kaiser's in  
Hell and  
We sign  
Four  
Memorandum  
Receipts and  
Go home,  
I'm a-going  
To sign up a  
Life hitch  
With the dear-est  
Angel on earth  
And move way  
Out in the  
Country  
Where we won't  
Have to

Stand no for-  
Mations or  
Nuthin'  
And we'll raise  
A garden and  
Onions  
And things --  
But if that  
Woman ever even  
Looks like  
Feeding slum or  
Canned Willie,  
So help me,  
Hannah,  
She and the  
Six youngun's  
Can get a  
New pa-paa.  
—*Plane News*.

A Lesson  
In Nutrition

Compare the oat—the greatest of grain foods—with foods shown above costing many times more. In calories—the unit of nutrition—the figures are as follows:

Calories per Pound			
Quaker Oats	- -	1810	Young Chicken - 505
Round Steak	- -	895	Eggs - - - - 720

Then compare the cost. For the same nutrition, meats and eggs, at this writing, average some 7 or 8 times the cost of Quaker Oats. A week of breakfasts on Quaker Oats costs about the same as one meat breakfast. And note what Quaker Oats supplies—

Twice the energy units of round steak.  
Ten times the lime, three times the phosphorus, and one-fifth more iron.

You get the ideal food for growth. You get the best-balanced food in existence. You get every needed element in just the right proportion. And you get exquisite flavor. Make Quaker Oats the entire breakfast. Then mix it with your flour foods. The more you use the more you save, and the better folks are fed.

Quaker Oats

The Extra-Grade Oat Flakes

13c and 32c Per Package Except in Far West and South

(1896)

# TRAVEL AND RESORTS

The Independent invites inquiries from its readers pertaining to Travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. This Department is under the supervision of the BERTHA RUFFNER HOTEL BUREAU, widely and favorably known because of the personal knowledge possessed by its management regarding hotels everywhere. Office at Hotel McAlpin, Broadway and 34th street, New York, where personal inquiry may be made. Address inquiries by mail to INFORMATION, The Independent, New York.

# THE POISON GAS BRIGADE

(Continued from page 288)

Chasing a rumor down has the fascination of a hunting expedition plus a great service rendered the country.

Every doubtful war tale should itself be doubted. Where possible, it should be denied. The facts given below are specific denials for most of the disloyal statements now current. If you find a person whose act, word, tone or manner leads you to think he may be pro-German, the best way to shut him up is to report him secretly to the National Committee of Patriotic Societies, Southern Building, Washington, D. C. The rumors that have been most widely spread are given here, with the facts in reply, the rumor in each case being quoted.

1. "What is the use of being economical? We might as well spend our money and enjoy it while we have it. I understand that the Government will confiscate the money we deposit in the banks, and cheat us out of our savings." To brand this piece of gossip a German lie we have but to quote a recent official statement from Secretary McAdoo. He says: "This absurd and vicious rumor is wholly without foundation." As a general principle, a rational man disbelieves any tale or supposition by a private individual concerning what the Government will or will not do.

2. "I hear the farmers have been kicking because they haven't had a square deal from the Food Administration; so last year they produced less crops than usual because they said it didn't pay to work so hard, and if we don't grab all the food we can we are likely to go hungry." The farm output last year was \$6,000,000,000 over the preceding year. The official report of the estimated value of all farm products, including animals and animal products, was \$19,443,849,381 for the year 1917, while the total value for the year 1916 was only \$13,406,364,011. If anybody makes general remarks that could be based on statistics, demand the figures to justify the report.

3. "Somebody told me that an American battleship had been sunk in American waters, and the Government hushed the matter up. I am afraid some of our own boys were on the ship, as they were leaving about that time. Isn't it awful?" The awful thing is that anybody would be fool enough and traitor enough to spread such a report. Official denial has come from the Secretary of the Navy. No such accident has occurred; and if it should occur, which is a wild improbability, the nearest kin of the boys on board would be notified at once. Remember that, concerning an American soldier boy, no news is always good news.

4. "I hear a salt famine is coming. But we aren't to be caught napping. I bought enough salt to last our folks a year, and I advise you to do the same for your folks." Here is a typical example of how the German liars produce a local famine merely by predicting it. Suppose even 20 per cent of the housewives of a given community rush in a panic to the grocery stores and buy sufficient food of any kind to last a year. This alone means a shortage that may take weeks, or even months in the war congestion of freight traffic, to counterbalance by new shipments. During this time, the people who have not hoarded this particular article of food are apt to be deprived of it, and to suppose a universal famine exists. How could salt be scarce when the domestic output in the United States for last year was 550,000 tons greater than the year before? An official of the

## One Machine for every purpose by the use of these interchangeable carriages

AN OPERATOR CAN CHANGE CARRIAGES IN 2 MINUTES

AN EXCLUSIVE FOX FEATURE

THE ability to use any one of five different length carriages on one typewriter is only one of several exclusive features of the Fox Typewriter.

This particular feature enables an operator with one machine to do varied types of work—correspondence, billing, the making of reports, any out of ordinary work. The carriage can be changed in a minute, the operator doing it without the slightest trouble.

Another remarkable feature of the FOX—its extremely effortless operation—is a revelation to new users.

F o x

Typewriters are used in larger numbers by railroad telegraphers than any other typewriting machine. In no other class of work do typewriters receive harder use, and the ability of the Fox to stand up year in and year out under such trying conditions has put it in first place with these discriminating users.

The Fox dealer in your locality will be glad to place a machine on trial in your office. Should it happen that there is no dealer in your immediate vicinity, write us direct and we will make it easy for you to test out the Fox in your own office.

## OH, YOU SKINNY!

Why stay thin as a rail? You don't have to! And you don't have to go through life with a chest that the tailor gives you with arms of childish strength, with legs you can barely stand on. And what about that stomach that flutters every time you try a square meal? Are you a pill-feeder?

Do you expect Health and Strength in tabloid form—through pills, potions and other exploited piffle?

You can't do it; it can't be done.

The only way to be well is to build up your body—all of it through nature's methods—not by pampering the stomach. It is not fate that is making you a failure; it is that poor emaciated body of yours; your half-sick stomach plain in your face and the word loves healthy people. So be HEALTHY—STRONG—VITAL—enjoy LIVING. Don't think too long; send 6 cents in stamps to cover mailing expenses of my book, "Promotion and Conservation of Health, Strength and Mental Energy," written by the strongest physical culture instructor in the world.

LIONEL STRONGFORT  
Physical and Health Specialist  
540 PARK BLDG. NEWARK, N. J.

Bureau of Mines at Washington says the production for 1916 was nearly 6,400,000 short tons, while for 1917 it was nearly 6,950,000 short tons. European war conditions do not affect the salt market here appreciably, as not more than three per cent of the total consumption is imported.

5. "Did you know that war bread isn't safe? I have been told that the Germans are putting ground glass in it, and large numbers of people have been terribly cut. If that's true, no more war bread for me." In the first place, particles of glass so fine as to be invisible would be too small to inflict serious damage. In the second place, flour mills and bakeries are now under the inspection of the Government, which makes handling by German spies next to impossible. In the third place, Major James Miles, head of the investigation department of the Food Administration, personally conducted ten different lines of investigation to run down these false reports, and put the Secret Service on the track. He found there was one case in Fort Smith, Arkansas, where a baker had trouble with one of his employees and the employee out of spite filled with glass a loaf of bread that was to be delivered to an orphanage; the lips of the children were cut by the bread and the newspapers made a sensational story out of the affair. German propagandists whispered the story all about the country, and in a few weeks thousands of persons believed that war bread was merely a container for ground glass!

6. "They say our boys in the army have grown demoralized with intemperance, immorality and other vices, and if their families knew what was going on they would turn against the Government." Secretary Baker, after a personal tour of close inspection, says our boys in France are both physically and morally fit. General Pershing says no finer, cleaner large body of men was ever brought together.

7. "My religion forbids killing and I am urging our young men to resist the draft." Your religion is based on a false translation of the Scriptures. The commandment "Thou shalt not kill" that you are so fond of quoting, should have been translated "Thou shalt not commit murder," which was the meaning of the original version.

8. "I am patriotic, but I want my drink of beer. I don't think the war should take away all a man's liberties. I am against the bunch of grape juice cranks who are trying to get national prohibition laws passed." You betray yourself. Do you know that more than \$700,000 was contributed chiefly by brewers and bottle makers, to wage this fight; that the Kaiser's largest backers in this country are the liquor interests; and that in New York City alone more than 20,000 Germans favoring these interests were subscribers to the last German War Loan?

9. "Look how the capitalists and profiteers are making money out of this war. It is a rich man's war, and the poor man pays as usual." It is a rich man's war—the rich men are doing and sacrificing most to win it. Look at the rich men who have given up their interests and incomes to serve the nation all or part time without pay. These include Vanderlip, Vail, Schwab, Edison, Ford, Hoover, Garfield, Coffin, Davison, Baruch, Williams, Rosenwald, Stettinius. The time of such men is worth from \$20,000 to a million dollars a year. On a conservative estimate, the rich men of this country are donating \$40,000,000 worth of time, knowledge and experience annually to the Government. The new Federal control of the railroads means cutting off the salaries of the chairmen of the boards of directors, aggregating \$2,000-

# *A School of National Service for Women*

*July 15 to August 23*

(2 periods of 3 weeks each)

Are you a woman in early or middle life, and in good health? What are you doing—what can you do to help win the war for civilization?

There are some things that everybody can do, but the great need is for trained men and women. Leaders, captains of patriotic endeavor, are wanted in every community.

Put yourself under a discipline for six weeks or at least for three, and get personally organized.

Live in a camp. Don a uniform. Commit yourself to a program.

Learn to do the work that the Red Cross, the Canteen Corps, and other organizations are laying upon patriotic women everywhere.

Learn to teach and drill others in these patriotic activities.

Food production, food conservation, the preparation and serving of food to the sick and the well.

Telegraphy and Telephone Operating. Signal Work. Canteen Work. Military and Relief French for those already proficient in the language.

First Aid to the Injured. Military Calisthenics and Maneuvers. American History and Current War Topics. Reconstruction Work for the disabled.

Following the general plan of the National Service School conducted last year with phenomenal success by the Woman's Naval Service at Washington, D. C. New features dictated by experience and the progress of the war.

Joint Auspices of Chautauqua Institution and the Woman's Naval Service.

An opportunity for the thoroly American young woman at small cost of time, effort, and money, to put herself effectively into the service of her country.

000, and cutting in two most of the salaries of the presidents; but raising the wages of the 1,939,399 railroad employees to a total amount of more than \$300,000,000 a year. Two-thirds of the income of the very rich man is taken away from him by the war, the surtax being for him 63 per cent of his income, while it is nothing at all for an income below \$5000.

10. "I read that our boys haven't enough weapons and ammunition." Remember that a lot of newspapers are secretly pro-German, as the money of German capitalists frames the policies and pays the salaries of the editors and reporters. An official statement from the Ordnance Bureau declares the production of Springfield rifles has reached 11,250 a day, with 1,050,000 rifles already delivered, and 600,000 on hand. This volume of rifle manufacture is the greatest the world has ever known. The production of small arms and ammunition has reached as high as 270,000,000 rounds a month—a larger output than France or England ever reached. The German soldier fears the American soldier partly because the American soldier is the best equipt fighter in Europe today.

11. "It seems hard to believe that the most efficient nation in the world could do such horrible things, after conferring so many benefits on civilization." German efficiency has been loudly and thoughtlessly overrated. In one year we have taken away from the Germans the chemical industry that took them a generation to build up. German war diplomacy has been a synonym for stupidity, and the laughing-stock of the world. The captains of the interned ships who ordered them destroyed before we could take possession boasted that the famous German efficiency had ruined the vessels beyond repair. Still our plain American mechanics put the boats rapidly in shape to land American soldiers and supplies on the trail of the Hun. A material skill that defies moral principle has to fail in the end.

12. "What's the use of hurrying, worrying and sacrificing? The war will soon be over anyhow, the Germans know they are whipped, and they haven't the money or the men to fight much longer." The officials of our Government, who know European conditions not by hearsay but by investigation, believe the war will last from three to five years, perhaps longer, and some military experts apprehend that we shall still be fighting ten years from now. The German hordes have to be driven back across the Rhine before they will acknowledge themselves defeated. An English captain lately returned from the front warns us: "Do not believe any stories you hear as to the enemy's being broken, as to its being at the end of its resources, as to the morale of the German soldiers being a thing of the past. The German morale is not broken. The German soldier, the German officer, and I assume also the German nation, are full of confidence. Germany has hundreds of thousands of reserve troops. England, fighting on twenty-seven battle fronts, has no reserves left. There is no hope for early victory, and the only hope for final victory is in the power of you Americans to speed up your war work twice as fast as you have been doing. For God's sake, hurry!" Even to think peace now is unpatriotic. The sane pacifists are all converted. The famous English pacifist, the Archbishop of York, says that our supreme duty is to kill as many Germans as possible. William Jennings Bryan, once leading pacifist of the United States, says: "We must all get together and give 'em hell." Nothing short of this can save the world. You can't fight? Yes you can, you can fight the German propagandist! He is the deadly foe.

## MEETING NOTICES

### BROOKLYN RAPID TRANSIT COMPANY NOTICE TO STOCKHOLDERS.

A special meeting of the stockholders of Brooklyn Rapid Transit Company will be held on Thursday, the 23d day of May, 1918, at 12 o'clock noon, at the office of said Company, at No. 85 Clinton Street, in the Borough of Brooklyn, City of New York, State of New York, for the purposes and objects of:

Considering and acting upon the proposition to consent to the execution and delivery by the Company of a mortgage limited in principal amount to not exceeding one hundred and fifty million dollars, in substantially the form to be submitted at such special meeting (or at any adjournment thereof) and covering all the property and franchises of the Company now owned (except such as may be expressly excluded by the terms of said mortgage) or hereafter acquired in exchange for, or with the proceeds of, the bonds issued under said mortgage, to secure the payment of the obligations of the Company contracted or to be contracted for the transaction of its business, or for the exercise of its corporate rights, privileges or franchises, or for any other lawful purpose of its incorporation. Such of the bonds issued under said mortgage as may be determined by the Board of Directors shall be convertible into stock of the Company under such regulations as the Directors may adopt.

Considering and acting upon any and all matters germane to the foregoing purposes and objects. The stock transfer books will be closed at 3 o'clock P. M. on Wednesday, May 8, 1918, and will remain closed until 10 o'clock A. M. on the day immediately succeeding the final adjournment of said stockholders' special meeting. The polls will remain open for one hour.

By order of the Board of Directors.

**BROOKLYN RAPID TRANSIT CO.**

By J. H. BENNINGTON,

Secretary.

JAMES C. BENNETT, Secretary.

## DIVIDENDS

### GENERAL DEVELOPMENT COMPANY

61 Broadway, New York, May 6, 1918.

At a meeting of the Board of Directors of the General Development Company held this day, a dividend of One Dollar (\$1.00) per share on the capital stock of the Company was declared payable June 1st, 1918, to stockholders of record at the close of business on May 15th, 1918. Books will not close.

SAM A. LEWISOHN, Treasurer.

### OFFICE OF

#### THE NIAGARA FALLS POWER CO.

15 Broad St., New York, May 7, 1918.

At a meeting of the Board of Directors of this Company, held on the 7th day of May, 1918, a dividend of \$2 per share on the capital stock of the Company was declared from the surplus net profits, payable on the 1st day of July, 1918, to stockholders of record at the close of business on the 15th day of June, 1918.

F. L. LOVELACE, Secretary.

The Board of Directors of the American Cotton Oil Company on May 7, 1918, declared a semi-annual dividend of three per cent, upon the Preferred Stock, and a quarterly dividend of one per cent, upon the Common Stock of the Company, both payable June 1, 1918, at the Banking House of Winslow, Lanier & Co., 39 Cedar Street, New York City, to holders of record of such stock at the close of business on May 15, 1918.

The Stock Transfer Books of the Company will not be closed.

RANDOLPH CATLIN, Secretary.

## THE TRIAL OF JESUS ITS LEGALITY

By Dr. S. Srinivasi Aiyar, Late High Court Vakil of  
Mylapore, India

### ITS ILLEGALITY

By Hon. John E. Richards, of the Court of Appeals of  
California

A classic—a judicial review of every phase of the world's most tragic court room trial.

It is a perfect and complete exposition of an event which in importance stands alone in the Christian world. The most remarkable work ever offered the public.

Address Book Department, The Lawyer & Banker  
Box 96 New Orleans, La.

# THE WOMAN'S LAND ARMY

(Continued from page 282)

Don't tell that. It might discourage plump women."

Various organizations are coöperating with the Land Army in helping forward the movement. The Young Women's Christian Association is taking it up as a part of their emergency work among women affected by the war. The association brings to this service its large and country-wide experience with girls in summer camps and in county associations. For the undertaking \$5000 has been appropriated. Suitable housing and chaperonage are provided. The address of the Woman's Land Army of America is 32 Fifth Avenue. Further information concerning the association's part in the work can be obtained from Miss Mary North, National Board of the Y. W. C. A., 600 Lexington Avenue.

A by-product of this patriotic movement is the standardization of farm work.

The result is more and better work.

A girl in overalls and a blue work shirt weeded her conscientious way the length of the corn field. "Where's the boss?" she asked a real hired man when she reached the end of her stent.

"In the south meader." He stopped for a friendly chat. "Whatyer want?"

"I've finished my job. I want to know what to do next," replied the farmerette.

"Gosh darn all hemlock!" ejaculated the hired man and pantomimed a fainting fit. He recovered to explain that under such circumstances you sat in the shade and waited till the farmer came around.

The typical hired man has been treated like a beast of burden. Like a beast of burden he has had no defense but balking. The eight-hour day under which the farmerettes work encourages careful work. The unit system gives the women laborers control over their living conditions. All this must act favorably upon the chaotic farm labor situation.

The wages paid these women are not equal to those paid unskilled male farm labor at present. The inequality has not, however, worked harm, because the girls are supplementing and not competing. The scarcity of men sustains any wage demand men may make. The girls are enlisting for patriotic reasons. Perhaps we are too ready to assume that a consecrated soul must not expect as much money as an individual who is on the make. This matter will right itself when normal conditions return. Meantime "The Girl with the Hoe" is a picturesque and significant figure.

Village Pedagogue—Darwin says we're descended from monkeys.

His Auditor—Well, what abaht it? My grandfather may 'ave bin a gorilla, but it doesn't worry me.

Voice from the Fireside—P'raps not, but it must have worried yer grandmother!—*Passing Show.*

Little Johnny—Say, Bill, father's got a new set of false teeth.

Bill—Go on! Wot will he do with the old ones?

Little Johnny—Oh, I s'pose mother'll cut 'em down and make me wear 'em.—*Sydney (Australia) Bulletin.*

Lady (to soldier who has been decorated for bravery)—And what inspired you to act in that heroic manner?

Jock—Weel, ye maun ken, ma'am. Ah've put ma money in the War Loan, an' Ah want to keep it safe.—*London Opinion.*

Roads, streets and other things with German names are being Anglicized. Berlin wool, it is to be hoped, will be Berlin worsted.—*London Opinion.*

## How the Armies' need for meat was answered

**I**N a fighting man's ration meat is the important item. Twenty ounces of fresh beef, or its equivalent, is called for daily.

To supply the meat needs of an army that was suddenly expanded from 100,000 to 1,500,000 is a tremendous task. Added to the needs of the Allies, it is a staggering one.

In one week, Swift & Company was called upon to supply the Allies and the American Army abroad 24,000,000 pounds of meat and fats—enough to have fed America's peace-time army for more than six months.

An order of this size means the dressing of 13,000 cattle and 200,000 hogs.

To move the finished products 800 freight cars were needed. Of these 650 were from the Swift refrigerator fleet.

Three days after the order was received by Swift & Company shipments began, and the whole amount was rolling seaward within a week.

Swift & Company's entire resources have been geared to every war demand. Since January 1, 1918, over 400 carloads of our products per week have been shipped abroad on war requirements.

The Nation's meat-supply machinery has stood the test.

Not once has there been a failure to meet the Government's needs.

This service Swift & Company performs without Governmental guarantee of profit, and with a limit of 9 per cent return on capital employed in the meat departments. This means about two cents on every dollar of sales.

Swift & Company, U. S. A.

# CHANDLER SIX

*Famous For Its Marvelous Motor*

## First Quality Has Put Chandler in First Place

**W**HEN men talk now of fine cars selling at medium prices they speak first of the Chandler. Because, for five years, the Chandler has been such a good car, so well built, so dependable in its service on the road. And because now, so distinctly, it offers extraordinary value.

The most distinguished feature of the Chandler Six is its marvelous motor—Chandler-designed and Chandler-built—which, through five years of refinement without radical changes, has been developed to a point approximating perfection.

The life, pick-up, power and endurance of the Chandler motor have been a revelation to thousands of experienced motorists.

The Chandler motor is mounted in a really great chassis, and Chandler bodies offer an attractive range of choice.

## MES AMIS, LES AMERICAINS

From *The Stars and Stripes*, official newspaper of the American Expeditionary Forces, we quote this story of the greeting of a French blessé to the American soldiers:

"He hobbled up on his crutches, his left trouser-leg hanging limp below the knee. His face was drawn and haggard, his whole body emaciated. His uniform, once the dark blue of the French marines, was spotted and faded and minus several buttons. His eyes were those of a man who has seen horrors.

"Yet his manner, as he approached the little group of American soldiers, was as gentle as that of the most polished courtier of the *ancien regime*. Steadying himself on his left crutch, he brought up his right hand—a gnarled disfigured hand it was—to salute, and began, in good but quaint English:

"You—you Americans, I salute you! I, who have been these nine months a prisoner in Germany, salute you. You are the first American soldiers I have seen."

"Prest to tell his story, he said he had been on the French battleship 'La Gloire' at the time she was torpedoed in the Atlantic. He had gotten away in a small boat, but the submarine that struck down the battleship pursued his craft, firing at it. That was how he lost his leg.

"The next he knew, he was in the bowels of the U-boat, a prisoner. Arriving at Bremen, he was hurried by rail to a prison camp, with scant attention paid to his injured limb. Amputation was therefore necessary; with proper care and treatment, it might have been avoided.

"For nine months he existed rather than lived in the prison compound, fed on black bread and vegetable parings.

"Water?" he echoed, in response to a question, "No water could I get! Always we were thirsty—and hungry? Oh, so hungry! It was cold, too—cold all the time. And we were given no clothes; all we had were these"—indicating his frayed uniform—"that we brought with us."

"Under the agreement for the mutual exchange of wounded prisoners, he was brought back. He had heard rumors, in Germany, of the appearance of American soldiers on the soil of *La Patrie*, but they were rumors only. He had hoped it was so, but had not known for certain. And now his hope was realized.

"I have a particular reason for wishing to see you Americans do well in battle. I come from Lille. In that city my two young sons—all I had—were shot down by the Germans. I am *blessé*—pointing to his poor stump of a leg—as you see. I cannot avenge them. But you—you may be able to do it! I wish you—how do you say it?—wish you luck.

"*Bonsoir, mes amis, les Américains! On les aura!*"

## REMARKABLE REMARKS

**BILLY SUNDAY**—It is Bill against Woodrow.

**PASTOR LEHMAN**—Germany is the future of humanity.

**EMPEROR WILLIAM**—There is only one law. That is my law.

**EZRA POUND**—Come, my song, let us express our baser passions.

**W. H. TAFT**—We are fighting for the most sacred cause since history began.

**REV. W. P. HANKS**—I have seen Belgium under the hoof of these God-forsaken despots.

**GUSTAVE LEBON**—Modern history seems to be advancing faster than modern thought.

**MARY HEATON VORSE**—Our civilization as it stands is built only for normal conditions.

**OTTO H. KAHN**—The people ought to be instructed in exact detail how and where and in what way to save.

**ORRICK JOHNS**—Oh, beautiful mind, I lost it in a lot of frying pans and calendars and carpets and beer bottles.

**GLEN BUCK**—Words are but the arbitrary, man-made symbols by which we convey to others the pictures of our minds.

**DUKE ERNST DUNTHER**—Were Wilson not the leader of so huge a country we would regard him as a political mountebank.

**ED. HOWE**—If I should choose to marry again, I believe I should propose to a telephone girl of considerable age. They have been so well trained.

**THE GERMAN CROWN PRINCE**—It is only by reliance upon our brave sword that we shall be able to maintain that place in the sun which belongs to us.

**ARTHUR BALFOUR**—The destruction of Germany has never been the Allied aim and is desired, so far as I know, by no sane man in the whole civilized world.

**WILLIAM BRADY, M.D.**—Chew your food until it is rendered to a creamy consistency. After a month of this practise you will feel like a magazine interview of yourself.

**MONTAGUE GLASS**—There is a supranos who hollers "Murder, Police"! and we call her a dramatic supranos, and there is a supranos who gargles. That is a coloratura supranos.

**SAMUEL GOMPERS**—I think the greatest, the most radical, the most idealistic and most fantastical declaration which any body of men has made has been by the Bolsheviks of Russia.

**THEODORE ROOSEVELT**—If any man works three days at high wages and loafs the next three because of the high wages he has received during the first three, he is an enemy to America and an ally of the Kaiser.

**JAMES WILSON**—Peace would be the fulfillment of the Prussian dream, for they have within their grasp the very heart of continental Europe and resources which would make sure further conquest upon the other nations of the world.

In 1917 Johns-Manville say:

"During the current twelve months our requirements have been approximately 65,000 tons of asbestos fibre."

About 1250 A.D. Marco Polo said:

"A Turke, named Kurcifar, told me that a certayne min-erall of Earthe was found in a nearby Montayne. But amounts were so scarce that none but Kings could find the fortunes it cost when spunne into cloth."

*A Few Pounds then for just  
one King—now a Hundred Million  
Pounds yearly for All Peoples*

**M**ARCO POLO found the Ancients of Tartary bruising small pieces of silky rock-fibre in a brazen mortar. He had stumbled on the crude efforts of ignorance to turn asbestos—the gift of Nature—to the use of rulers of men.

For it was known that such rock, so treated, gave a substance unharmed by fire—which flames served only to bleach and cleanse. So they washed and spun and wove it into cloth. But the labor was so great and the substance so rare that the product was only for kings. As Man's development progressed, new needs for comfort and safety arose. But within asbestos were the properties that met those needs—and many more. So man

delved and found a way to make these uses available and the mines increased in number and production.

Around asbestos a great industry has been built and its wheels kept whirring to meet the public need. Asbestos is unique for it is unaffected by the action of acids and fire, electricity, decay or moisture. So many are its uses that Johns-Manville alone, mine, crush, mould and weave over one hundred million pounds a year into Shingles, Roofings, Brake Linings, Insulations, Packings, Cements, Electrical Devices, Tapes, Clothes, Yarns—hundreds of products that enter every avenue of science and the useful arts.

# Teeth-Cleaning Methods Must be Changed

*All Statements Approved by High Dental Authorities*

## Old Ways Do Not End the Film

It is evident that brushing teeth too often fails to save them. Teeth still discolor, still decay. Statistics show that tooth troubles are even on the increase.

The fault is not with the tooth brush. It lies in a film which resists the brush, and keeps the teeth unclean.

That slimy film which you feel on your teeth is the cause of nearly all tooth troubles. It clings to the teeth. It gets into crevices, hardens and stays.

That film is what discolors—not your teeth. It hardens into tartar. It holds food which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. And that very often leads to other diseases.

So the chief object of tooth-cleaning must be to remove that film. Without that, brushing cannot save the teeth.

Methods which cannot end the film must be superseded by a method which can. That method is Pepsodent—a pepsin dentifrice which has been proved by four years of clinical tests. It seems to solve completely the problem of this film.

This is to offer a one-week test to show its results to you.

## Watch the New Way For One Week

Pepsodent is so efficient that it quickly proves itself. It clearly does what nothing else has done. So we offer a One-Week tube to all who will use it and watch results.

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object is to dissolve the film, then to constantly prevent its formation.

Pepsin long seemed impossible. It must be activated, and the usual agent is an acid, harmful to the teeth.

But science has now found a harmless activating method. Five governments have already granted patents. That method is employed in Pepsodent alone.

Able authorities have proved Pepsodent by thousands of clinical tests. A very large number of dentists have watched its results for years. The time has now come when we feel that every one should know it.

Send the coupon for a One-Week tube. Use it like any tooth paste, and watch the results. Note how clean the teeth feel after using. Note the absence of the film. Note how the teeth whiten as the fixed film disappears.

One week will convince you, we believe, that Pepsodent should forever displace your old teeth-cleaning methods. Cut out the coupon now.

## TO THE AMERICAN PEOPLE A MESSAGE FROM GENERAL PERSHING

By Cable to The Independent

Please assure the American people that the morale of the officers and men under my command is beyond all praise. From the docks of disembarkation up to the first line trenches everyone seems to be doing his best, and an American's best is not bad. If only the American people could see with their eyes the task before us they would agree that the quickest way to victory is to prepare as tho the war would take two or three years more and require four or five million men.

JOHN J. PERSHING

Headquarters of the American  
Expeditionary Forces in France

May 16, 1918

## THE PEOPLE'S RIGHT TO KNOW

**P**RESIDENT WILSON has assumed a grave responsibility in attempting to prevent investigations by the Senate Committee on Military Affairs of the activities of the War Department in relation to aircraft and ordnance production and the Quartermaster General's supplies. He has declared that he will consider the passage of the Chamberlain resolution authorizing the investigations as "a direct vote of want of confidence in the Administration." He has expressed the hope "that every senator who intends to support the present Administration in the conduct of the war will vote against it." Finally he declared, "These are serious times, and it is absolutely necessary that the lines should be clearly drawn between friends and opponents."

What does the President mean? That any one who presumes to question the efficiency of an executive department or bureau or board is to be written down an "opponent" of the Administration? That Congress may not investigate what the War Department is doing and how it is doing it without being guilty of failure to "support" the Administration?

It is hardly a tenable position. The conduct of the war is the people's business, not exclusively the Administration's business. The people have a right to know how the war is being carried on, with what efficiency, what speed, what effectiveness. They cannot know that of themselves, or find it out for themselves. They have a right to look to their representatives in Congress for assurance on this vital point.

If the President is going to insist that Congress may not inquire about these things without being denominated the President's "opponent," the people are come to a pretty pass indeed.

Efficiency in administration, in business or in government, consists in giving a job to some one, granting him full authority to do it, and then holding him to rigid responsibility for doing the job thoroly and well. The President has now been given by Congress, thru the passage of the Overman bill, the utterly free hand he has asked for in executive organization.

He has unprecedented authority in the conduct of the war. He cannot complain if he is held to the most rigid responsibility.

Now, under the American Constitution, the President can

be held to responsibility only by public opinion. Public opinion is worthless unless it is based upon knowledge. The public can not *know* how the war is being conducted. It can either swallow the conduct of the war whole with its eyes blindfolded or it can desire its representatives in Congress to investigate and make public the facts, in so far as is possible to do so without detriment to the progress of the war.

Mr. Wilson opposes this latter course. He has apparently drawn a line on the sand and said to Congress and the country: "Those who are willing to believe without evidence that the Administration is conducting the war well will stand on this side of the line; they are the Administration's friends. Those who want evidence as to whether the war is being conducted well in every line of endeavor will step across the line; they are the Administration's enemies." It is a dangerous distinction to make. The President is not wise to set it up.

Why should not the President say to the Senate and to the country: "Those are the Administration's friends who demand of it the highest efficiency, who hold before it the highest standard of achievement, who assist it to attain that standard not only by applauding its successes, but by pointing out its failures. The Administration, gentlemen, has nothing to conceal. You are cordially invited to investigate every phase of our conduct of the war. If you can point out shortcomings and suggest improvements, we shall be heartily grateful. In any case, the people, whose representatives you are, have a right to know."

Secretary Baker, we believe, was better advised than his chief when he met the proposal to investigate the War Department with this statement:

I have received your letter of May 10 enclosing a copy of Senate Resolution 241, introduced by Senator Chamberlain, providing for the investigation by the Military Affairs Committee of the Senate of the progress of aircraft production and into any other matters relating to the conduct of the war by or thru the War Department. I do not know how far additional powers are needed by the Military Affairs Committee of the Senate, and clearly the War Department could have no wish adverse to the most complete inquiry by the Senate Military Affairs Committee. I point out, however, that every facility which the War Department has is freely at the disposal of the Senate Military Affairs Committee, whether any additional authority is conferred by resolution or not.

The people have a right to know.

## SHOULD WE DECLARE WAR ON BULGARIA ?

**T**HE impatience which is occasionally manifested in the American Congress and press against President Wilson for his reluctance to declare war against Bulgaria and Turkey arises from a misunderstanding of the situation. There is nothing to be gained from a declaration of war against Bulgaria and a great deal may be lost.

We could not fight Bulgaria if we declared war against her, but Bulgaria could fight us. So far as known there has been no demand from the Allied War Council for American troops to be sent to Salonica, but on the other hand, if we declared war against Bulgaria, Bulgarian troops might be sent to the French front and add to the strength of the Germans there. So far the Bulgars have refused to conform to the demands of their allies to send troops out of the Balkans in aid either of the German armies against France or of the Austrian armies against Russia. Nothing would suit Germany better than a break between Bulgaria and the United States, for that would enable her to draw upon Bulgaria for troops and supplies wherever they were needed.

The Bulgarian people are, as they always have been, de-

cidedly friendly toward the United States. Many of the Bulgarian statesmen and military leaders of the younger generation were educated at Robert College, Constantinople, or other American schools. If America had been in the war from the start, it is very doubtful if the Austrian Czar of Bulgaria could have induced the Bulgarian people to enter the war on the Austrian side, altho Bulgaria had an opportunity to make territorial gains by that act. Reports say that hundreds of Bulgarian soldiers are deserting and slipping thru to the Allied lines at Salonica and that these are largely Bulgars who had formerly lived in the United States. When we declared war upon Austria the German Wolff Press Bureau circulated the false report that we had also declared war against Bulgaria. This caused great distress in Bulgaria because the people did not want to be drawn into a conflict with the Americans. The Bulgarian Sobranje or congress has stedfastly stood out against a declaration of war against the United States. Premier Radoslavoff has offended the German and Austrian governments by his refusal to break with America. Vice-Premier Pechoff has taken the same attitude and declared that he

Providence Sunday Journal

## THE DRIVE TO DEATH

would resign if Bulgaria went to war against the United States.

Bulgaria has no love for her present allies. The hereditary hatred against Turkey has never become extinguished and has recently been revived in the disputes over the border territory in the vicinity of Adrianople. The German and Austrian officers who during the war have been in Bulgaria have, as everywhere, aroused resentment by their overbearing dispositions and harsh treatment of the population. Bulgaria has all too little food of her own and she resents having it confiscated for the benefit of Austria and Germany. With Russia the Bulgarian people are allied by race and sentiment, but they distrusted the Czar's Government and not without reason. At the outbreak of the Great War when Bulgaria was still neutral several Bulgarian officers volunteered for service in the Russian army against Austria and Germany. Among them was the "Bulgarian Napoleon," Radko Dimitrieff, who led the Bulgarian troops on their victorious march toward Constantinople in 1912 until they were stopped by the great powers. It was under the command of this Bulgarian general that the Russians made their spectacular advance into Austrian Galicia early in the war. When King Ferdinand, in opposition to the will of his people, brought Bulgaria to take sides against Russia, Dimitrieff threatened to return to Bulgaria and lead a rebellion against him. With the overthrow of the Czar's Government Bulgaria loses all ground of apprehension or enmity against Russia. Miliukov, one of the leaders of the Russian revolution, was formerly a professor in the Bulgarian university at Sofia and other leaders of the new Russia are decidedly friendly toward Bulgaria. The Russian prisoners who were captured in Rumania and sent into Bulgaria were received by the people more like brothers than foes. Toward England Bulgaria has always felt grateful since Gladstone waked the world by his denunciation of the atrocities of the Bashi-Bazouks.

Americans who have recently returned from Bulgaria report that they have been well treated thruout the war. The American schools in Bulgaria are running as usual and are well attended. The American Consul General Murphy still remains in Sofia and is *persona grata* with the Bulgarian Government. There are now some twenty-five Americans resident in Bulgaria, missionaries, teachers and commercial agents, and they have no complaint to make against the Bulgarians.

The Passing Show, London

## PRUSSIAN PROGRESS

## CAGED!

There is no doubt but that Bulgaria is heartily sick of the war, but it would be impossible for her at the present time to break with her allies. If her soldiers have to spend another summer on the hot and fever-stricken lines of Macedonia they will be more disgusted than ever. We must remember in fairness that Bulgaria has some excuse for entering the war in defense of her own interests. It is generally acknowledged that the treaty of Bukarest that put an end to the war of 1913 was unfair to Bulgaria, altho Bulgaria may have deserved such harsh treatment by precipitating the second Balkan war. By the treaty of Bukarest territory inhabited largely by the Bulgars was ceded to Serbia and to Rumania. In the present war Bulgaria has avenged herself and gained more than she deserves. If the Allies win they will not, of course, allow Austria to keep the northern half of Serbia and Bulgaria to keep the southern half. But on the other hand, if the Balkan question is settled on ethnographical lines, as the Allies and President Wilson have said it ought to be, Bulgaria would be awarded part of Macedonia now claimed by Serbia and Greece and the part of Dobrudja ceded by Rumania to Bulgaria in the treaty just concluded. As for the port of Kavala, which was betrayed into the hands of the Bulgars by King Constantine, we must remember that before this it had been offered to Bulgaria by Premier Venizelos with the approval of the Allies. The most promising solution of the whole question would be probably a federation of Balkan states, of which of course Bulgaria would be a member.

The Bulgarian people are now realizing that they are on the wrong side. Before many weeks they will realize that they are on the losing side. When they find that they are not bound to their present allies by bonds of sympathy or of interest or of fear, it will be hard to keep them even nominally numbered among our enemies. In the meantime it is obviously our policy to avoid active hostilities toward Bulgaria so long as possible.

## AVE ITALIA!

THE nation-wide celebration of Italy America Day on May 24 gives Americans an opportunity not only of expressing their gratitude to Italy for joining the Entente Allies on that date three years ago but also of revising their ideas of Italy. Too long has Italy been regarded as a museum and a pleasure park, a land of beauti-

ful lakes, historic ruins and picturesque beggars. The American definition of "a person of culture" has been "any one who has taken Cook's Italian tour." Of those who have written most about Italy some would look at nothing later than *cinque-cento*; others disdained anything after A. D. 0. Few there were who knew or cared for living Italy.

But in the last three years Italy has proved herself very much alive. She showed her independence and courage in breaking with her allies and she has held her frontier against the armies of four nations. Last year when the Austrians did break over the Alpine barrier the military critics generally believed that Venice was lost. But the Italian armies rallied and halted the enemy on the Piave instead of the Po.

Now Italian soldiers are fighting in France side by side with Americans and our aviators are bringing down Austrian airplanes in the valleys of Venetia. Hundreds of thousands of Italians have become American citizens. Hundreds of thousands who had come to America to seek their fortunes have gone back to fight for their fatherland. According to the ancient rite those who have mingled their blood become brothers forever. Italians and Americans are now blood-brethren by virtue of the rite consummated on the Somme and Piave.

We must learn to know and love the new Italy as we know and love the old. We need a Columbus who shall discover for us the Italy of the harnessed waterfalls and recovered Campagna, the Italy that produces a Marconi as well as a Caruso, a Caproni as well as a D'Annunzio, the Italy of Cadorna and Nitti, of Montessori and Deledda. So when we display the Red, White and Green on May 24 it is not only in honor of Italy for holding the right wing of the Allied line, but it is also a sign of our desire for a closer acquaintance and real friendship with those who are fighting our battles.

## CLEANING UP AFTER YOURSELF

THERE is a moral to be found by the change in the customary way men handle themselves in the washroom on a Pullman car. Ten years ago when the men all piled into the smoking room, the wash basins were all nice and shiny. During the evening and in the morning, they were used and—left. Either the porter would sneak in at times and try to wipe them out with a lick and a promise, or some of the more particular among the pas-

sengers would try to wipe out a basin with a towel and, maybe, a curse.

Today consider the same. Each man seems to take a particular pride in leaving the basin just as nice and clean, dry and shiny as he can.

Talk about efficiency. Each man cleaning up after himself and making it easier for the other fellow is Christian efficiency.

Consider the net results. Either the porter has to be kept cleaning up all the time, or each man has to clean up a basin, or use a dirty one. If he uses a clean one he has to clean it.

Isn't it a whole lot nicer, to say nothing of being essentially more Christian, to clean up your own mess than to clean up somebody else's? It is the same effort in either case. Only in one it is a disagreeable business and you do it with maledictions for the fellow that has left the mess. In the other you enjoy seeing how good a job you can do and you don't anathematize the other fellow.

All life is human contact—the Pullman washroom on a big scale. Let's clean up after ourselves and make it easier for the other fellow.

What is Germany? A nation with three allies and no friends.

The fact that the Prussian Government is offering the people franchise reform is pretty good proof that it isn't "loaded."

With Finland filled with pro-German White Guards and pro-Russian Red Guards what has become, we wonder, of the pro-Finns?

The Sinn Feiners boast that it took centuries for England to obtain a grip on Ireland. But they are now making it equally hard for England to let go.

Your subscription to the Liberty Loan proved that you have a head. Until you subscribe to the Red Cross it will remain to prove whether you have also a heart. There is still time to subscribe.

Hearing that the British Isles were going to adopt "Home Rule all round," the Kaiser announced that the Welsh people would never be happy until the Archduke of Saxe-Donner-Dummeiten had given one of his sons to rule them.

Telephones nowadays are implements of warfare. Private telephone service is directly competitive to war telephone service; if you waste the former you hamper the latter. Remember that next time you are mildly curious to know the baseball score, where the fire is or "the correct time, please."

## Somehow or Other

By Willard Wattles

*Somehow or other, I believe  
We're paid about what we should receive,  
For what Life sets on the credit side  
To the debtor Death is not denied,  
And Someone sets the balance right  
With seven stars for His candle-light. . . .  
I'll not much care for anything  
When it comes to that final reckoning.*

*Somehow or other, I believe  
There is utter rest for hearts that grieve,  
And Peace with a cool green coverlet  
Will tuck us in when the time is set,  
On a little hill, and we shall not miss  
The toys of day for her goodnight kiss,  
And Love will come like a weary thing  
Home at last from his wandering.*

*Somehow or other, I believe  
There's a Plan beneath that we don't perceive,  
For a thought that's low or a life that's foul  
Set their sign in belly or jowl,  
And little faith or a withered soul  
Will weazen a face like a shriveled scroll. . . .  
Travel the path that the doubters trod,  
But find at the end of the journey—God.*

*Somehow or other, I believe  
He is strong like a brother to relieve;  
And when I'm gone like a puff of wind,  
The good I've done, and the evil sinned,  
The hopes I've lost, and the soul I've made,  
The loves I've known, and the prayers I've prayed,  
Will seem like a strangely futile thing  
In the light of His face at the balancing.*

# THE STORY OF THE WEEK

## American Troops Parade London

The announcement of Secretary Baker that half a million

troops had been landed in France came out just as London had its first opportunity to see the American soldiers in a body. A regiment of the new national army numbering 2700 men, mostly New Yorkers, marched in columns of fours over a three-mile route in the heart of London on May 11. From the Wellington Barracks they marched past the British War Office, where they were cheered from the balcony by Premier Lloyd George, Bonar Law, Viscount Milner and other members of the British Cabinet; then on to the American Embassy, on the steps of which Ambassador Page was standing with Vice-Admiral Sims and Colonel Slocum, and finally by Buckingham Palace, where they were reviewed by King George, Queen Mary, Queen Alexandra and the Duke of Connaught. General Biddle was in the King's party and Colonel Whitman led the march. On arrival at the barracks each American soldier received an envelope marked, "A message to you from his Majesty, King George V," and containing a facsimile letter as follows:

Soldiers of the United States, the people of the British Isles welcome you on your way to take your stand beside the armies of the many nations now fighting in the Old World the great battle for human freedom.

The Allies will gain new heart and spirit in your company. I wish I could shake hands with each one of you and bid you Godspeed on your mission.

Altho the first announcement of the parade was made in the papers of the same morning the streets were packed with people, who cheered the troops and flag with the greatest heartiness. The papers are very complimentary as to the appearance of our troops. The *Telegraph* may be quoted as the general opinion:

On every judge of fighting manhood the American troops made the same impression. In physique and morale they are equal to the finest troops raised by any country at the time when the standard of the European man power stood at its highest point.

## Mysterious Message from Ottawa

America was amazed at the issuance by the

Canadian Director of Public Information of a London cablegram from the British War Cabinet on May 10 summarizing operations for the week in language that implied that American troops were not needed at present but would be held in reserve for later as an independent unit. Coming as this did at a time when it had just been announced that our troops were being rushed into the firing line with the British and French and that two million Americans would be drafted in addition to the million that were in

## THE GREAT WAR

*May 9*—Old British cruiser "Vindictive" sunk to block entrance to Ostend. General Maurice, who attacked Lloyd George, retired on half pay.

*May 10*—French gain at Grivesnes, before Amiens. Rumanian Parliament dissolves.

*May 11*—American troops parade London. Italians storm Monte Corno.

*May 12*—Emperors William and Charles meet at German Headquarters. Food riots at Prague.

*May 13*—Americans five miles east of Montdidier. Soviet troops retake Rostov-on-Don.

*May 14*—Italian submarine sinks Austrian battleship in Pola harbor. Prussian franchise bill passes lower house of Diet without equal suffrage.

*May 15*—Hard fighting north of Kemmel. Duval, editor of *Bonnet Rouge*, condemned to death for treason.

France or on the way, the Ottawa despatch created a sensation, especially as it was more optimistically worded than recent announcements from the British War Office have been. It said, for instance, that the enemy's advance had brought him into positions "tactically exposed in two dangerous salients on waterlogged ground," which was a queer way of alluding to Mount Kemmel and Hill 82 and a week of exceptionally dry weather. Other passages in the message were:

To the sledge-hammer use of masses of men by the enemy the Allies are opposing the strategy of meeting the blow with the smallest force capable of standing up to the shock, while keeping the strongest reserve possible. Troops on the wings are permitted to give ground within limits whenever the enemy has been made to pay a greater price than the ground is worth, the whole aim being to reduce the enemy

to such a state of exhaustion that our reserve at the right moment can restore the situation.

His reserves have nearly reached complete exhaustion. Those of the Franco-British are still in being, while the American preparations develop. The time draws closer when defeat is inevitable.

Entente are so confident that, given choice of a small immediate American army for defense or waiting till reinforced by a complete, powerful, self-supporting army, they have chosen latter.

This announcement that the Americans were to fight in an army of their own was, according to Washington correspondents, "received by army officers with frank delight," but both Secretary Baker and the British Ambassador declared it contradictory to their latest advices and questioned its authenticity. In reply to inquiries the British Government confirmed its official character but explained the passage regarding the American contingent as follows:

Owing to an error in compilation it was not made clear that this related to the period when America first joined the war and had no relation to present events whereby the American army is being brigaded with the Entente armies.

This explanation, however, rather obscured than clarified the question, for it is hard to understand how a summary of last week's news should have been compiled from plans made more than a year ago.

## The Plugging of Ostend

The attempt of the British to block up the two Belgian ports on the night of April 21 was less successful in the case of Ostend than that of Zeebrugge. Two obsolete cruisers, the "Sirius" and the "Brilliant," were intended to stop up the channel at Ostend, but neither succeeded in getting inside the entrance. Another and more

© Kadel & Herbert

## FIGHTING SEVENTY-FIVE FEET UNDERGROUND

This French bomb-proof shelter on the firing line has been built deep down under the ground in a solid bed of clay. The French soldiers can find comparative comfort there, protected from the shells fired over by the German artillery.

fortunate attempt at Ostend was made on the night of May 9. The cruiser "Vindictive," which had led the landing on the mole at Zeebrugge and came out badly battered, was utilized for blocking Ostend. This operation, like the former, was under the command of Admiral Keyes, who used the destroyer "Warwick" as a flagship. The entrance to Ostend is hard to find in the best of times when it is buoyed and lighted, and now of course there are no guiding lights and mines take the place of buoys.

On the arrival of the British fleet at Ostend shortly after midnight a fog settled down which prevented even the convoy of destroyers with their flares from finding their way about. The "Vindictive" had to cruise up and down for twenty minutes under heavy fire of the German artillery before the narrow mouth of the harbor could be discovered. Commander Godsall left the shelter of the conning tower and stood outside on the deck where he could observe the ship's movements and called his orders to the officers inside the conning tower. The "Vindictive" made her way up the channel some 200 yards and then drove her bow against the pier and prepared to swing across the channel before sinking. At that moment the shell from the shore batteries struck the conning tower, killing Commander Godsall and stunning Lieutenant Sir John Alleyne, who was inside. The cruiser was now hard fast against the pier and lying at an angle of about forty degrees across the channel. Since it was impossible for her engines to move her those who were left on board blew up her magazines and escaped in smaller boats. The explosion blew out her bottom plates and bulkheads and she sank about six feet. A Berlin report claims that the "Vindictive" is outside the main channel and it will not interfere with navigation, but the British believe that the channel is obstructed at least for larger craft. Since Ostend and Zeebrugge are connected by canals it is necessary to close them both to shut off the German submarines and destroyers from the Channel. The British casualties in the raid amounted to forty-seven.

#### Austro-German Entente

Emperor Charles of Austria, having failed to conciliate the Slavic elements of his dominion, seems to have thrown himself unreservedly into the arms of Germany. On Sunday, May 12, he went to the German headquarters in company with his new Foreign Minister, Baron von Burian, and others of his staff, to meet Emperor William. Germany was represented by Chancellor von Hertling, Field Marshal von Hindenburg, General Ludendorf and Foreign Secretary von Kühlmann. It is also said that the Kings of Bavaria and Saxony attended uninvited. According to the Berlin report of the conference:

A cordial discussion took place, and all the fundamental, political, economic and military questions affecting the present and future relations of the two monarchies were thoroly discussed. There was complete accord on all these questions, tending to deepen the existing alliance. The guiding lines of the contemplated contractual agreements already exist in principle.

Whatever may be gathered from this it appears evident that a step has been taken toward the consolidation of *Mittel-Europa*, or Central Europe Union, proposed by Pastor Naumann. It is supposed that among the measures to be carried out are a combination of military forces, a customs union, and a better distribution of food and raw materials thruout the two empires. How the Teutonic Austrians regard the antagonism toward Germany may be seen by a quotation from the Vienna *Tageblatt*:

There are vast bodies of our population who still fail to see any value in our alliance with Germany, and who, even after the evidence of the last four years of faithful friendship on the part of our ally, resent the intimate connection between us and our dependence on one another.

Is it not true, perhaps, that these people dislike Germany merely because of the good order which prevails there in contrast with the disorder which prevails in Austria? In Austria we have somehow come to view our social backwardness, our political disorder, as esthetic values which cannot be too highly praised. We would do well to go to school to Germany. Germany is our true friend, even if she is not always a pleasant one. In Germany there is no joggling on in the old groove; there is no impressionism in German politics.

#### Disorders in Austria

It is quite apparent from what transpires that racial antagonisms are becoming more intense in Austria-Hungary, but it is impossible to determine which side is gaining. The young Emperor on his accession to the throne made it evident that he was desirous of solving the racial question by some sort of local autonomy, but so far his efforts in that direction have resulted only in alienating other groups while failing to secure the support of those that he meant to favor. On March 1 Premier von Seydler explained to the Reichsrat that he proposed to solve the problem by having the various nationalities organized like churches on a personal instead of a territorial basis. But this plan was received unfavorably and in May the Emperor was obliged to dismiss the Reichsrat because of the opposition developed in it. The Czechs and Slovenes are openly mutinous and the Poles have been alienated by the annexation of the Cholm district, which they claim for the Ukraine republic.

The Czechs and Slovaks, on account of their hatred of the Germans, refuse to sell their food. Consequently the cities of Bohemia in which Germans predominate are frequently without wheat, potatoes, eggs or milk. Food riots have taken place in many localities, the more serious being at Smichow, a suburb of Prague, where on Sunday several hundred women gathered outside the residence of the Burgomaster and smashed his windows. Nineteen of the demonstrators were arrested and taken to Prague and when one hundred and fifty other women marched to the city, demanding the release of the prisoners, they were arrested and sent to prison for fourteen days without trial.

The news has leaked out thru Italy that early in February there was a great mutiny in the Austrian fleet at Pola and Cattaro. At the latter port the Socialists and Slavs revolted and raised the red flag on six cruisers and several destroyers. The admiral was imprisoned in one of his ships and authority taken over after the Bolsheviki manner by a "Committee of the Crews." The Germans and Hungarians among these sailors refused to take part in the mutiny and finally gained the upper hand. After a week of much disorder the mutineers consented to surrender on the agreement that none of them should be punished. After an investigation the Emperor Charles is said to have cashiered thirty officers because of their slackness in discipline.

#### Prussian Franchise Bill

In the German press the question of the reform of the electoral law of the Kingdom of Prussia is receiving as much attention as the war. Both the King and his Premier have declared their determination to make the electorate more democratic yet the junkers are holding on to their power relentlessly. The chief object of the bill now before the Diet is to break up the three-class system which puts it in the power of the wealthy faction of a community to overrule a popular majority. Clause

#### HOLLAND SPEAKS UP FOR HERSELF

"Will there be any left over for me?" is the question that Holland is asking anxiously as she sees her food ladled out to feed Belgian refugees, German children, German deserters and English and Russian prisoners of war.

3, which provided for an equal vote for every man, was struck out of the bill by the committee and the Lower House by a vote of 236 to 185 refused to re-store it.

The provisions of the bill for the re-organization of the Upper House, for secret ballot and for compulsory voting were passed.

The attempts of the Independent Socialists to hold mass meetings of protest were prohibited by the police. What they think of it may be judged from a remark made by one of their representatives, Heinrich Ströbel, in the House of Deputies:

Attempts are being made to build up a modern political system on medieval lines under which the junkers and capitalists can join hands to deprive the working classes of their rights and keep them in permanent subjection.

King William has promised Premier von Hertling that he will dissolve the Diet if it votes down the franchise bill. The recent successes in France have so strengthened the military party that they are not only holding out against the reform of the Prussian Diet, but are hoping to rescind the resolutions passed last July by the German Reichstag in favor of a peace without annexations and a general disarmament.

After the passage of the bill the House of Deputies adjourned until June 4. The bill now goes to the Herrenhaus, but Vice-President Friedberg, announced that the Government would insist upon the adoption of the equal suffrage provision within a definite period.

#### Opposition to Irish Con- scription and Home Rule

The Lloyd George Cabinet, by proposing to extend conscription to Ireland immediately and to establish Home Rule without waiting till the end of the war, has offended both factions. The Ulster organizations, which just before the war were devised for the purpose of preventing the enforcement of the Home Rule act passed by Parliament, are now being brought again into activity for the same purpose. The Unionists hold that if the Irish refuse to take up arms in this war for freedom and democracy they will have forever forfeited any right to Home Rule. The *Sheffield Telegraph* says that wherever the Irishman is he is always against the government and ready to fight anybody but the enemy.

On the other hand, the antagonism to conscription has been thoroly organized and has brought together all factions outside of Ulster. At the conference at Mansion House the Redmondites, the O'Brienites, the Laborites, the Sinn Feiners, and the Clericals joined in united opposition to the draft law. Fifty-five members of the Irish party in Parliament met at Dublin and resolved that

The enforcement of compulsory military service on a nation without its assent constitutes one of the most brutal acts of tyranny and oppression of which any government can be guilty. The present proposal of the Lloyd George Government to enforce conscription in Ireland is an outrage and a gross violation of the national rights of Ireland.

#### REFUGEES FROM THE GREAT BATTLE

Two train-loads a day of refugees from Picardy are arriving at Basle, Switzerland, and being sent forward thru Swiss territory into France again. These Swiss soldiers are working with the Red Cross representatives to make the refugees' journey as easy as possible

Twenty-seven of the thirty Roman Catholic bishops of Ireland have signed a manifesto calling upon the Catholic population of the country "to resist conscription by the most effective means at their disposal." The pledge to this effect was administered by the Catholic priests and bishops on Sunday, April 21. The clergy read the pledge sentence by sentence as the people recited it after them or had it passed in at the church door signed by their parishioners.

As a demonstration against conscription a Workless Day was ordered for April 23. In Dublin no bread or milk was distributed, no newspapers were printed, no tramways or railroads were run, no shops or saloons were open during the day, and no electricity was turned on after six o'clock. In the north of Ireland Anti-Conscription Day was not observed.

Both sides are looking to America for support in this crisis. Sir Martin Hall, for eighteen years a strong opponent of Home Rule, makes this interesting suggestion in a letter to the press:

As we have failed, why not ask the United States to help and offer to hand over the government of Ireland to them? Instead of creating a possible menace on our shores we should bring our allies nearer by thousands of miles. Under their beneficent rule Ireland would prosper as she never has done. We should bind America to us by bonds of mutual gratitude.

The Lord Mayor of Dublin has applied to Foreign Secretary Balfour for passports for himself and his secretaries in order that they may go to Washington to bring their case before President Wilson and ask his interference in their behalf.

In Congress With only two votes against it, the Overman departmental reorganization bill was passed by the House last week. Thus is concluded an important chapter in the political development of the United States Government. Beyond this, the week was notably active on Capitol Hill. The \$60,000,000 housing bill, pending for many weeks, was agreed to by Congress and sent to the President. Definite refusal to consider

woman suffrage came from the chairman of the Senate committee on that topic. Likewise in the Senate there was made an attempt to postpone the new high rates on second class mail matter, but no action was taken. The House began consideration of the army appropriation bill, carrying the total of \$11,777,666,000, exclusive of the estimates of about \$3,000,000,000 for heavy ordnance and fortifications. The new bill covers the recently announced program of some \$15,000,000,000 for the war needs of the coming year. The census committee reported a measure authorizing funds for the 1920 enumeration, and the special water power committee made arrangements to conclude its hearings and report the much-desired bill. Agreement by the conferees was reached on the amendments to the selective draft law.

An event which now occurs weekly almost entirely without notice in the daily press is a regular conference between Secretary of State Lansing and the foreign relations committee of the Senate. The purpose of these conferences is to establish closer relations on matters of international import between the executive and the treaty-ratifying branches of the Government, so that members of the Senate may be thoroly familiar with the attitude of the State Department.

Adjournment of Congress, desired to take place in July, may be postponed indefinitely.

#### The Aircraft Investigation

Charges and counter charges involving the reputation of the sculptor, Gutzon Borglum, and of many officials of the Government having to do with airplane production and construction, were thrown back and forth last week pending the outcome of several formal investigations. Rather an extensive probe, not only into the question of aircraft production, but also into the "conduct of the war" has been planned by the Senate. Meanwhile, acting under instructions from the President, the Department of Justice is sifting charges of dishonesty and malfeasance made in this connection.

International Film

#### "FAITH" JUSTIFIED

Our first big concrete cargo boat, "Faith," has surpassed expectations on her trial trip in San Francisco Bay, averaging a speed of more than eleven knots and seeming to be practically free from vibration. Concrete barges have long been used successfully for short hauls, but the "Faith" is our first experiment in concrete-built ships for the high seas. Its success promises to further considerably one solution of our shipbuilding difficulties.

The first part of this controversy had to do with the status of Gutzon Borglum as an investigator for President Wilson. The impression left by the documents in the case, so far published, is that Mr. Borglum was permitted by the President to look into aircraft matters and that he was given a quasi-official but not an official status. Later these privileges were withdrawn, and later still there was made public in the Senate certain correspondence to show a financial connection between Mr. Borglum and manufacturers or promoters of aircraft material.

The Borglum charges and counters, however, are not expected to play a main part in the investigation. Washington despatches generally indicate that every official concerned in aircraft production is desirous to have the facts impartially examined. Certainly this is true of the public. The investigation will probably be long drawn out and it is hoped that it will be corrective as it goes.

In a letter to Senator Martin, Demo-

cratic leader in the Senate, President Wilson made it clear that he would regard the passage of the Chamberlain resolution calling not only for an aircraft investigation, but also for a general investigation into the conduct of the war, "a direct vote of want of confidence in the Administration." As this issue goes to press the gage of battle between the Executive and the Senate still lies, so to speak, on the ground.

Former Justice Charles E. Hughes has accepted President Wilson's request that he coöperate with Attorney General Gregory in the investigation of the criminal charges in connection with aircraft production.

#### We Need More Money

While Congress was endeavoring to clear the decks last week for a July adjournment, the Treasury Department launched a campaign for new revenue to be raised at once in order to meet new and unexpected expenses. Provided Congress agrees with the Treasury Department to the extent that it determines to open the question, the chances are that there will be no adjournment till autumn.

The unexpectedly heavy estimates for the coming year include the \$15,000,000,000 army program, about \$1,500,000,000 for the Navy, with additional estimates looked for, and \$2,500,000,000 for the Shipping Board. The principal source from which the new revenue is expected to be drawn is income and excess profits. Majority Leader Kitchin of the House declares that the rates on both can be doubled. Chairman Simmons of the Senate Finance Committee indicates that the additional tax burdens should be spread over the population.

Steps to convince the Executive Department that further tax legislation at this time is unnecessary were taken at conferences between members of Congress and the Treasury Department.

#### A Million Tons of Shipping

Up to May 11, according to the Shipping Board, one million tons of ships were completed. More than half of this tonnage was delivered since January 1, and the monthly totals show a steady upward curve. Virtually all these ships are of steel. Lest there should be a misapprehension regarding the work of the Government, it is stated that most of these deliveries were either on the ways or in contract form

when the United States entered the war. None of the ships of the "wood program" have been delivered, though forty-six have been launched. Delay in obtaining boilers is alleged as the reason for failure in delivery, which of course means turning over the completed vessel to the Government for which it was built.

Among the points where ships were delivered last week are Seattle, Sparrows Point, Md., Gloucester, N. J., and Wilmington, Del.

#### Election Day Is Coming

Both sides are playing for position in the opening moves of the congressional campaign this fall. From the Republican side it is announced that the first gun will be fired May 28 at the Republican state convention of Indiana. The platform to be prepared there, it is declared, will be the model of republicanism for the nation. National Chairman Hays has given out a statement in which the following cardinal doctrines are advocated:

First, that the Republican party is the "win-the-war-now" party.

Second, the party stands for peace by victory and not by compromise bargains.

Third, that the party advocates immediate preparation to meet conditions arising after the war with a sound protective tariff and conservative financial system.

At Fort Wayne, Indiana, Speaker Champ Clark fired what the despatches described as the opening gun for the Democrats. The real fight in the coming election, said the Speaker, is for the control of the House. "Ours is a magnificent record," declared Mr. Clark, "which anybody save a stark idiot can easily and successfully defend. Upon that unequalled record we confidently appeal to the grand inquest of the nation in the coming campaign." Among the achievements of the Democratic Congress cited are the tariff bill, the income tax, the federal reserve bank act, the farm loan banks, the opening up of Alaskan resources, the federal trade commission, the shipping board, besides the needed war legislation.

#### Above Party Prejudices

An attempted party coalition for the period of the war with the express object of sending loyal men to Congress without regard to party affiliation is the latest interesting development in the political situation. If this movement succeeds, some of the belligerency of Messrs. Champ Clark and Will Hays

#### A WOMAN ON THE ROLL OF HONOR

Miss Marion G. Crandall, of Alameda, California, was the first American woman killed by the enemy while she was serving at the front. Miss Crandall was a post-exchange worker with the Y. M. C. A. in charge of a canteen for the French soldiers. She was killed by a shell during the bombardment of St. Menhould.

will cease. A delegation of representative men, appointed by the League for National Unity, waited on leaders of both parties in the House last week, and presented an appeal to disregard party lines in doubtful districts.

"If in any district it is likely that an anti-war candidate be successful," runs a statement from the league, "it is the imperative duty of the two leading parties to effect a coalition against the non-American or anti-American candidate in order to make certain his defeat. An equitable arrangement should be effected between the two parties covering all such districts as require the expedient of coalition in order to avert the election of a disloyal candidate."

The committee appointed by Theodore N. Vail, chairman of the league, to present the appeal, was as follows: Samuel Gompers, president American Federation of Labor; Charles S. Barrett, president Farmers' Educational and Coöperative Union of America; John Hays Hammond, president National League of Republican Clubs; V. Everit Macy, president National Civic Federation; Mrs. Carrie Chapman Catt, president National American Woman's Suffrage Association; Mrs. James Wadsworth, Jr., president National Association Opposed to Woman Suffrage; W. P. Bloodgood, member executive council, Wisconsin Loyalty Legion; John G. Agar, New York; George F. Kull, state executive secretary Wisconsin Loyalty Legion; R. E. Miller, San Francisco; P. H. Callahan, chairman committee on war activities, Knights of Columbus; Frank Morrison, secretary American Federation of Labor; Ralph M. Easley, director League for National Unity.

**Railroad Rates and Wages** The problem of wage and rate adjustments on the railroads has now definitely passed from the field of semi-political controversy to the field of routine administration by experts. This fact is demonstrated daily by statements from Washington setting forth what the Government is doing and proposing to do for the carriers which it controls for the period of the war—at least. Interest centers chiefly on the proposed wage increase and on the freight and passenger increases which it is assumed will follow necessarily. Inasmuch as in these days of billions, figures alone do not tell the story, a quotation from the report of the railroad wage commission to the director general of the railroads is illuminating:

Things came to a head just before the Government took over the railroads. Another three months of private management and we would have seen much more extensive concessions in wages, or there would have followed an unfortunate series of labor disturbances. The Government, therefore, has now to meet what would have come about in the natural course. . . . The Government now enjoys this position of distinction—it is not yielding to threats; it is not compelled to a course by fear of any unpatriotic outburst; it is not making concessions to avoid disaster. There has been no hint that such a policy would be pursued by those who have it within their power. The right thing "at the right time," a measure of justice, consideration for the

needs of the men, whether organized or unorganized, whether replaceable or not replaceable—these are the standards that we have sought to meet. By what amount have the railroad workers been disadvantaged by reason of the war, and how may that disadvantage be overcome with the largest degree of equity, assuming that, in common with all who do not wish to exploit the opportunities which the war affords, these workers can not have and will not expect a full meeting of the entire burden?

The complete report of this commission, which has not been adequately summarized in the daily press, is published in the Official Bulletin for May 10.

Already savings in railroad management which will run well up into significant figures have been effected by the Government. For example, it was announced last week that curtailment of transcontinental traffic by eliminating competition and cutting down passenger schedules will save about \$18,000,000 a year. By securing a \$6,000,000 loan for the New York Central at a reduced interest rate, the Government has virtually served warning that it does not in the future expect to pay more than six per cent for long time loans. Abolition of sinecures among the official positions on the carriers will save hundreds of thousands of dollars. Incidentally, it is pointed out that "it is hardly realized that the roads themselves have in two years, 1916 and 1917, increased wages approximately \$350,000,000 per year, if applied to the present number of employees."

**Averting Labor Troubles** The new war labor board, under the joint chairmanship of William Howard Taft and Frank P. Walsh, has announced plans for the settlement of local industrial disputes

which might interfere with the nation's war program. These plans provide for the appointment of local arbitration committees in industrial cities and districts and of two-member subcommittees of the board itself to act in controversies which local committees cannot settle. Trained field agents from Washington will assist these committees in the accomplishment of their task.

The war labor board will act as supreme court of appeals in cases where the principles established by the President's proclamation creating the board have been violated; where an award made by a board has not been put into effect; and where questions of jurisdiction between government boards are involved.

Several important cases have already been heard by the new board and were last week awaiting decision. Among these is the case of the employees of the Western Union and Postal Telegraph companies, operators of which are being discharged because of their affiliation with the Commercial Telegraphers' Union. A strike in a Washington, D. C., cigar factory was last week adjusted by the board, which affirmed the right to organize, one of the main contentions of the striking women and girls. The demands of the Bethlehem Steel Company's workers are to be investigated by the new board; Secretary of Labor Wilson has requested an investigation into labor conditions in Porto Rico; settlement by the two chairmen of the street railway controversies in Cleveland, Ohio, and Detroit, Michigan, is soon to be attempted.

Coincident with these activities, the

Paul Thompson

#### THE PILOT OF AMERICAN SHIPPING IN FRANCE

Because of his experience in river navigation and his knowledge of managing river boats, Captain Walter S. Ware, of Cincinnati, has been chosen by the United States Government to take complete charge of navigation on the rivers of France which will be used for shipping supplies to the American front. As soon as Captain Ware organizes a company of river pilots, mates, bargemen, sail-makers and master ship carpenters he will sail for France with his American river navigators and mechanics

Secretary of Labor appointed Felix Frankfurter as administrator of war labor activities, to coördinate the work of several departments.

**An I. W. W.** Literature, correspondence and theories of the Fade-away I. W. W. were brought forth in profusion at the trial of the hundred and twelve members of that organization at Chicago for sedition and conspiracy.

That the disruption of the nation's war plans by the I. W. W. was the object of much unscrupulous activity is the main contention sought to be established by Government attorneys. As indicating the nature of some of the anti-war propaganda, the story of a vision which came to one of the defendants was read into the record.

"Mobilization is crippled more and more as the days pass," declared this dreamer. "Federal officials are in a panic, and the rich are fleeing from the country in private yachts. Thru sabotage hundreds of trains are stalled, wheels of industry have ceased to turn, cities are dark and troops are disbanding for lack of food. The President and his Cabinet leave secretly on a yacht for parts unknown; the Senate fades away."

**Disloyalty Punished** Thirty years' imprisonment at Fort Jay, New York, was the sentence given Ernst Flentje, a sergeant in the 301st Infantry at Camp Devens, last week.

The man was convicted of unpatriotic utterances, witnesses at the trial testifying that Flentje had said that President Wilson was incapable of standing

Baltimore American  
WHERE ARE MY WINGS?

the responsibilities put on him by the war; that this country had no business entering the war, and that Germany could have won if the United States had kept out.

A court martial at Camp Custer last week also imposed a heavy sentence for alleged disloyalty, and at Santa Fe the trial of former Major Birkner, charged with violation of the espionage act, opened.

**Do You Know a Spy?** Every citizen a detective, coöperating with the Department of Justice in running down spies, is the scheme proposed by Attorney General Gregory as a measure to make more

efficient and at the same time to democratize the work of winning the war at home. "The district attorneys are instructed to make it clear," says an official statement, "that complaints of even the most informal or confidential nature are always welcome, and that citizens should feel free to bring their information or suspicions to the attention of the nearest representative of the Department of Justice."

Hundreds of letters are received daily by the Washington authorities from persons who think that they have discovered evidence of disloyalty. Not all this information, by any means, is of value, but the Government wants to encourage it as much as possible.

**Trade After the War** Promising careers in the prosecution of the "war after the war" are suggested by the Department of Commerce, which is looking for "big-caliber men with foreign-trade experience" to serve as commercial attachés for the Bureau of Foreign and Domestic Commerce. These attachés will be well paid—salaries ranging from \$4000 a year upward—will be accredited to American embassies and legations, and will be expected to meet with Government officials and business men. "The appointments," it is announced, "will be made in pursuance of the department's plan to prepare now for the competition in foreign trade that will come as soon as the war is over, and because the work is so vitally important to the future of American trade only men of undoubted qualifications will be considered."

"Trade commissioners" will later on be appointed to Europe, South Africa and the Far East.

COMPLAINANT, JUDGE, DEFENDANT IN THE AIRCRAFT INQUIRY

The charges preferred by Gutzon Borglum (left), a well-known sculptor, permitted by President Wilson to undertake an unofficial investigation of aircraft production in the United States, have resulted in a storm of controversy on the subject of undertaking any war inquiry. A resolution introduced by Senator Chamberlain, giving the Committee on Military Affairs authority to investigate the aircraft program, Ordnance, and the War Department, has been opposed in a letter from President Wilson. In the meantime the President has appointed Charles H. Jones (center) to coöperate with the Department of Justice as special investigator of the criminal charges in the aircraft inquiry. Major General George O. Squier (right), as head of the Aviation Corps, was until recently responsible for aircraft production

# CONNECTING THE MAN AND THE JOB

STAFF CORRESPONDENCE FROM WASHINGTON

**F**IVE years ago a mechanic had a vision of a national system of labor exchanges which should find jobs for men and men for jobs. This vision he set down on paper and took to Congress. It became that formidable thing, a bill. It was discussed and at last rejected. It was too radical. It interfered with the helter-skelter

processes of labor distribution which had been in existence for many long years.

Today the vision of this mechanic is a reality. Its name is the United States Employment Service, with headquarters in Washington and with branches in most of the states—soon in every state. Like magic under the hand of the magician, war, this service has sprung into being. It is expanding daily. It is demonstrating that a federal switchboard for labor is the only kind of switchboard that will work either in peace or in times of belligerency. By dint of an aggressive publicity and advertising campaign, this service is telling employers and employees that it is here to be used, and that using it will connect the man and the job quickly and efficiently and thus help to victory.

This article is to sketch the machinery whereby American labor is being mobilized, to show how it is being used to that end, and how it may eventually be used even down to the task of securing a cook or emergency repair man for a fire-damaged house.

It so happens that the assistant director general of this service, Charles T. Clayton, was secretary to the chairman of the congressional committee which threshed out and endeavored to enact the vision of the mechanic five years back. Here is Mr. Clayton's description of the mechanism:

"The United States Employment Service has nearly 300 branches grid-ironing the industrial sections. The federal and state public employment agencies in more than two-thirds of the states are being operated as one system, permitting the free interchange and distribution of workers between the states and localities. In each of such states there is a state director of the United States Employment Service, with supervision over all the public employment offices within it, while the country has been divided into thirteen great employment districts, each in charge of the employment activities of the states within his district. This decentralization of operation, with a centralization of administration at Washington, facilitates labor clearances.

"Behind these offices, which are the

receivers of applications for workers and for employment, stands the Public Service Reserve, the skilled-labor mobilizing division of the United States Employment Service. This is thoroly organized in every state and is enrolling and classifying workers, not now engaged in war production, who are ready to accept such employment as they are needed and notified. The classified lists of the reserve are in the hands of the branch offices, so that any calls which cannot be met from the lists of the unemployed may be filled from this great reserve. More than 300,000 skilled workers, including 18,000 engineers and executives, already have been enrolled, classified, and are ready for call. A special clearance section is maintained at the main office at Washington to meet calls for men of highly skilled or unusual trades when the branch or other offices cannot readily meet them."

Special machinery has been established for supplying farm labor, and the commercial organizations of cities and towns have been hitched up with the newspapers, the post offices and the Government to assist in this task of mobilizing and exchanging labor. Nearly 100,000 third and fourth class postmasters and rural mail carriers have been made available as farm-labor agents.

To look at the thing in another way: twenty per cent of the population of the United States lives in the twenty-nine cities of 200,000 population and over. The service has branch offices—one or more—in twenty-eight of these cities. Thirteen per cent of the population lives in 238 cities of between 25,000 and 200,000. In more than 200 of these cities the service has branch offices, and the rest are soon to come. Seven per cent of the population lives in 512 towns of between 8000 and 25,000. These towns are served by nearly fifty branch offices and by third-class postmasters. The remaining sixty per cent of the population lives in villages and rural districts. These are connected with the national employment service by the postmasters and rural carriers. In brief, the entire United States is covered in such a way that the needs

ample, the federal employment bureau in New Orleans located and furnished between 6000 and 7000 laborers, skilled and unskilled, to contractors and plants doing Government work. These men were sent from Louisiana to points all the way from Texas to Maryland. Each man got the job that had been set apart for him. There was no waste. Each man knew what he was booked to fill and filled it.

Late last month Connecticut agreed to put into operation a plan of the United States Employment Service whereby manufacturers and merchants are to release some of their employees as part-time emergency farm workers to help with the crops. The Connecticut plan provides that the city employers will continue the wages of their workers during their engagement on the farms, while the farmers will pay them the regular farm wages.

A week ago the Employment Service put up to Director of the Railroads McAdoo a plan for further mobilizing farm labor by reducing fares to agricultural workers mobilized for distribution by the United States Employment Service. It is estimated that while the proposed fare reduction may cost the railroads about \$1,600,000, the carriers will gain \$16,000,000, or ten times that sum, thru the freight returns on the additional foodstuffs produced by these extra farm laborers. These half-fare workers alone, it is reckoned, will produce, or harvest, extra crops sufficient to fill at least 280,000 thirty-ton cars.

Roger W. Babson, whose name is well known in the labor world, has been made chief of the inquiry and education division of the service. One of the big immediate problems, as he sees it, is to redistribute labor for efficiency and to make idle labor immediately effective. He predicts that the elimination of the labor turnover would be equivalent to increasing the available labor supply about twenty per cent. The significance of this figure can easily be imagined. It means adding one new pair of hands to every five now working to win the war. It means multiplying our output by one-fifth.

WILLIAM LEAVITT STODDARD

Kodak & Herbert

The tanks, great caterpillars, which reel and rock and wheeze along the road, carrying gigantic long-range guns or mortars

## THE MOVING OF AN ARMY

**T**HE French Army has gone away. Day and night for more than two weeks they have groaned and yelled and cheered and bugled and curst and grunted under the American Red Cross office windows. The railway yards have been full of them, their oxen, their asses, their pigeons, their horses, their airplanes, their camions, their pontoons, their soup kitchens, their carts, and their heavy artillery. Train after train of them has got loaded and gone puffing heavily out of the station. The mud of — has been churned by thousands of human feet.

Who can describe the moving of an army? You meet it on all the roads converging on —. As dusk comes down you come on regiments of it marching in, the poilus carrying long staves so that they look like pious pilgrims or crusaders en route to the Holy Land, the horses wearily, patiently pulling the interminable processions of carts, the cavaliers plodding along on their tired mounts. Then long, long, long trains of motor lorries, rocking and swinging from side to side along the dusky road, showing no lights for fear of avions, and covered with canvas camouflé into queer futuristic greens, browns and yellows that hide them, in daytime, from the enemy-photographer who rides the air.

BY EDWARD EYRE HUNT

On the broad highway you come on half a hundred little wise-eyed donkeys with straw panniers, such as one sees in Naples. They are the liaison—the brave, sure-footed, little vivandieres who go up to the front line trenches during attacks, carrying food and drink to tired warriors.

Or you come on "tanks"—great caterpillars which reel and rock and wheeze along the road, carrying gigantic long-range guns or mortars or armadillo-like armor and rounded turrets.

Or in the river you see a fleet of pontoons, painted like motor-lorries and extraordinarily light and strong. Or on the prairies of the Somme you see a pigeon-house and a tepee tent where the pigeon man lives—all camouflé so that it looks like the brown field where it squats. Or you see big canvas aerodromes, and airplanes settling like tired dragon-flies into the open runway. Some of them are snow-white; others are jet-black. The black ones are for night raiding, and they are sprung so lightly that they rock back and forth even in a breeze which scarcely turns the wind gage.

The — Army has gone away. In towns where you used to come on their horizon-blue soldiers thick almost as flies in summer, you are suddenly confronted with khaki-clad Britons and Canadians and other Colonials. Tommies with the exaggerated strut of a well-set Mr. Atkins, come from ruined houses or poke about the walls, as if mildly interested in this new quarter of blasted Picardy to which Fate has sent them. Billets and bullets are alike to their philosophy.

Trucks, infantry and cavaliers plod along the dusty roads

The moving army is met on every road as regiments of British reinforcements go to the front to relieve French veterans

*Farming reduced to a mechanical basis means larger crops with less expenditure of human labor*

# THE TRACTOR THAT NEVER TIRES

## A Fable for Farmers

BY ARTHUR L. DAHL

**T**HE work the tank is doing at the front to win the war is being equaled by its prototype, the tractor on the battlefields of American farms.

The question of food has never before, in the history of the world, affected as many people in scattered localities as during the present war. From a matter of a possible inconvenience in the first stages, it has grown to a serious threat, to America as well as Europe, unless all parties unite in producing the maximum crops and at the same time conserve those crops so that the wants of our own and the Allied peoples may be met.

One hundred years ago over ninety-five per cent of the people in the United States lived on farms; in 1910 only a little more than thirty-five per cent of the people engaged in agricultural pursuits. But in spite of the gradual decrease in the number of people engaged in farming, compared to the total population, the production from American farms has constantly increased, so that today the farmer is producing three times as much food as his ancestor of a hundred years ago.

The answer is machinery—power. In the old days it required one man to drive a pair of horses, and both man and animals had to toil long hours in the hot sun to plow a small patch of land. If more horses were used, it required more men. Today one man can sit in the seat of a tractor possessing the power of from twelve to seventy horses, and with one movement control not only the tractor but a battery of plows, or harrows, or other modern farm machines that can plow or cultivate more land in an hour than the same man with horses could cultivate in a day. As our men go from the fields to the battlefields they must be replaced by machinery, if the farmer is to do his share in supplying the world with food. The human element never can be eliminated from agriculture, but scientifically the whole subject of farming is strictly a mechanical one. The actual development of the seed and the growth of the plant depend entirely upon nature. The actual "life" of a

plant is as much a riddle to man as his own life. Every step connected with the planting of the seed and the cultivation of the soil is a mechanical one, and the more it is done by machines the greater the certainty of success. The corn-planter secures more even results than planting by hand, and a field plowed to a uniform depth by a tractor will produce a larger and better stand of grain than where the plowing is done by horses and a hand-guided plow. Accordingly, the farmer who reduces the operation of his farm to as complete a mechanical basis as possible will obtain the best results, the largest crops, with the least expenditure of human labor.

While farming is a mechanical opera-

greater than if we would burn hay in a mechanical engine. Furthermore, every sixth acre cultivated by a horse must be reserved to feed him during the year, while

a tractor or gas engine consumes nothing that is needed by man for food.

With modern farm implements and with efficient power, the farmer can reduce his force of laborers to a minimum and yet perform the work required during the different stages of a growing season. Take the matter of plowing: With a tractor of sufficient power, the farmer, or his son or his daughter (many women are now operating tractors), can guide the machine back and forth over the field while it plows up the earth to a uniform depth, turning corners and reaching close to fences in a manner that cannot be duplicated with horses. If the season is favorable and it is desired to finish the plowing

in the shortest possible time the tractor will go on plowing to its full capacity so long as the fuel and water tanks are kept full. Horses would need numerous breathing spells, and at the end of possibly ten hours, they would need a long rest. On many farms where tractors are used, they are operated day and night for periods of several days, merely changing crews and using headlights for night work. This ability to work continuously for long stretches is one of the most valuable features of a tractor, and it often means the difference between success and failure of a crop.

Tractors are less susceptible to climatic conditions than horses. After long rainy spells the farmer who depends upon horses must often wait for days before the fields are dry enough to sustain the horses. Tractors, with their endless-track or their broad wheels distributing the weight uniformly, can navigate soft ground that would mire horses, and they can pull the heavy implements thru mud that would anchor horses. Again, in the hot summers where the broiling sun makes work impossible for man or beast, the tractor will operate continuously oblivious of heat, and the operator, seated under a canvas canopy, is fanned by the breeze [Continued on page 339]

*Many women are operating farm tractors nowadays*

tion, the very foundation of it is a question of power. It takes power to turn up the soil, break up the clods, plant the seed, cultivate the ground during the growing period, and do the many other things preliminary to a matured crop. It takes additional power to harvest and thresh the grain, haul it to the barn, or lift it into a silo or storehouse. The wasteful, unscientific power plants are human beings, while the efficient, scientific power plants are mechanical. Even horses, for centuries the power-furnishing means on the farm, are described by Edison as being the most unscientific power engines in the world. He says that because they use hay for fuel, their efficiency is no

## BILLIONS FOR BULLETS

The Story of the Remarkable Overnight Growth of the Ordnance Department, Our Biggest Industrial Achievement

BY DONALD WILHELM

**W**HEN the Great War came overseas to America, the Ordnance Department, little tho it was, had an heroic task set it, like that of Jason of long ago, who planted the dragon's teeth, and lo, had warriors! save that it sowed, necessarily, the stuff that wholly new industries and factories are made of. And lo, up they sprang, in all their infinite complexity.

Its buildings in Washington illustrate its miraculous rise in plan, in personnel, in power. They haven't "just growed," these buildings; they have spawned, and multiplied. They haven't risen, slowly, steel on steel and stone on stone; they have leaped up, out of the very earth, officered, equipt and armed. The Department had an apartment, as in space it was, in the War and Navy Building.

"Bing!" said one of its officers. "That quick! Quicker than you can say it, we were grown all over thirteen different buildings! Now we are in four. One of these is the Ford assembling and office headquarters on Pennsylvania avenue, a huge building six stories high; and another——!"

This other has precisely one million square feet, *net*, of office space.

It was one of the dragon's teeth sown by the Ordnance Jason. It is a handsome tho temporary stucco structure, admirable of its kind—one that the cantonment division of the Quartermaster Corps, now the separate entity called the Construction Bureau, caught by the hair of the head and raised right up out of the depths of Mother Earth—raised three stories up, full pano-

plied, with heating plant and all, in less time than it takes a bud to turn to leaf. One week it wasn't there; with a horse and buggy, or a Ford, one could spend a Sunday afternoon driving round the ground it now occupies. Another week—and the building was there; or, rather, three of them, each with a headhouse and six long wings, all adjoining.

This is the headquarters of the biggest industrial achievement in the history of the world.

Measured by results, no belligerent government has a comparable record in point of time. Measured by the obstacles it overcame and by their diverse complexities, such an organization as the Steel Corporation or the Standard Oil, the Panama Canal or sixty-seven hundred Zeppelins along with a Krupp plant or two, isn't worth considering.

And measured by cost the thing takes one's breath away.

In one year the Ordnance Department made direct appropriations and commitments for an amount of money so vast that financiers wonder where it came from, and know that the expenditure would have been impossible without disrupting Finance, had it not been for that salutary bit of preparedness without which the nation would now be stumbling on its sword—the Federal Reserve System. Edward R. Stettinius, Assistant Secretary of War, spent for the Allies, in America, in the first three years of the Great War, three billion dollars. When Germany said, "Hit me, Samuel, if you dare." Samuel hit, and the Ordnance Department furnished the bomb!

How and where, is quite another story; with what he hit is this story.

He hit with all his manufacturing resources, the best old pinch-hitter who ever came up to bat; and Ordnance produced the bat. It cost a lot of money, for Ordnance spent, of itself, *in one year*, our first in the war, about nine times the total value of all the automobiles manufactured in the United States in a normal year; more than the total assessed value of all the property of the entire Commonwealth of Massachusetts, more than the total debt of the United States before the war plus that of all the states and all the towns and cities and counties within all the states, all combined, \$4,756,503,185.

**T**HE Ordnance Department spent this sum in doing what it particularly is designed to do. "Ordnance," explained Colonel MacRoberts, head of its Procurement Division, "is the agency of the Government which furnishes to the army the direct implements of fighting."

An army division, he explains, "consists of 26,920 men and 944 officers, or two brigades, each composed of two regiments of infantry, one machine gun battalion, two regiments of 75's, one regiment of 155 mm. howitzers, and one battery of trench mortars and a battalion of heavy machine guns. These make up the front line forces and are supplemented by a regiment of engineers and one signal battalion of 500 men. For the equipment of a division it is necessary to maintain always in perfect order and ready for instant use,

in round figures: 180,000 rifles, 12,000 pistols, 224 heavy machine guns, 768 automatic rifles, 36 aircraft machine guns, 50 75's, 24 155 mm. guns, 12 6-inch, 24 3-inch, 12 1-pound guns; these, together with all the necessary reserve ammunition and trench warfare munitions, consisting of bombs, hand grenades, rockets, signal lights and other pyrotechnics. In addition to these Ordnance furnishes the personal equipment of the men in the field except clothing and shoes, and such articles as helmets, belts, bolos, mess equipment and other miscellaneous personal equipment, machine guns, drop bombs for aircraft, and so on."

So much for a division of about 30,000 men. To supply an army of 2,000,000 men one cannot get accurate figures by multiplying the huge amounts above by sixty-six, nevertheless one can approximate the quantities in that manner and get some idea of the necessary equipment.

But "some idea" by no mean tells the story of Ordnance production, for the simple reason that tho the Krupps, for instance, were able to go at their tasks all prepared, the Ordnance Department here had not Krupps. No matter how we feel about it now, and it is probably true that history will make us feel better and better about it, it is a fact that our Ordnance Department, as it is now a huge army individually, had hardly seen an army rifle, let alone such a complexity as a hand grenade, because in America a grenade didn't exist. In fact, the Department accurately can be said to have been so small, with less than a hundred officers, and of so narrow experience in modern warfare that substantially it didn't exist. Only a very, very small group of its present personnel had ever served in the army. Many of that few had to be sent abroad. The rest had to achieve an unheard of miracle.

The Department was confronted at

once with a staggering necessity for expanding tremendously its functions and policies and at the same time multiplying its personnel a thousand times. The wonder is that it was able to do any of these three things in so short a time, successfully. It not only did all three, but it looked far enough ahead to provide the means of attaining a peak of production calculated to be continued thru an indefinite number of years. It is easy enough to expand existing industries, tho many of those Ordnance required were at the beginning of the war unborn, but it is another matter to expand, or upbuild industries, to last indefinitely. The policy of Ordnance in this respect was enunciated by Brigadier General Wheeler, who succeeded Brigadier General Crozier and is now abroad, succeeded here by Brigadier General Peirce. General Wheeler, who has been referred to publicly by Secretary Baker as a man of tremendous driving force, who made of Watertown Arsenal a marvel of scientific management, said that the way to overwhelm the Germans is not with one wave of arms but with continuous waves beating on, one after another, without end.

But to attain these continuous waves of production a tremendous force of trained personnel was required. Lieutenant Colonel H. K. Hathaway, now assigned abroad, one of the very first efficiency men called to Washington in May of last year, who has achieved a noteworthy thing in the Control Bureau of the Ordnance Department, said "No private firm could have built up such an organization as this in a great many years, because it would not be able to get the men." But Ordnance got the men very simply. In most instances it picked the best in America, then sent one of those many telegrams, which, in the mass, we shall deem deeply significant some day, reading about like this: "For the welfare of the United States, please confer with us here at your earliest convenience." Men came,

and usually were wanted. Usually each one was put "in the littlest job for which he was fitted technically, while he learned the ropes." Shifting goes on continuously, as the most is made of each man's development. No man has a chance, in other words, to get his spurs embedded in any Ordnance desk; he is required to be straining every capability he has, every moment. There isn't that sense of having a life job anywhere. Orders are orders! In half a moment men are shifted up, down, west or to France. If there is a new-comer at a desk you often go to, you can guess its former devotee is going quite as fast as ever somewhere else; if you don't see him for a week, you can imagine he is working night and day breaking himself in; if you don't see him for a month, you address him in care of the A. E. F., France.

But Ordnance is a huge training school only incidentally. The end and aim of everything is production, and and transportation of the implements produced.

It is a disconcerting task to attempt to describe production so big in space so little, when there are so few of us with the faintest idea of the things required. There is our lay idea of a big gun, for instance. We walk up close to it. It is extremely big, so we look closely at the littlest thing on it—the telescopic sights, then at a little object in them, in all preceding years "Made in Germany"—a bit of glass. America *had to learn* to make that glass, to develop it by laboratory processes, then by shop processes, with all their disappointments and uncertainties. That little piece of glass is almost as essential to the effectiveness of that gun as the barrel itself. And in that piece of glass there are cross-hairs made of spiders' web! That is, the Ordnance Department had to go into the market for spiders' webs—just one of precisely 100,000 parts different in kind.

But that spider web is not the only

disturbing thing about this big gun. As you look at it you realize that a tremendous steel forging was required for its barrel; that forging had to be drilled out; then round it huge steel jackets had to be shrunk in great pits with temperature at white heat, with all sorts of attending difficulties and cost.

But that is by no means all.

Samuel M. Vauclain, vice-president and general manager of the Baldwin Locomotive Works, as well as the head of the biggest rifle plant in the world and one of the biggest shrapnel plants,

since the beginning of the war has had, as a member of the War Industries Board, which has coördinated its efforts with the Army and Navy, guns as his special province. "It was the most difficult thing in the world," he said, "to get gun carriages. It required the expenditure of millions of dollars to assist manufacturers and to bring them in and get them to do it. Instead of giving the complete gun carriage to one concern, we had to give the gun carriage proper to one and the recuperator to another. While there is nice work on the carriage itself there

is an entirely different class of work on the recuperator."

These problems, from design thru to quantity production, are the kind whose details merely have kept hundreds of private concerns in ordinary times baffled for weeks at a time. There are a thousand epics in the devotion of the manufacturers of America to the nation in war—epics that cry to be told and for the most part will ever be among those undiscovered stories of the war that never will be told. There is a glimpse of the spirit back of these epics when [Continued on page 335]

## PHANTASMS OF WAR

### Marching Hessians

BY AMY LOWELL

The white pine blister rust, a disease "made in Germany" and imported into this country with white pine nursery stock from Germany, threatens to destroy our most valuable timber trees. Germany's latest attempt to destroy the wheat crop of California and other states has taken the form of shipment to this country of powerful poisonous pollen.—Daily News Report. The Hessian fly in the wheat regions causes a loss of \$50,000,000; the codling moth costs over \$16,000,000 to the fruit grower; the San Jose scale lays another toll upon him of \$10,000,000; and these are only a few typical examples of the hundred or more destructive imported insects.—U. S. Department of Agriculture Bulletin.

I lay on my back in a wheat field,  
Lulled and soothed by the waving wheat.  
Flat as a golden plate,  
The yellow wheat spread out,  
Upturned and glistening at the old, golden sun.  
It rippled and bent,  
And went all one way at a touch of wind;  
It rose, flowed up to a crest like a wave,  
Breasted the wind,  
Arrested itself a moment  
Poised,  
Then fell again, beaten over,  
And I lay looking up at the concave arches,  
Listening to the swish and sweep  
Of stem impinging upon stem.

Wheatfields,  
And forests where rivers breed:  
This is America,  
Running mile after mile  
Between the great seas.

I lay among the smooth wheat  
And listened to the drone of insects  
Flying above me,  
Humming among the tall wheat ears.  
Drum,  
Drum,  
In a long roll.  
Bass drums,  
Snare drums,  
Setting a pace,  
A tramping tune  
Rapping to the toll  
Of wheat bells tapping in the broiling noon.  
Tramp, through rippling ranks of wheat,  
Up—down—marching—  
Feet.  
Bearskin shakoes,  
White bandoleers,  
Bearded faces,  
Obscene leers  
From narrow pig eyes,  
They come—come.  
Thick-soled shoes,  
Crushing the sweet  
Torn-down turrets of the pliant wheat.  
Mercenary soldiers  
Bought at a price,  
Sent to the Colonies,  
Rich, ripe Colonies,

Sent to reap Colonial wheat,  
Sent to trap Washington,  
Paltry Provincial,  
Sent by the flourish of a broad quill pen  
Thousands of heavy-shoed, bright-coated men  
To fall like a sudden pestilential  
Scourge on America.  
Quintessential spirit of Monarchy  
Spoiling the wheat,  
Trampling a dust path wide as a street,  
Thru acres and acres of proud young wheat.  
Drum,  
Drum,  
Hessians!

I rolled over on my side  
And brushed a Hessian fly from my forehead.

Magnificent, imperial Germany!  
So your army recruits even flies.  
A regiment of burnished insects  
As brightly colored as your troops of those days.  
Conscripts of gossamer,  
Pollen dust of armies.  
Spectacled entomologists and wizened professors  
Martial corps after corps  
And label them "Flowers."

You would shatter our great pines,  
Would you?  
You would press our currant and gooseberry bushes into  
service,  
And force them to feed your soldiers?  
"Pine-rust" billeted even in my kitchen-garden.  
When I walk there of an evening,  
The gooseberries hang their heads under their withered  
leaves  
For shame,  
And the currants have put off their green coats  
And wear black,  
As befits the inhabitants of an occupied territory.

O Brave! Brave!  
Who war upon trees and grain!  
If I could see your old Hessians  
Marching again across our country,  
I would offer my hand.  
They were men against men,  
One as good as another,  
But who can fight the flash of a colored fly  
In the sun!

## DO IT AGAIN!

HERE'S HOW YOUR MONEY GOES—WHEN YOU CONTRIBUTE TO THE RED CROSS FUND

The hospital above, maintained by American workers and American money, is for soldiers who are badly wounded

## THE AMERICAN AMBULANCE

The first Americans to take their part in the Great War were the volunteer workers in the American Ambulance, which has been operating hospitals and field ambulances since the beginning of the war. A fleet of ambulance motors is drawn up here ready for service. On the opposite side of the page is one of the hospitals in the firing zone, its windows barricaded. A large ambulance corps, patterned after the American ambulance, is being organized now under Colonel Jefferson H. Kean as part of the National Army.

## FOR THE NEXT GENERATION

There are 20,060 children in France receiving American Red Cross assistance. Five hundred children a day receive medical attention at Evian, the point of repatriation for nationals of France who are being returned from behind the German lines. One of the centers of the work in the war zone in France was established among villages looted and burned, with practically all buildings destroyed, yet counting among their inhabitants more than one thousand children, all of them without medical care.

## A STOREHOUSE OF MERCY

At this distributing center in France the varied contributed supplies from America are sorted and sent wherever they are most needed

# ILL-CONSIDERED INSURANCE ARGUMENTS

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

As a business people we are so assiduous that often we don't find time to do our business properly. We are in a continual state of ferment. We drive in a way which gives the calm beholder the idea that we are driven: that instead of being aggressive and on the offensive, we are repelling assaults. We are in as much of a rush at our play as at our work. Lord Brougham said of Daniel Webster that he reminded him of a steam engine in breeches. Webster was a fair forerunner of the Twentieth Century American business man. We wear ourselves out all day trying to do two days' work, we hurry home, bolt dinner and put in a few feverish hours afterward trying to enjoy ourselves. And we think we do. And on the Hamletian principle of "nothing is either good or bad but thinking makes it so," perhaps we do enjoy ourselves.

But we are not as thoro as we think we are, nor as we might be. This fact has been demonstrated wherever we have, outside the country, come into competition with certain foreign peoples whose disposition it is to perform their tasks well rather than rapidly. Importers of our manufactures in foreign countries complain of our slipshod methods of packing for transportation. We see that point fully illustrated in the manner in which we put up cotton for export. The bale is inadequately covered, easily torn. The contents protrude from the package on all sides, to be damaged by water and fire and the mud and dust of the streets and wharves. From grower to shipper overseas, everybody thru whose hands it passes is in a hurry to get rid of it.

We have the best system of life insurance in the world, and that is due to the fact that it has been deliberately thought out and slowly improved thru a half century of time. We are also the most heavily insured people, calculating on a per capita basis. But it cannot be proved that we are properly insured. The misfits are more numerous than the fits. That is due to the power behind the drive in placing it.

An insurance solicitor finds that the most difficult portion of his work lies in securing proper interviews with the people he is endeavoring to write. In this he is up against the national infirmity. His "prospects" are too busy to give him that kind and duration of audience essential to fitting them with the life insurance equipment for which their circumstances call. And generally the solicitor is in a hurry. If he can get the application, he is anxious to call on the next man; if he can't, he sees no profit in wasting time.

This leads to loose methods and unsatisfactory results on both sides and, in large measure, accounts for the numerous questions propounded to the director of this department.

In it I can find the explanation of many illogical statements and sincerely held plausibilities which emanate orally and on the printed page from life insurance men, particularly those in the agency field—the salesmen. Haste paralyzes efficiency in action and in the intellectual processes. It induces a careless and slouchy habit of thought, with the result that what the solicitor thinks is an unanswerable argument is merely a clever web of plausibility.

Putting the matter concisely for the sake of brevity, I have read reams of essays in the form of canvassing literature to the effect that a man expresses the value of his life in the amount of insurance he carries. Of course, nothing is less true. There are numerous reasons why men do not carry a large amount—say a sufficient amount of life insurance: their financial means will not permit of it; they have interests which they believe preclude the need of it; they frankly don't believe in it; or they stubbornly won't have it. In none of these contingencies are we warranted in concluding that a small amount of insurance, or none at all, is indicative of the man's value of his life.

Not precisely answering to the foregoing description but approximating the conditions is something which lies before me as I write. I find it in the house-organ of a hundred-million dollar company of more than a half century's endurance. It is an agent's advertisement. I cite it as an example of loose thinking, tho it doubtless will impress some people.

Here is the case as it is put, and I am making extracts at will:

"Suppose that your widow were on the witness stand testifying in a suit for damages for the loss of her husband, who had been killed by an automobile. The case is almost finished. Her lawyer has shown that you were killed by defendant's car and that he was driving carelessly at the time, while you were using reasonable care in crossing the street. Every one feels that she is sure to recover something, but there is still a question as to the amount of the damages."

The proposition is clear and we are hopeful of results. But we are made uncomfortable by the next paragraph, which reads:

"The defendant's lawyer asks her: 'Do you consider that, from an economic standpoint, your husband's life was worth \$15,000, the amount which you are seeking to recover?' Would you want her to have to say, to avoid committing perjury, 'Honestly, I don't think it was. Jim was a \$1000 man and he knew it. That's all the insurance he carried. Give me a thousand and call it square.'"

Because "Jim" had but \$1000 insurance on his life, we are to assume that in appraising his own value he settled on that sum as the proper amount and that his widow is estopped in any efforts she may make to raise the figures.

In spite of "Jim's" failure to properly appreciate life insurance, he may have been and probably was a substantial citizen, with a fair income, was a capable business man, devoted husband and father and a good homekeeper. Insurance did not interest him as much as it should. His attitude

toward it was pretty much the attitude of many lovers of general literature toward Homer or the other older classics. Because one is not capable of being absorbed in the tales of the destruction of Ilium or the wanderings of Odysseus is not to argue that one cares nothing whatever for the music of Shakespeare or Tennyson.

Returning to my text. The writer of the argument from which I have been quoting, leaving the court and the widow with her \$1000, addresses himself to the uninsured—and under-insured-at-large in the following terms:

"If you think you are a \$1000 man, don't carry any more insurance. The insurance problem is solved forever for you, for if you do not think that you are worth more than \$1000, you never will be. But if you place a greater value on yourself than you would on a first-class draft horse, do not let another day pass without acting up to your belief."

If this statement were addrest to me as an under-insured man, or to use the writer's phrase, "a \$1000 man," not only would it fail as an argument to convince me, but I would have difficulty in preventing myself being prejudiced. The premise from which the reasoning is done is false, as I have endeavored to show—no man expresses the money value of himself in the amount of life insurance he happens to be carrying—and the form in which the argument is made is objectionable. Instead of being forceful and attractive, if not convincing, it is weak, fallacious and repellant.

What would become of the court case described if the man who was killed had left \$25,000 of life insurance, instead of \$1000? Would that have resulted in an admission from his widow, when questioned by counsel for defendant, that he was a \$25,000 man, and would counsel thereupon have agreed that his client should pay that sum in damages? I think not.

Look at it from the opposite viewpoint: Suppose the deceased carried no life insurance at all. Would that prove that the defendant had killed a man the value of whose life, by his own appraisal, was nil? Certainly not.

In point of truth, the two facts are not related; nor do I believe that any court would permit a defendant in such a damage suit as the one cited, to attempt to prove by the amount of life insurance carried by the dead man the value of his life to his dependents.

And so I regard the argument made as fallacious and, therefore, futile.

In my judgment soliciting of this sort is the product of haste. We are in an everlasting hurry. An agent sets himself the task of writing so many hundreds of thousands a year. He must keep under high pressure to succeed. He has no time to think out his plans. Most agents have no systematic methods of soliciting. Tackle everybody, anywhere, any time. Make any argument. Get the business. That's the main thing.

Of course, it's a mistake.

But as I said in the beginning: it is the product of a national infirmity—our inability to make haste slowly.

*The Insurance Department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. Address all communications on insurance subjects to the director of The Independent Insurance Service*

# Mistakes Parents Make

## —How To Avoid Them

### New Methods in Child Training Fast Superseding the Old Highest Authorities Endorse Them

Being a good parent is the biggest job on earth. Upon how we train our children depends their entire future success and happiness.

Yet what training have most of us had in this all-important work? Instead of using scientific methods in our contact with the most delicate mechanism in the world—a child's mind—we often use methods that do irreparable injury.

What chance would a fine Swiss watch have if, knowing nothing about watchmaking, we tried to adjust it with a hatchet and a crowbar?

As absurd as that may seem, thousands of loving parents with their whole beings wrapped up in their children's welfare are using methods fully as unsuited—fully as dangerous and harmful.

For a child's mind needs far more intelligent care than the most delicate watch ever made. And very often the method we use to correct one bad habit is the very cause of other bad habits which can easily wreck the entire life of the child.

#### Where We Go Wrong

The trouble in the past has been that when a child is disobedient, untruthful or "naughty," we punish the child for exhibiting that symptom. What we should do is to attack the cause. Not by punishment, but by co-operation.

When we attack the symptoms instead of the cause, we very often irritate the cause instead of removing it.

Millions of children are deceitful because the parents in trying to overcome some other bad habit have caused them to be deceitful.

#### Who Is To Blame?

When a child is straightforward, obedient and willing—when it is courageous, generous and fine in every way, it is that way because the parent made it so. And the reverse is equally true. When a child is untruthful, selfish and disobedient, it is not the fault of the child but of the parent.

You can make your children what you will. Character is nothing more than a set of established habits. Whether these habits are good or bad depends on the parent.

The parent has no one but himself to blame for the conduct of his offspring, not only when young, but throughout life.

### No Help Until Now

Until now parents have had to grope around as best they could. They have had to depend on self devised methods. It is a wonderful commentary on the intelligence

#### DO YOU KNOW HOW—

to instruct children in the delicate matters of sex?  
to always obtain cheerful obedience?  
to correct mistakes of early training?  
to keep child from crying?  
to develop initiative in child?  
to teach child instantly to comply with command "Don't touch"?  
to suppress temper in children without punishment?  
to succeed with child of any age without display of authority?  
to discourage the "Why" habit in regard to commands?  
to prevent quarreling and fighting?

to cure impertinence? Discourtesy? Vulgarity?  
to remove fear of darkness? Fear of thunder and lightning? Fear of harmless animals?  
to encourage child to talk?  
to teach punctuality? Perseverance? Carefulness?  
to overcome obstinacy?  
to cultivate mental concentration?  
to teach honesty and truthfulness?  
These are only a few of the hundreds of questions fully answered and explained, in a way that makes application of the principles involved easy through this course.

of the average parent that they have done as well as they have.

But now, for the first time, there is constructive help at hand. A great organization, the Parents Association, an international society with members in all parts of the world, has been formed to guide parents in the upbringing of their children.

The principle upon which this association was founded is that in dealing with children **confidence is the basis of control.**

Professor Ray C. Beery, A.B., M.A. (Harvard and Columbia), the founder of the Association, after years of exhaustive research and practical experience, has created a complete Course in Child Training, endorsed by leading educators everywhere, which is available to members of the Association.

This course is unlike anything that has ever gone before. Instead of dealing in generalities, it is intensely definite and practical, and tells the parent exactly what to do in each individual case to produce immediate and permanent results. It is meant for the modern busy parent of children from the cradle to 18 years of age.

#### The "Case" Method

The method used by Professor Beery in his Course in Child Training is essentially the same as that now used in teaching the law, except, of course, that it is condensed and remarkably easy to apply.

Instead of devoting pages to a theoretical discussion of the various traits and habits which are to be

cured, Professor Beery shows in each instance exactly how some other parent in the same situation has applied his methods to secure results.

For instance, suppose your child is aged four, and is afraid of the dark. All you have to do is look up this trait in the index for children of that age and then turn to the proper page. Here you will find in detail an example of how some other parent cured a child of this fear through Professor Beery's methods. No other teacher of child training has ever attempted to handle the subject in such a practical, easy to apply way. It means that in addition to a constructive, thoroughly organized system of child training, you have the daily help you need to overcome all undesirable characteristics as they develop.

#### Personal Service

In addition to the complete Course in Child Training, by Professor Beery, members of the Parents Association enjoy many other equally worthwhile benefits such as the privilege of personal consultation through the mail with Professor Beery on any particularly vexing child training problem, exchange of experiences of other members through the Association's Bulletin which is issued regularly; free Purchase Service, which enables you to buy children's books at publisher's prices, advice as to schools, camps, etc. But we have not the space here to give the whole wonderful story.

#### Free Book Explains All

"New Methods in Child Training" is the title of a 24-page illustrated booklet which describes the work of the Association and explains Professor Beery's remarkable Course in Child Training. It also contains letters from members outlining the astonishingly satisfactory results they have secured through these New Methods. A copy of this book will be sent at once to any interested parent who merely writes a letter or postcard; or, mail the coupon below. It is suggested that you write at once, as the Association is making a special offer to new members which will undoubtedly be withdrawn shortly. Send today—no obligation. Parents Association, Dept. 15-B, 449 Fourth Ave., New York City.

## EIGHT STORIES OF GOOD CHEER

With Introductions by Frederick Houk Law

## MRS. WIGGS'S BENEFIT DANCE

IN order to be happy one must be rich in Good Cheer—so rich, in fact, that he must continually give it to others. The truly happy person sympathizes with Mrs. Wiggs of the Cabbage Patch when she says:

Somehow, I never feel like good things b'long to me till I pass 'em on to somebody else.

The book, "Mrs. Wiggs of the Cabbage Patch," tells a tenderly humorous story written by one of our modern popular writers, Alice Caldwell Hegan (Alice Hegan Rice).

According to the story, Mrs. Wiggs is an illiterate but thoroly good-hearted widow who lives with her son, Billy, and three daughters, curiously named after the continents, Asia, Australia and Europa. The poverty-stricken family lives near the railroad tracks in that part of shantytown called "The Cabbage Patch," in a crazy house whose roof is made from old tin cans. Among their near neighbors are Miss Hazy and one-legged Chris Hazy, poor, bedridden Mrs. Schultz, stout Mrs. Eichorn, and the shantytown grocer, Mr. Bagby.

Mrs. Wiggs's poverty and naïve good nature have drawn to her the friendship of Miss Lucy Olcott and Bob Redding, both of whom do many kind things for the family. Lucy

BY ALICE CALDWELL HEGAN

had once sent a turkey for Christmas and Bob had given

tickets for an extravaganza, the household's one theatrical experience. All unknown to Mrs. Wiggs, her need drew Lucy and Bob together in a love that had once threatened to end.

One day, out of goodness of heart, Mrs. Wiggs proposes to give a benefit dance in her poor little home, to buy a new "peg stick" for one-legged Chris Hazy. That is the dance we attend.

Imagine a wretched house in the Cabbage Patch, a jack o' lantern on the fence in an exuberance of light, a Japanese lantern over the front door, like an emblem of happiness, the floor made slippery by candle wax, many chairs borrowed from nearby friends, a whole freezer full of ice cream sent by grateful neighbors, and old Uncle Tom with his fiddle and Jack Schultz with his accordion to give an uproarious round of music. Here is genuine happiness, built on goodness of heart. Mrs. Wiggs had filled all the Cabbage Patch with her own radiant light and her unbounded trust in goodness.

We should do well to take her words to heart: "Looks like ever'thing in the world comes right, if we jes' wait long enough!"

Those there are whose hearts have a slope southward, and are open to the whole noon of Nature.

NOTWITHSTANDING the fact that calamities seldom come singly, it was not until the Fourth of July that the Cabbage Patch was again the scene of an accident.

Mrs. Wiggs had been hanging out clothes, and was turning to pick up the empty basket, when Billy precipitated himself into the yard, yelling wildly:

"Chris Hazy's broke his leg!"

Mrs. Wiggs threw up her hands in horror. "Good lands, Billy! Where's he at?"

"They're bringin' him up the railroad track."

Mrs. Wiggs rushed into the house. "Don't let on to Miss Hazy till we git him in," she cautioned, snatching up a bundle of rags and a bottle of liniment. "Poor chile! How it must hurt him! I'll run down the track an' meet 'em."

She was breathless and trembling from excitement as she turned the corner at Mrs. Schultz's. A crowd of boys were coming up the track, trundling a wheelbarrow, in which sat Chris Hazy, the merriest of the lot, waving a piece of his wooden leg in the air.

Mrs. Wiggs turned upon Billy.

"I never lied, ma! I said he broke his leg," the boy gasped out as best he could for laughing, "an' you never ast which one. Oh, boys! Git on to the rags an' arniky!"

Such a shout went up that Mrs. Wiggs laughed with the rest, but only for a moment, for she spied Miss Hazy tottering toward them, and she hastened forward to relieve her anxiety.

"It's his peg-stick!" she shouted. "P-e-g-stick!"

This information, instead of bringing relief to Miss Hazy, caused a fresh burst of tears. She sat down on the track, with her apron over her face, and swayed backward and forward.

"Don't make much difference which one 't was," she sobbed; "it would be 'bout as easy to git another sure-nough leg as to git a new wooden one. That las' one cost seven dollars. I jes' sewed an' saved an' scrimped to git it, an' now it's—busted!"

The boys stood around in silent sympathy, and when nobody was looking Chris wiped his eyes on his coat sleeve. Miss Hazy's arrival had changed their point of view.

Mrs. Wiggs rose to the occasion.

"Boys," she said, and her voice had an inspiring ring, "I'll tell you what let's do! Let's give a benefit dance tonight, an' buy Chris Hazy a new peg-stick. Every feller that's willin' to help, hol' up his hand."

A dozen grimy hands were waved on high, and offers of assistance came from all sides. Mrs. Wiggs saw that now was the time to utilize their enthusiasm.

"I'll go right back to the house, an' git Asia to write out the tickets, an' all you boys kin sell ten apiece. Miss Hazy, you kin come over an' help me git the house ready, an' we'll put Chris to cleanin' lamp-chimbleys."

Under this able generalship, the work was soon under way; the boys were despatched with the tickets, and the house was being put straight—at least the parlor was. It would have required many days to restore order to the chaos that habitually existed in the house of Wiggs.

"Asia, you help me roll these here barrels out on the porch, an' I'll mop up the floor," said Mrs. Wiggs. "Miss Hazy, you look 'round in the kitchen, an' see if you can't find a taller candle. Seems like I put one in the sugar-bowl—that's it! Now, if you'll jes' cut it up right fine it'll be all ready to put on the floor when I git done."

When the floor was dry and the candle sprinkled over it, Australia and Europa were detailed to slide upon it until it became slick.

"Would you ast ever'body to bring a

cheer, or would you have 'em already here?" asked Mrs. Wiggs.

"Oh, let's bring 'em ourselves!" insisted Asia, who had been to a church social.

So a raid was made on the neighborhood, and every available chair borrowed and ranged against the parlor wall.

By noon the boys reported most of the tickets sold, and Mrs. Wiggs received the funds, which amounted to six dollars.

It being a holiday, everybody was glad to come to the dance, especially as the proceeds were to help little Miss Hazy.

At one time there threatened to be trouble about the music; some wanted Uncle Tom, the old negro who usually fiddled at the dances, and others preferred to patronize home talent and have Jake Schultz, whose accordion could be heard at all hours in the Cabbage Patch.

Mrs. Wiggs effected a compromise. "They kin take turn about," she argued; "when one gits tired, the other kin pick up right where he left off, an' the young folks kin shake the'r feet till they shoes drop off. Uncle Tom an' Jake, too, is a heap sight better than them mud-gutter bands that play 'round the streets."

The grocery boy, staggering under the weight of an ice-cream freezer and carrying something wrapped in white paper, came up the path.

"It's fer you," he said, grinning broadly. John was cross-eyed, so Miss Hazy thought he looked at Mrs. Wiggs, and Mrs. Wiggs thought he looked at Miss Hazy.

However, the card on the freezer dispelled all doubt:

"Fer Mrs. Wiggs on her 50 Birthday compelmments of The Naybors."

Under the white paper was a large, white iced cake, with a "W" in cinnamon drops on top.

"How'd they ever know it was my birthday?" exclaimed Mrs. Wiggs, in delight. "Why, I'd even forgot it myself! We'll have

the cake fer the party to-night. Somehow, I never feel like good things b'long to me till I pass 'em on to somebody else."

"Where's Europaena?" asked Asia.

Nobody had seen her for some time. Search was made, and she was discovered standing on a chair in a corner of the parlor, calmly eating the cinnamon drops off the birthday cake. Fingers and mouth were crimson, and the first stroke of the "W" was missing. Billy was so indignant that he insisted on immediate punishment.

"No, I ain't a-goin' to whip her on my birthday, Billy. She's sorry; she says she is. Besides, the cake ain't spoiled; it's jes' a 'N' now, 'stid of a 'W,' an' N stands fer Nancy jes' as good as W stands fer Wiggs!"

Mrs. Wiggs waited until all the guests assembled before she made her speech of thanks for the cake and cream. It was a very fine speech, having been written out beforehand by Mr. Bagby. It began, "Ladies and gents, it gives me pleasure—" but before Mrs. Wiggs got half through she forgot it, and had to tell them in her own way how grateful she was. In conclusion she said: "Couldn't nobody be more obliged than what I am! Looks like nice things is always comin' my way. Hope God 'll bless you all! The musicianers have come, so we'll begin the party with a Vir-giner reel."

Old Uncle Tom was warming up to his work, and the fun waxed furious. Asia, looking very pretty in her new crepon, cast shy glances to Joe Eichorn, who had been "keeping company" of late. Billy, for whom there was no room in the reel, let off his energy in the corner by a noisy execution of the "Mobile Buck." Australia and Europaena sat in the window with Chris Hazy, and delightedly clapped time to the music.

When the dance ended, Mrs. Wiggs went to the door to get cool. She was completely out of breath, and her false front had worked its way down over her eyebrows.

"Look—comin', ma!" called Billy.

When Mrs. Wiggs saw who it was she hastened down to the gate.

"Howdy, Mr. Bob; howdy, Miss Lucy! Can't you git right out an' come in? We're havin' a birthday party an' a benefit dance fer Chris Hazy's leg."

"No, thanks," said Redding, trying in vain not to look at Mrs. Wiggs's head. "We just stopped by to tell you the good news."

"'Bout Asia's position?" asked Mrs. Wiggs, eagerly.

"Yes, about that, and something else be-sides. What would you say if I told you that I was going to marry the prettiest, sweetest, dearest girl in the world?"

"Why, that's Miss Lucy!" gasped Mrs. Wiggs, more breathless than ever. Then the truth flashed upon her, and she laughed with them.

"Oh, sure 'nough! Sure 'nough! I'm jes' pleased to death!" She did not have to tell them; her eyes, though suffering a partial eclipse, fairly beamed with joy and satis-faction. "An' so," she added, "it wasn't the paint, after all!"

When they had driven away, she lingered a moment at the gate. Music and laughter came from the house behind her, as she stood smiling out across the moonlit Cab-bage Patch. Her face still held the reflected happiness of the departed lovers, as the sky holds the rose-tints after the sun has gone.

"An' they're goin' to git married," she whispered softly to herself; "an' Billy's got promoted, an' Asia's got a place, an' Chris 'll have a new peg-stick. Looks like ever'-thing in the world comes right, if we jes' wait long enough!"

## Helping Out Belgium

WHEN you drop a nickel in the Belgian Fund, you wonder who eats your loaf of bread. Is it the soldier, crippled past usefulness in the early days of the invasion, or the girl who, before the war, was one of those 50,000 lace-makers whose delicate patterns were famous the world over? Is it a woman of the "Ashamed Poor," too proud to enter the soup-line, helped by means she does not understand, thru people she does not know? Is it the farmer, trying to restore his wrecked buildings, or the half-nourished child just wavering between health and disease?

The saving loaf, bought with your five cents, may turn the balance for any of these. Every third man, woman and child in Belgium today depends for his life on the daily pint of soup and ten ounces of bread doled out in the soup lines. Thanks to your five cents, and millions more like it, not one of the 5000 communes in the Belgian and French occupied territory missed its ration of bread for a single day, from the time the Americans went in till the day they left. The Ten Commandments of the Commission for Relief in Belgium were kept. These commandments are rolled into one, according to Vernon Kellogg, one of the commissioners:

Feed the people regularly. No matter the cost in energy, in compromise, in money, no matter the difficulty or discouragement, keep the food coming in and keep it going to the mouths of all.

It will be such a story of heroism opposing brutality, of spirit persistent in the face of bodily suffering and mental anguish, of the higher humanness in struggle with the lower, that the world will count the experience of Belgium as one of those parts of the terrible trial not entirely without compensation.

Mr. Kellogg says in *Fighting Starvation in Belgium* that the whole story cannot be told until every gray-coated invader is driven off the soil of Belgium.

*Fighting Starvation in Belgium*, by Vernon Kellogg. Doubleday, Page & Co. \$1.25.

## Professor Latimer's Progress

THIS is a very lively and entertaining account of the adventures of a most lovable professor, in his endeavor, by a mild form of walking tour, to escape from the obsession of the war and from his own sense of having "no measuring-stick for life . . . no formula. Oh the comfort of a good, double-jointed, collapsible, extension formula. Oh, the saving on a man's heart and nerves." The professor's encounters with the "movies," with playwrights, an independent and very modern girl factory-inspector, a criminology specialist—which allows some quiet fun at the expense of the Binet tests—a conscientious objector, labor and capital, folk fashionable and unfashionable, and his dealing with all on a level of simple human relationship and sympathy, make a series of fascinating incidents and character-sketches, against the peaceful background of the spacious out-of-doors. The author, strange to say, has very little of a formula himself, but much quaint and deep wisdom, and a determined optimism of outlook "that somehow good shall be the final goal of ill."

"Competitive system nonsense," he shouted. "It is the old, unregenerate heart of man."

In all discourse between man and man the spirit of controversy intrudes upon and injures the spirit of truth.

Labor and discontent; labor to feed the body and discontent to keep the soul alive.

We are too ready to take it for granted that all men today are weighed down by the horror of war. As a matter of fact, there is no such unanimity. . . . It is true that, if you made a poll of newspaper editors, you might find a great many who think that war is evil. But if you were to take a census among pastors of fashionable metropolitan churches—

The pity of it, that as soon as you have more than one man to face, you are no longer dealing with souls, but with problems.

America, the offspring of Europe, in her the blood of every race . . . she will be the reconciler of Europe. She will bring together and hold together a world that is torn and clawing and gone mad with panic and gall. . . .

Professor Latimer's Progress. Henry Holt & Co. \$1.40.

## Verse of Many Moods

THE fifty or sixty short poems by Rositer Johnson, collected in *Morning Lights and Evening Shadows*, make an excellent pocket volume for summertime. Some of them ring with inspiration, some stop to moralize a bit, some of them laugh in a rollicking rhythm. Ninety-nine in the Shade, for instance, long a newspaper favorite, comes into its own in this collection:

O for a lodge in a garden of cucumbers!  
O for an iceberg or two at control!  
O for a vale that at mid-day the dew cumburs!  
O for a pleasure-trip up to the pole!

O for a soda-fount spouting up boldly  
From every hot lamp-post against the hot sky!  
O for proud maiden to look on me coldly,  
Freezing my soul with a glance of her eye!

Then O for a draft from a cup of cold pizen!  
And O for a thru ticket, via Coldegrave,  
To the baths of the Styx, where a thick shadow  
lies on

And deepens the chill of its dark-running wave!

But for the most part Dr. Johnson carries over into his verse something of the dignity that is his as historian and editor. Great and Small is perhaps a fairer sample of his work:

Our lives are little, but our times are great.  
We come, we see, we linger, and we pass;  
Weave but a single thread in web of state,  
Or give the field a single spear of grass.  
We are in action like a boyish class,  
Where each one stumbles thru his dozen lines,  
And looks bewildered at the stubborn mass  
Of foreign words and intricate designs—  
But lo! when all is done, thru all an Iliad shines.

*Morning Lights and Evening Shadows*, by Rositer Johnson. James T. White & Co. \$1.25.

## Books in Brief

THE HOPE CHEST, by Mark Lee Luther. (Little, Brown, \$1.50.) Social comedy deftly handled. The romantic adventure of the millionaire and the shopgirl.

THE HOME POULTRY BOOK, by E. I. Farrington. (McBride Nast, \$1.) Contains specific directions and information covering every phase of poultry raising.

THE REAL FRONT, by Arthur Hunt Chute. (Harper, \$1.50.) A Canadian officer's story of the men who hold the British line. "The light heart in the midst of danger is our invincible defense."

THE RIDER IN KHAKI, by Nat Gould. (Stokes Co., \$1.25.) Racing, with all its attendant thrills, is the theme, and interwoven is an exciting episode in the Great War and a love story of the good old-fashioned variety.

ECONOMY COOK BOOK, by Maria McIlvaine Gillmore. (Dutton, \$1.) Written for those who wish to secure the full nutritive values of different foods without using costly meats. Simple, practical, economical.

WAR TIME CONTROL OF INDUSTRY, by Howard L. Gray. (Macmillan, \$1.75.) An account of the British governmental control of industry which has passed thru three phases—(1) tentative action, (2) determined regulation, (3) stringent control.

HISTORY OF LABOR IN THE UNITED STATES, by John R. Commons and associates. 2 vols. (Macmillan, \$6.50.) A complete and authentic history of labor in the United States based on original sources. Includes a description of economic, political and social conditions.

## How to be happy EVERY morning

HAPPINESS in itself is most desirable—but with it comes that confidence in one's self, that steady nerve, that sure, clear judgment which so essentially fits you to conquer the day's problems—business, political, domestic, social or whatever they may be.

This is possible only when your physical self is functioning properly—the sturdiest machine will lose its efficiency if it is not kept clean, and the human system likewise, but more so—

Physicians agree that the vast majority of human illness is traceable to Auto-Intoxication, produced by accumulated waste in the Colon.

### Constipation Makes Happiness or Health Impossible

Drugs force Nature and are habit-forming—Internal Bathing assists Nature and is regulating.

Just send today for an interesting treatise on Internal Bathing called

## Why Man of Today is Only 50% Efficient

By Chas. A. Tyrrell, M.D.

Dr. Tyrrell has specialized on this Nature Treatment for 25 years with marked success, and over a million clever Americans are now bathing internally at intervals by means of the "J. B. L. Cascade," with the invariable exclamation, "I never have felt so well as in the morning after an Internal Bath."

Write today for this free and interesting book. It will be sent you by return of mail.

CHARLES A. TYRRELL, M.D.

134A W. 65th St., New York City

## Physicians' Opinions

BELIEVING that the actual results obtained through Internal Bathing, by members of the Medical Profession in their regular practice, may be informing and interesting, we append a few extracts from the many communications which Dr. Tyrrell has received from practicing physicians. The names of the senders and signers of these letters Dr. Tyrrell is permitted to furnish upon your request.

## One Reason of Success

"I am convinced of the benefit of a thorough cleansing of the lower bowel. I can say, for a truth, what few physicians can say: I have treated typhoid fever thirty-five years and never lost a case except one that had gone too far before I was called, and I know the reason of my success was due to having the bowels washed out. I only wish I could make the people in general believe in the efficiency of a good Internal Bath."

## For Nearly 20 Years

"It is over twenty years since I first used the long tube to flush the colon and almost that long since I began using the 'J. B. L. Cascade' for this same purpose. By the use of this latter instrument the whole bowel can be filled with water if desired. In almost forty years of active practice I have my first case of so-called appendicitis to be operated upon and the first to lose by death."

# TRAVEL AND RESORTS

The Independent invites inquiries from its readers pertaining to Travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. This Department is under the supervision of the BERTHA RUFFNER HOTEL BUREAU, widely and favorably known because of the personal knowledge possessed by its management regarding hotels everywhere. Office at Hotel McAlpin, Broadway and 34th street, New York, where personal inquiry may be made. Address inquiries by mail to INFORMATION, The Independent, New York.

## BILLIONS FOR BULLETS

(Continued from page 324)

it is considered that one manufacturer, reminded of shortage of skilled help, of transportation difficulties, of all the other difficulties that topple out of uncertain skies these days whenever one tries to achieve an industrial miracle, agreed to erect for the Ordnance Department a thirteen acre plant, to make an unheard of article—a French mechanism. This mechanism required forgings so big and accurate that not one plant in America has ever achieved anything similar. He took the challenge. He won.

It is thru the Ordnance Department—"the manufacturing branch of the army," as Secretary Baker calls it—that the Government has gone into manufacturing and on a prodigious scale. Some idea of the expansion of its work may be found in the fact that the eleven arsenals, which formerly constituted nearly all its manufacturing facilities and supplied the army with almost all its arms, have been extended to about six thousand separate plants, if we count those of sub-contractors. And nearly a score of those plants are the newborn industrial children of Uncle Sam. They not only had not seen the light of day but they had never even been thought of.

These plants had no panacea for the cure of those multitudinous ills that confront everything young in industry. They had to go thru the whooping cough, mumps and measles stage like any other plant: the only difference being that the general temperature here in America—due to the breakdown of our railroads under redoubled war traffic, the withdrawal of reservists by foreign countries, our own draft, scarcity of materials and many other aspects that "made it hot" for manufacturers, was very high. No matter what you were making, your cost sheet looked like a fever chart. Consequently, when the Ordnance Department intimated it needed this or that, the usual response was not an influx of reliable manufacturers loudly bidding, but a quiet and thoughtful egress. They were already doing their bit; why should they double the size of their plants and go thru childhood ills again? So the Ordnance had to ask them to take orders, to build plants to fill those orders, or to convert plants, at a time when organizations were working Sundays. The Government said, "We'll finance you, because you've got the organizing brains to start with. We'll help you and see that you get materials; no matter what they cost we'll go in with you, on a cost plus basis. That is, we'll see that you get a fair profit above the costs."

But the cost-plus plan has objections. A manufacturer in such a city as Rochester, New York, for instance, where much war material is being made, or in Bridgeport, will consider, "Well, I need the men; I get a profit above my costs, so why not raise wages until I attract all the skilled men I need." Then the surrounding plants, likewise on Government work, are disorganized. Ordnance talent apprehended that. The Department organized a great body of expert accountants to keep track of every item of cost in every plant, from buildings to coal and coal to scrap and scrap to wages. This body of accountants kept costs down to minimum all along the line, checking up frequently in the Washington headquarters. In that manner the Department made up fully 90 per cent by former civilians, got an accurate check on costs and got them adjusted to minimum, allowing 10 per cent profit to the manufacturers meanwhile. Next the Department lessened its supervision sufficiently by asking the man-

## It's your face, Mr. Shaver—

But maybe you don't realize what makes your razor "pull." It's RUST! The naked eye can't see the rust, but it's there just the same.

Any razor blade, magnified 1,000 times, looks like a cross-cut saw—with ragged, jagged teeth. Between these infinitesimal teeth moisture collects and rust forms. Even the moisture from the lather causes rust. You can't stop it by trying to wipe or strop your razor dry. But you can stop it with a little

## 3-in-One

Here's what thousands upon thousands of self-shavers do: Moisten thumb and forefinger with a drop of 3-in-One Oil, then draw the blade gently between them. Do this simple thing before and after shaving.

3-in-One prevents rust forming. It gives you a rustless razor, the only kind that doesn't "pull" and hurt.

Rub a few drops of 3-in-One into your strop, too, now and then. Keeps it soft and pliable.

3-in-One is sold at all stores, in 25c Handy Oil Cans and in 15c, 25c and 50c bottles.

**FREE** A liberal sample of 3-in-One Oil and our Special Razor Saver Circular—both sent free for the asking.

**THREE-IN-ONE OIL CO.**

# Is Your Life's Blood Trickling Away?

When you see red blood escaping you know that your vitality is escaping with it, and you promptly stop the flow.

## Millions of people live on, indifferent to the loss of vital power even more serious than the loss of blood— THE LOSS OF NERVE FORCE WONDERFUL BOOK on the NERVES

Paul von Boeckmann, the noted Nerve Culturist, has written a remarkable book which explains the Laws of Nerve Force, and teaches in the simplest language How to Soothe, Calm, and Care for the Nerves. It is the result of over 20 years' study of nervous people, whom he understands from the ground up.

If after reading this book you do not agree that it has taught the greatest HEALTH LESSON you have ever had, return it, and your money will be refunded at once.

A keen and highly organized nervous system is the most precious gift of Nature. To be dull, nervous means to be dull, brained, incapable of feeling and doing the higher things in life. Therefore care for your nerves. Send for this book TODAY.

### What Readers Say

Send us 100 replies to give to our emil. It is the only real efficiency book.

I gained 12 pounds since reading your book, and I feel more energetic. My nervous headaches disappear and my nerves are strong. I never knew I had nerves.

SLEEP is now my middle name, thanks to the advice in your book. It is wonderful.

Your book did more for me for indigestion than two courses in dieting.

Stopping the leak of nerve force has cleared my brain. Before I was lost in dizziness all the time.

A Nerve Specialist says:

"Your book shows you have a sound understanding of the nature of the nerves and nervous system. I am recommending your book to my patients."

Price of book is only **25c**

434 College Avenue Rockford, Illinois

manufacturer to make 50,000 gun carriages, let us say, or other objects to be manufactured amidst great uncertainties—10,000 on a cost-plus basis and 40,000 at the same figure, with as much profit as he could make. That was a challenge that most manufacturers liked. They had learned something about cost accounting: they saw ways to make use of sub-contractors: in a word, having passed the mumps-and-measles stage they were given plenty of tolerance and told to see how rapidly they could get quantity production, plus, on a basis they were sure would give them a 10 per cent profit, or more.

At once comes to mind the question of quality. But there was no letting-down on quality. Doctor Ordnance, with all his assistants, supplements by a relentless system of inspection the natural desire of ninety-nine of a hundred manufacturers, who insist that their boys over there are to get absolutely reliable weapons. The Department has 700 officers, 300 enlisted men, 6000 civilians inspectors—metallurgists, textile experts, experts of every kind—busy continuously, and it is building up this young army steadily, with the expectation of having it four times as large as it is. You go into a shell plant and find, in little groups, these inspectors, each in charge of others in the employ of the company, plying gages all day long, plying all kinds of tests, so that, not by the remotest chance, can anything defective get by: and over these groups, supervising inspectors; and over these, others, going from plant to plant, making methods everywhere completely uniform. Many of the subordinate inspectors are women who are faster and more skilful in the work than are men.

To a large extent this same spirit of inspection is extended down thru the huge part of the Ordnance task abroad, where practically a duplicate organization is required. "Since the manufacturing is all done here," one might consider, "why are inspectors required over there?" The Ordnance Department is making large purchases and doing a great deal of manufacturing abroad. It must maintain there all the means for transporting, storing and keeping in repair its products and its facilities. It has on the other side a simply enormous capacity for re-manufacturing, in addition to facilities for handling anything from a huge gun borrowed from the Navy to a rifle plant, motor-truck, passenger-automobile and motor-cycle repair stations. This strictly re-manufacturing task is enormously intricate and comprehensive.

The Ordnance Department works on the assumption that the death of one American soldier from the mal-function of his own weapon is worse for American morale than a hundred American casualties at the hands of the enemy. Accordingly, before any effort is made toward quantity production of any weapon thoro-going and conclusive effort is made to get a perfected weapon. The greater part of the trained personnel of the old Ordnance Department was, therefore, given over to the work of design. That was imperative: for while the Department was growing, when measured by expenditures 339 times its original size in a single year, and fully fifty times over, if measured in personnel, the prime burden of all rested on the central force of designers. No matter how difficult it was to place contracts, no matter how effective the work of procurement, or how effectively the Production Division and the inspectors followed up that work, in the end all of the 100,000 objects, produced in no matter how great quantity, were contingent upon the success of their original plans. The production of rifles is a case in point. We had enough

Springfields for the first 500,000 men, considering that not half of a modern army are equipt with rifles. England and France had more than they could use. Consequently the Ordnance Department, anxious to get the best possible rifle, took some of the first months of the war to develop a gun with the best points of the Springfield and of the British Enfield, a less powerful gun than the German's, consequently rechambered the Springfield to use a standard rimless cartridge and perfected its firing devices. The present rifle of the American army, accordingly, is by all odds the fastest and most powerful rifle in existence.

Before the war, in thirteen years the Ordnance Department had manufactured only 600 guns of a certain caliber. Of that gun the Ordnance Department will soon have a monthly production greater than that—a result and only one result—of the expenditure of \$46,000,000 to get facilities for guns of all kind, not counting an expenditure almost as large to provide carriages for them.

But it is almost impossible to get clearly in mind the bigness of the Ordnance task unless we go back and count the almost infinite number of operations in making any one part—in making a part of a big gun, or, more notably, in making the part of such a thing as a hand grenade, produced now by the million—then multiplying that by 100,000 parts, all in millions. It would be interesting if we could apprehend in millionth part the number of processes necessary, in all the 6000 plants now busy for the Ordnance Department.

The ablest talent in the country is engaged in this task. The ablest powder maker is working for the Government now, in a laboratory with other experts, and the Ordnance is building, besides, two huge powder plants to supplement the great ones already at work. The ablest brains in the Army—those of such men as Colonel Beverly W. Dunn, the inventor of "Dunnite"; Brigadier General John H. Rice, head of its engineering department; General Wheeler; Colonel Guy E. Tripp, formerly the chairman of the board of directors of the Westinghouse Company; Colonel Mac-Roberts, executive head of the National City Bank, and others including scores of majors and captains who have gone over to the Government at great sacrifice to their personal earnings—all are busy, almost ceaselessly, with technicians, transportation experts, every kind of technical and scientific capability that there is, in creating, sustaining and steadily bettering the functions of the biggest industrial organization in the history of the world.

For the Ordnance Department is that, by every possible measurement.

By it, in the end, perhaps the United States will live or die.

### Capital Copy

Twenty-five Protestant chaplains have been requested by the Red Cross, and it is likely that an equal number will be asked for every month for some time to come.

The War Council has authorized a gift of 10,000,000 francs (\$1,750,000) to the French Red Cross from the war fund of the American Red Cross.

The Army Nurse Corps already has an enrolment of 9824 women and it is estimated that by January, 1919, 24,000 will be needed.

Allotments and allowances to soldiers' and sailors' dependents paid by the Government in February amounted to \$19,976,543.

In April the new merchant marine increased at the rate of a little more than 9000 tons of shipping daily.

# Market Place Talks

BY LUIGI CRISCUOLO

## A TIP TO INVESTORS

**I**N the two years and a half that I have conducted this department, I have received letters requesting advice from hundreds of persons in all walks of life—merchants, physicians, lawyers, office-workers, and plain working people. Some had \$100,000 to invest, others were considering the investment of only a few dollars. The same sort of advice had to be given to all—don't take chances unless you can afford to lose all you are investing. This may sound like an argument against buying stocks but it is not; it is just an injunction not to buy unless you know what you are buying.

You may be a wholesale grocer. If you have been successful, your success is due to the fact that you know your business, every detail of it, from putting sugar into bags and tying a string around it to signing checks for thousands of dollars. You have been in business for a great many years; you are a part of this business, it is a part of your life. You will like it so much that you will hate to retire. You have created something, perhaps, out of nothing. You are therefore a producer.

After you have placed your business on a successful foundation, you find that the profits are so large that all of the surplus cannot be utilized in your business. Do you decide that for the sake of establishing a reserve fund outside of your business, you should buy some securities? Do you want to provide a rainy day fund for your wife or children? You buy what? stocks, bonds, life insurance, real estate or mortgage. How do you buy them?

Perhaps you go to your banker for a "tip" on a good thing to buy in quite the same manner that one goes to a race track hanger-on to get a tip on the horses. Do you ask your next door neighbor who is a clerk in a Wall Street banking house? Do you read market letters of some brokerage house specializing in speculative mining or oil securities? Having gotten your "tip" on a "sure winner" do you go any further? Do you get out a copy of "Moody's Manual" or the "Investor's Pocket Manual" and endeavor to find out something about the past record of the company's savings, range of stock price, dividends, etc.? Do you give a thousand dollar stock purchase as much care as you would the purchase of a thirty-five dollar suit of clothes? Or, do you just go ahead and buy on the tip? The chances are, you buy on the tip and you are like 999 "investors" out of 1000 who are always going to get ahead of the game, but who never do.

The Wall Street of today is not like the market of twenty years ago. Speculation is not increasing since people began to read advice on investments given in many of the leading periodicals, but every now and then I find a fresh victim from Oshkosh whose name has been sold with thousands of others to some promoter, and the first thing our friend from Oshkosh begins to be flattered by a prominent "banker" from New York or Chicago who wants to "let him in" on something that will make him rich. The promoter will have an office in a

large building and a picture of the building will appear on the letterhead. The promoter will have a company with a high sounding name so that the victim may be led to believe that the company owns the aforesaid magnificent building and therefore must be prosperous. He buys a few shares. A few years pass and he finally knows he has been duped. I have seen this happen many times.

The moral is: You have spent your life making money in the wholesale grocery business and have made money. Your business is groceries, not gambling. That money you made should be laid aside where the principal will be safe and draw 6 per cent or so. In these times one can get even 7 or 8 with safety. But, you will have to consult a reputable banking firm or your own banker and tell them you want standard bonds or stocks—that is to say those of companies with a long record for successful business—such as United States Steel, Pennsylvania Railroad, Illinois Central, Great Northern, Southern Pacific, American Sugar, American Locomotive preferred, American Telephone and Telegraph, etc.

Write to a responsible broker. If you do not know of one, ask your banker to recommend one. Tell him your wants, say that you do not want to speculate, that you want to *invest* for safety of principal and regularity of interest payments. And stick to that theory without being deluded by promise of large profits. Safety and 6 per cent should be your motto.

The average investor or intending investor cannot become a financial analyst but he can request a broker to send him a copy of the "Investors' Pocket Manual" every little while. This gives him in very clear form a great deal of useful data regarding *standard securities* and should help the untechnical mind to form a judgment. Tips may be good but every tip should be supplemented with an investigation by the person receiving it. You may have saved a thousand dollars in a year; is it not worth while spending an hour or so in learning how to make it earn 6 per cent with safety? Or would you prefer to take a "plunger," just for the excitement of it? Aside from the desirability of corporation securities for private investment, it is the duty of every person who has savings to invest a large portion in the bonds of his country. Money is only worth what it can purchase. If money in the banks or in the oven might lead to a German victory, there is no reason for money to remain there. The Government only pays 4¼ per cent, but 4¼ per cent with absolute safety of principal and regularity of interest payments is a splendid return because the intangible element is worth 50 per cent of the principal. And by the "intangible" element is meant the possible victory which a purchase of Liberty Bonds may have a hand in assuring us.

We have emerged from a nation of spenders to one with more than ten million bond holders. Let us hope the future will transform us from a nation of speculation in absurd propositions to one of real investors in sound and tried securities.

## THE TRACTOR THAT NEVER TIRES

(Continued from page 321)

created by the moving machine. In the fall, when the workhorses would be worn out by the heavy demands made upon them by the harvesting operations, the tractors could be utilized to plow up the stubble fields and allow the soil to be aerated during the winter months. This practise also destroys weeds by plowing them under. If the land has become soured the tractor motor can be belted to a rock-crushing machine and native supplies of lime, almost universally distributed can be ground and spread over the soil to sweeten it.

The ability to use the tractor motor for all kinds of belt work enables the up-to-date farmer to do many things about his farm that he was unable to do with horses. For instance, if a part of his field is too high to be irrigated from the surface canals, he can pump the water into a reservoir or tank by belting his engine to a pump, and the high land can be irrigated or watered from the reservoir. Or a portable sawmill can be set up in the wood lot and the winter's supply of fuel wood cut in a few days. The corn or other crops to be preserved in a silo can be lifted to the top of the silo by the tractor motor, or it will run the silage machine, or a corn husker.

Altho tractors move slowly, they have great pulling powers and one tractor can haul to market or to a grain elevator or storehouse, half a dozen loaded wagons or trailers, all of which can be operated by one man.

If all the work about a farm has been attended to, the tractor can be put away in the barn or covered with an old tarpaulin, and it requires neither food nor attention. Horses must be fed whether they work or not.

The automobile has meant a great deal to the farmer, in enlarging his world and enabling him to keep in closer touch with the city. The tractor, or power machine, will mean as much to him in eliminating the drudgery of farm work and in enabling him to get his work done at the right time and in the right way without regard to climatic conditions and with less dependence upon the labor market during times of greatest need.

### The New Plays

*A Marriage of Convenience* is a Dumas play daintily mounted and played in the Louis Quinze style by Henry Miller and Billie Burke as Comte and Comtesse. (Henry Miller's Theater.)

*The Kiss Burglar*—an entertaining Viennese-American musical comedy. The music is pleasing and the play as a whole is better than the average of its kind. (George M. Cohan Theater.)

*Belinda*—rippling, gurgling, chucklesome comedy full of the peculiarly captivating charm of Ethel Barrymore at her best. A curtain raiser by Barrie only adds to the joy of the evening. (Empire Theater.)

The Washington Square Players' farewell bill of the season: *The Rope*, by Eugene O'Neil, grim characterization with an unexpected twist; *Close the Book*, one of Susan Glaspell's satirical comedies; *Lonesome Like*, a study in human interest, featuring Whitford Kane; and *Home of the Free*, a clever parody on some new-fangled ideas of independence. (Comedy Theater.)

## Booklets Every Investor Ought to Own

**W**E have prepared investment literature of the utmost interest and value, which should be in the hands of every investor in the United States.

It will post the experienced bond buyer on a class of securities on which he should be well informed. It is a mine of information for the inexperienced, who will gain through this a grasp of those fundamental principles which mean *safety*. Among these publications are:

**Safety and 6%:** An exceptionally interesting and valuable booklet, telling how and why the *Straus Plan* has protected investors for thirty-six years without the loss of a dollar.

**Acid Tests of Investments in War Time:** Outlining the precautions every investor should take to ensure safety of his funds in times of war.

**Straus Investors Magazine:** A popular and interesting monthly publication.

**Investment Record:** For all owners of securities, affording a convenient way of recording amounts, maturity and coupon dates, rates of interest, redemption privileges, and other essential data.

**Investment List:** Describing a variety of sound First Mortgage Serial Bonds, secured by the highest grade of properties in the larger cities of the United States, in \$1000, \$500 and \$100 denominations, netting 6%.

If you are an investor, genuinely interested in safe securities, write for any of the above. Specify the publications you desire and mention

Offering No. F-312

## S. W. STRAUS & CO.

Established 1882  
NEW YORK

Thirty-six years without loss to any investor

**6% NET** For 36 years we have been paying our customers the highest returns consistent with conservative methods. First mortgage loans of \$200 and up which we can recommend after the most thorough personal investigation. Please ask for Loan List No. 710. \$25 Certificates of Deposit also for saving investors. **PERKINS & CO. Lawrence, Kans.**

### AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would produce an annual income of \$618.35 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

## WHEN and HOW To Invest Profitably

This is an ever-present problem confronting the investor. Intrinsically good securities are often bought at the wrong time. To make investments profitable, one must know when and how best to buy.

Our fortnightly publication

**"Investment Opportunities"**

tells when—and our copyrighted booklet **THE TWENTY PAYMENT PLAN** tells how. Both sent gratis upon request for 66-IN.

**SLATTERY & CO.**  
(Inc.)  
Investment Securities  
(Founded 1908)  
40 Exchange Place New York

### YOUR REAL OR PERSONAL PROPERTY OF TODAY MAY BE THE ASHES OF TOMORROW.

A National Life Annuity of today *is* THE ASSET OF TOMORROW.

As True as you Live and as Long as you Live

Write the **NATIONAL LIFE INSURANCE COMPANY**, Montpelier, Vt., for the booklet "What Are Annuities?"

# DURAND Steel Racks

**ECONOMY** in storage space demands that shelving be easily adjustable to meet changes in stock.

With Durand Steel Racks there need never be waste space. Individual shelves can be removed or shifted in a few moments without tools. They are interchangeable, fit exactly and are easily taken down and re-erected.

*We are makers of Steel Racks, Bins, Counters, etc., for every kind of merchandise; also Durand Steel Lockers for every need. Write for catalogue.*

New York

## Music Lessons

**Book Sent FREE** Wonderful home-study music lessons under great American and European teachers given by the University Extension Method. The lessons are a marvel of simplicity and completeness. Anyone can learn at home. Endorsed by Paderewski and many other great authorities.

### Any Instrument or Voice

Write, telling us the course you are interested in, age, how long you have taken lessons, if at all, etc., and we will send you our Free Book containing text and illustrations covering Lessons in PIANO (students' or teachers' courses) by the great Wm. H. Sherwood, HARMONY by Dr. Protheroe and Rosenbecker, VOICE COURSE (with aid of Phonograph) by Crampton, PUBLIC SCHOOL MUSIC by Frances E. Clark, VIOLIN, CORNET, MANDOLIN, GUITAR, BANJO, REED ORGAN, by equally eminent teachers.

**Send NOW** for Free Book and learn how easily you can become a fine singer, or a skillful player. Write today for full particulars. Investigate without cost or obligation.

**University Extension Conservatory**  
1231 Siegel-Myers Building Chicago, Ill.

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

##### I. Patriotism and Loyalty.

A. CONNECTING THE MAN AND THE JOB. 1. Your public speaking society is holding an open meeting. A number of workmen are present. Give an extemporaneous talk on the United States Employment Service, with the object of aiding and encouraging your hearers.

B. DO YOU KNOW A SPY? 1. Speak to your class in a spirited manner, telling what school students may do to thwart German plots. 2. Narrate clearly and interestingly some "German spy story" that you have heard.

C. DISLOYALTY PUNISHED. 1. Imagine that you have heard some one say something disloyal. Give him a suitable talk on loyalty, using the story of Ernest Flentje in illustration.

D. WE NEED MORE MONEY. 1. You wish to sell Thrift Stamps. Give a talk in which you mention the vast expenditures to be made by the United States. Urge the most unselfish support of the Government.

E. BILLIONS FOR BULLETS. 1. Write a very short summary of the article. Explain what sort of material you have been obliged to omit in making the summary. 2. What is the literary value of the material omitted when you made the summary? 3. What two types of material are needed in almost every composition? Comment on the respective values of each type. 4. How does the title of the article reflect the spirit of the American people? Give rules for the writing of titles.

F. THE MOVING OF AN ARMY. 1. What is the spirit of the article? 2. What is the purpose of the article? 3. What method does the author employ in order to accomplish his purpose? 4. Write a short outline of the article. 5. Point out examples of the following: Place Order; Time Order; Appeals to Different Senses; Figures of Speech; Words Chosen for Particular Effects; Use of Color; Suggestive Use of Adjectives; Methods of Indicating Point of View.

G. CLEANING UP AFTER YOURSELF. 1. Give a patriotic talk in which you show that the thought of the article, when applied to the care of streets, and the appearance of dooryards, is an aid to patriotism. 2. Show how the thought of the article may be applied to the pupils' care of the appearance of a schoolhouse.

H. THE ATTITUDE OF BULGARIA. 1. What proposition is laid down in the article? 2. Name the steps by which the writer proves the truth of the proposition. 3. What methods of proof does the writer employ?

##### II. The News of the Week.

1. Give a clear oral account of the recent activity on the Western Front. 2. What is the purpose of the Germans in their attacks in the West? 3. Your are at a gathering where many soldiers are present. Tell of the work of American soldiers in France, speaking in such a way that you will stir the enthusiasm of your hearers. 4. Some one says: What is going on in Russia? Give him a clear explanation of the Russian situation. 5. Write a short paragraph on the topic: The Lloyd George Cabinet has offended both factions in Ireland. 6. Imagine that you have a relative who lives in Dublin. Write the letter your relative might have written about the recent disturbances there. 7. Write a patriotic paragraph in praise of the American spirit indicated in the suggestions of Sir Martin Hall. Tell for what principles America has always stood.

##### III. Literature.

A. PHANTASMS OF WAR. 1. Give an oral description of the picture suggested in the first section. 2. Of what value is the comparison of the wheat-destroyers and the Hessians? 3. Explain the various details in the comparison. 4. What is the effect of the entire composition?

B. MRS. WIGGS'S BENEFIT DANCE. 1. Tell who Mrs. Wiggs is. 2. Give an account of the story that precedes the selection. 3. Describe the appearance of Mrs. Wiggs's home. 4. Describe Mrs. Wiggs. 5. Name and illustrate her characteristics. 6. Name her friends, and tell the most notable characteristic of every one. 6. What effect is produced in the introduction of the story proper? 7. Narrate the events that take place at the dance. 8. What gives the article its spirit of good cheer? 9. Compare or contrast this article with other articles in the series. 10. How does the style of the article add to its interest? 11. How may we apply the article to our own lives? 12. Why is the article a fitting one for the conclusion of the series? 13. Write an original story of good cheer.

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

##### I. Organizing and Equipping an Army—"Billions for Bullets."

1. Set down in tabular form the various units which go to make up an army division. Indicate, as far as you can, the equipment necessary for such an army division.

2. Distinguish carefully between the work of the Ordnance Department and the Quartermaster Corps. Why is the work of the Ordnance Department so much more complicated than that of the Quartermaster Corps?

3. On the basis of information given in this article show just what the Ordnance Department has accomplished during the past year.

4. Why does the author declare that the Ordnance Department is "the biggest industrial organization in the history of the world?"

##### II. The Labor Market—"Connecting the Man and the Job," "Averting Labor Troubles."

1. Give a brief résumé of the labor theory as presented in some standard text book. How far does the organization of a government labor exchange and the new war labor board force us to modify our theories?

2. Why does the author describe the former processes of labor adjustment in this country as the "helter-skelter processes of labor distribution which had been in existence for many long years?"

3. Do you believe in a system of local labor exchanges? a system of state labor exchanges? a federal system? What are the advantages of each? the disadvantages?

##### III. Railroad Administration—"Railroad Rates and Wages."

1. Look up the controversy which led to the passage of the Adamson eight-hour law on September 1, 1916. Contrast the method by which that controversy was settled with the method in use at the present time.

2. Study the quotation from the report of the railroad wage commission. What, in your judgment, is the central idea of the report?

3. Do you find in this news item any evidence that the federalization of railroad management has had any beneficial effects?

##### IV. Political Parties—"In Congress," "Election Day Is Coming," "Above Party Prejudices."

1. Explain the opening sentence of the second news item. Do you find evidence of the fact in what is going on in Congress?

2. In what way do the principles announced by Mr. Hays differ from those which the Democratic party will probably set forth in its platform? What will be the issue of the congressional election next autumn?

3. "Ours is a magnificent record," etc. Do the facts justify Mr. Clark in making this statement?

4. Will the activity of the League of National Unity have any effect at the next election?

##### V. The Balkan Situation—"The Attitude of Bulgaria."

1. Look up the history of the Balkan wars which came to an end with the treaty of Bukarest. Show how this treaty laid the train which led to the explosion of 1914.

2. What led each of the Balkan states to enter the war? What has been the result upon the fortunes of each thus far?

3. What are the grounds which might lead the United States to declare war on Bulgaria? Why should this country not make such a declaration of war?

4. "Bulgaria has no love for her present allies." Why, then, did she join them in this war?

##### VI. Political Unrest in Europe—"Austro-German Entente," "Disorders in Austria," "Prussian Franchise Bill," "Opposition to Irish Conscription and Home Rule."

1. Why is Austria leaning more and more upon Germany? What will be the result?

2. What is the three-class franchise system in Prussia? Why has this system persisted in the face of franchise reforms in other countries?

3. Why are the Ulster organizations so bitterly opposed to Home Rule? the organizations of southern Ireland so bitterly opposed to conscription?

4. "Both sides are looking to America for support in this crisis." What interest have the people of this country in this controversy?

# HOW WE STOPPED THE LEAKS THAT KEPT US POOR

The Discovery Which Enabled Howard Lindsay and His Wife to Save One-Third of Their Income and Later Made Mr. Lindsay President of a Large Corporation. A Secret That Applies to Any Income

By Harrison Otis

WHO should walk into the room but Howard Lindsay! Of all men perhaps the last I had expected to find as the president of this great new company. They had told me that Mr. Lindsay, of the Consolidated, was looking for a fine country home and was interested in buying the Dollard Place in Englewood; so as executor of the Dollard estate, I had come to discuss the terms with him.

But Lindsay! Surely some miracle had happened. For it was the very man who had come to me "dead broke" about four years back and had asked me to help him get a new job. But how he had changed! The man I remembered was down at the heel, and timid and ill-kept. The man now facing me was keen-eyed, alert, confident and well groomed.

"You are surprised, Mr. Otis, I can see that without your telling me. I was a pretty sorry object the last time we met—and you may be sure I have not forgotten the good turn you did me when I needed it so badly.

"Let that real estate matter rest for a moment while I tell you how the miracle happened. It won't take five minutes. It all seems simple as A B C as I look back on it now. And come to think of it, it was simple and perfectly natural.

## How It All Began

"My new life began when I discovered how to save money. That happened soon after I started in the new job you helped me secure. And it all came about right in my own home. Our family cash account was in terrible shape at that time. Both my wife and I had been used to luxuries at home and 'charge it to Dad' had been our easy way out of any money problem.

"But it was different now and our sole source of supply was my salary of \$3,000. We never went to the theatre that we didn't have the uncomfortable feeling that we were using money that ought to go for coal or clothes or food. We seldom bought anything without feeling as though we were cheating ourselves out of something else.

"That year we didn't save one cent. Besides that, we woke up on New Year's day to find a big bunch of unpaid bills to be taken care of somehow or other out of future salary checks.

"When I asked myself the reason for all this I found that I did not know the reason, and no more did my wife, because we hadn't the faintest idea what our money had been spent for.

"Then I looked around among our friends and learned a great lesson.

"The Weeds, I knew, were getting more than \$5,000 a year. They lived in a modest apartment, did not wear fine clothes, seldom went to the theatre, did little entertaining, yet we knew they barely had enough money to pay current bills. They found it out of the question to save any money and found themselves, so Weed told me, in the same predicament that we had faced on New Year's Day.

"In the case of the Wells I found a very different story and one that set me thinking hard. Their income was \$2,000 a year, yet, to my amazement, they confided to us that they had saved \$600

a year ever since they were married. They didn't have any grand opera in their program—except on their little Victrola—but they did go to the theatre regularly, they wore good clothes, entertained their friends at their home and were about the happiest and most contented couple of all our married friends.

## Our Great Discovery

"Then I discovered the magic secret. The Weeds never knew whether they could afford to make a given expenditure or not. Theirs, like ours, was a sloppy, happy-go-lucky existence with the happiness cut out because they were always worried about money matters. They kept no accounts and just trusted to luck—and so had bad luck all the time.

"The Wells, on the other hand, were getting more real enjoyment out of life than people with double their income—simply because they knew what they could afford to spend.

"The difference between these two families was that in one case the expenditures were made without any plan—while in the other the income was regulated on a weekly Budget System.

"Right there I got my Big Idea and my key to success and happiness.

"We sat down that evening and made up a budget of all our expenses for the next fifty-two weeks. We discovered leaks galore. We found a hundred ways where little amounts could be saved.

"And in no time we were engaged in the most fascinating game either of us had ever played—the game of 'Money Saving.'

"In one short month we had a 'strangle hold' on our expenses and knew just where we were going. In one year my wife proudly produced a bank book showing a tidy savings account of \$800.

## My New Grip on Business

"In the meantime an extraordinary change had come over me in business because of my not having to worry about my personal affairs. I was able to give my employer's affairs my full, undivided attention during business hours instead of being harassed and worried as I had always been before.

"I didn't fully realize this until the president called me in one day and said, 'Lindsay, you have been doing exceptionally well. I have been studying your work for the last year and you have saved the company a lot of money. We have decided to give you an interest in the business.' And besides that he doubled my salary. I never told him what had worked the change, but my wife and I know well.

"When you consider what my income is now, all that I have told you seems funny, doesn't it? I can write my check in six figures today, and my new salary here is \$25,000 a year. But I am still working on the same plan that I used to keep track of that original \$3,000. Result, I know just what I can subscribe to Liberty Bonds and the Red Cross and all the other war funds, and I never have to wonder whether I can afford to have a new motor car, because my budget tells me—to a penny.

"It all began when we got a grip on our family expenses.

"So there you are. It is wonderful, isn't it? I often wish I might tell my story to the thousands of young married couples who are having the hardest time of their lives just when they ought to be having the best time.

"If you ever get a chance, do pass this message on, for there are thousands who don't know what the trouble is, who would give everything to know 'the secret of the fat bank balance.'"

So now I have the opportunity and you are lucky, if only you will act on the wonderful message this story contains.

HARRISON OTIS

\* \* \*

## The Magic Budget Plan

The Ferrin Money Saving Account Book is built on the experience of Howard Lindsay. It is simplicity in itself. It contains 112 pages, size 8 1/4 x 10 3/4 inches, and is bound in dark blue seal grain imitation leather, semi-flexible, stamped in gold. This book has been prepared by an expert and fits any salary from the smallest to the largest.

This wonderful aid to money-making—this watchdog of your income and expenditures—will tell you to a penny where your money goes. It will keep absolute track of your expenditures. It will keep you out of debt. It will put money in the bank. It will provide, as nothing else can, a feeling of security, self-confidence and independence that comes only from the knowledge that you have a tidy and growing bank account.

The Ferrin Money Saving Account Book is the first and only device of its kind. It is the only account book based on the budget idea. It is the only one that provides for the income as well as the classified items of expense. It contains compact information on

Keeping Expense Accounts.  
Making An Inventory of Household Goods.  
Making Safe Investments.  
Making a Budget.

## Two Minutes a Day

The Ferrin System takes only two minutes a day. No knowledge of bookkeeping is required. Any child who can read, can keep the accounts in the Ferrin Book. This method is not a hard task. It is just fun. It is more enjoyable than a game—because the pleasure lasts forever.

Skimping and scraping are banished and you save money as easily as you spend it.

Now you will not worry about the money you spend for clothes, food, rent or the theatre. You will spend it freely and will have the time of your life because you will know how much you can afford to spend.

## Send No Money

See how magically the Ferrin Book works, no matter how much or how little your income. We know what you will think of it when you see it. So we are willing to send you the book without your sending us any money in advance. Just mail the coupon, and back will come the book by return mail. When you have seen what big returns the Ferrin System will pay you, send us only \$2. If you feel that you can afford not to have it, return the book and owe us nothing. Act now, for the sake of your bank account and your future.

### AT THE BATTLEFRONT

The editor of The Independent sailed for Europe in March as the guest of the British Government for a visit to England and the Western Front. He has been some weeks now in France, visiting the training camps, supply stations, hospitals and reconstruction centers and getting actual experience of being under fire in the front line trenches. On May 16 Mr. Holt sent to The Independent the message from General Pershing which we published last week. The entire cable reads as follows:

I had the pleasure of taking luncheon today with General Pershing and his staff in the beautiful old French chateau that he uses as his headquarters somewhere among the sunny hills of France. In response to my request for a word to cable home to readers of The Independent, the General said: "Please assure the American people that the morale of the officers and men under my command is beyond all praise. From the docks of disembarkation up to the first line trenches every one seems to be doing his best and an American's best is not bad. If only the American people could see with their eyes the task before us they would agree that the quickest way to victory is to prepare as tho the war would take two or three years more and require four or five million men."

(Signed) HAMILTON HOLT

Mr. Holt's story of his voyage overseas appeared in The Independent of May 18. We shall publish further correspondence from him shortly.

The Italy-America Society, of which Mr. Holt is vice-president, cabled him on May 15 asking that he proceed immediately to Rome to coöperate with the staff of the Committee on Public Information and with the Italy-America Society to combat a widespread scheme of insidious German propaganda in Italy concerning which the Federal Government has recently received astounding information.

### REMARKABLE REMARKS

JOSEPH DEVLIN—Today we are followers of Carson.

EMPEROR WILLIAM—The spirit of God has descended upon me.

GENERAL LUDENDORFF—The harder the task the firmer the will.

SAMUEL GOMPERS—My aspirations know no limit for my fellow men.

EZRA POUND—The fish swim in the lake and do not even own clothing.

SIDNEY NYBERG—We Jews have a hereditary sense of world tragedy.

ED. HOWE—Every fighter who wins is something of a bully, and unfair.

PASTOR LEHMAN—The German soul is the world's soul; God and Germany belong to one another.

OTTO H. KAHN—This war is, to a very large extent, a test of organizing ability and industrial power.

DR. W. T. McELVEEN—The League of Nations is the "get together" movement applied to the human race.

GLEN BUCK—The extravagant laxity of the past will not survive in the strenuous competition of the future.

### CURRENT WAR POEMS

Turning from the ghastly side of the conflict writers are emphasizing now the pathos of war, and the rage against the Hun is being neglected for the emotions of those left at home.

The following poem is reprinted from *Collier's*:

#### THE TRANSPORT

BY BEATRICE WASHBURN

I watched your transport sail away for France,  
And tried to tell you then how brave you were,  
How much I loved you, how the coming years  
Were glorified; how all our little dreams,  
That we had built together, sailed with you;  
And of that winter day when we first met,  
And how there was a new moon in the sky.  
Do you remember when like splintered ice  
It lay upon the surface of the lake?  
Of how I loved you and the wasted years  
We might have spent together, but it still  
Was something to have had, those happy years,  
Something to hold, something to thank Him for,  
Something most people die with never having known,  
Something the war can never take away!  
All this I would have told you, but so much  
Was left unsaid. We only talked of ships  
And why the gulls could dip their wings so deep,  
And how the sky line changes with the years,  
And of the city, and be sure to write  
And tell me everything you think of France—  
And don't forget!—and then the whistle blew. . . .

Now when they talk of war I only see  
The harbor flashing in the sun, the dipping gulls,  
The ragged edge of rope that tied the ship,  
A little crack upon the painted rail  
Where you last laid your hand.

This cry of the mother who is robbed by  
the war of everything but sorrow and pride  
is taken from the "Collected Works" of  
Padraic H. Pearse (Stokes):

#### THE MOTHER

BY PADRAIC H. PEARSE

I do not grudge them; Lord, I do not grudge  
My two strong sons that I have seen go out  
To break their strength and die, they and a few,  
In bloody protest for a glorious thing.  
They shall be spoken of among their people,  
The generations shall remember them,  
And call them blessed;  
But I will speak their names to my own heart  
In the long nights;  
The little names that were familiar once  
Round my dead hearth.  
Lord, thou art hard on mothers:  
We suffer in their coming and their going;  
And tho I grudge them not, I weary, weary  
Of the long sorrow—and yet I have my joy:  
My sons were faithful, and they fought.

Free from the spirit of hate that sings  
only of bringing the Boche down, is this  
war poem from *Everybody's*:

#### THE EYES OF WAR

BY GHART PITT

Like a gauzy speck in the pearly dawn,  
We drift thru the silent skies,  
Over No-Man's-Land, where the smoke-balls  
spawn  
And the deadly gases rise.  
We mark the spot where the battery stands—  
Where sappers toil on the trench-scarred height.  
We map each mile of a hostile land,  
Where millions writhe in the battle-blight.  
No silvery bugle to speed our flight,  
Nor the flutter of banners gay;  
Not a war-steed's stamping for the fight,  
As we rise at break of day.  
Only the song of the wind in the planes—  
A thrill that lives in the day-dawn's glow—  
A shifting vision of country lanes,  
That wave like ribbons below.

Washroom of the Norton Company, Worcester, Mass.

## Every Factory Owner and Manager Should Have This Free Book

IT is a guide to higher standards of factory and general industrial efficiency as well as descriptive of the great installations which we have made in manufacturing centers, large and small, throughout the country. "Factory Sanitation" is a

book for busy men on one of the most important of all business subjects—the increase of *man power* through proper attention to the physical well-being of employees. Sent free on request.

## "Standard" Plumbing Fixtures

### "Standard"

#### Wholesale Houses

In the cities marked thus (\*) at the bottom of this page there are "Standard" Wholesale Houses carrying in stock complete lines of

#### Supplies and Tools

for Mills, Mines and Factories—also the Water, Gas, Steam and Oil Industries. Write to or call upon the nearest wholesale house.

**Standard Sanitary Mfg. Co.**

for factory use are doubly important in these days when the maximum producing power of every worker is needed. They are important, too, because of the increased number of women in so many of the industrial plants. They represent an investment of actual value far beyond their cost.

"Standard" Plumbing Fixtures for the Home—for Bath, Kitchen and Laundry—are fully described in a separate catalogue which will be sent free upon request.

If you intend to build, remodel or install new fixtures, be sure to write for it.

# The Independent

WITH WHICH IS INCORPORATED  
HARPER'S WEEKLY

THE LINE-UP ON THE WESTERN FRONT

So far as can be ascertained from the German despatches, the five German armies taking part in the westward drive are under the commanders named on the map. Field Marshal von Mackensen is recently reported to have been placed in supreme command of all the forces south of Arras. The estimates of the numbers of the enemy armies are of course uncertain, as they are continually changing. On the Allies' side are named some of the troops mentioned in recent operations. The Americans are brigaded with the French at several points. From the map it may be seen that the Germans have secured by their recent advance a tolerably straight north and south line and are in a position, if they have the strength, either to cut off the British forces by a drive from Amiens to Abbéville or to gain Calais, Dunkirk and Boulogne by a swing of their right wing.

## THE DEMOCRACY WE FIGHT FOR

IT is now generally recognized thruout the free nations that the European war has precipitated a world conflict not only more far-reaching geographically than any hitherto waged, but also more radical in the issues involved. In the conflict over issues three groups of combatants are engaged. It is a three-cornered fight.

One of the three groups consists of the absolutists. They want a Kaiser; whether the one who now reigns in Germany or another does not greatly matter.

Another group consists of the anarchistic revolutionaries of whom the Bolsheviki are for the moment the spectacular exponents. They want to destroy the existing social order by two specific deviltries—(1) the redistribution of property by expropriation instead of by a lawful procedure of readjustment to which men could accommodate themselves with minimum sufferings; (2) the substitution of ignoramuses and incompetents for men of ability and training in legislative and administrative positions.

Absolutism is the declared intent of powerful thugs to loot the world and rule it.

Anarchistic revolution is the declared intent of a rabble of ignoramuses to loot the world and rule it.

It was disheartening to see German university professors and theologians defending the scoundrelism of the absolutists. It is pitiful to hear some of our literati and other illuminati lauding the Bolsheviki as idealists and martyrs who are about to create a millennium. We have learned that a man can be a German theologian without possessing the rudiments of moral sense, and that it is possible for English and American scribblers to be illuminati without possessing the rudiments of common sense.

The third group of contestants in the three-cornered fight over issues consists of men and women who conceive of democracy as a mediation between despotism and chaos.

These democrats believe that powerful thugs and ignorant thieves are a minority of the human race and can be put in their place. They intend to put both lots in their place before this war is ended and its subsequent agreements are completed.

Democracy, as men of common sense and moral sense conceive it, is the power of the people exercised in an orderly way thru a legal procedure. It is an organized power. It utilizes leadership, but it holds leadership to accountability.

The organization of democracy is by no means perfected yet in any part of the world, and this is why the free nations are now compelled to fight a war of life and death to make the world safe for democracy, and why, after victory, they will be under the necessity of giving their utmost intelligence and devotion to the task of making democracy safe for the world.

The organization of democracy will consign to the scrap heap a good many things that were once believed to be valuable and enduring. Privilege will have to go. The greater inequalities of wealth will have to go. Men of great ability will have to give their lives to public service instead of to the creation of private fortunes. The educational program will have to be enormously expanded and improved. It will be necessary to find an effective way to keep ignoramuses, demagogues and political adventurers out of public office. It will be necessary to distinguish between the real expert and the pretender.

These things will not be achieved in a minute. The way to them will lie thru disappointments, mistakes and discouragement.

These will be overcome, and democracy will be organized and established because the war has discovered and brought into the contest over issues a body of men intelligent enough, brave enough, and patriotic enough for the task, immense and difficult tho it is. The millions of average men and women, democratic in feeling, were vague and uncertain in thought. They did not clearly see what democracy is, or what it demands. Their thought has been clarified, and sharp contrasts have delimited the field of democracy itself and thrown its problems into strong relief.

The millions of men and women will not submit to a Kaiser, nor will they surrender the world to its Bolsheviki. They will create a competent democracy.

If this be optimism, we are optimists.

## THE ADVANTAGES OF A FREE PORT

THE announcement of the purchase of the Grand Central Palace by Alfred I. du Pont of Wilmington, Delaware, with the intention of making it an international bazar, is a new proof of the need of some sort of free port facilities. The Grand Central Palace is a thirteen-story building erected by the Merchants and Manufacturers' Exchange over the tracks of the Grand Central Station in New York City for the purpose of holding commercial expositions, and it was granted by Congress in 1912 the privileges of a bonded warehouse. It is possible, therefore, to use the building as a sort of a free port where foreign goods may be exhibited, inspected, sold, repacked and transshipped without passing thru the custom house.

But this, while an interesting enterprize, does not solve the problem except in a partial degree for the few who are in the organization. What is wanted if New York or any other American city is to become a center of international exchange like London, Hamburg or Hongkong, is a free port district of considerable extent where any firm may lease space for storage and handling of foreign goods intended for reexport.

The free port district or *Freibezirk* is said to have been a device of Bismarck to overcome the reluctance of the free city of Hamburg to surrender its ancient privileges and enter the German Customs Union which he later molded into the modern German empire. The result was that Hamburg came rapidly to the front as a shipping point and before the war

had gone ahead of London and Liverpool. The free district consists of about 1300 acres of land and as much water. It is fenced off from the rest of the port by means of a canal and floating palisades. Ships brought into this free port unload their goods without interference of the custom house officer. The goods may be stored indefinitely without paying duty or giving bonds. They may be divided and repacked to be sent out to any part of the world. They may be mixed, manipulated or manufactured in any desired fashion and sent off again without the delay, expense or red-tape incident to governmental supervision. But if any of the goods pass from the free zone into the city and country the customary tariff dues must be paid.

It will be seen that the free port is not as it is sometimes called "a breach in the tariff wall." It is merely a niche in the outside of the wall for the shelter of outside trade. The example of Hamburg was followed by other German cities and Copenhagen. France was planning to adopt the system when the war came on and Spain established a free port zone at Barcelona in 1916.

The United States has so far stuck to the bonding and drawback system by which the duty may be suspended or remitted on goods to be exported. This is useful and will doubtless be retained, but it is a complicated and inconvenient process compared with the flexibility and informality of a free zone. Dr. Frederick C. Howe, when Commissioner of Immigration at the Port of New York, advocated three

free ports on the Atlantic, one at Panama and one or more on the Pacific. The Merchants' Association of New York has urged the opening of a free port at that city. It would be easy to set aside such a district on Staten or Long Island or on reclaimed land in the harbor of New York, and it is believed that it would greatly facilitate our trade with South America, for a vessel from Europe could then discharge its cargo at the docks of the free port; part of it could be sent into the United States after paying duties, part of it could be repacked and relabeled for southern ports and the rest could be stored still duty-free until it was needed in the domestic or foreign market. Buyers from the United States and other countries could inspect and compare domestic and foreign products of all sorts and make their purchases without bothering about the tariff. Whether

manufacturing on any considerable scale ought to be permitted as at Hamburg is questionable. It would necessitate a larger district, greatly increase the liability of smuggling and involve the introduction of fuel, machinery, raw material and a large force of workmen. Factories would have to be confined to one place instead of being scattered thru the country as they are now.

The war has made the free port more necessary than ever for as it looks now national lines will be more strictly drawn. The Allies are committed by the Paris Conference to a joint policy of protective and discriminatory restrictions on commerce. Germany, who has professed to be fighting for equality of trade privileges, has in her recent treaties with Russia and Rumania secured for herself a virtual monopoly of their products. The committee appointed by the British Government to draw up a national policy has just handed in its report, which is a pronounced protection document, providing for the exclusion of foreign capital, the protection of essential industries by tariff or subsidy, the monopolization of Allied products by the Allies and government aid to encourage home industries and make the British empire self-supporting. Since England has thus renounced her traditional free-trade faith there is no likelihood that any other country will embrace it in the immediate future, and we should adapt ourselves to the conditions by adopting the free port system, which combines so far as possible the advantages of the protection and free trade policies.

## THE AMERICAN PURPOSE

**I**N a speech for the Red Cross last week in New York President Wilson made clear with more convincing emphasis than ever before that America intends to go thru with the war to an end that is both definite and worthy. We must not only win the war, he said, but we must win it "greatly and worthily, showing the real quality of our power not only but the real quality of our purpose

© The Bell Syndicate

### KEEPING UP WITH WILLIAM

"Go on, William, I think I can keep pace now," says John Bull in this cartoon by Louis Raemaekers, based on a recent statement by Sir Eric Geddes, "We are sinking submarines as fast as Germany can build them"

engaged in strengthening by every device known to Prussian brutality and Prussian guile her grasp upon the rich regions to the East. It would be by no means surprising, as The Independent long since suggested, if, repulsed inexorably on the western front, Germany should once more propose peace with the intention of satisfying her lustful ambitions in Russia and the Balkans.

The President has put into a sentence what must be the American response: "I intend to stand by Russia as well as France."

This is not only the decent and right thing to do. It is the only safe thing to do. Germany coming out of this war with Russia and Rumania and Serbia under her control would be a Germany victorious, not defeated, reinforced in power, not impotent. Such a Germany would be an even greater menace to the future peace and well-being of the world than the Germany of 1914.

## THE AIRCRAFT INVESTIGATION

**T**HE selection by the President of Charles E. Hughes to conduct an investigation of the whole matter of aircraft production is a guarantee that the investigation will be searching, pitiless and scrupulously fair. Judge Hughes made his first reputation in public life in just such inquiries in New York—the notorious gas and insurance investigations. He goes to the bottom of anything he sets out to investigate, and goes there with a thoroughness, a mercilessness, an indefatigability that leaves nothing to be done when he is thru.

When Judge Hughes has completed his task, the Government will know, beyond a shadow of doubt, not only whether there has been dishonesty and fraud in the aircraft business, but whether there has been bungling and inefficiency as well. In a letter to the Attorney General Judge Hughes has made clear just what he believes should be the ends to be pursued in his work:

and of ourselves." He declared that there must be no limit to the number of men that the United States is to get ready, because "we all intend that every ship that can carry men or supplies shall go laden upon every voyage with every man and every supply she can carry."

Mr. Wilson further asserted that no insincere approaches upon the subject of peace are to be allowed to divert us from the one grim purpose of winning the war. He has tested the approaches that have been made and found them insincere. "Every proposal with regard to accommodation in the West involves a reservation with regard to the East." The President has here put his finger on the danger point in the whole situation on the political as distinguished from the military side. While Germany fights savagely to break thru or at least to hold fast on the western front, she is busily en-

If we discover a basis for civil suits by the Government, they will be instituted. If we find grounds for a criminal prosecution, it will be in order to go before the grand jury to obtain indictments. If we find no sufficient basis for such proceedings, our conclusion, to be convincing to the country, could not well be stated as a mere negative conclusion in general terms, but should be accompanied by a fair, candid and adequate statement of the facts which our investigation has disclosed. . . . When we are in a position to make such a report of our inquiry we shall know the facts, and it will be reassuring to the country and support our inquiry and its reputation for integrity, if we state concisely, but fairly and completely, the results of our investigation.

The country may rest assured that the Hughes investigation will produce the facts.

Meanwhile Judge Hughes hopes that the Senate will not conduct a parallel inquiry into the aircraft situation. His wishes should be promptly and generously met. Conflict and confusion would certainly result. The Senate may well be content to wait. No investigation its committee could make would be so valuable as that already under way.

## AMERICAN SOLDIERS AND AMERICAN HOMES

THE statement recently appeared editorially in a widely circulated monthly magazine that "the time has come for the public to keep hands off our men in service." It was further asserted that those in charge of military camps and naval bases have come to the conclusion "that the entertainment of the men in service in private houses has resulted to the detriment of the men instead of to their benefit."

These editorial assertions have drawn forth vigorous denial from the Chairman of the War Department's Commission on Training Camp Activities. Mr. Fosdick's presentation of the facts in the case is definite and unequivocal:

That time has no more come than the time has come to stop conserving wheat or supporting Government loans. To say that it has is a direct contradiction of the Government's policy. The preservation of normal social relationships between the people and the men in training is an essential part of our military program. It is under Government supervision and is being done by the War Camp Community Service outside camps with equal effectiveness as the work of the Y. M. C. A. and Knights of Columbus inside the camps.

It is not true that the entertainment of the men in service in private homes has resulted to the detriment of the men instead of to their benefit. There has been no change in the attitude of the Government toward home hospitality. In fact, with hundreds of thousands of men pouring into the training camps, the Government desires more than ever that the people of America continue to offer to them the wholesome influences of their homes.

Naturally in the entertainment of thousands of men in private homes there have been some instances of hospitality overdone or taken advantage of. Some women, unwisely, have flooded soldiers with sweets and unnecessary "comforts" and have written doleful letters to their boys. These things and the "godmother" idea are justifiably discouraged. But a sharp distinction should be drawn between pink-tea sentimentality toward the soldier and the organized hospitality which is supervised by the Government.

The recreation provided in camp communities is not a hit-or-miss affair. Known all over as the War Camp Community Service, it was long ago established by the Recreation Association of America, at the request of the War and Navy Departments. This town hospitality for the men in service is mobilized by nearly two hundred trained workers. It is supervised by the War and Navy Departments thru the Commissions on Training Camp activities, which is just as responsible for the activities outside of the camps as for those of the Y. M. C. A., Knights of Columbus and other agencies inside the camps.

The assertion that over 90 per cent of the social functions provided for the men outside of the camps have taken the form of dances, which, keeping up until all hours, impair the physical vitality of the men, is mere speculation. Dances do not constitute an overwhelming proportion of the recreation program. Athletic meets, community sings, concerts, church socials, automobile rides, home hospitality and many other forms of entertainment are provided. Dances almost always take place Saturday nights—not often enough to impair their vitality.

To eradicate vice not only by repression but by the substitution of attractive and healthful diversions is the great purpose of the

commissions. Any slight temporary ill-effects resulting incidentally from the system of recreation in and about camps are negligible compared with the remarkable decrease in venereal disease rate obtained thereby.

Man power will win the war, and we depend upon the American home in conserving this power. As President Wilson has said: "The spirit with which our soldiers leave America, and their efficiency on the battle fronts of Europe, will be vitally affected by the character of the environment surrounding our military training camps."

The Commission on Training Camp Activities is doing a splendid work both within and without the camps in keeping the necessarily abnormal life of the boys who have gone to be soldiers as near to the normal as possible. "It is not good for man to be alone"—that is the chief trouble with the life of the soldier and the sailor. The Commission does its utmost to mitigate the loneliness and the monotony of the soldier boy's life in the midst of a dense mass of his own kind and nothing but his own kind, all engaged in a single highly specialized form of activity. It brings the every-day life of the world to him; and takes him out to the every-day life of the world. Its contribution to the preservation of the sanity and wholesomeness of camp life is tremendous. The public need have no qualms about doing anything for our soldiers and sailors that the Commission recommends or approves.

## STATUARY STORAGE

IT is reported from Germany that bronze statues are being requisitioned and melted up to regain their copper for munitions. Thus is revealed another secret of German preparedness. Besides providing concrete foundations within suitable range of Paris, London and New York for the 75-mile gun that they were later to invent, and preparing landing places in the vicinity for the flying machines that the Wrights were to invent for them, the German military authorities have been laying up and hiding away a supply of metals for use when *der Tag* should come. Poe, the father of the detective story, proved that the safest hiding place was the most conspicuous. So the Germans, having doubtless read "The Purloined Letter," concealed these tons of copper, tin and zinc in the middle of the market place and on mountain tops. For fifty years they have been engaged in erecting monuments to all the major and minor deities of the Gothic and Hohenzollern pantheons in spite of the curiosity, the amusement and the derision that they excited in the mind of foreigners. The French tourist pointed out that the statues were not beautiful. The Britisher declared that the personages they purported to represent were not worthy of such honor. The Yankee proved that they did not pay. Personally conducted parties, laboring thru a Triumph-Alley with Baedekers in hand, looked at each other with a wild surmise and asked the conundrum of the ages: "It's ugly, but is it art?" The poor, patient Germans answered never a word. Not one of sixty-five million, including women, betrayed the secret.

The torrent of democracy is rushing on in Germany with all the impetuosity of a glacier climbing a hill.

We don't care so much what language a hyphenate speaks in or writes in as we do what language he *thinks* in.

Learning that food conservationists were advocating the use of whale meat as a beef substitute the German Government issued a proclamation declaring all of the high seas north of 420 degrees south latitude a prohibited zone for whales. Any found within the prohibited zone may be torpedoed without warning.

They say that America isn't going to get anything out of this war. Don't you believe it! We have already gained vast extensions of equal suffrage and prohibition; social supervision of private capital and enlarged industrial coöperation; an integrated nationality, and a living sympathy with all the other democracies of the world.

# THE STORY OF THE WEEK

## Gathering Forces

In the past month of comparative inactivity both sides have been rushing reinforcements to France in preparation for the summer campaign. It is generally assumed that the Germans will, as formerly, take the offensive and that they will be stronger than on March 21, when they made their big drive toward Amiens. According to Allied estimates the total strength of the German army is now about 5,300,000, which is twice as large as it was at the outbreak of the war, but 1,500,000 less than in August, 1916. On the western front there are thought to be 3,600,000, which is 1,200,000 more than the Germans had there a year ago. Three-fourths of these reinforcements came from the Russian side.

On the front of the new offensive between the North Sea and the Oise River the Germans are known to have 140 to 150 divisions, of which ten are supposed to be stationed between the sea and Ypres, forty between Ypres and La Bassée, and the rest between La Bassée and the Oise. This would mean two men for each running foot of the front below Ypres. German divisions are now commonly calculated at 13,000 to 14,000 men each, making

## THE GREAT WAR

*May 16*—Shipping losses for April total 222,709 tons British, 84,393 tons Allied and neutral. German flour ration cut to 5½ ounces a day.

*May 17*—Five hundred Sinn Feiners arrested in Ireland. Captain Resnati, Italian aviator, killed at Mineola by collapse of Caproni biplane.

*May 18*—Australians take Ville-sur-Ancre. Explosion of TNT at Aetna works, Pittsburgh, kills about a hundred men.

*May 19*—Major Lufbery, American ace, killed by armored German plane. Japanese and Chinese reach agreement on Siberia.

*May 20*—Five airplanes, raiding London, brought down. French gain at Locre, southwest of Ypres.

*May 21*—Americans on Toul sector launch gas attack. Holland again protests to United States against seizure of her ships.

*May 22*—Bohemia divided into twelve districts to repress insurgent movement. Senate passes bill appropriating \$1,620,000,000 for navy.

altogether about two million Germans on and back of the line from Nieuport to Noyon. A somewhat different distribution is presented in the map on another page of this issue.

Estimates of losses in the recent operations vary widely. An English expert, Hilaire Belloc, figures that the Germans in the six weeks between March 21 and May 1 suffered losses of not less than 450,000 or 500,000. Of these about sixty per cent are so slightly wounded that they may be returned to the rank during the summer. On the other hand an American expert, Frank H. Simonds, maintains that the German losses amount to less than 350,000. Now the British mission in the United States has given out the statement that the total British losses are 250,000. If we add to this 50,000 to 75,000 for the French casualties without counting the unknown but comparatively small Portuguese and American losses we reach a figure which is not much below the German losses. The weekly reports of British casualties have averaged about 40,000 for the last three weeks. Since the fighting has not been heavy of late these must be largely composed of belated reports of the first offensive and would indicate that the official estimate of 250,000 for the British losses was not too high and that the German claim of 100,000 prisoners is not impossible.

The unusually large proportion of prisoners in the British losses was due

Drawn by D. Macpherson for the London Sphere, Copyright New York Herald

## WHILE THE BATTLE RAGES

"Extraordinary scenes took place along the canal bank when the enemy tried to cross in the twilight of early dawn," says the correspondent's despatch on which this sketch is based. "Groups of our machine gunners were able to reap a deadly harvest among the advancing 'field grays' as they attempted to force a passage across canal or river bridge. All the while, Allied aviators swooped and soared over the heads of the Germans"

L'Asino, Italy

## ITALY SUGGESTS TO THE JUGO-SLAVS THAT IN UNION IS STRENGTH

to the break-up of the Fifth Army by which the Germans were able to advance at an average rate of five miles a day for a week. In this part of the field at least the British, altho on the defensive, lost as many or more than the Germans, who were on the offensive. The Germans will have the advantage in the matter of recoveries, for men captured are permanent losses while from half to three-quarters of the wounded are eventually able to be used again. The Germans withdraw, replace and reorganize their troops at a rapid rate and from this the reader is likely to get an impression that their losses are greater than they actually are. When it is reported that in a certain battle three or four divisions of German troops have been "demolished" or "used up" it is not to be inferred that this number of men are to be permanently subtracted from the enemy's forces. A division is ordinarily withdrawn when a certain proportion, assumed by Allied critics to be twenty per cent, have been killed, wounded or captured. But the retired division after being reinforced and recuperated may be sent again into action within two or three weeks. In the six weeks of the German offensive fifty divisions appeared on the front twice, twenty appeared three times and one four times, so the 140 divisions which were identified amounted really to 230 divisions.

We have then Mr. Belloc's estimate that the enemy losses were more than twice those of the Allies and Mr. Simonds's estimate that they were about equal. If we turn to the other side we hear a very different story, for the Germans estimate the British losses at 600,000. But the British critics point out that the German claims of "enormous losses" among the British are demonstrably fantastic. For instance, the Berlin wireless stated that the Fifty-sixth British Division was "almost completely wiped out," when as a matter of fact it lost only 1468 men. The Fourth Yorkshires, which the Germans claimed to have "captured almost complete," had only 191 missing men.

But, whatever the discrepancy of the surmized losses, it is certain that the Allies have much greater reserves to draw upon. The American contingent is

now over half a million and besides this a quarter of a million Italian troops have now been brought to France to meet the next German offensive. For the first time since the war began all the Allied forces have been brought under one commander and General Foch is placing the various nationalities wherever they are most needed between the English Channel and the Adriatic Sea.

## Americans Join the British

The American troops which were at first brigaded with the French in the sector south of Amiens have now been distributed at other points along the line to Flanders, which is expected to bear the brunt of the impending German drive. The total front now assigned to the Americans is longer than that hitherto held by the Belgians and is only exceeded by that held by the French and British. The United States now has 2,078,223 officers and men under arms. More than half a million are in France and a million are ready to go as soon as shipping can be found. During the first ten days of May 90,000 American troops were sent to Europe.

By being intermingled with the veteran French and British troops the American officers and men have the advantage of being able to learn the methods of modern warfare from the experience of the Allies. During the past week the Americans at their new posts in Picardy took part in repelling several German raids. The new gas bombs on which American chemists have been working for more than a year are proving good. One night last week Girechamp Wood, in which many Germans were known to be sleeping, was drenched with poison gas from the American shells. Three waves of the fumes were discharged upon the enemy within a half hour. A body of American negro troops, which has been stationed for a month at St. Menhould, west of Verdun, was attacked on the night of May 18 by a small raiding party. But two of the sentries, Privates Johnson and Roberts, held up the enemy by a hand to hand fight with bayonet, rifle butt and bolo knife until relief came. For this act of "notable bravery and devo-

tion," as Pershing's communiqué puts it, the two colored soldiers are to receive the War Cross.

Both sides have been absorbed in preparations during the present month, but the French and British have by local drives greatly improved their tactical positions at several points. A dashing charge by the Australians put them in possession of the hamlet of Ville-sur-Ancre, between Albert and Morlancourt. This place on the hills overlooking the Ancre River had recently been reinforced by the Germans, possibly as a point of departure for their next drive, and the Australians were able to take 400 prisoners and thirty machine guns.

The French made an advance on a two mile front about the Locré hospice, which stands between Mt. Kemmel, which the Germans hold, and the hills to the west occupied by the French.

## A Victim of the Flying Tank

There have been rumors for several months that the Germans had constructed a giant airplane so heavily armored as to be invulnerable to rifle and machine gun fire. The first of these aerial monsters appeared on the American front on May 19 and caused the death of the most illustrious of American flyers. The new machine is said to be a biplane with a wing stretch of sixty feet. It is driven by two powerful engines and carries a pilot and two gunners. Steel armor, supposed to be at least three-eighths of an inch thick, protects the gasoline reservoirs, the engines and the pilot-house from attack from above, below, or in the rear. The two gunners with six machine guns are likewise sheltered and armored.

When the giant plane appeared over the American lines, two of our airmen went up to engage her. Two others followed and later more, but, altho they followed the German machine for many miles pouring bullets into her from various angles, they made no impression. Finally Major Lufbery asked permission to have a try at the stranger. He swept by the flying tank, raking her with his machine guns, and then turned to make another attack, but a shot from the German guns shattered his

hand and set his gasoline on fire. Lufbery jumped from his blazing machine and fell to the ground over 1600 meters below.

Raoul Lufbery was born in France thirty-four years ago. When the war broke out he entered the French service as a mechanic and later became a pilot in the Lafayette Escadrille at Verdun in 1916. He brought down seventeen enemy aeroplanes and perhaps more. For these exploits he has received the French Croix de Guerre and the Medaille Militaire, the Legion of Honor, the British Military Cross, and three other English decorations and the Montenegrin war medal. When the American war service was organized he entered it with the rank of major.

#### Aerial Fight Over London

In greater force than ever the German air fleet made a raid upon London Sunday night. Five squadrons in succession went over the Kent and Essex coasts, but very few of the machines succeeded in reaching the capital. Altho the German machines kept to an altitude of 12,000 feet, the night was clear and the British anti-aircraft guns placed a barrage around them, breaking it only when their own airmen were ready to attack. The battle lasted for two hours and a half and was watched by thousands of spectators, who cheered when a boche plane fell flaming to the ground. One of the machines was smashed up in a tea garden on the outskirts of London and was visited by throngs of sightseers the next day. Another was brought down ten miles away and the three occupants taken prisoners. Including one that fell into the sea, five of the German airplanes are known to have been lost and possibly two more. The machines are of the Gotha type and latest model, twenty-six yards from tip to tip and furnished with eight large rubber-tired landing wheels.

This raid caused more damage than any other since that of January 28. In London thirty-seven persons were killed and 165 injured besides six persons injured in the provinces. Of those who were killed seventeen were men, fourteen women and six children. The large number of casualties were caused in part by carelessness, for many persons refused to take shelter and persisted in staying on the street to watch the battle. One bomb which dropt on the street killed eleven persons including three children. Another bomb striking a house in the vicinity killed five persons of one family.

On the preceding night six French and English airplanes made a raid on the city of Cologne, killing fourteen persons and injuring more than forty others. The chief damage was caused by the bombs that fell in the market place of Cologne. The city of Metz was raided in daylight on May 18. The Allies have been unusually successful during this past two weeks. Within a period of ten days the British airmen destroyed 116 German planes and brought thirty-eight others to the ground. During the same period thirty-eight British machines were lost.

British airmen dropt 110 tons of bombs upon the German ammunition, guns, stocks and railways. During the same period the French airmen destroyed twenty-three German airplanes and drove down thirty-four. The Germans claim to have driven down seventy Allied planes. According to an official statement given out in London 1000 German planes have been brought down within the last two months and 1000 tons of bombs dropt upon German cities.

#### The Irish Crisis

The arrest of several hundred Sinn Feiners is the culmination of a rapid series of events which has made of Ireland one of the most critical points in the Great War. In the first place the Irish Convention which met under the chairmanship of Sir Horace Plunkett and was comprized of all factions of the Irish except the Sinn Fein, failed to agree upon any plan for the government of Ireland and could not even vote unanimously in approval of the minutes of the proceedings. After the British reverses in France in March Premier Lloyd George introduced a bill for increasing the strength of the army and extending conscription to Ireland. This was promptly passed by Parliament with a vote of three to one in the House, but its application to Ireland was twice postponed by Orders in Council. At the same time that the conscription law was proposed the Premier promised to bring in a Home Rule bill to take the place of the act which was passed in 1914, but Parliament adjourned on May 18 without any sign of it.

The extension of conscription to Ireland met with furious opposition all over Ireland. The Nationalists joined forces with their rivals and opponents, the Sinn Feiners, in organized resist-

ance to the enforcement of the draft law. An anti-conscription fund of almost a million dollars was soon raised. The Roman Catholic priests and bishops administered on Sunday after mass an oath in opposition to conscription. This caused a recrudescence of the old "No Popery" movement in England. The Catholic Union of England protested to the Vatican against the action of the Irish clergy as an unwarranted interference of the church in politics. The Protestants in Ireland were divided upon the subject.

#### An Irish-German Conspiracy

On May 6 Premier Lloyd George made a significant change in the administration of Ireland. In the place of Lord Wimborne, who had resigned as Lord Lieutenant of Ireland, he appointed Field Marshall Viscount French, who was for the first year and a half commander-in-chief of the British forces in France. Lord French is an Irishman, and just before the war had resigned his position in the army because he became involved in the refusal of British army officers to take any part in the establishment of the Home Rule act passed by Parliament. As Chief Secretary for Ireland in the place of Henry C. Duke, the Premier appointed Edward Shortt, member of Parliament from Newcastle, who had voted for Home Rule and against conscription for Ireland. On May 17 the new Lord Lieutenant issued a proclamation in which he declared that "it had come to our knowledge that certain subjects of His Majesty the King domiciled in Ireland have conspired to enter and have entered into treasonable communication with the German enemy," and that "whereas such treachery is a menace to the fair name of Ireland and its glorious military record, a record which is a source of intense pride to the country whose sons always distinguished themselves and fought with valor," drastic measures would have to be taken to put down this German plot, and the Lord Lieutenant called upon all loyal subjects to assist in quenching this conspiracy.

At midnight of the same day the military and police in Ireland arrested some 500 suspects, men and women. Those who were seized in Dublin, numbering over a hundred, were put on board a ship and transported to Wales. As the arrests were made under the Defense of the Realm act, it will not be necessary to have the prisoners put to trial. The evidence on which the arrests were made was not made public, but it is said that the conspiracy involved co-operation of the Sinn Fein with U-boats in providing for a German landing on the Irish coast.

The headquarters of the Sinn Fein and the National Aid Funds and the offices of some of the Irish newspapers were occupied by the military.

#### The Rumanian Peace Treaty

The Germans are jubilant over the conclusion of the treaties relieving of danger their eastern frontier and providing the necessities of national life—the "bread peace" with

These Red Cross workers formed the symbol of their service as they marched down Fifth Avenue in New York's Red Cross parade

Russia and the "petroleum peace" with Rumania. But the latter treaty, which was signed at Bucharest on May 7, is so onerous on the defeated nation as to arouse criticism from the liberal press of Germany, which see in it a violation of the principles professed in the Reichstag resolution and the Brest-Litovsk conference for a peace without annexations and indemnities. Rumania is compelled to indemnify Germans, Austrians and neutrals for all damages done to their property during the Austro-German invasion by whatever party including the losses suffered by foreign shareholders. It will be remembered that the oil wells and refineries, mostly owned by foreign capitalists, were destroyed by the Rumanian Government to prevent their falling into the hands of the invaders. Rumania also assumes the burden of paying the expenses of the army of occupation and renounces any claims for damages, requisitions and contributions. The Rumanian national debt, now amounting to two billion dollars, will keep her in financial subjection to Germany.

The territorial changes involve the retrocession of the Dobrudja below Constanza which she took from Bulgaria in 1913. The rest of the Dobrudja, between the Danube and the Black Sea, is ceded to the Central Powers collectively. Besides this the "rectification of the frontiers" gives to Hungary some five thousand square kilometers in the Transylvanian Alps and to Austria about six hundred square kilometers on the southern border of Bukovina. But in compensation for these losses Rumania acquires Bessarabia by her new treaty with Russia. This territory is largely inhabited by Rumanians, but was seized by Russia in 1878.

These two territorial transfers, the alienation of the lower Dobrudja and the acquisition of Bessarabia by Rumania, are both justifiable on ethnological grounds, but the Rumanians of Transylvania, for whose recovery Ru-

mania entered the war, will remain under Hungarian rule and the new territory south of the Alps acquired by Hungary is of course inhabited by Rumanians.

The new treaty stipulates that the Jews and Moslems shall have equal rights. Such a provision was imposed upon Rumania by the Congress of Berlin in 1878, but has been disregarded by the Rumanian Government.

The supplementary economic treaty binds Rumania to sell all her surplus products, oil, grain, cattle, wool, fodder and poultry, to Germany and Austria-Hungary for a period of nine years.

It is reported that Queen Marie of Rumania has declared that she would rather abdicate than to recognize such a humiliating treaty. The Austrian press is demanding the deposition of King Ferdinand and Queen Marie as anti-German.

In Congress Congress leaders last week spent much time conferring with Administration leaders on the subject of holding the session open for tax legislation. "If we are told that a bill is essential, of course we will be good soldiers and draw one," said Majority Leader Kitchin after talking with Secretary McAdoo and his colleagues. Washington despatches indicate that the bill will be presented, debated, and passed at this session, which means that Congress will remain at the Capitol till late summer or early fall at least.

Appropriation bills which should be enacted before the end of June occupied much of the energy of both houses last week. Eleven million dollars was requested by Food Administrator Hoover—a sum which is almost certain to arouse opposition in the Senate. The important post office bill, carrying a total of \$380,000,000, including a provision for Government purchase of the pneumatic mail tubes, passed the Senate. Pensions for past wars to the ex-

tent of \$185,000,000 are provided in legislation approved by the House. Prohibition in Hawaii was voted by the House by 237 to 30, the same bill having already passed the Senate. It now goes to the President for signature. A rivers and harbors bill carrying \$21,000,000, a Federal Trade Commission appropriation bill calling for \$1,600,000 and another requiring \$18,000,000 for the next census enumeration, these and a number of lesser legislative propositions filled in the time of individual members and committees.

Pending decision in the matter of the tax bill, every effort is being made to clear the slate for an early adjournment.

Railroad Reorganization Capital for long needed railroad projects to the limit of practically a billion dollars will be expended this year under the operation of the carriers by the Government. Part of the money will be supplied by the Government itself, the rest being authorized by the Government and supplied by the market. The billion dollars will be expended for additions and betterments, such as stations and other property equipment, for rolling stock, and for track extension. The estimates of the railroads, submitted to the Director General, called for an authorization one-fourth as large again as that which has been approved.

This authorization marks the first time in the history of this country when the needs of the rail transportation system were considered all together and considered, moreover, in the light of national policy and necessity. The Government has frowned on extensions of lines which were not absolutely demanded by traffic conditions, but it has encouraged roads to make improvements and extensions where such would

THE PRESIDENT LEADS THE PARADE The opening feature of New York's campaign for the Red Cross war fund was a big parade down Fifth Avenue with President Wilson marching at its head

materially add to the solution of the freight jam. Altho many of the budgets of the eastern roads were cut sharply here and there, it is true in general that the eastern main lines were generously treated, the object being, of course, to enable them better to handle the great flood of traffic to the Atlantic seaboard for movement to Europe.

Twenty thousand dollars is the limit fixed for the salary of railroad presidents by the Director General of Railroads, and hereafter every railroad president in the United States will be either an employee of the Federal Government or else relieved from active duty as executive manager. By this move the Government draws still tighter the reins of its control, and at the same time effects a saving estimated at millions annually.

### More Shipping

All kinds of things have been happening in the shipping line, and new records are being made. For over a month wooden ships have been coming off the ways at the rate of more than one a day, and within one span of twenty-four hours four wooden hulls, totaling 14,500 tons, were launched. As was indicated last week, shortage of boilers is holding back the completion of these craft. But the building goes on. Riveting contests have been started in various parts of the country, with newspapers offering prizes to the gangs or individuals driving the greatest number in a day.

One negative item of progress should be chronicled—the report of a special board of naval experts on the so-called “unsinkable ship.” The desirable quality of unsinkableness was to be obtained by the installation of buoyancy boxes, invented by a well-known builder of dry docks. The board, in declaring against the scheme, was of the opinion that a ship provided with such a system of boxes “would, after the explosion, be little better than a water-logged derelict, and, under these conditions, even should she remain afloat, her salvage would prove difficult.”

At the request of the Secretary of the Navy, this same board made a supplemental report on the value and practicability of other means of preserving buoyancy. For the information of inventors and the general public, this report is summarized as follows:

(a) That external protection by any means so far suggested is not a practical solution of the problem of preserving buoyancy, by reason of the reduction in speed, and the difficulties in attaching or operating such features.

(b) That attached methods of buoyancy protection by “bulges” and “blisters” are objectionable on account of the reduction in speed and the difficulty in fitting this form of protection.

(c) No form of buoyancy box or any so far suggested material for stuffing affords a practicable solution of the buoyancy problem, on account of the reduction in dead-weight and cubic capacity, etc.

(d) A judicious selection of cargo will aid materially in obtaining better buoyancy conditions in the case of damage resulting from flooding of holds.

(e) Internal protection by sub-dividing bulkheads is the best way to preserve buoyancy of vessels operating in the war zone.

### THE FIRST MAIL CARRIERS OF THE PLANE POST

When the daily mail service by aeroplane was established last week between New York and Washington, H. P. Culver (left) carried the first post to New York and Lieutenant Webb (right) took the first sack of mail from New York to Washington

Additional light on the shipping situation was thrown by Secretary Daniels in a statement explaining why the Navy Department refused to furnish certain turbine engines to the Fleet Corporation for vessels under construction at Hog Island. “Destroyers,” said Mr. Daniels, “are the paramount thing, and we could not consent to delay a single minute. The safe conduct of troops and supply ships is the supreme duty of the navy. It is of vital importance. Merchant vessels are getting more and more numerous all the time. This means that we will need more destroyers to properly safeguard them.”

Outside of the ship construction news, the shipping event of the week was the reported agreement of the directors of the International Mercantile Marine Company to relinquish control to British interests of its British subsidiaries and ships. This corporation is therefore scheduled to become purely an American concern. The status, however, will not actually change till after the war. Among the well-known ships which will change hands are the “Adriatic,” the “Olympic” and the “Baltic”—White Star vessels—together with forty-four large freighters of the Leyland Line. In addition, ten steel ships of an aggregate tonnage of nearly 60,000 were completed and delivered to the Emergency Fleet Corporation in one week. A number of steel ships were launched.

### Local Labor Boards

St. Louis has the honor of having the first local war labor board, established by the National War Labor Board. Similar committees or boards will be set up wherever necessity requires them in various sections of the country. The scope and purposes of this plan were thus explained by the joint chairmen of the National Board, Messrs. Taft and Walsh:

“The Local Committees of Mediation and Conciliation of the National War

Labor Board will constitute the forums of industrial peace in the United States. On these conferences capital and labor will work hand in hand with a single aim—to win the war. They know only one necessity, the maintenance of maximum production, and they know only one common law—the principles established by the board as the basis for the Government’s mediation and conciliating action. These principles secure to the employer maximum production and guarantee to the worker his right to organization, healthy growth of the principles of democracy, as applied to industry, and the highest protection of his economic welfare.”

**The Aircraft Investigation** President Wilson’s first move under the Overman departmental reorganization bill was to make a drastic change in the organization of the air service. By an executive order the President separated the air service from the Signal Corps, of which it has been an overtopping outgrowth, and at the same time made a sharp division between the production and operation functions of the aircraft management. Production passes to the control of John D. Ryan; operation, or utilization, becomes the task of Major General Kenly; and the aircraft board, once supreme, or nearly so, remains in existence but in an advisory capacity. The chief signal officer of the army remains chief signal officer, without aircraft burdens imposed on him in addition to those which he now has.

Meanwhile the Senate has been disputing about the proposed investigation into aircraft production and other matters connected with the war. The appointment by the President of former Justice Hughes to assist the Department of Justice in its probe into aircraft affairs, took the edge from the attack then hanging fire in the Senate, and on May 22 the Senate adopted unanimously a compromise

substitute for the Chamberlain resolution, which demanded an investigation of aircraft by the Committee on Military Affairs. This action of the Senate followed a letter from Mr. Hughes, in which he recommended that no parallel investigation be undertaken by the Senate, since the Department of Justice was about to undertake an exhaustive inquiry into the entire aircraft situation and might be hampered if the Committee on Military Affairs undertook a similar inquiry.

The daily Washington-Plane Post New York airplane mail service, in spite of initial accidents and delays, has now become a thing of regularity, and the Aero Club is urging its extension to Pittsburgh, Cleveland and Boston. One argument put up by the club is that experience in this service would be invaluable training for military aviators before going overseas.

**A Bigger Navy** The time when Congress debated endlessly on the number of battleships which should be authorized in a given year is now long past. The \$1,500,000,000 naval appropriation bill which the Senate has just begun to consider not only overturns previous precedents in the staggering total of the appropriation called for, but throws to the scrapheap all the fine argumentation for one as against two battle cruisers by boldly calling for the construction of a fleet of dreadnaughts and other men-of-war. The enlisted personnel of the navy will, under this bill, jump to three times its pre-war size. A \$9,000,000 nitrate plant is to be established at Indian Head for the manufacture of the chemical without which explosives cannot be made. In similar generous fashion \$6,000,000 is set aside for equipping navy yards for ship construction, and half that sum for a mine depot.

The bill as thus briefly summarized has been reported by the Senate committee. It represents an increase of over \$200,000,000 more than the House authorized. A little difference of this kind, however, can easily be settled when our first line of defense is involved, and Germany remains unbeaten.

**The League to Enforce Peace** The League to Enforce Peace held on May 17 at Philadelphia a "win the war" convention whereat every speaker emphasized the league's adherence to the war national program and purposes in such fashion as to leave no possible room for doubt as to the non-pacifist makeup of this organization. To make the world safe by the defeat of German militarism and to keep the world safe by a league of nations are the two cardinal principles underlying the activities of the league. "The issue is sharply defined," runs a resolution adopted by the conference of governors of states, held in conjunction with the meeting of the "league." The free nations must be armed to enforce a freeman's peace or liberty will perish from the earth. In the

#### MEDALS FOR OUR SOLDIERS

The medal of honor (right) is the highest reward given by the United States. It is presented in the name of Congress for distinguished gallantry in battle, for heroism of an especially distinguished character not performed in the regular line of duty. The distinguished service cross (left) was recently authorized by order of the President. It is awarded to those who since April 6, 1917, have distinguished themselves by extraordinary heroism in connection with military operations against an armed enemy of the United States under circumstances which do not justify the medal of honor. One hundred of the crosses have been sent to France. These medals, with their respective values, have their counterparts in the Victoria Cross and distinguished service order of Great Britain and the medaille militaire and Croix de Guerre of France.

military triumph of the Entente Allies, and in the organization afterward of all the resources of civilization against militaristic aggression, lie our hopes for the future of mankind. To this goal there is only one way. It lies thru battle and bloodshed."

Some of the discussion turned toward the details of a practical league of nations plan. United States Senator John Sharp Williams, speaking on this topic, suggested 450,000 men as a safe and reasonable limit for national armies after the war. "The treaty of peace," declared Senator Williams, "should contain a provision that no country shall support an army of more than, say, 450,000 men trained for war. The greatest nations—Britain, France, Germany, Japan and the United States—need no more unless they premeditate offense and are seeking advantage beforehand by the anticipated quick use of force. Does this limitation deprive the strong and populous states of their 'natural advantages'? No. They still have that advantage in their reserves of superior intelligence and resources."

**The Steel Barometer** Steel common, which has recently been over twenty points above its average for many months, began to tumble the other day. Whether its rise and turn had or had not anything to do with the meetings between steel men and government officials in Washington, Pittsburgh and New York is not clear. But the fact is to be gathered from every source that for the moment at least steel is seen to be as vital a war necessity as ships, men, or food. There has long been in all the war industries an undercurrent of complaint that the steel which had been ordered was not

forthcoming. The railroads adduced this fact a year ago as an excuse for the car shortage. Other examples are too numerous to mention. Steel is a prime war necessity.

In order to get at the truth, the steel industry and the War Industries Committee have designated a joint committee to ascertain the facts and report on them later. Probably because of the peculiarly important position of the steel industry, both in the financial and in the industrial world, nothing has been officially announced except this brief statement: "The War Industries Board presented to the industry the increasing demands for steel to supply the military necessities for this country and its allies, and we have been discussing means of meeting this demand. The matter is under advisement."

**A Year of Hooverizing** After less than a year of Hoover and Hooverizing, strenuous as that time may have seemed, the public was pleased last week to be told by Mr. Hoover himself that the unprecedented quantity of pork and beef saved by the people of the United States and shipped to the Allied countries was performing exactly the service which it was intended to perform. At the same time, according to the food administrator's statement, the embargo on foodstuffs to the northern neutrals, effective in July, 1917, has caused the Germans to reduce their meat ration to such a point that it is about one-ninth of the present American meat ration. Diet experts declare that the 150 grams of meat a day now obtainable by the Germans is close to the danger mark.

Compared with the beef and pork exports of April, 1914, amounting to 43,700,000 pounds, the net exports of April, 1917, before the food control was organized, were 161,000,000 pounds. This figure may be said to represent the natural increase in meat exports due to the demands of the belligerents. In April, 1917, we went to war with Germany and "began to begin" our intensive food-saving campaign. In spite of the fact that this campaign did not actually get under way till late in the summer, the net exports of April, 1918, were 359,058,000 pounds—an increase of about 220 per cent over the same month of last year, and about 830 per cent over April, 1914.

The Food Administration justly takes credit for these results. The Allied nations called for more meat. There was not time to grow it. So we saved it.

The Allied nations also called for more wheat. And we saved that. Had we not saved it, there would have been between 10,000,000 and 30,000,000 bushels to export. Thanks to the nationally practised economy, however, we had 110,000,000 bushels ready to go over.

Thus it has turned out that the most effective food blockade of the war has been neither the submarine blockade by Germany nor the naval blockade by Great Britain. It has been the blockade carried on in the American kitchen and on the American dining table.

# THE WORLD OF SCIENCE

## The Super-Gun

The Germans started their recent drive as they did their first with a surprise in the way of big guns. In 1914 they brought out the 42-centimeter cannon with which at a range of ten miles they were able to smash in the stoutest steel and concrete cupolas. In 1918 they brought out a 21-centimeter cannon that could bombard Paris from a distance of seventy-eight miles. In the second case, as in the former, the news was at first received with incredulity but unfortunately proved true. It was said that guns of such power could not be constructed or if they could that they would soon be so corroded as to be unusable. But the super-guns at Crepy-en-Laonnois continued to shell the city occasionally and sometimes all day long at intervals of half an hour or less from March 21 to May 16, when the last of the three was put out of action by the French cannonading.

All of the shells exploded. There were no "duds" among them. But from the fragments picked up in Paris the character of the shell can be ascertained and the type of the gun surmized. The caliber of the shell is twenty-one centimeters (8.2 inches) and it weighs over 200 pounds. It is made of a hard, fine-grained steel with walls an inch and a half thick. It is twenty inches long and blunt-nosed, but a conical cap of light steel screwed on to the front end extends its length to thirty-six inches and adds to its range and accuracy of aim. The explosive chamber is divided into two parts by a perforated partition and the charges are set off by separate fuses at the nose and base. The proper rotation is secured by two copper bands and by grooving the steel in front of each to fit the rifling on the inside of the gun barrel.

In order to fire a projectile such a

distance a muzzle velocity of between 5000 and 6000 feet a second is required, which is twice as fast as the biggest guns in use by the Allies. To attain this velocity the amount of powder must be very much larger in pro-

portion to the weight of the projectile than is ordinarily used. To provide for this the powder chamber would have to be enlarged or the length of the gun extended, or both. It is believed that the inventor of the big gun has done both. He has apparently taken one of the 15 or 16 inch Krupp howitzers and fitted into it a tube of about half the bore and twice the length. This would bring the total length up to about a hundred calibers; that is, a hundred times the diameter of the bore, and furnish the necessary initial velocity.

One of the difficulties of extending the range of artillery has been that the resistance of the air at such high speeds increases as the cube of the velocity or even at a greater rate. But the Germans have surmounted this obstacle—quite literally—by throwing the shell up out of the heavier atmosphere and into the rarefied air above. To reach a range of seventy-five miles the shell must travel about 120 miles and attain an altitude of over twenty miles at the highest part of its trajectory. This is three times as high as the highest recorded altitude reached by a balloon, the German "Preussen," which in 1901 rose to 35,100 feet. At this height the atmospheric resistance and friction would be negligible.

According to the French reports there were three of these big guns mounted on concrete platforms connected by spurs of the railroad from the Crepy station east of Laon. In order to prevent their being discovered by the sound of the report ten other heavy guns were set off at the same instant as one of the super-guns and to prevent their being seen from airplanes thick clouds of smoke were sent up from surrounding heights. But the French aviators finally discovered them and two big guns were set up inside the

London Sphere © New York Herald

### THE SHELL THAT REACHED PARIS

This sectional diagram of a shell from the German super-gun was drawn by G. Bron after a study of the fragments picked up in Paris. The shell is fitted with a false nose of highly tapered form made of sheet iron. The explosive is contained in a thickly walled shell, which limits the amount of explosive to about twenty-five pounds. A diaphragm separates this space into two compartments

### HOW THE SUPER-GUN WORKS

The gun is assumed to be mounted on a special triple-truck railway traveling base. It is here shown as in the position for loading. The barrel is drawn in section in order to show the inner tube fitted to take the comparatively small shell. One shell is shown in position ready for discharge with the big propulsive charge behind it. Another shell is also shown leaving the muzzle, where it probably has a velocity of 5200 feet per second

French lines which here are only seven miles away. These guns were named the "Mary Magdalene" and the "Mir-eille," the latter for the heroine of Mistral's Provençal poem. After eight shots from these guns the airmen hovering over signaled that the German guns had been demolished. According to the German reports one of their super-guns burst last month and the others have been taken back to the Krupp works to be relined.

Of course such a long-range gun must be aimed by the map and the French are careful not to announce the location of the hits. Even the name of the church that was struck on Good Friday, killing several persons of prominence, was successfully concealed for weeks. It is now understood to have been St. Gervais, in the heart of Paris. Whether any damage has been done to the fortifications or military buildings is not known, but many civilians, men, women and children, have been killed and wounded and thousands of the inhabitants have left for safer places. But it is surprising how little the city has suffered on the whole from the three months' bombardment. The shells of the super-gun do much less harm than the bombs of the airplanes, for they are smaller and carry less explosive in proportion to their weight. The only possible advantage which the Germans could have gained by this vast expenditure of money and metal would have been to have scared the Parisians, but it did not even succeed in keeping them away from church. It was a great feat in ballistic engineering, but its only effect is to increase the abhorrence and hatred felt by the outside world for those who devised and employed such a weapon.

**Wound Shock** The real struggle "over there," the vital conflict, is between the opposing forces of destruction and reconstruction, between mutilation and restoration. The real antagonist of the soldier on either side is the surgeon on the opposing side.

The surgeon has recently won a great victory. He has taken from the enemy half an army corps of his former victims. Every year some twenty thousand young Britons and Frenchmen have died of shock, altho their wounds were not necessarily of a fatal kind. Instead of rallying when his wounds were drest the patient would collapse. His blood would cease to flow thru the finer veins; his breathing and heart-beating would become rapid and feeble. Soon for no apparent reason he would die. No cure was known, for its cause was not known.

This was the problem that was put to the Rockefeller Institute for Medical Research and how it was solved is told in fascinating fashion by Dr. W. T. Porter in his little volume on "Shock at the Front," just published by the *Atlantic Monthly*. First, it was observed that death from shock was most apt to follow fractures of the femur by which the fatty marrow of the bone is brought into the blood. In the scien-

tific process the next step after observation is experimentation. It was found that a teaspoonful of harmless olive oil injected into the veins of a cat brought on the symptoms of traumatic shock. The third step, hypothecation, led to the theory that the cause of shock was the clogging of the capillaries by minute drops of oil. The fourth and final step, the application, had to be carried on at the front and under fire where victims of femoral wounds could be operated upon without any delay.

The remedy, the best remedy so far discovered, is what to the layman would seem most absurd—impure air. By sticking the patient's head in a bag and so making him breathe the air over and over again, or better, running in carbon dioxide gas until the air he inhaled contained a hundred times as much as normal air, the patient had to breathe deep and strong. The enhanced respiration raises the circulation. The heavier heart pressure forces the blood thru the veins and the oily plugs are swept out. Within a few minutes after the carbon dioxide is inhaled the pulse reappears and the victim revives.

**Rural Slums** The civilized man, as the name implies, has always been a city-dweller. The problem of the present is to prevent the countryman from becoming what he used to be called, a pagan.

It is in the remoter rural districts that the most persistent cases of congenital degeneracy are to be found. Mental defectives are four times more frequent among the country children than among city children. These are by their nature irremediable, but much can be done to relieve the handicaps of poverty and neglect incident to country life. Recent school surveys show that 3.7 per cent of the country pupils have lung trouble while less than one per cent of the city pupils are so affected. Fresh air alone is not a preventive of tuberculosis. Insufficient and improper food is an active agent in this as in other diseases. It has been found that 31 per cent of the country children suffer from malnutrition while the corresponding percentage in the cities is 23 per cent.

The discrepancy is growing to the disadvantage of the country, for more attention is now being paid to the diet of the children in urban schools. The future of the race depends upon the extension of modern sanitation beyond the limits of the city.

**The Secret of Lacquer** First impressions are most lasting and long after you have forgotten

most of your chemistry you will remember how on one of your earliest days in the laboratory you made oxygen out of potassium chlorate and manganese dioxide. Why you added the latter you never did understand, for it came out unchanged. The teacher "explained" it by calling the manganese dioxide a "catalyst," meaning by that a substance that stirs up a reaction without apparently taking any part in it. You've

seen such people, always starting a row but never caught at it.

The catalysts of plants and animals are called enzymes, from the Greek word for yeast. "A little leaven leaveneth the whole lump" and is not used up in the process. Now the famous lacquer which the Japanese applies to boxes and furniture, twenty coats of it each patiently polished off by hand, is made from milky juice of the *Rhus vernicifera*, a distant relative of our poison ivy. When a layer of this is exposed to the air it takes up oxygen and hardens to a varnish. This oxidation is due to an enzyme, called "laccase." You can always tell an enzyme when you are introduced to one because its name ends in *ase*.

But to get out the laccase from the juice so that it could be identified proved impossible. Professor Bertrand, of Paris, who tried to isolate it by repeatedly dissolving it in water and precipitating it with alcohol, found that the purer he got it the less it would work. It was hard to free it from traces of the metal manganese and as it was freed it became inactive. But adding to it the minutest particle of a manganese salt it resumed its activity as an oxidizing agent. So it seems that here manganese acts as a catalyst in the opposite way from the familiar laboratory experiment. In that it aided the chlorate to get rid of its oxygen. But here it aids the lacquer to take on oxygen.

**Litchi Nuts** The increasing popularity of the chop suey in American cities has led to the introduction of various Chinese viands, among them the litchi or lee-chee, commonly served as dessert. This would have a better right to the name of "grape-nut" than the popular breakfast food so called, for it has a shell like a nut and a pulp like a grape. Fresh or preserved the pulp is white; dried it looks and tastes like a raisin. The shell is thin and corrugated like a golf ball. Embedded in the pulp is one seed, larger than the grape seed.

Like the potato and tomato the litchi has disreputable relations. It belongs to the *Nephelium* family, some members of which are poisonous. But the litchi is a harmless and wholesome fruit, tho devoid of the medicinal action imputed to it by the Chinese materia medica. Analyses of it made at Yale and published in the *May Journal of the American Chemical Society* show it to be composed largely of the invert sugars, which are similar to glucose and therefore easily digestible and nutritious. The acid is citric as in the lemon.

It contains none of the fat and little of the woody fiber that make nuts hard for some people to digest. Its fuel value is seven-tenths that of wheat bread, therefore much more nutritious than most fruits.

The litchi nut is mostly grown in southern China and India, but could doubtless be cultivated in Hawaii and Porto Rico, if not in our southern states.

# NO STRIKES IN WAR TIME

STAFF CORRESPONDENCE FROM WASHINGTON

**N**OBODY is surprised at anything in Washington these days. Projects large and small, important and unimportant, are undertaken and put thru with little comment or wonder. Sworn enemies are friends, working side by side to win the war. Hustle, drive, push, characterize this once deliberate, sleepy and backward capital of the United States. For example:

William Howard Taft, formerly President and defeated candidate for reelection, can be seen almost any pleasant morning in converse with Frank P. Walsh, one-time belligerent chairman of the muck-raking Industrial Relations Commission. This converse takes place in a corridor or a room near the roof of the new Labor Building, another of

the rush-housing creations which the war has put up in Washington. If you happen to hang around a while—as prosperous employers and determined looking representatives of employes have to hang around—you can hear from the other side of the door the infectious chuckle, growing into laugh, of the “most useful ex-President,” and you can observe the infection spread to the gentlemen with pressing grievances so that they cannot but feel that, after all, this is a decent sort of world and that troubles can be ironed out provided people will get together in the spirit of peace and co-operation.

Such is the guiding spirit of the War Labor Board, concerning which several formal announcements have been made, but of which few citizens, notably citizens resident now in Washington, are really aware. The key to understanding what the War Labor Board is and expects to do may be found in that chuckle and laugh of Mr. Taft's. No one who has ever heard it can ever forget it. It used to leak out from the sacred precincts of the cabinet room before the American people voted thumbs down on the candidacy of its proprietor. It has been heard by thousands who have crost the trail of our most itinerant ex-President during his missionaryings for the League to Enforce Peace. Sometimes this chuckle-laugh follows the joke, but more often the impulse to perpetrate it is so strong that the chuckle-laugh precedes the joke and has the effect of working up an attitude of mind insuring successful receipt of the joke when it comes.

Mr. Walsh laughs and smiles, but it is nothing to what his brother chairman does. Some might interpret this to mean that capital, in the person of Mr. Taft, is in superior position, and

that labor must fight doggedly on in order to wrest a modicum of its rights from its ancient enemy. But this is not so. There is to be no wresting here. Even the casual visitor to the War Labor Board can see that. The balance between capital and labor is too well adjusted both in the personnel of the board and in the personalities of its chairmen for that to occur.

By the time this piece gets into print the board will probably have made history in the shape of one or two awards which will establish precedents for the future. The moral force of these precedents will undoubtedly be such that some threatened difficulties will be settled without recourse to the board. But at any rate, within a very few weeks the newly-created machinery will be operating and presumably turning out industrial peace and contentment.

“There should be no strikes or lock-outs during the war”—this is the first and underlying principle on which the board is going ahead. It is published in heavy black type in the eight-page leaflet which Roger Babson, the new chief of the division of information and education of the Labor Department has prepared. In the words of the President: “The powers, functions and duties of the National War Labor Board shall be to settle by mediation and conciliation controversies arising between employers and workers in fields of production necessary for the effective conduct of the war, or in other fields of national activity, delays and obstructions in which might, in the opinion of the National Board, affect detrimentally such production; to provide, by direct appointment, or otherwise, for committees or boards to sit in various parts of the country where controversies arise and secure settlement by local mediation and conciliation; and to summon the

parties to controversies for hearing and action by the National Board in event of failure to secure settlement by mediation and conciliation.”

Without such mechanism as is here sketched—mechanism which, by the way, has been the dream of many in both the democracy of capital and in that of labor for many years—the nation might very well be plunged into serious strikes and industrial unrest. But the machinery is nothing without the men to work it and a code of laws or morals to work it by. At the risk of repeating what many already know, let me abstract as follows the fundamental principles whereby it is hoped to secure democracy here while fighting for it in France:

The right of workers to organize is recognized and affirmed.

The right of employers to organize is recognized and affirmed.

Employers should not discharge workers for trade-union membership, either actual or potential.

Employees should not use coercive measures in forming unions, either against employer or employee.

Where union standards exist, they shall be maintained.

Established safeguards for protection, health and safety shall not be relaxed.

Equal pay for equal work—for women replacing men.

The basic eight-hour day is recognized where required by law, and in all other cases the question of hours of labor shall be settled *with due regard to governmental necessities and the welfare, health and proper comfort of the workers.*

Maximum production shall be maintained—sabotage discouraged.

In order to mobilize labor, the Department of Labor is to keep on file information from all sources.

Wages, conditions of labor, hours, shall be fixed with regard to local standards and conditions.

The right of all workers, including common laborers, to a living wage is recognized.

In fixing wages, minimum rates of pay shall be established which will insure the subsistence of the worker and his family “in health and reasonable comfort.”

Three years ago this would have been looked on as a revolutionary document. Today it is admitted to be little more than common sense.

What we know of what took place between labor and capital in Great Britain during the early days of the war makes it clear that there was nearly civil war, due partly to the lack of machinery for getting together and partly to the legitimate fear on the side of labor that dearly fought for privileges were being lost while profiteers profited. Here we have heard the low, un-

Chairmen of the War Labor Board: Ex-President Taft and Mr. Walsh

# SIMS'S CIRCUS

## A Cruise with Our Destroyers Over There

BY HERMAN WHITAKER

CORRESPONDENT OF THE INDEPENDENT AT THE BATTLE FRONT

IT will soon be a year since our destroyer flotilla sailed away and was lost to view in these war mists of silence and secrecy with which the British Admiralty camouflages its sea operations. Generally speaking, the policy of secrecy was good; that is, it was good for the Hun. Impenetrable mystery surrounded the "forty or fifty per cent of sinkings" of submarines of which the British First Lord recently informed Parliament.

How they came to their ends, whether by shell, mine or storm, collision with each other or sunken rocks, or thru internal defects of their own, the Hun could never find out. His knowledge on this very important fact could be summed in a nutshell: after two and a half voyages, on the average, his submarines never returned, and we have good reason to believe that the mystery which surrounded their fate seriously impaired the morale of the German submarine crews.

For England, a small country geographically and close in to the war, the rule of silence entailed no hardship. Considerable news seeps down to the man in the street. Tho nothing was ever printed till very recently about the submarine war, everybody knew that it was going well, and news of individual feats of gallantry soon spread thru the nation at large.

In America, however, there are no such sources of information. We are too far away; our borders are too wide. California is further from New York than the latter city is from London. After our destroyer fleet sailed away it might just as well, for anything we knew to the contrary, have been at the bottom of the ocean.

I took up the question of visiting the base and received Admiral Sims's permission.

"I think that might be managed, too," he replied to a further request to go for a cruise.

But his eye took on a twinkle that I was destined to see again—in the eye of the British base admiral, to whom I reported two days later; in that of the chief of staff of the American flotilla; also that of the captain in whose vessel I finally went out. His executive officer even laughed—and apologized. They all asked, quite casually, how much of a sailor I was, and gave non-committal nods to tales of voyages on big ships. Then they all twinkled again.

© E. Muller,

United States destroyer traveling at full speed

From the train window approaching the base I obtained my first view of "Sims's circus," as the flotilla has been named by the irreverent ensign. At least, I obtained my first astonished view of the minor portion thereof that chanced to be in port. For the base admiral is a most efficient man. His offices and house windows both overlook the water, and it's said by our skippers that his idea of heaven is "a harbor clear of ships and every destroyer at sea."

I may add from personal observation that never was there a man who did so much to make his idea of heaven obtain on earth. Nothing short of a "salty condenser" will procure from him a stay in port—which reminds me of a question put by a green ensign in our wardroom one day: "Is the water we drink pure enough to use in our boilers?"

To which was given in indignant chorus: "Of course not! What do you think you are?"

Returning again to the flotilla. A convoy was ready to sail, a dozen or so of our destroyers were to be seen nestling like speckled chickens under the wings of the mother repair ships.

I said "speckled." It is, however, too weak a term for the "dazzle" paint with which they were bedaubed. No wonder the irreverent ensign dubbed them "brick-yards."

Barred, striped, blotched, smudged, ring straked with vivid pinks, arsenic greens, blowsy reds, violent blues, they looked like—like nothing in the world unless it be that most poisonous of drinks, a 'Frisco pousse cafe. All of the giraffes, zebras, leopards and tigers ever assembled in the "World's Greatest Aggregation" exhibit conventional patterns in comparison with this destroyer camouflage. The exception to this blazing color scheme, a recent arrival from home, looked in her dull lead paint like a Puritan maiden that had fallen by accident into a blowsy company of painted Jezebels.

The object of this wanton display is, of course, to fool Fritz of the submarines. That it might do so by hurting his eyes or the shock of his artistic sensibilities none would deny; but I found it hard to believe that these rainbow colors make a difference in visibility. Yet they do. Whereas, at sea the following day, the "Puritan maiden" showed a clear black outline at four miles with

every spar clearly defined, the "Jezebels" presented at the same distance a blurred, wavering mass of color. It was difficult to tell bow from stern or judge their direction. They presented about as fair a target as a darting hummingbird.

The vessel I went out on had struck America's first blow in the war by attacking one of the submarines that opposed our transports in the Atlantic. The thought was hot in my mind when after boarding her my eyes wandered from the knifelike bows back over the shotted guns, grim torpedo tubes, along the low, rakish hull to the stern, where two depth mines hung poised for instant use.

Of all the enginery of destruction produced in the war, there is no weapon more terrible than these. The explosion of one lifts a column of water thirty yards wide fifty feet above the sea. One that was discharged nearly 200 yards away from a 30,000 ton ocean liner heaved her up six inches in the water. So terrible are they that destroyers only drop them when running at high speed to insure a "get-away," and even then the iron floor plates of the boiler room are often lifted by the concussion.

From the bridge I watched this slender arrow of a ship slip out thru the harbor headlands, where a number of other destroyers were at work combing

the offing for submarines before the convoy came out. They were beautiful to see, shooting like a school of rainbow flying-fish over the long green seas; careening on swift turns, laying the white lace of their wakes over sixty square miles of sea. Among them, graceful as a swallow, was the unfortunate vessel which, torpedoed two weeks later, now lies with sixty-four of our brave lads at the bottom of the sea. It is only necessary to record that she did not die unavenged.

Were I permitted to tell the number of sinkings to the credit of our fleet it would indeed cause surprise. I may say that dozens of submarines are strewn over the ocean floor around the British Isles. Out of the five sinkings which Mr. Lloyd George was to announce in Parliament this very night as being the bag for one day two were to the credit of our base.

I heard the stories of some of those submarines while we were circling and swooping above them.

"You see that marker?" The executive officer on the bridge indicated a small buoy as we swept by. "There was something funny about the way that fellow got his.

"A little patrol boat happened to cross his wake. Cheeky little beggars, those patrols. Tho he had nothing but an old style depth charge he took a chance, dropt it at the head of the wake, then listened around.

"After a while we heard calking hammers going on the bottom and knew that Fritz was down there making repairs. So he sent out a radio and a destroyer came up and dropt a big charge of TNT squarely on top of Fritz. His oil came up in gushes, and a diver found him lying on his side like a dead whale, split wide open, like a gutted fish.

*Press Illustrating*

*Admiral Sims, commander of our navy in European waters*

"There's another lying some miles away over there. The British Admiralty has to be shown before it gives credit for a sinking, and tho oil came up in gushes after we dropt the ash can"—thus does the American sailor irreverently allude to the depth mine—"they gave us no credit till another skipper reported the sea covered with oil two days later in the same place.

"Even then they only allowed us a probable sinking. But it is all right. Fritz is cunning; will often pump out a little oil when we drop a charge to make us think we've got his goat."

While he was talking there had been no let up in the combing of the offing for submarines. Here and there, back and forth, the destroyers swooped with birdlike circlings, and no words can describe the thoroness of the watch upon the sea. From the bridge by officers and quartermasters, by the men in the crows' nests fore and aft, by the

deck lookouts ahead, amidships and astern, vigilant watch was maintained. Multiply this steady eye-searching by the number of destroyers and you can easily imagine that scarcely an inch of ocean remained for more than a minute unswept by human eye. And yet—Fritz was there.

There? Why, for two days he had been there lying in wait for the convoy which was now poking cautiously out thru the heads, and when he attacked it was like the leap of a lone wolf on a flock with the following rush of shepherd dogs at his throat. As he rose to take his sight at the leading steamer a destroyer almost ran him down. Indeed it was going full speed astern to avoid the collision when his periscope showed above water.

It was only an instant and the periscope was of the finger variety, an inch and a half in diameter. It was raised in that instant scarcely a foot above the water, but was still picked up by the sharp, young eyes of the lookout on the next destroyer. The submarine had submerged at once, but rushing along his wake the destroyer dropt a depth mine that wrecked the motors, damaged the oil leads, blew off the rudder, tipped the stern up and sent the "sub" down on a headlong dive fully two hundred feet.

Afterward the commander said that he thought she would never stop. In a desperate effort to check her before she was crushed by deep sea pressure he blew out all his four water ballast tanks and so came shooting back up with such velocity that the "sub" leaped thirty feet out of the water like a beaching whale.

Instantly, the first destroyer, which had swung on a swift circle, charged and dropt a second depth mine as the submarine went [Continued on page 386]

# SHAKESPEARE IN THE TRENCHES

BY MONTROSE J. MOSES

AUTHOR OF "THE AMERICAN DRAMATIST"

**T**HE theater is being mobilized for the fighting front. It has been found that the soldier needs food, clothing, munitions, and entertainment. Amusement, we are told, is as necessary for the soldier's mental constitution, under strain, as sugar is for his coffee or flour for his bread. The actor's art has, therefore, become a war commodity. We are manufacturing guns and powder for the soldier. We must likewise manufacture something for his theater "over there."

With this realization before them, the Y. M. C. A. sent for the American theater-manager, Mr. Winthrop Ames, and for the actor, Mr. E. H. Sothern, and asked them to go to the trenches and see exactly what amusement the boys in khaki wanted. They were to visit General Pershing and learn first hand from him whether he was as anxious to have actors sent overseas as he was to have war supplies.

Mr. Sothern and Mr. Ames put on Y. M. C. A. uniforms but were given no military rank, for that would have hampered their progress. Mr. Ames says that Mr. Sothern persisted in calling his uniform a costume! And they sailed, no longer manager and actor, but Y. M. C. A. workers, both of them, intent on establishing a sort of theater commissariat within sound of the enemy. They went, equipt to visit the front as near the first lines as non-military officials are allowed, and intent on returning to New York as quickly as their camouflaged ship could bring them, to ask the American actors to go and play for the soldiers within sound of the German guns.

Thus was the American theater started in its great movement toward the "line." If one wishes to know what that means, let Mr. Ames describe it:

As the train takes you thru France, you will see no men out of uniform except those actually decrepit, and only women are working in the fields. Everywhere there will be barracks, and more barracks, and crawling freight-trains laden with cannon and ammunition, and boxes and bales from every part of the world. You will pass encampments of English troops and of Canadian troops, of troops from India and Senegal and Africa, and gangs of day-laborers by the thousands, brought from China. The whole stream seems flowing slowly in one direction, crawling toward the "line." That thin line—only about four hundred and fifty miles long, the distance from Washington to Boston, and never wider than a mile—that crack in the earth, is the center and focus of the whole world today. And toward that crack—that narrow crater of destruction—the whole world is moving in two streams from opposite sides of the globe.

Into that long caravan, mobilized for one definite idea, the American theater has been put.

Reaching France, General Pershing gave to Mr. Ames and Mr. Sothern no uncertain answer as to their question whether amusement was wanted by the khaki army in France. "Morale," he emphasized, "is a state of mind upheld by entertainment."

No matter what may be said to the contrary regarding amusement in the face of the soldier's job, the fact remains that, as Mr. Ames has persisted in saying ever since he and Mr. Sothern returned, "Theatrical people make something that is as needful in war as overcoats or shovels."

When the Government wishes a bridge built it mobilizes expert engi-

E. H. Sothern as a Y. M. C. A. worker

neers. Mr. Ames and Mr. Sothern were sent as experts; Mr. Ames to examine the physical aspects of the Y. M. C. A. huts, and to suggest improvements upon them; Mr. Sothern to gage the response of the men to certain entertainment, and to aid Mr. Ames in determining the most advantageous acoustic arrangements under special conditions. Their insignia of the triangle was an open sesame, not only at the headquarters of the commanding general, but with every man they met, who treated them as brother and friend from home. They inspected to within a few miles of the German guns. During the day they could see the enemy's aircraft. At night they could follow the glare of the enemy's guns. Mr. Sothern recited during an air raid. He crept into a dugout and read to the men who were tired after the day's work. And there came a time when he found out that, even as amusement was necessary under certain conditions, there were other conditions under which amusement was an intrusion. He had been reading two, three, often four times a day, and finally the moment arrived when he and Mr. Ames, wear-

ing steel helmets and armed with gas-masks, were carried in a cab to the farthest limits of civilian adventure. Mr. Sothern was brought to a group of soldiers who were at rest, their guns on one side of them and their gas-masks on the other. They were waiting for the call. It was then that the idea of reading "Hamlet" seemed out of place. There was nothing for him to do but to rake up anecdotes of home and to pass the time in familiar talk.

Mr. Sothern has faced many different kinds of audiences, but never before, he confesses, has he quite experienced such gatherings, under such circumstances, as he faced the first time he read in a Y. M. C. A. hut on the battlefield of France.

The soldier, as an audience, is eager, unconsciously noisy, and smoky. Mr. Sothern had to content himself with being seen thru a gray mist, from the "smokes" of five to seven hundred men. His voice had to quaver thru the scraping of a thousand hob-nailed shoes. And should one soldier cough, the player might wager that hundreds would pick up that cough in sheer sympathy. Sometimes, in these Y. M. C. A. huts, there was found a stage. In others two tables were joined together and Mr. Sothern was hoisted upon an improvised platform. Not every one could see, but that made no difference. Mr. Sothern was a man from home who had the latest news. He was "made in America!"

Entertainment means a great deal to these men. Mr. Ames says:

In getting to one hut where Mr. Sothern was announced to read, our car broke down (you may expect that—and it may be raining, too, but *c'est la guerre*), and we were an hour and a quarter late. The boys had waited all that time, whistling and singing in chorus to keep themselves amused, but not one left his place, because he knew that some one else would take it if he did. You see it is not only entertainment you are bringing them, but entertainment from Home—Home that is 3000 miles away.

It was much easier, Mr. Sothern believes, to determine what the men didn't want than what they did want. These boys in khaki, who are sent to fight, care little about the patriotic appeal; they who are about to face the Hun do not need to be told what bravery is. The nearer they get to the first line the more purified their sentiment becomes. Mr. Sothern says that at one time he began reciting some sentimental verses, thinking that they would be liked; but the boys instantly asked him to "cut it out" and to tell them something funny. You are bringing coals to Newcastle when you describe war or analyze service to them. They are seeing and doing both.

Mr. Ames and Mr. Sothern wanted to know exactly this, and it is interesting to note their different impressions. Mr. Sothern, with Mrs. Sothern, will return to the trenches this summer and will read scenes from Shakespeare, interpolating these scenes with the story of the play. [Continued on page 380]

# THE AMERICAN MALCONTENTS

BY FREDERIC L. PAXSON

PROFESSOR OF AMERICAN HISTORY AT  
THE UNIVERSITY OF WISCONSIN

IT is impossible to prove, from the evidence as yet before us, that there exists a conspiracy of malcontents to blunt the purpose of the United States or to weaken its effectiveness in war. But it is easy to show a coincidence of policies so striking as to create suspicion. If there were another Lincoln on the stump today to confront the followers of Robert M. La Follette and his sympathizers, he might show as effectively as Lincoln did, the way political events may hang together. Lincoln, in the debate with Douglas, had only circumstantial evidence to deal with; but he so used it in his metaphor of the hewn and mortised timbers as to make a political issue out of the mere possibility that the next move of the forces of slavery would be a judicial decision admitting slavery to the free states. Today he might show with equal plausibility a coming together of pacifism and disloyalty, of agrarian discontent and political unrest, with a common program and a stubborn and courageous prophet.

The figures that would invite the attention of another Lincoln would be Senator La Follette and four or five "marginal" periodicals—the monthly *La Follette's Magazine*, thru which the leader has spoken to his people since 1909, the weekly *Nonpartizan Leader*, which is the organ of the Farmers' Nonpartizan League, and Viereck's *The American Weekly*, which continues under a new camouflage the propaganda of the *Fatherland*, and the Socialist dailies, the *New York Call* and the *Milwaukee Leader*. Three of these antedated the European war. The *Fatherland* came out in 1914, on August 10—"on the ninth day of mobilization," as the elder Viereck boasted in the hall of the Prussian Diet in Berlin a few months later. The *Nonpartizan Leader* came from a hard-times movement originating among the farmers in the following spring, gathering up the reminiscent threads of populism, grangerism and the Farmers' Alliance, and first appeared September 23, 1915.

It was at the mass convention of this Nonpartizan League in St. Paul, on September 20 last, that Senator La Follette made the famous speech that has called out the torrent of invective upon him. His relations with the League antedated the speech. On September 13, 1917, he advertised his monthly paper in the *Nonpartizan Leader*, and he repeated the advertisement some weeks later because of the valuable results received. The North Dakota farmers who maintained this organ had in 1912, and again in 1916, endorsed the candidacy of La Follette for the Republican nomination; and what concerned them must needs concern his fate. The League elected an unknown farmer as Governor of North Dakota in 1916. The *Nonpartizan Leader* advanced in circulation in four months of 1917 from 100,000 to 150,000. It printed the speeches and the face of its favorite Senator and dwelt with affectionate interest upon his doctrines of corporation control and tax

on profits. It shared his lukewarmness toward the war, and like him, attributed the war to greed and graft. The Nonpartizan League is the very spirit of La Follette's agrarian followers. It is spreading from North Dakota into Minnesota, Nebraska and Wisconsin, with a force that must either be brought under his domination or dethrone him. It is not difficult to believe that he desires to avoid the latter.

The Nonpartizan League, its members and its organ may be regarded as the "right" in the conjectural parliament of discontent. The "left" speaks German, or English with an accent.

It was only natural that the millions of Americans of German blood should have been drawn to the cause of the *Fatherland* in 1914 and should have been slow to appreciate our cause for war. It was equally inevitable that Germany, being Germany, should have encouraged their solidarity by patronage, and intrigue. The list of war organizations manned by men of German name is long—the American Independence Union, Labor's National Peace Council, Friends of Peace, American Embargo Conference, the German University League. These, and their kind, drew the pro-Germans together in a new volume that swelled the circulation of all the German language press. Viereck, with his *Fatherland*, became a mouthpiece for pro-German and anti-British thought. In his initial number he sang of the Teutonic power:

But thy great task will not be done  
Until thou vanquish utterly,  
The Norman brother of the Hun,  
England, the serpent of the Sea.

And in his desire to advance this task he naturally featured the Friends of Irish Freedom and the American Truth Society, and printed the countenance of the distinguished spokesman of the latter, Jeremiah A. O'Leary, who recently disappeared before his trial for conspiring to obstruct the operation of military laws in this country.

AS American conviction realized that Germany meant force and the Allies freedom and democracy, Viereck and the *Fatherland* turned the guns against the pro-Allies—and the "pro-British press," the "kept press" of Socialist parlance—and here he found his armament accumulated in the arsenal from which La Follette drew his own bolts. The great steel interests, the Navy League, the munition makers and the interlocked banks and factories became subject for article after article; while the language of La Follette and the attacks of the *Nonpartizan Leader* and the cartoons of Baer (now Nonpartizan Congressman from North Dakota) were suitable to be reprinted and to strengthen the impression of concerted action against the measures of Government. "The stars seem to point to Robert M. La Follette as the leader in the fight to make democracy safe at home," he

wrote. When we went to war, Viereck renamed the *Fatherland*, but the "change of name," he said, "implies no change of heart." It had become inexpedient to sing the Teuton praise. But the old enemy in the wealthy and malevolent armament maker remained available for use; and still remains.

With the farmers on the "right," conservative by instinct, yet socialistic in some details; with the pro-Germans on the "left," lukewarm at best and often hopeful for the worst; the "center" is filled with the Marxian Socialists. These need no teaching to make them hate capitalism in all its branches. They often look with welcome toward any crisis that may hasten the day of the revolution, in hope of which they live. The bond of national patriotism is weak among them partly because their philosophy is international, but more because they are drawn from alien races, with Jews, Germans and Slavs in the ascendancy and have lived with their faces set against contemporary society.

AMERICAN socialism, like socialism everywhere, has thriven with the war. It was growing on its own account thru the years of muck-raking and corporate development. It lately has acquired two daily newspapers, the *New York Call*, founded May 30, 1908, and reflecting Jewish revolutionary socialism, and Victor Berger's *Milwaukee Leader* (founded December 7, 1907), which has a flavor of the German, the Middle West and the agrarian. Together these give a guide to all the ways of socialism in America, altho they may be supplemented by Max Eastman's *Masses* (now suppress and reincarnated in the *Liberator*), and the official organ of the Socialist party, the *American Socialist*. In addition to all the antipathies to wicked wealth congenitally possessed by the western farmers and sympathetically acquired by the pro-Germans, the Socialist movement was ready to egg on any discontent up to the point of amalgamating with it. La Follette figures largely and favorably in the Socialist journals, which join hands with the farmers in their program, and with the pro-Germans in their alien outlook. Together the right, center and left make an amalgamation of current discontent whose power in politics, at a time when the two great parties are nearly equal, might well attract the notice of an ambitious statesman.

Distributed thru the various divisions of malcontent are the pacifists. A study of the roster of the societies which war produced reveals these as an interlocked group, functioning sometimes as the American League to Limit Armaments, or for the American Union Against Militarism; sometimes as the Emergency Peace Federation or the Women's Peace Party. Sometimes they junket out, as to the Women's International Peace Conference at The Hague in 1915 or on the memorable "Oscar II" at the expense of Henry Ford. But, in whatever guise, they represent a mixture of altru-

*The ruins of Sermaize after the German invasion*

*Reconstruction brought about by the Quaker invasion*

## QUAKERS IN THE WAR ZONE

While this manuscript was on its way from France to the United States the Great Battle brought another invasion of the German army thru Sermaize, and much of the work, built up so valiantly, was wiped out. But the spirit of the workers is the gage of their success. Sermaize, thru the courage of the group of Friends ready to carry on their task of reconstruction, is more than before, "a word of hope for all northern France"

**S**ERMAIZE is rising on its ruins. The little Marne village, burned and razed by the Germans in August, 1914, is a hive of industry in the spring of 1918. Piles of fresh bricks lie in the shadow of weathered ruins; straight fronts of new shops are framed between jagged remnants of old walls. And here and there stand the cosy little red-tiled cottages erected in the first emergency by the English Quakers.

You leave the north-country of France, desolated by the Germans in the spring of 1917, with a sense of hopelessness. The ruin is so immense that the task of reconstruction seems impossible. But the torch was put to Sermaize just as cruelly, almost three years before, and the ruin was as complete; Sermaize's resurrection in 1918 gives hope for all of northern France.

It was in November, 1914, that the first gray-clad English Friends arrived in the Marne. They installed them-

selves, along with forty refugee families, at "La Source"—in part of the old hotel by the spring which gives Sermaize its full name of Sermaize-les-Bains. They were a motley group—university men, architects, engineers, women of standing in England—and they set themselves to erecting two or three-roomed brown wooden houses with red-tiled roofs here and there among the ruins. People came out of their cellar refuges to dwell in these "maisonnettes." The English women brought bedding and distributed relief supplies where they were most needed; a doctor tended the old and feeble—and a maisonnette hospital soon grew up behind the Source; and a physicist made new spectacles for the old folks.

Sermaize became more than a heap of ruins. Families which had fled before the Germans, returned. Families which had sought refuge in the wooded hills above Sermaize when the flames swept their homes, found new homes in

the maisonnettes, which steadily mounted in number, built gardens about them, added new sheds behind. The village authorities gave the land for twenty-four little brick houses which went up for working people who had never had homes of their own, and whose rented rooms were lost in crumbled heaps of brick and mortar. The Friends' work spread into three hundred towns of the Marne and the Meuse; but Sermaize remained its center.

For three years the English Friends worked on in Sermaize. Some of them, worn out by the steady pull, went home again; but most stayed on.

New life came to Sermaize in the summer of 1917. The American Friends arrived—first two or three, later an invasion, backed by Quakers in America and the American Red Cross. Meanwhile, many of the English Friends had been drained off to other work—some of the pioneers had gone to Russia to do relief work [Continued on page 378]

*The women under the teaching of the English and American Friends had their share in rebuilding Sermaize*

*Irrigation produces a luxuriant garden, and in one of this kind concealing the water pipes is an easy matter*

## RAIN WHEN YOU WANT IT

THE chemical condition of the soil moisture determines the fertility of the ground, and if the moisture is lacking the plants suffer. In our climate dry spells or summer drouths are inevitable, but we have a choice of saving as much as possible of the natural soil moisture by deep and constant cultivation or supplying the needed moisture.

A proper irrigating system is preferable to other means of supplying water artificially. Most of the systems have overhead piping whereby the water is somewhat tempered in its contact with the air, for the metal piping is a conductor of heat. The water which is supplied to the plants is more nearly the temperature of the air than where underground piping is used. Another factor is the jet nozzle which separates the water into very fine particles. This gives the air a further opportunity to temper it, and falling in a very fine spray it does not pack the earth and will penetrate more deeply than where the water is supplied in larger quantities.

The most common system of irrigation is a small portable affair with pipes arranged in tandem with adjustable joints so that the spray may be arranged at any desired angle. These portable systems may be attached to any ordinary hose bib or faucet. They have two pairs of wheels and may be moved easily from one part of the garden to another. They cost about \$30.

For larger gardens it is well to have the pipes parallel with the rows in the garden and set about forty feet apart, as with an ordinary force of water it will then be possible to cover the entire area. The pipes are usually drilled about every four feet and a spray nozzle inserted so that the end nozzles will have as great a force as those nearest the supply. When the runs are one hundred feet or longer it is necessary to use a larger pipe on one end as the volume of water in the customary supply pipe, which is three-quarters of an inch, is not enough. On the supply end there is a loose union which allows the pipe to be tilted at any angle. This also contains a screen which

BY WILLIAM C. McCOLLOM

prevents small particles from clogging the nozzles.

The height of these pipes varies. In some cases they are nine feet high so that horses may be used to work the ground without

disturbing the pipes, while in gardens which are dug by hand, the pipes are arranged about three feet above ground, where they are not so unsightly. It is not practical, however, to put them lower than this as tall growing vegetation will interfere with their operation. Irrigation with overground piping is unquestionably the most practical for vegetable gardening and farming, but for the flower gardens, shrubbery borders and lawns it is preferable to have the pipes all arranged not very deep below the ground. This system may be shut off in winter and the pipes properly drained to prevent injury from frost. Small nozzles are placed equal distances apart and just project above the ground. In this case the water is not tempered but the system has the advantage of being hidden entirely from view except when in use.

When installing the main pipe which supplies the various nozzle lines, water pressure is an important consideration. The great danger is not enough pressure, resulting in a system where only one or two nozzle lines may be operated at one time. The chief advantage of using all the nozzle lines at once is the fact that the irrigating can be done at night. A proper shut-off valve and drain cock should be located on the supply line, so that in late fall the system may be shut off. All valves should be opened, and when overhead systems are used the pipes should be uncoupled to prevent splitting where sags are likely to occur.

Galvanized iron posts are frequently used for supporting the above ground pipes. This, however, is by no means a necessity as good wooden posts may be used. The rollers upon which the pipe rests facilitate their turning or rocking motion. In gardens which are divided into small areas, pipes can be hidden easily by installing a nozzle line on the tops of trellises which are used for growing trained fruit trees or grape vines. In all cases galvanized pipe only should be used for this system as the pipes are exposed to the weather and black iron or wrought iron pipe will rust out in [Continued on page 379]

*This overhead system is probably the most commonly used*

*No one would suspect an irrigation system in this garden*

*Raised parallel pipes are practical but they do not add beauty*

*An underground system with nozzles raised on short pipes*

## A BUNGALOW IN TWO INSTALLMENTS

BY PERSIS BINGHAM

**G**IVEN—a practical mother, three small children, ten acres of raw land and a father in a salaried position demanding the daylight hours of five and a half days a week in Los Angeles, twenty miles distant.

Required—to construct a house for the family without borrowing on the property and with only a few hundred dollars cash.

This was the extremely difficult, almost baffling problem that confronted Mr. and Mrs. Warren Pangborn several years ago. Their highly successful solution of it now reposes on the gentle north slope of the Palo Verde Hills and looks across a citrus valley sixty miles wide, across the smokestacks of industrial towns, up over the skyscrapers of the largest city in the Southwest to the snow capped peaks of the Coast Range. First the owners planned a house that could be built in two instalments, then they built and lived in three rooms of it while saving money for the rest. A small living room, bedroom and kitchen were built and used for nearly two years, then the partition between living room and bedroom was removed, leaving the present large living room, and the rest of the house completed. The entire house was built by day labor. Much of the interior painting was done by the mother, and hardwood finish and South Sea mahogany furniture were done by the man of the house. A home designed for children is different from one built only for grown-ups. You can distinguish the difference almost as soon as you open the front door.

The sleeping quarters are separated from the culinary department by a living room, 14 feet wide and 28 feet long. At the south end are French doors opening to a cement floored open court, and when the neighbors gather in the evening and some one starts the victrola, the glide from end to end of the accessible floor space is almost that of a small ballroom. This large room makes an excellent place for the children to play. It required both patience and tact to teach them to clean up after themselves, but the satisfaction of knowing where they are and whom they are with is worth it.

The fireplace is of solid concrete, poured into a form and allowed to set. Later, the finish coat was put on and into this the art tile placed. The opening is 3 feet 6 inches wide by 1 foot 10 inches high, the entire fireplace 8 feet wide and the bookcases on either side 3 feet wide. The hearth is raised 6 inches above the floor so as to make a comfortable foot rest or a seat when the fire is not too hot. It slopes at an angle back to the floor of the firebox, which is on a level with the floor of the room. This drop prevents coals from rolling out or ashes from being blown into the room. Art tile used above the opening depict three prairie schooners drawn by sturdy oxen, trailing westward toward the Land of Promise. The scene is a semi-relief, done in tan colored clay with a bluish tinged wash over it. The two lower tile farther down on the face are rustic scenes of the same general type. The mantel shelf is an ordinarily innocent appearing shelf about

in and the nails half pulled out where the heavy wood has been dumped. No one would accuse the neat looking hammered brass box in the corner of being a woodbox, but it is. It required only a little time and ingenuity to cover a common pine box with a sheet of hammered brass and the operation transformed this woodbox into a thing of beauty. Door knobs, plates and electric light fixtures are also of hammered brass, the latter designed and made by the owners. The walls of the room are tinted a light tan and the South Sea mahogany is finished in a medium brown.

The Pullman Breakfast Nook will be interesting to every housekeeper who finds it necessary to save steps, and every mother of three finds that necessary. The table is 2 feet 8 inches wide by 3 feet 6 inches long and the seats are each 17½ inches wide. From wall to wall, back of the seats, the width is 6 feet, leaving a 2 inch space from the front of the seat to a line dropt from the nearest edge of the table perpendicular to the floor. In constructing a table of this kind, great care should be given this

seemingly unimportant feature, for it will make or mar one's comfort while sitting at the table. An old saying has it that an inch is a long way on the end of a man's nose and it is also a long way on the distance which separates a man from his dinner plate. The end of the seat has been carefully designed. At first thought it might appear that it would have been more "artistic" to have made the arm higher, but when one tries to squeeze in between the

high part of the arm and the lower edge of the table, he quickly agrees with William Morris's theory, "In order to be beautiful, a thing must first be useful." It is the little minor perfections that make a home comfortable.

The top of the table is covered with white oilcloth carried over the edge and under the table where it is secured by a quarter round molding tacked along its edge. The cloth is easily washed and when worn may be replaced economically.

On the wall which forms the back of the south seat is a china closet with sliding

*An attractive living room and an excellent play room created by removing a partition*

2 inches deep and extends the full width of the room from one bookcase to the other. But there is a blind panel in the top which lifts up and presto! you have disclosed a regular treasure box—anything from the family diamonds to a screw off the vacuum cleaner. Above the bookcases are two art glass windows showing landscape scenes, which further carry out the color scheme of the room.

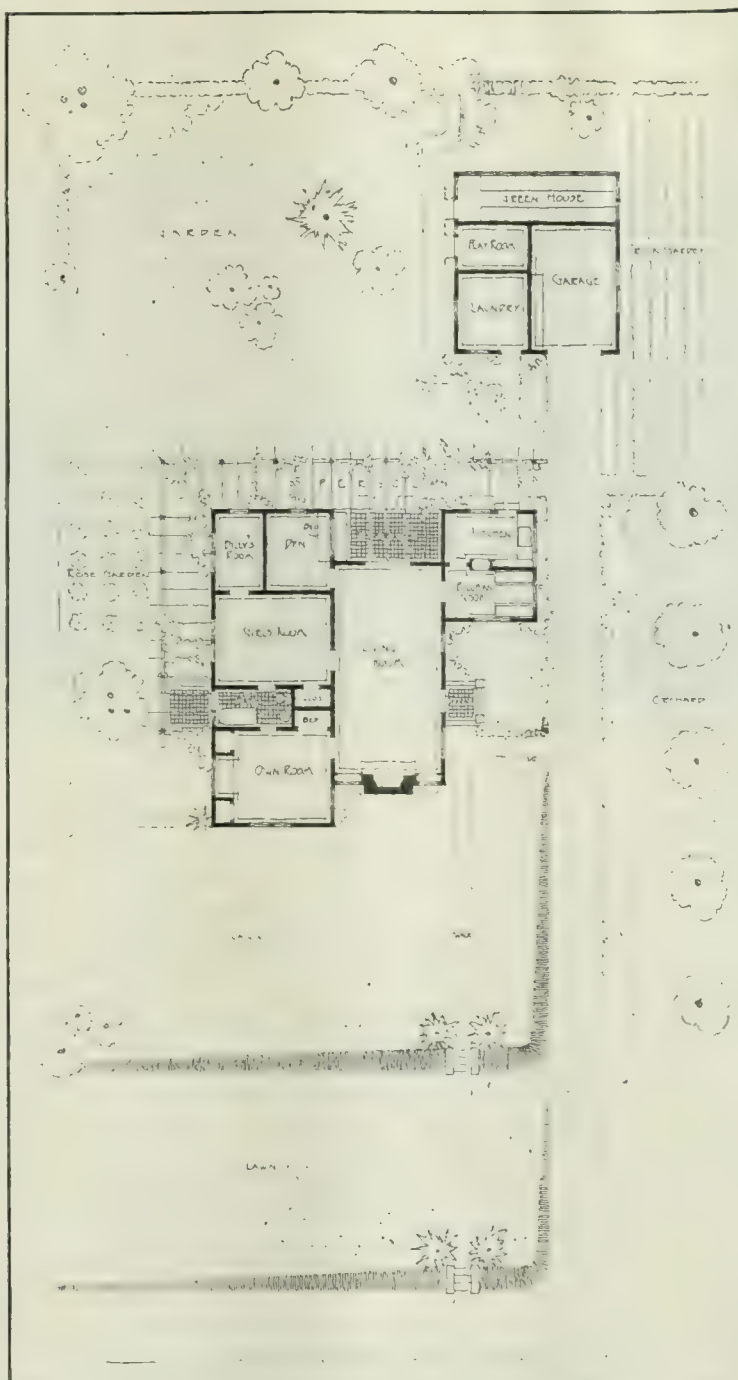

Every one loves a good old crackling fire in the fireplace on a cold winter's night, but how the majority of us hate to see a battered old wood box with its sides caved

doors opening to both kitchen and breakfast nook. Without rising from the table one may place his cereal dish on the lower shelf of the cupboard and help himself to ham and eggs. A great many steps are saved, especially when there are five cereal dishes and a milk pitcher to remove to get ready for the next course. This little breakfast nook has done duty for three meals a day, every day of the year except Thanksgiving, Christmas or when there were guests. Then dinner was served on the dining table in the living room.

The kitchen is small, every inch of it earning its right to existence. One can stand in the middle and reach almost anything in the room. The china cupboard between kitchen and breakfast room holds all the dishes used on ordinary occasions. Below it are pots and pans accessible only from the kitchen side, and in the cook table are drawers for kitchen knives and silverware. Beneath these is a place for sugar, flour, crackers, lard and so forth, and above is a spice and extract cabinet. At the left of the sink is a soap and cleaning powder case; beneath, a fireless cooker, drawers for towels, cook books, string, and wrapping paper. At the right, more cupboards for breakfast foods, canned goods or whatever hasn't been taken care of elsewhere. This is a wonderfully workable little kitchen and there's not an inch of waste space in it.

The front bedroom, which opens from the living room near the fireplace, is a beautifully lighted, well ventilated room with view windows to the north, east and west. The woodwork is finished in white enamel, the walls are tinted pink with a pink and green applied border at the picture mold. Across the entire east side of the room is built a combination clothes closet and dressing table, with a large view window in the center and storage closets above. The shelf of the dressing table is 18½ inches deep and 2 feet above the floor. There are small drawers for neckties and collars and larger ones for other wearing apparel. On either side of the window is a clothes press 6 feet high and 2 feet 6 inches wide for suits, and a shelf for hats. In addition to this, there is a closet 5 feet wide back of the dis-

*Floor and ground plan of the bungalow*

pearing bed on the south side of the room. This bed is known as the oscillating bed. It folds upright against a panel 5 feet wide, which revolves on a metal arm. When not in use the bed is inside the closet and the room has much the appearance of a sitting room.

The woman who has never had to live in a house with three growing human dynamos will look askance at the outside bathroom door. Mothers will be the first to appreciate this unusual feature, for they will realize quickly its elimination of muddy

floors, dirty shoes and the tramp, tramp thru living room or bedroom just when the baby has drifted off to slumberland. It may not be good architectural technic to put three doors in a bathroom, but in this instance it has proved one of the most satisfactory labor saving features in the house. When one is in a hurry to get dinner on the table the day after a rain, it's mighty inconvenient to say the least, to have six muddy little rubbers deposited on the kitchen floor and six dirty little hands getting washed at the kitchen sink, and equally inconvenient to have those same six dirty hands opening all the clean doorknobs on the way to the bath room. But the outside door just solves the problem. In a country home where one is quite likely to come in with soiled hands from garden work, the outside entrance to the washroom is most acceptable.

In the den is a full size couch rolling bed, half of which serves during the day as a couch in the den and half of which is hidden under the seat on the open south court. The end of the seat out on the court opens up so that the bed may be rolled outdoors for use during warm weather, or the bed may be used in the den. The court is especially useful in winter as it faces south and is protected by the east and west wings of the house. The top of the seat is just the right height for a paper doll parade or a display of wares if it is to be a game of store.

South of the house and connected to the kitchen door by a pergola is the combination wash house, sewing room, children's play room, greenhouse and garage. Quite a motley group, it might appear at first, but after considering the resulting conveniences it isn't so motley after all. The entire south and east side of this house and part of the north are made of glass door sash, 7 feet high. The sewing room and wash room contain the electric washing machine, electric sewing machine, electric iron and built-in cabinet for sewing materials, and a drop cutting table. There are numerous shelves for dress goods, drawers for patterns, buttons, thread, magazines and a mirror on the reverse side of the cutting table so | *Continued on page 381*

*The china closet sliding door connects kitchen and breakfast nook*

*The combination clothes closet and dressing table is convenient*

# WINDOWS INSIDE AND OUT

BY GEORGE LELAND HUNTER

**W**INDOWS are the eyes of the home. They serve not only to see out of, but also to give expression and beauty to the façade. Upon the way in which they are shaped, framed and drest depends the style of both exterior and interior.

Anciently buildings had windows that were small and few, and from the architectural point of view comparatively unimportant. But during the Gothic thirteenth, fourteenth and fifteenth

centuries windows grew at the expense of walls, and were exalted by stained glass to the pinnacle of decorative prominence.

Remaining large and prominent during the Renaissance, windows were during the Baroque seventeenth century emphasized extraordinarily. Each single unit was enshrined in an architectural frame or "tabernacle," massive and magnificent enough to mark a main doorway or even an entire building. But during the last half of the eighteenth century, and especially in the creations of Robert Adam, architectural exuberance was replaced by balance and repose, and windows became less assertive, tho still often strongly accentuated, as in the second story of the city residence illustrated at the head of this article (Plate A).

However, it is not with the architectural setting of windows that we are here principally concerned. It is with the modifications produced in their appearance by the use of roller shades, lace curtains and other draperies.

Modern window glass is so nearly transparent as to reflect little or no light. Windows seen by day from the outside look like black holes, unless backgrounded with inside shutters or curtains or other light surfaces. Consequently the inside dressing of windows that face publicly is of great importance externally.

In quantity, roller shades come first. In the United States more windows are backgrounded with them than with any other kind of drapery. The favorite position is one third or one half way down, leaving a black hole below to contrast with the shade surface above. When the shades are an ugly color, or a color or tone that contrasts too strongly with the façade of the building, the effect is unfortunate. When the shades are adorned with gold borders, or have skirts of lace and fringes, the lack of other draperies is felt less.

The finest glass curtains in the world (glass curtains are those that come next the glass and are called *vitrages* by the French) are those that hang in the front windows of the residences in upper Fifth Avenue, New York, and the adjacent cross streets. They are a liberal education in the art of combining hand-made laces with machine-made scrim or net into panels and stores that dress the outside while toning the light for the inside. Excellent examples are those illustrated on Plates G, H and I. The main figure panel of the first and second is in point de venise, and of the third in Italian cut work. The side panels of the

first and third are in bruges lace, and of the second in filet italien. Cluny venise and broderie anglaise are also freely used. Such panels are, of course, much less opaque than Austrian shades of Bombay silk like that illustrated on Plate E, even when the latter have a deep tasseled skirt of point de venise. Where economy must be practised, excellent effects can be secured with inexpensive machine-made laces, especially with the Nottingham filets.

However, the percentage of draperies that have to be planned to look out is very small as compared with those that look in only. By them rooms are made or marred, shaped and reshaped, colored and toned at the will of the decorator. Windows of ugly shape and bad spacing are camouflaged with valances and side curtains into poetic compositions that inspire rhythm in all the environment. Glare and shadow are tamed and toned until every part of the interior is illuminated agreeably and softly tho sufficiently.

Fine examples of modern draping are those illustrated on Plates C, D and E. The first is in plain blue taffeta, with narrow heading of silver cloth, and tasseled cord

with pipings and lining of burmah cloth. The bullion fringe and drops of the valance are an original composition in ivory, gold and purple, accentuated with black.

I would call especial attention to the effectiveness of the vertical folds of the fabrics, relieving the flatness of the long arch without friction. Fortunately, the principles that apply in elaborate draping are equally applicable in simple draping.

One of the cleverest compositions I have ever seen is the breakfast room drapery on Plate B. Against rough walls of red brick hang translucent folds loosely woven with silver shining thru black, the vertical wave lines embroidered in gold. The medallions on the side curtains as well as the bands and crown of the valance are richly embroidered in blue, red and gold.

Draperies in interior decoration have a double function. They not only add textile softness and comfort, like rugs and upholstery; they also introduce line effects that supplement or modify or entirely change what was erected by the builder, making the windows the principal stylistic feature of the interior.

Especially significant are the heavily shadowed lines of the vertical pleats and folds of draperies. Like architectural fluted columns and pilasters (Plate A), they establish order and pleasing rhythm, and pull the parts of a room together into a single composition; but being cloth instead of wood or stone or plaster, they have less stiffness, and thru the elasticity of their materials and construction accomplish all sorts of "architectural refinements" in a manner peculiarly textural.

So fascinating are these refinements that the cabinet makers of the Gothic centuries used to reproduce their effect in "linen fold" carved panels, and Roman and Renaissance mural painters did not hesitate to show them in shadowed simulation on smooth flat walls of plaster. For examples of the former, see much of the Gothic paneled furniture at the Metropolitan Museum of Art; and of the latter, the lower wall of the Sistine Chapel at Rome, and the walls of several of the chambers of the Davanzati Palace at Florence.

The principal horizontal effects of window draperies, corresponding to the entablatures of architecture, are due to the headings and valances that often finish them at the top (Plates C, D, E). The larger the valance, and the fewer its vertical pipings and pleatings, the more will it tend to lower the apparent height of the

hangers on the valance. The fringe and tassels are vivacious with interweaving of blue and silver. Moss edging softens the bottom of the heading. Next the glass is plain net draped flat and full.

More difficult was the problem to be solved in Plate D, a wide window seat with windows above separated by ugly casings. The dominant color selected was purple, in burmah cloth for the narrow curtains next the glass, and in a two-tone brocade for the valance,

Plate A—Second story windows of a city residence, designed by Robert Adam.

Plate B—Breakfast room draperies of silver and black with gold embroidery.

Plates C, D and E—These designs by Paul Zimmerman are examples of modern draperies in dark taffeta and burmah cloth

window. In rooms that are low, and have little architectural framework, draperies should usually hang without valance, but with a simple French heading. In high rooms having windows surrounded by elaborate tabernacles, the draperies will either be subordinated to the architecture and hence simple, or used to conceal it and hence large and carefully planned, with lambrequin hiding the pediment above, and side curtains well out over the moldings at the side.

Always the questions of scale and composition are of prime importance. The draperies should rime with one another, and with the room as a whole, being large enough not to seem trivial, and small enough not to overpower and suffocate. Plate B illustrates a drapery scheme that grew logically out of the round bush arch from which it depends, and the beauty of which it enhances. Plate D illustrates a scheme that had to rime with the architectural frame while reshaping the window, and minimizing its extreme flatness. In Plates C and E the draperies adorn and complete windows of shape and size common in America.

The color combinations and the relation of the color of the draperies to the rest of the room—but that is another story, and a long one, which requires colored illustrations for adequate presentation. Suffice it to say here, that strong contrasts should be avoided. If red is used with green the quantity of one of the two colors must be so small as to seem lightly embroidered and trivial by contrast; or the red must be a greenish or grayish red, and the green a reddish or grayish green. Above all should be sought the vivacity which it is the

especial genius of the loom to produce, the vivacity which comes from gold shimmering thru red, or from blue twinkling thru yellow and which charms even those who are not keen to color, altho intelligently appreciated only by a few of the master painters and decorators.

Naturally enough it is the tendency of most architects to employ architectural rather than decorative ornament, and to give their windows character by the use of architectural shapes and groupings and moldings and stiles and pediments which preclude any but the simplest draperies. But the extraordinary vogue of the few architects who do use textiles freely in residential work, and the fact that so many architectural interiors have to be remade by the decorator, is gradually lessening the mass of architectural framework that

formerly disfigured the interiors of our homes.

The variety of textile stuffs available and suitable for window draperies is great. Textures vary from plain machine-made net and marquissette and scrim and valours to roughly-figured madras and crete, and elaborately intricate brocade in cotton as well as in silk; and exquisite damask and lampas and brocatelle in finish no longer polished and shiny, but strong with thread contrasts after the ancient fashion; and rare and precious laces like those in Plates F, G, H and I, made by hand in Belgium or France or Italy with the needle or with the bobbin; as well as laces figured inexpensively but beautifully on the Nottingham and other woven lace machines and on the marvelous schiffle embroidery machine; not to speak of the extraordinary range of printed silks and cottons and linens, some imprest from wooden blocks by hand in France and England, but more from power-driven rollers here in America.

Obviously, the dressing of windows is an art still in its infancy. The models evolved in past ages are not suitable for windows as now constructed. The massive complications of damask and embroidered velvet inherited from the seventeenth century, are no longer in favor.

Before closing, I should like to say a word on the illuminative function of roller shades. When light in color and let down to the bottom of the window, they conserve artificial light by reflecting it back into the room. Dark shades are almost as bad as windows unshaded, swallowing the light uselessly. Light shades and light walls make an interior easy to light, and save electricity while promoting cheerfulness.

Plate F—Puffed shade of Bombay silk with deep tasseled skirt of point de venise

# What to Do in June

A GARDEN GUIDE BY HUGH FINDLAY

PROFESSOR OF HORTICULTURE IN SYRACUSE UNIVERSITY COLLEGE OF AGRICULTURE

## FRUIT AND BERRIES

**Spray** Apply two or three times during the month 1 gallon of lime sulfur added to 40 gallons of water. Mix with this 3 pounds of arsenate of lead. Dissolve the arsenate paste in water before adding it to the lime sulfur. This spray holds in check the apple scab and destroys all chewing insects. Spray with Black Leaf 40 for the red bug.

**Thinning** Summer pruning is practical in some orchards, especially where there is a surplus of growth. Thin out all weak branches in the interior of the tree. Do not over-prune. Thin the fruit of pears and plums as soon as they are large enough that the best can be selected. After the June drop, rake up all fruit and destroy. Poultry in the orchard at this time is a benefit, since they eat the larva of many insects. Fruit thinned now will remove the development of surplus seed and the strength that would go into the seed will go into the fruit buds for next year.

**Berries** Spread a little grass or clean straw under the clusters of berries. This not only keeps the fruit clean, but it aids in retaining the moisture. Stop all cultivation. Do not let the strawberry patch suffer for the want of moisture. It takes about 600 barrels of water to mature a crop of berries. Plunge a few small pots and plant the runners this month if a new bed is to be set out in August. A little nitrate of soda scattered about the plants on a rainy day will increase the size of the berries. Do not get this food on the foliage or fruit.

**Mulch vs. Cultivation** If your orchard is on a hillside, do not cultivate. Mulch the trees by placing straw, etc., about the tree, out where the rain drips from the tips of the branches. This is where the feeding roots are. Keep all tall grass or weeds cut down. Keep calves, sheep and hogs out of the orchard. If the soil is dry and cultivation is advisable, keep the soil stirred up close to the trunk. Wrap burlap on the harness of the horses to prevent any possible bruising of the bark. Do not drive too close to the trunk. Do not cultivate too deeply.

If you plan to intercrop the orchard, do not plant corn, blackberries or any other crop that will interfere with the care of the trees. Do not over-feed the trees. This causes weak growth, which invites the attack of tip blight, fire blight, etc.

## THE FLOWER GARDEN

**Transplant** Pot plants such as heliotrope, salvia, begonias and other tender plants, may safely be transplanted to the open. Get the pot callas, caladiums, gladiolus, cannas and dahlias into the garden as soon as possible. Loosen the roots a little so that they are not bound and may easily find their way in the new soil.

**Seedage** For fall bloom, sow the seed of pinks, petunia, ten week stocks, verbent, antirrhinum, mimosa, marigolds, phlox, California poppies, nasturtiums, zennias, mignonette and candytuft. The seed may be sown out of doors or in the cold frame. It should be shaded until the young plants appear above ground.

**Roses** Spray roses attacked by rose beetles and slugs with arsenate of lead,  $\frac{1}{2}$  pound to 8 gallons of water. The rose chafers attack the peony and flowers of the grape. Clay soil seldom harbors the chafers, but a sandy loam does. Cultivate freely. Mildew is controlled by spraying with Bordeaux mixture, or dust-

ing the foliage with flowers of sulfur. Nourish the teas, hybrid teas, and climbing roses when they are in full bloom with liquid manure. Do not allow the rose tips to ripen.

**Plant Lice (Aphis)** If this pest appears on the tender shoots of the rose, chrysanthemums or golden glow, spray with Black Leaf 40, kerosene emulsion, or dust with tobacco dust.

**Sweet Peas** Feed with liquid manure, but do not get this food on the plants. Water freely after feeding. Cultivate frequently. Do not allow any seed pods to develop. Cut the bloom. Do not pull the flower.

**Hints** Cut all fading and dead flowers from flowering shrubs and other garden plants. Spray with lime and Black Leaf 40 for the black aster beetle. Place palms and large pot ferns in a shady place. Gather cut flowers early in the morning and late in the afternoon. Stake or support all tall growing plants. Add a few pieces of simple but useful garden furniture to your flower garden this year.

## THE GREENHOUSE

Plant out such stock plants as stevia, and bouvardia so that the plants may develop to full size by fall. Plunge the pots of ornamental foliage plants in a shady place. Spray often to keep the red spider in check. Stock plants of climbing roses, lilac, etc., that have been forced should be planted out and given one year's rest before forcing again.

Rest the calla and amaryllis bulbs by placing the pots in a shady place. Do not let the soil become completely dry, so that the bulb shrivels. The gloxinia and begonias should be kept cool and growing slowly. An occasional feeding with liquid manure will insure a strong bloom later.

**Fern House** Stir the soil to prevent the mossy covering. This is usually a sign of too much water. Be sure to shade the glass. Spray plants and walks often. Watch for the scale and if found wash the fern in Whale Oil soap.

**Cuttings** Make cuttings of fuchsia, abutilon, and other flowering plants, so that thrifty plants may be formed by September. Propagate the flowering begonias this month, so as to have a full bloom. Cuttings of many of the varieties of chrysanthemums, especially for fall pot plants, should be made this month.

**Carnations** Pinch back plants so that they may grow stocky. Keep all bloom pinched off. Spray every two weeks with Bordeaux to prevent rust. Cultivate frequently. Keep out all weeds. Irrigate only in the evening.

**Roses** Keep the rose-house cool. Overheating causes weak growth. Spray often with a clear force of water to keep the red spider in check. All flower buds should be kept picked off. Fumigate by burning tobacco stems or punk on rainy days or on a foggy evening. This will keep in check the green fly. Prune back and allow the old bushes to rest. Close the ventilators on cool nights, or during a cool rain. Prevent mildew by eliminating drafts. Keep a supply of flowers of sulfur on hand. Cultivate the soil frequently.

**Plants for Fall and Winter** Shift cyclamens and primulas to a cool place. Sift about one inch of ashes over the ground before setting the plants. This will check the slug. Set the pots level. Plants should be partly shaded. Sow the seed of pansies for bloom next fall and winter. The fuchsia, abutilon and other flowering pot plants may be propa-

gated by cuttings and, if kept growing vigorously, will make most desirable plants for next year.

## THE VEGETABLES

**Plants** Set out tomato plants. Stake and train them to a single stem; fruit is large, ripens early and is of a fine quality and texture. After the fruit is well formed, prune the lower leaves to half. Do not overfeed. Set out peppers, eggplant and all vine plants started indoors. Corn started in strawberry baskets may be set out now. Lettuce plants should be transplanted to a partly shaded part of the garden.

**Seed** This is the month to sow wrinkled peas. As the season advances, plant the seed of peas deeper until a depth of four inches is reached. If squash seed is planted between the rows, a pane of glass placed over the hill for a few days will hasten germination. Fall crops such as celery, cauliflower, late cabbage and Brussels sprouts, should be sown this month. After the middle of June, sow the seed of winter radish, rutabaga and Hollow Crown parsnips. Plant winter squash between the hills of corn. Squash will do best if planted after the soil is warm. One ounce will plant fifty hills. If you get the seed in by June 1, you will have a fair crop by September 30. The soil should be rich. Pumpkins may be grown in the same way and need about the same soil. Lima beans should be planted as soon as the soil is warm. If those already planted are of the tall variety and fail to climb their poles they should be started on their way up in the world.

**Corn** Get the seed of your mid-season and late corn in now. This is a good month to plant golden bantum for drying or canning in the summer. Arrange varieties so that you have a continual supply from August until frost.

**Potatoes** Plant your late potatoes this month. Do not use fresh manure or wood ashes on the soil. Have the seed treated for scab before planting. Submerge the potatoes in one ounce of powdered corrosive sublimate in 8 gallons of water for  $1\frac{1}{2}$  hours. Dry and cut. On a sandy loam plant the potatoes 12 to 15 inches apart and 5 to 8 inches deep. The rows should be 30 inches apart. Intercrop with radish, lettuce, dwarf peas, string beans, etc. Cultivate freely thruout the season. Spray the early varieties the last of the month with Bordeaux mixture. Check the first potato beetles by spraying with arsenate of lead, or Paris green.

**Transplant** The last of the month, transplant to the garden cabbage, Brussels sprouts, cauliflower, celery, kale, leeks, late tomatoes and endive.

**Asparagus and Rhubarb** Apply a liberal application of bone meal the first of the month. Stop cutting the asparagus about June 30. Cultivate between the rows and allow the plants to develop a strong root system for next year. Keep all seed from the rhubarb by cutting off the seed stalk.

**Pests** Check the cut-worm by mixing bran and Paris green. Scatter this in the garden close to the plants. One-half pound of arsenate of lead to 6 gallons of water will control the currant worm. Dust cucumber plants with London purple, helibore, tobacco dust or powdered arsenate to check striped beetle. Keep liquid manure barrel covered. This will control the increase of many insects. Keep the soil well cultivated and the plants thrifty. Insects are less likely to attack them.

**T**HAT you can grow your own roses from cuttings is a fact becoming generally known in our United States; that you can raise coveted large rose trees seems to be a fact unperceived save by a few rosarians.

I have for five years proved, to the satisfaction of neighbors and gardeners, that rose tree growing can be carried on, not only by myself, but by any one who successfully grows green things. When I had discovered this fact by carefully observing the growth of one of my Paul Neyron roses, I immediately set to work growing other varieties in tree shape. At present I feel prepared to undertake the growing of about fifty varieties on their own roots in the California climate and at least a dozen hardy varieties in Eastern states. To raise your own rose trees means economy, for at the nurseries you must pay from \$1 to \$1.50 for each one.

The value of rose trees, or standard roses as they are called in England, where the custom of growing them originated, lies first in the superb effect that they produce when planted by twos before the house, or singly among shrubbery and perennials, or in stately avenue effect along the sides of a walk.

Secondly, in the ease with which one can move about them, dig around them or look admiringly upon them. Rose trees occupy little ground-space, they are not in the way of lawn mowers nor do they tear the pedestrian's clothes as rose bushes are apt to.

In landscape gardening the rose tree has come into its own, as it is particularly valuable for furnishing the straight lines and perfectly balanced effect of formal gardens. No other flower has such rare, intrinsic beauty as the rose. Yet, when grown only on low bushes as the Teas or Hybrid Teas commonly are, it is impossible for one to fully appreciate the grandeur of the blooms. On rose trees, however, they grow like a large bouquet, within easy reach.

**T**HE instructions for growing a rose tree are simple but important. Two things are absolutely essential—a stout, straight, long stake and a very young rose bush. Besides these, an unlimited amount of vigilance should be practically applied. In other words it's all in the pruning or training. A vigorous, quick-growing rose like Francois Levet, Frau Karl Druschki, Paul Neyron, or Maman Cochet, the last either pink, red or white, is best for the purpose. In spring or summer, when your rose bush or self-raised cutting is almost a year old and well rooted, trim off all branches or shoots except one, the thickest and sturdiest. It should be thick from the ground up and straight. Allow it to grow in a perpendicular line without twisting or bending. Set a stake close to it and tie it at several points. This will keep the rose straight without further effort as well as safe from storms.

For a year or so you have nothing to do, besides soil cultivation, except to rub off

*The value of a rose tree lies in its superb effect wherever it is used*

## HOW TO GROW ROSE TREES

BY CLARA WHITTAKER

*To grow sturdy trees prune the one year old cuttings as indicated by the dotted line. All except the thickest branch should come off*

*An American Beauty Rose tree at the end of the third year. The tree has healthier foliage and larger blooms than the bush*

the "eyes," or leaf-buds, that appear on the sides of your tree trunk. Just one leafing-out bud on top should remain. All others must be removed or they will form branches. There comes a perplexing time when what looks like an infant leaf turns into a blossom. As soon as you have discovered this, carefully rub it off, or break it off. Then allow a new leaf-shoot to start where the blossom was, to elongate the cane till it is four feet high or more.

It will reach that height in about two years if it grows in a climate like southern California's. At that stage allow four or five eyes to remain near the top of the cane. These will soon grow lateral branches and form the crown of the rose bush.

When pruning the top, in spring, always thin out to four, five or six main branches. There you have your tree. Remove all suckers that spring up from the ground. If you neglect this for a year or more the trees will revert to a common rose bush.

**T**HERE are queer notions afloat as to what constitutes a rose tree. An innocent old lady who had heard of my success wrote to me: "I have many rose bushes, but I would like to have a rose tree. Please send me a slip from yours."

Years ago, some friends of mine bought two beautiful La France rose trees. One day, when they saw that a shoot had sprung up from the ground, about one foot away from the rose tree, they decided to let it remain. Then they would have three rose trees, so they conjectured.

Alas! tho it had formed strong roots and stood transplanting well, it was and always remained an ordinary rose bush.

If you happen to live in a cold climate you cannot have a Cafrano or La France rose tree unless you box it up in winter.

But you can have in rose tree shape a dozen beautiful hardy or hybrid perpetual varieties. These you can winter without protection by simply untying the tree from the stake and laying it on the ground with the crown end fastened down securely.

As a rule, you will have larger blooms and healthier foliage in a rose tree than in a rose bush or climber, because more strength is stored up in a small crown than in a spreading bush and because the air can circulate around it better. If mildew, or rust-spot should develop it can be overcome more readily because there are fewer leaves to doctor.

Better than a scraggly rose bush with its blossoms dragging on muddy soil is a rose tree with a dozen, or score, of large blooms that display their beauty even from a distance.

The perfect outline of the rose tree, free of all unnecessary branches and foliage, is a pleasure not only to the owner but to the passerby who views it from the street. Like sentinels these trees stand, seeming to guard the grounds from all intrusion of disorder.

# NOMADIC MOTORING

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

"HOPE springs eternal in the human breast," sang a poet of old, and the same may be aptly said of the spirit of wanderlust. Some of us can satisfy our longings in this direction by stealing away now and then to spend a day in the woods or fishing along some quiet stream; others find a month's vacation spent in traveling about or camping too short, while a few must lead a veritable nomad's life to secure contentment.

Whatever the degree of our yielding to the spirit of wanderlust the automobile supplies an ideal solution for the important problems of travel and transport. That its merit for these purposes is appreciated by nomadic motorists is attested by the numerous automobile camping outfits which have either been devised by individuals to serve their particular needs or placed on the market by manufacturers and sporting goods houses. These camping facilities range all the way from a dog tent, frying pan, axe and grub box, which the owner of a flivver straps to his running board, to the more or less elaborate caravan body which his wealthier friend has fitted to a passenger car or motor truck chassis, and including the two wheeled trailer, which is somewhat like a magician's hat in that it contains a completely equipt tent for four people, which may be put up in a few minutes.

The bane of automobile touring to many is the reaching of some crowded inn each noontime for luncheon, and the stop over night at hotels which shame human nature in their variance. The nomadic motorist, whose car carries his home and subsistence, is spared these inconveniences. And better still, he or she can combine with the enjoyment of automobile touring the pleasures of camp life. Also, the motorist dependent on hotels must travel the beaten trails and maintain more or less of a schedule, while those with camp equipment may seek the more delightful byways which lead into the heart of nature's charms; camp under the trees by the side of some secluded lake versus a crowded resort hotel, with only the brief summer season in which to make expenses and profits; the whip-poor-will calling to his mate, the hoot of the owl, and the baying of hounds, giving tongue as they run a fox over distant hills, against the noisy chatter of the hotel veranda. Small wonder the ranks of nomadic motorists are being steadily augmented.

Caravan is an English term used to designate a road vehicle which provides living as well as traveling facilities.

With the possible exception of a motor vehicle which the German Kaiser had built several years before the war and used when attending army maneuvers, the most elaborate motor caravan ever built was that made to order a few years ago for a prominent New York banker and art patron, and used by him and his family in making a leisurely trip to Chicago, and during the fall of the same year for a month's tour of California. This land yacht, as the owner termed it, provided living and traveling quarters for six people in addition to a chauffeur and a steward. It was built on a long motor omnibus chassis, and no expense was

spared in its construction and equipment. The "crew" slept in the forward driver's compartment, the driving seat being wide enough for one berth, while another could be lowered from the ceiling overhead. The main compartment behind was not dissimilar to a Pullman sleeper in that the six commodious berths could be folded out of the way during the daytime, to make room for comfortable folding chairs. Windows, with screens and shades, extended along the entire length of the vehicle. The rear compartment contained on one side a yacht's galley, with refrigerator and electric stove, while on the other side there was a secretary, with a built-in phonograph above it, bathroom, with toilet, lavatory and shower bath, and the stairway leading to the upper deck. The upper deck when in camp was fitted with a canopy top and served as a roof garden and sleeping porch. It also provided ample locker room, and a water tank. One of the lockers held a motorcycle which was lowered by means of a davit, and used for investigating the road ahead and for going into towns for mail, newspapers and supplies. A dynamo driven by the gasoline motor and storage batteries supplied electricity for cooking, lighting, fans, etc. The owner had been accustomed to making a cruise each summer in his steam yacht and planned this motor caravan to provide the same facilities and conveniences for a trip across country. Its drawbacks were a height which prevented it from passing under low bridges and a weight which often brought it into trouble when driven off hard roads.

A motor caravan more in keeping with

enough to provide two six foot berths running lengthwise, which means that a full half of its length overhangs the rear axle. The two berths with

extensions lowered can be used as seats during the daytime. The floor has a "well" dropt between the wheels, giving five feet eight inches of head room within the body.

Lockers are suspended below the floor and reached thru trap doors, and also placed above the berths. Special provision is made to keep dishes, cooking utensils, etc., from rattling when the vehicle is traveling. A curtain is hung above the back of the front seats for use at night. This is hardly necessary as the windshield and side curtains in front enclose the vehicle, thus giving additional air space to the sleeping quarters. This caravan has served nicely as a traveling home for its owner and his wife during a sixteen day vacation trip in north Wales.

Several new things have recently been offered to the nomadic motorist in this country, among them a turtle back deck for a roadster which opens back resting on legs and providing a double bed, springs, mattress and all. The compartment also carries tent and supports for enclosing the bed. Other camping equipment is carried in trunks strapped to the running boards. There are several variations of this type. The two wheeled trailer, which resembles a contractor's tool box when traveling, was brought out two years ago and is more or less familiar. It can be set up in about ten minutes and provides a tent covering two compartments with separating curtain, each having double bed level with the top of the trailer sides and at the outer edge resting on legs. The floor of the trailer serves for standing room when dressing, and lockers beneath carrying provisions and culinary equipment. When this camp is set up the car can be used without disturbing it.

Another type has tents that are erected at either or both sides of the car, the top of which when raised being the main support for the canvas.

Collapsible beds are provided, one end resting on the running board and the other on legs. This equipment is bulky and when traveling takes up considerable room in the car and on the running boards.

Another somewhat more compact arrangement which is quite new provides a bed across the top of the seats of the car itself. The front cushion or cushions are raised to the level of the back of the front seat and the back cushion brought forward and similarly elevated. The cushions

are held in this position by curved irons passing over the back of the front seat and by rods resting on the sides of the body. A canvas is hung from the rear side of the back cushion to the top of the back seat, thus completing the bed, the sleepers' bodies resting on the cushions with their legs and feet on the canvas.

The top, side curtains and windshield form the tent.

How the nomad of old would envy the motorist of today, not alone because of such camping facilities, but also for his reliable and speedy means of traveling as he likes.

*He who carries camp equipment need not take the road to the inn*

the needs and pocketbook of the average nomadic motorist was recently designed and built by an Englishman. Its principal features have been patented by a British firm, which will place duplicates on the market after the war.

Our English cousin first provided his regular touring car with a detachable tonneau by cutting thru the body just back of the front seat. The caravan body may thus be substituted for the tonneau, or vice versa, in a comparatively few minutes. The former resembles the body of a delivery van, is built of sheet metal fastened to a wooden frame and weighs but three hundred pounds. It is long

## Fairbanks-Morse Electric Light and Power Plant

1 to 200 H. P. for Cottage or Mansion  
in Town or Country

Made by the largest engine manufacturers in the world, it is the most highly perfected plant made. It is remarkably simple and efficient and extremely economical.

It will pump water anywhere you want it and supply current for fans, vacuum cleaners, washing machines, sewing machines, etc., at half the cost of city electricity.

Too much cannot be said in favor of the Fairbanks-Morse Electric Light and Power Plant. The cost of installation can be saved over and over again in time and labor saved.

Before you install any plant, you must see the Fairbanks-Morse. Buying the right plant in the first place will save worry and inconvenience later.

Write to-day for our catalogue 409E.

## THE POULTRY YARD IN JUNE

BY E. I. FARRINGTON

**T**RYING to increase the number of chickens raised in the country this spring has been uphill work. Scores of commercial poultry keepers have greatly reduced their hatches owing to the high prices charged for feed and the difficulty of getting feed at all. Probably the total number of chickens hatched has been smaller than last year, but fortunately back yard poultry keepers and the women on the farms have responded in large numbers to the Government's appeal. They have been responsible to a great extent for the salvation of the poultry industry this season.

In some places children have been enlisted for the work of poultry raising. In Peoria, Illinois, for example, more than six hundred boys and girls have joined a school poultry club, and the movement has been endorsed by the Governor. Ohio Baptists recently started a campaign to raise a large fund for war work thru the aid of poultry.

Now that the breeding season is over, all the male birds not needed for next season should be gotten rid of immediately. Hens lay just as well or better when there are no roosters in the pen, and there is no reason why the grain fed to these unprofitable birds should not be saved. In fact, dressing off the roosters now is distinctly a war time measure. It does not follow that the family must live on poultry for the next few weeks, or that the surplus birds must be put on the market. When there are only a few, it is much wiser to can them for home consumption next winter.

Some hens begin to molt very early in the season. They can usually be set down as poor layers and not worth carrying over, even tho they are only a year old. It is best to get rid of them immediately. Many hens will keep on laying thru the summer, and not molt until October or November. They should be carried over, and used in making up next spring's breeding pens.

From now on the garden ought to help feed both the growing chickens and the laying hens. All sorts of garden waste can be run thru a meat grinder, and if mixt with a little bran and 10 per cent of beef scraps, will make a valuable mash. With a row or two of rape in the garden there will be no lack of green stuff, for rape grows

up again as fast as the tops are picked off. Swiss chard has the same peculiarity and also makes good greens for the hens. The tops of mangel wurzels planted to provide vegetables for the poultry next winter, can also be used, but in a more limited way. This is the month to plant both mangel wurzels and red beets to be fed next winter.

The chickens hatched in April or early in May need not be fed oftener than three times a day. A commercial chick feed or ground grain of any kind can be given, and it is desirable to keep a dry mash in front of the birds all the time. A commercial mash is about as economical as any which can be mixt at home. Still several expert poultry keepers reported good results from a mash consisting simply of bran with 10 per cent of beef scraps.

Be sure that your chickens have plenty of yard room, or if they must be crowded, that they are kept busy. Otherwise they are likely to develop cannibalistic habits such as eating each others' toes and combs. It's a good plan to spade up a part of the yard each week. A little grain dug into the ground will encourage the birds to take exercise. A wheel hoe for garden work will be found very useful in working up the poultry yard.

Be sure that the growing chicks have shade. This is even more important for ducklings. If exposed to the hot sun, many of them will be lost. For that matter, all kinds of poultry need shade. If it does not exist naturally, it will be necessary to supply artificial shade in the way of brush, burlap bags fastened to stakes, or something similar. An excellent plan is to grow Jerusalem artichokes in the poultry yard. The birds will not eat the leaves, and the plants will provide the necessary shade.

It is of vital importance that the chickens and hens alike have an abundance of fresh water always before them. They do not like lukewarm water any better than do human beings, so it will pay to refill the drinking vessels several times a day. For the ducklings, be sure that the water is deep enough so they can insert the whole of their bills. They will smother if they are not able to free their nostrils from mud and mash.

# New Kind of War History

Here is a New Kind of War History. It is written in a new way—in the universal language—*pictures*. One picture tells a more vivid story than 100,000 words—if it is the *right* picture! "From the First Shot" contains 437 pictures, selected as the best of hundreds of thousands received from "over there." These 437 thrilling photographs were made on the firing lines by the greatest war photographers, by soldiers themselves in the trenches, by aviators above the battle lines, by men at sea.

Written on the moment—pictured on the spot, "From the First Shot" not only tells the whole tale of the war, year by year but every thought is driven home to you by a vivid picture. Besides this collection of the finest war photographs and 100 famous cartoons, this New Kind of History also contains many vital articles by such men as President Wilson, Ex-President Taft, G. Bernard Shaw, H. G. Wells, Hamilton Holt, John Hayes Hammond, Jr., and Donald Wilhelm.

This new War Book of 224 pages, size 8¾ x 12¾ inches, is richly bound in full cloth with a beautiful four color medallion of Bransom's famous American Eagle Painting.

## SEND NO MONEY

So confident is the Independent Corporation, the publishers of this beautiful War Book, that once you have an opportunity to see it you will want it, that they are willing to send you the book on free examination.

Don't send any money. Merely mail the coupon or write a letter and the book will be sent, all charges prepaid, at once.

If you are not entirely satisfied, send it back any time within three days after you receive it and you will owe nothing.

On the other hand, if you are as pleased as thousands of others are who have received one of the books, send us only Two Dollars in full payment. You take no risk, and you have everything to gain, so mail the coupon now, before this offer is withdrawn.

## QUAKERS IN THE WAR ZONE

(Continued from page 365)

in the overcrowded southern provinces; some of them were working with the Serbians; one man was re-roofing a civilian hospital at Rheims—one rafter at a time, so as not to attract too much attention from German gunners; others had gone up into the region evacuated by the Germans in the spring of 1917 to start similar work there; some had gone down to the factory at Dôle, where a group are manufacturing parts for the maisonettes; and others had scattered to new units opened east and west and south and north of Sermaize.

Just what share the English Friends and the Americans who succeeded them bear in the reconstruction of hope and courage which has made possible the physical reconstruction, the new shops and houses which are rising in Sermaize, no one can say, but they have played their part.

Very close and intimate has been the relationship between the English speaking strangers and French peasants of the Marne and Meuse. All last winter little groups of Americans were living in the peasants' cottages, working in the barns with the peasants and other laborers—soldiers, boche prisoners or women who could be secured, threshing grain thru the day and chatting after supper around the little stoves in the one-room cottages. Sometimes an old peasant woman would get out letters from her boy, a prisoner in Germany, and tell the Americans the private code by which he told her news. Some Americans had lived in a nearby village in the Marne before the war; when he wished to refer to the Americans, he said the "people from Louppy."

They thrashed a thousand tons of grain, but more than the wheat is the friendship, the new courage and hope given by these whistling American boys, who laughed as they rubbed their hands, red and cold; who sang as they toiled thru the long hours of the day, and who welcomed an opportunity to tinker with the mysterious mechanism of somebody's broken machine.

Two Americans to a machine was the rule; the rest of the labor was supplied by the farmer, who paid only for the petrol, and the men hired to help. Every Monday a camion took the boys out, two to one village, two to another, and Saturday afternoon it brought them back to Sermaize to a big wood fire, and to English speaking human beings. You learn a lot of French when you live in a peasant's cottage, but you do enjoy getting back to the English language on a Saturday night.

Grain rotted in the Marne the first winter of the war for lack of men to thresh it: some was not planted the next year for fear that more would rot. And when it doesn't seem worth while to even plant the seeds a farmer gets discouraged. That is why the threshers bring new hope, encouraging more farmers to return and to make the beginnings of new life where there has been a desert.

Up in the devastated north, where the destruction was, if possible, even worse, and the depopulation more complete, other groups of friends are at work. There are two centers of agricultural work from which, as in the Marne, threshing is done in winter and heavy plowing in the spring and fall.

But it is not only the threshers who have their headquarters at Sermaize. There is a whole staff of women relief workers—and there are the hospitals.

Picture to yourself a countryside without hospitals and without doctors—or at

## WHITE HOUSE

BRAND

### COFFEE And TEAS

In our campaign for a "Better Cup of Coffee" we need the assistance of the intelligent housewife to the end that the splendid material furnished by us under the name of "White House" be not spoiled in the brewing.

The WHITE HOUSE COFFEE is sold in the bean, ground or pulverized, and never in any package but the one, two, or three-pound ALL-TIN cans. White House TEA, quarter and half-pound ALL-TIN cans, all varieties, just as good as White House Coffee.

least without any medical opportunity for civilians. There had been hospitals and there had been doctors before the war. But the old hospitals are now barracks or military hospitals for soldiers only, and the doctors are in these hospitals or at the front.

Today a medical system covers the whole countryside. The English Friends began the work, and with a staff of doctors and nurses from America and substantial financial assistance from the American Red Cross, it has been expanded and developed.

A château on the outskirts of Sermaize which in previous months had sometimes been used as an army barracks and sometimes stood empty has been converted into a surgical hospital. A new Children's Home has been opened at St. Remy-en-Bouze-mont. The old Baby Home at Bettancourt and the general hospital at La Source are used as convalescent homes for patients from the château who are well enough to be transported.

Some of the patients had been living in bed, doctorless for three years, in need of operation; others lay patiently—and sometimes impatiently—awaiting the end of the war, convinced that there was no help for the civilian until then. The Friends brought new hope.

Sermaize is rising on its ruins and becoming a bustling country town. And Sermaize was one of hundreds of towns laid waste. Most of them lie flat. But in dozens there are little groups—French, English and American, and almost all of them substantially aided by the American Red Cross—carrying on the task of spiritual reconstruction which must precede the physical.

Sermaize is a word of hope for all of northern France and Belgium.

## RAIN WHEN YOU WANT IT

(Continued from page 367)

a short time. When the underground system is used in gardens where digging or plowing is necessary it is important that the pipe be placed at a sufficient depth below the ground so that it is not interfered with by these operations.

It is almost impossible in our climate to obtain large crops of any kind if the garden is not irrigated properly. Soaking the seeds to hasten germination has little effect as the roots which are then quickly emitted come into contact with the dry soil and are immediately checked or stunted. With an irrigating system this is easily overcome. After sowing the seed the water can be turned on in the early evening and allowed to run all night. The tiny constant drizzle penetrates to a great depth. If the surface is then cultivated to retain this moisture, it is not necessary to repeat the operation for two or three weeks.

Irrigation is also invaluable in saving the garden from the first early frost as the constant drizzle of the water on the foliage will prevent damage. In case of unexpected frost, the loss may be averted by turning on the system in the morning before the sun strikes the plants. This applies to all kinds of flowers as well as vegetable crops.

Formal gardens require even watering to assure uniform growth. This is only possible when a system is used whereby the entire area is covered with the one operation. Where the old method of Henry dragging the hose around was resorted to, it generally resulted in Henry's favorites being well watered and the rest being neglected.

"Not the name of a thing, but the mark of a service"

# MAZDA

## MAZDA Service—a systematic research for making lamps more economical

THE MEANING OF MAZDA—MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA

Service is centered in the Research Laboratories of the General Electric Company at Schenectady. The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

## SHAKESPEARE IN THE TRENCHES

(Continued from page 360)

However Mr. Ames and Mr. Sothern may differ in their impressions, they have returned to America firmly convinced that the weight of entertainment "under fire" will fall upon the shoulders of vaudeville. In peace times the abhorrence of the actor is "to recite." I doubt whether, previous to his going to France, Mr. Sothern ever stood up before an audience and gave isolated selections. But now, "under fire," if the actor is not willing to adjust his art to conditions, if he is not willing to entertain the soldier quickly, between gun shots, so to speak, he has no business to be in France. So says Mr. Sothern. And he is learning hard the art of reciting; with envious eye he is studying the programs of vaudeville; and tragedian and comedian tho he may have been on the legitimate stage, he is willing, in France, to call the acrobat and the professional whistler brothers.

Mr. Ames found that these men who had gone abroad were transformed by their experiences. He says:

They are no longer boys, but men—men who respect the dignity of their service, men that the American theater cannot afford to belittle by sending anything but its most respectful best. But by best, mind you, I don't mean high-brow. Men they may be, but when they are at play they are just great, happy, wholesome, fine American boys. They haven't lost their sense of humor. For instance, one division has taken for its motto: "See America First." They don't want you to lose your sense of humor when you come to them. They want cheerfulness, and gaiety, and clean laughter, and good catchy music, and stirring recitations, and little swift plays—oh, anything that is good of its kind, and well done, and "made in America."

Audiences differ at the front, as they do in a Broadway theater. Mr. Sothern said that he felt, while reading, a great difference between an engineer corps and an aviation corps, that the drafted soldier in his demands was different from the Red Cross nurse, or the Army doctor. An audience of strapping, healthy boys was not the same as an audience of invalids, many of them brought before Mr. Sothern on stretchers to hear him read.

No longer Y. M. C. A. workers, but more than ever devoted to the cause of the Y. M. C. A., Mr. Ames and Mr. Sothern, soon after their return from France, called a meeting of the actors, and read a message from Pershing—an S. O. S. signal for amusement. It may be ships and more ships, but it is also actors and more actors! As Mr. Ames and Mr. Sothern outlined to the players assembled at the special overseas theater meeting, the contagion of service swept thru the auditorium. Had Pershing wanted at that instant, he could have removed the entire Great White Way to the front. Every actor there wanted to go, despite the dark picture of discomfort, and the assurance of Mr. Sothern that if the American actor carried a "stunt" into France that was bad, it would be within the military power of General Pershing to have him shot at sunrise!

Many years ago devotees of the Y. M. C. A. would have scouted the suggestion that the time would come when a minstrel would travel a war-worn land in the uniform of the Red Triangle, side by side with the Y. M. C. A. minister. But this war is changing many things. The theater is to become part of the army equipment of the United States, and the player, under military orders, will act within sound of the German guns. He will act at the top of his bent, for the amusement of those boys, and for the glory of his soul.

## HODGSON Portable HOUSES

Hodgson Houses are built at the Hodgson factory—in neatly finished, fitted and painted sections.

Select the bungalow, cottage, garage, play-house or poultry house you want from the variety of photographs, plans and prices in the Hodgson Catalog. Then by paying 25% of the cost of your house we prepare and hold it until wanted. Your house is shipped to you in sections and it is but a day's work for unskilled workmen to put it together.

## A BUNGALOW IN TWO INSTALLMENTS

(Continued from page 369)

that when it is folded up it serves as a looking glass. Laundry and sewing are very closely associated in the every day life of a family of children and in this workroom clean clothes are supplied with lost buttons before being taken into the house. Underneath this laundry, and reached by trapdoor and ladder, is the preserve cellar with walls of concrete. Its roof is the floor of the laundry and it gets its ventilation from the air space just above the grade level.

South of the laundry is the children's play room with three shelves, one for each of them. Here they cut out paper dolls on the floor, make mud pies, play house and litter up the place to their hearts' content, and here they clean up after themselves. It is their own particular haven and they keep the key to the door.

The long exposure of the green house is toward the south, its entrance to the east. The propagating beds are built on either side of a central walk and are about two feet high. The top of the green house is also of glass sash, placed to admit the south sunlight.

The garage, which joins the laundry on the west, is at the head of the driveway and very convenient to the house. It contains all necessary tools and accessories for the car except gasoline, which is kept in two tanks about 15 feet distant. A rose trellis has been trained up over these tanks so that they are almost hidden. West of the house is the extensive vegetable garden and a little to the north the berry vines and orchard. Each one of the children has his own special flower and vegetable garden which he cares for himself. He may do just as he pleases with its products. Each child has also a small amount of work for which he is responsible around the house.

The exterior of the house is finished with shingles above a belt course which is 2 feet 6 inches above ground. Below this course are 1 by 12 inch boards laid 4 inches and 10 inches to the weather, alternately, and nailed to flaring blocks. The vergeboards are of heavy rough Oregon pine and the brackets of the same material. The roof is paper composition on 1 by 6 sheathing and is laid with a low pitch to harmonize with the gently sloping line of the hill back of the house. The chimney has been left rough cast as it appeared when the form boards were taken down—the rough surface of the concrete forming an excellent surface for Virginia creeper and English ivy.

The house has been nearly three years in the course of construction but it has proved a paying investment from the beginning. It has saved rent and has afforded its owners the opportunity of improving their garden space besides giving the children the benefit of fresh air and sunshine. In short, it has successfully solved the problem which confronted its owners when they invested in their country property—how to get a suburban home without mortgaging their land and with only a few hundred dollars cash.

Fair One—I'm afraid these Louis XV heels are too high for me. Perhaps you have lower ones—say about Louis X.—Orange Peel.

## THE AMERICAN MALCONTENTS

(Continued from page 364)

ism, high simplicity, antipathy to capitalism, and socialism. The People's Council of America for Democracy and terms of Peace attracted too much attention for its own good last September, but it brought together the Socialists, the pacifists and some pro-Germans. That the nonpartizan Governor of North Dakota invited the Council to meet in his state is as significant as it is that the loyal Socialists under the guise of the American Alliance of Labor and Democracy, trailed them to expose them; or as the insistent demands of Senator La Follette for an expression by Congress of our aims in war.

It would be easy for a Lincoln on the stump to hint that among all these propaganda there is a real entente. That with whatever motive, their conduct is headed toward a single end. Perhaps ambition, perhaps disloyalty—or selfish interest, or obsession, or conceit, or class consciousness, may drive the group together. A churlish acquiescence in the acts of war yields to an eager thoroughness for measures of economic advantage or revenge. A high price for wheat, a heavy tax on profits of the rich, and ho! for the revolution, may be heard among the voices of the alliance. And there is but one named statesman who appears to lead the force.

It is an unholy alliance, if indeed it be an alliance. But the American, irritated and exasperated by its unfairness, need not fear it. It is at most a grouping of the "outs," and is bound by hatreds rather than by a purpose. It lacks completely the constructive poise that dignifies the British socialist-labor group. Senator La Follette may never know why we are at war, but he will never be an open worker for Germany. He wants to be a president of the United States, and he is a Democrat. The farmers want grain elevators and hail insurance, and are socialistic to this extent; but they also want to own their Fords and their farms and will never stay by their Socialist associates in hopeful anticipation of a revolution. If they think or pretend now that they are Bolsheviki it is only because they have not yet learned the meaning of the word. And the Germans themselves are much better than their promise. Some, like Viereck, have spoken for the bond campaigns, others like Ridder have pulled away from the most disloyal of their associates, still others, like the officers of the German-American National Alliance, have reconsidered many of their earlier utterances and want to be loyal Americans. Sullen and silent at their worst, they may remain an uncomfortable element in our body. But their existence and status is only the normal consequence of wide-open immigration. And long before the apparent entente of the malcontent is within reach of power its own internal antagonisms will have rent it asunder. The United States may have troublous days ahead, but the least of the realities is the one which today seems ominous.

In Japan when the subscriber rings up exchange the operator may be expected to ask:

"What number does the honorable son of the moon and stars desire?"

"Hohi, two-three."

Silence. Then the exchange resumes:

"Will the honorable person graciously forgive the inadequacy of the insignificant service and permit this humble slave of the wire to inform him that the never to be sufficiently censured line is busy?"—*New York Globe.*

# BOOKS TO SUIT ALL READERS

## WORRYING WON'T WIN

By MONTAGUE GLASS

Author of "Potash and Perlmutter"

Your likeable friends, Potash and Perlmutter, are here in a new book, in experiences humorous and wise—which take your mind off war. In their inimitable way, Abe and Mawruss discuss the various phases of the European situation, and mix up German secret service, union labor and hundreds of other subjects. "There's only one thing that a Russian revolutionary dictator really and truly worries about," says Abe. "What's that?" asks Mawruss. "Losing his voice."

Illustrated. Post 8vo, Cloth, \$1.50

## GASLIGHT SONATAS

By FANNIE HURST

"In 'Gaslight Sonatas' are seven of the inimitable short stories of humble life in New York which have brought fame and innumerable readers to Fannie Hurst. Somebody called Miss Hurst recently an American Dickens. She is better than that. She is herself."—*New York World*.

Frontispiece. Post 8vo, Cloth, \$1.40  
Khaki Edition for the Soldier, \$1.40

## THE GIRL IN HIS HOUSE

By HAROLD MACGRATH

Author of "The Luck of the Irish"

James Armitage, after traveling abroad for several years, drove up one night to his New York house and found it all lighted up—and a strange girl at the window! His house—occupied by a beautiful girl! In this manner, with a New York clubman, a deserted house and an unknown girl, Harold MacGrath unfolds a plot that might have been woven in the days of the Arabian nights.

Illustrated. Post 8vo, Cloth, \$1.25

## THE WINGS OF YOUTH

By ELIZABETH JORDAN

A story of youth and love. In this book, Miss Jordan, already well known for her short stories, has put not only the sympathy for youth and its strivings, the humor, and the insight into many different phases of life, but an unusual plot treated in a novel way.

Frontispiece. Post 8vo, Cloth, \$1.40

## THAT ROOKIE FROM THE 13TH SQUAD

By Lieut. P. L. CROSBY

Do you know Crosby's Pictures? He is the Bairnsfather of the American Army

If you have a friend who is a rookie, this book will delight you. To rookies themselves, the naiveness of Private Dubb will mean even more, and should set whole camps laughing.

75 cents

## IN OUR FIRST YEAR OF WAR

By WOODROW WILSON

Messages and Addresses to the Congress and the People, March 5, 1917, to January 8, 1918. A Companion volume to "Why We Are at War"

"This book summarizes all the principles, all the ideals for which, during forty months, millions of men have been fighting and dying on the fields of Old Europe."—Stephane Lauzanec, Editor of *Le Matin* and Member of the French High Commission.

Portrait. \$1.00

## SONGS OF THE SHRAPNEL SHELL

By CYRIL MORTON HORNE

These poems were born in the trenches, between one attack and another, to the music of bullets. Captain Horne was killed while rescuing a wounded soldier. Though he was only twenty-nine years of age, he had already sung brave songs of other heroes. It is a book worthy of the noble spirit of the man who wrote them and of the men of whom he wrote.

Portrait. Post 8vo, Cloth, \$1.25

## WAR GARDENS

By MONTAGUE FREE

Head Gardener, Botanical Gardens, Brooklyn

This is essentially a practical book, designed to help those who desire to raise their own vegetables and states simply and clearly the ways and means necessary to obtain the largest returns from small plots of land. The author of "War Gardens" has had much experience with backyard and vacant-lot gardens. Besides being head gardener at the Botanical Gardens in Brooklyn, he was trained at the famous Kew Gardens in London, England.

16mo, Cloth, 50 cents

## SOCIAL DEMOCRACY EXPLAINED

By JOHN SPARGO

Mr. Spargo says: "This volume is an attempt to state in simple, popular and untechnical language the essentials of the Socialism of the Marxian school—not only of the philosophical and economic theories of Socialism, but of the principles underlying the policies of the Socialist movement."

Post 8vo, Cloth, \$1.50

## OUTWITTING THE HUN

By Lieut. PAT O'BRIEN, R.F.C.

You Americans who want to know how a plain Chicago boy can play tricks with the German army—read this tale by Lieutenant Pat O'Brien. He fell in his aeroplane 8,000 feet into the German lines. He was nearly dead. They started him on the way to prison. But they couldn't hold our young man. He leaped from the window of the flying train. Then for 72 days he ran and hid and crawled and swam and cajoled and fought—through Luxembourg—through Belgium—to—but read the story yourself.

Illustrated. \$1.50

## A FLYING FIGHTER

By Lieut. E. M. ROBERTS, R.F.C.

There lay the Huns, huddled, menacing—and over them swooped the fast plane, dropping death. Shells burst around the bird man—he was hit—hit again—his pilot wounded—and still he drove on. What was the outcome? Read this book. Roberts has been gassed and wounded and shell-shocked; he was brought down from the air four times in four days by the Germans. He has volumes to tell and has packed it all into one gorgeous, vivid, thrilling book.

Illustrated. \$1.50

## MY BOY IN KHAKI

By DELLA THOMPSON LUTES

Editor of *American Motherhood*

The heart-story of an American mother, whose only son is in the army "Somewhere in France." The book is certain to reach and comfort and inspire thousands of mothers whose hearts are sore with the struggle between Love of Son and Love of Country. It is a greatly patriotic story.

Post 8vo, \$1.00

## THE MAN WHO SURVIVED

By CAMILLE MARBO

Translated from the French by Frank H. Potter

This story, by the wife of a distinguished Frenchman, is remarkable even without the wartime background and unfolds a situation as novel and convincing as that of Jekyll and Hyde. It, too, is the story of a dual personality.

Post 8vo, Cloth, \$1.35

## CONFESSIONS OF THE CZARINA

By COUNT PAUL VASSILI

Was the Czarina really mad? Did she act as a German spy? Why did she marry the Czar? Did she have any real friends? There is one who knows—Count Paul Vassili of the Russian nobility. And in this remarkable book he has told the truth about what has for years been merely court gossip.

Portraits. \$2.00

## THE YELLOW DOG

By HENRY IRVING DODGE

This story is a prescription for people suffering from doubt—the Government distemper! A hit between the eyes for those who are not in the fight for democracy with all their might—aimed at whining, back-biting, sneaking, cowardly, pro-Germans, bad American citizens. A corking story to boot.

50 cents

## KITTY CANARY

By KATE LANGELEY BOSHER

"The reader who likes to laugh is recommended to get the book and do his own smiling over the naive tale of Kitty herself. She is both amusing and dear. And the humorously affectionate picture she gives of Twickenham Town and its inhabitants is quite equal to the best work of her creator, Mrs. Boshier."—*Philadelphia Evening Telegraph*.

Frontispiece. Post 8vo, Cloth, \$1.00

## MISS AMERIKANKA

By OLIVE GILBREATH

She was a charming American girl—and the love of adventure ran strong in her veins. So she left the land of moon-flowers and cherry blossoms, and traveled alone into the grim and war-torn heart of Russia. And there she found—. But the remarkable things she found—you can read about in a tale that is like the incense burning in a great Russian cathedral.

Illustrated. Post 8vo, Cloth, \$1.50

Shelltex Rimmed

**SIMS'S CIRCUS**  
(Continued from page 359)

down again. As the first cleared out of the way the second destroyer opened with her bow guns on the conning tower, which was now showing again.

Having no rudder the "sub" was "porpoising" along, now up, now down, and every time the conning tower showed the destroyer sent a shot whistling past it. They had fired three shots each before the hatch flew up and the crew came streaming out and ranged along the deck with hands up.

As the destroyers hove alongside, covering the crew with their guns, two of the men were seen to run back below. They were only gone a minute. But that was sufficient. Undoubtedly they had opened the sea-cocks and scuttled the vessel, for she sank three minutes thereafter.

The crew jumped into the water and were hauled aboard the destroyer as fast as they could catch a line, all but one poor chap who could not swim and was nearly drowned before he was seen. Then in vivid contrast to the German practise under similar circumstances, two of our men leaped overboard and held him up till he could be hauled aboard.

All had happened in no more than ten minutes from the dropping of the first depth charge.

How I ached to talk to those prisoners! But discipline demanded that we keep our stations; neither is a large convoy to be held up while a correspondent chatters. We moved on, leaving one destroyer to take the prisoners back to the base.

But I heard a good deal more about them afterward. The bag consisted of one captain-lieutenant, one lieutenant, one ober-lieutenant, one ober-engineer and thirty-six men. As the "sub" had been out from port about six days and had come straight to our base, it carried down with it a full complement of twelve torpedoes; a loss greater than that of the submarine.

The crew appeared to be well nourished, but the faces of the officers, in particular, were deeply lined, haggard from strain and nervous anxiety. They all appeared stolidly indifferent to capture. Indeed, after they had been given coffee and sandwiches—contrast this treatment with that accorded by a German submarine commander to the murdered crew of the "Belgian Prince"—the crew began to sing. When they were placed in the boats to go ashore on the first lap of their journey to a prison camp they gave their captors three cheers.

The prisoners were cross-examined, of course, and from a plentiful chaff of misinformation were gleaned a few kernels of truth. The commander said, for instance, that no submarine captain who knew his business would waste a torpedo on a destroyer! That which caused our first casualty did not come from the hand of a "greenhorn" out on his first voyage! All very nice and friendly, but in course of an intimate conversation with the ensign in whose cabin he was billeted for the night, he let out the fact that every submarine kept two torpedoes gaged for a depth of six feet—destroyers, of course!

The piece of information that most concerned us came in a radio three hours later—the base port was "closed to commerce." The poor harmless submarine that would not waste a torpedo on a destroyer, not even if it went to sleep on the water, had sown the offing with mines. All those evolutions of ours, swallowlike dips and swoopings, had been executed in a mine field.

I confess to a little gasp. But gasps, if you are given that way, come thick and fast on a destroyer.

(To be continued)

**YOU NEED VIGOR!**

**STRONGFORT**  
The Perfect Man

**LIONEL STRONGFORT**  
Physical and Health Specialist  
560 Park Bldg. Newark, N. J.

More fitness for your duty; more ability to produce more energy; more enterprise; more action; you need more backbone; you need better health; better memory; more strength; more endurance; in other words, you need something to make you worth more to yourself and more to others.

I can give you the missing element I can multiply your energy; extend your life. I can so improve you, that I'll see you around within a year and compel you to admit your power is a beautiful endowment. I can make you the physical man you ought to be.

Every day you have added to your experience. Every day you have gained wisdom. Every day you will tune up your personality. If you will be more keen in your conduct; if you will wear your system and wear your brain; if you put more vigor, more enterprise in your activity. Test with your daily experience your vitality and want better yourself when you can be so full of nerve force and physical vigor that you could not resist from playing a man's part and profit in doing.

I can make your life with vigorous action; put you on a plane you never dreamed of; and you can do it easily, simply, naturally. Never mind what allusion you may have, let me tell you how Nature can fortify your system so that you can throw off disorders like an old coat.

Send 6 cents in stamps to cover mailing expenses and receive my book, "Promotion and Conservation of Health, Strength and Mental Energy." It is written for your interest.

# NO STRIKES IN WAR TIME

(Continued from page 357)

pleasant rumblings of strikes and labor disturbances; here we have feared the stoppage of production, the waste of time and energy, the blackening of hopes of thousands of honest toilers. And here, in this National War Labor Board, which is just now demonstrating by its decisions what is its spirit and object, we are frankly meeting the situation and "carrying on."

One vital point in the manner of meeting this situation must not be overlooked. This point was brought out a few days ago in a statement of organization in these words:

The National Board may appoint permanent local committees in any city or district to act in cases therein arising. In the selection of such local committees, recommendations will be received by the National Board from associations of employers and from the central labor body of the city or district and other properly interested groups. Sections of the board are authorized to appoint temporary local committees where permanent local committees have not been appointed by the board.

There is much meat for reflection here. You, perhaps, are living in a city of ten thousand with one or two big factories on the outskirts. Trouble arises in one of those factories. The trouble affects your people—your friends who work in the factory and your friends who own it. The owners and the operatives fail to meet on common ground. There is nothing to do but agree to disagree, peacefully if possible, otherwise not peacefully. There is no way to get the thing settled, barring the occasional state mediation commission. In your town, very likely, patriotic as it is, there is little sense of solidarity with the rest of the nation. You do not realize that what you do or do not do makes a difference everywhere.

One way out under the new scheme of things would be for the National War Labor Board to summon men from your town to Washington; another way would be for it to send some one from Washington. In either case there would be the feeling that an outside power was interfering, and in neither case would even a satisfactory conclusion be perfectly satisfactory. The settlement would have been undemocratically made; it would have violated, innocently, of course, the principle of local self-government.

Hence the projected creation of local boards, made up of local people, and affiliated with the big National Board in Washington. An attempt to cure a thing locally means that it will be done with speed, which in time of war is essential; it means that it will be done by men already familiar with the situation; it means, lastly, that you will put your own house in order before you go out on the highways and byways searching for assistance. This device of local committees is well worth pondering over. They are coming, and their coming is going to mean a brand new deal both for the employees and employers everywhere in the land.

"The National War Labor Board," said one of its officials informally the other day, "is really a supreme court of labor appeals for industrial disputes. Below it will be lesser courts from which undecided cases may go on up to the last court. For the period of the war, anyway, our job is to call on every interested citizen—which means every citizen—to use us when any likelihood of a break threatens. After the war—well, we may last or not, according to the kind of a job we do."

WILLIAM LEAVITT STODDARD

## In Vacation Land

### "A.B.A." American Bankers Association Cheques

Even in these war times, vacations are necessary for many persons; they must renew their health and strength for the important business in hand. Those making vacation trips find "A.B.A." Cheques an ideal form of funds. These cheques are *safe* to carry because they are of use only to the owner until he has countersigned them; they are most *convenient* because accepted like cash in payment of all kinds of purchases and service. You can obtain "A.B.A." Cheques in denominations of \$10, \$20, \$50. and \$100 at the principal banks in all important towns and cities of the United States and Canada.

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

#### I. Patriotism and Loyalty.

A. THE AMERICAN MALCONTENTS. 1. Write a logical definition of "an American malcontent." 2. Write a series of questions and answers concerning the different types of malcontents, making your work so simply emphatic that it could be printed and posted thruout your school building as an aid in developing patriotism. 3. Deduce from the article the causes that make some people unpatriotic. 4. Make written suggestions for overcoming the evil influence of malcontents. 5. Narrate instances of malcontent activity that may have come to your attention.

B. QUAKERS IN THE WAR ZONE. 1. Prepare a short, enthusiastic oration on the history of the Quakers. 2. Write a paragraph of contrast on the spirit of the Quakers and the spirit of the Germans. 3. Write a paragraph of contrast on the village of Sermaize before and after its reconstruction. 4. Write a somewhat poetic paragraph in which you tell why the spirit of the Quakers in the War Zone predicts the victory of the Allies. 5. How is the central thought of Longfellow's "Saga of King Olaf" related to the article?

C. SIMS'S CIRCUS. 1. You have a cousin serving on a destroyer. Write the letter that he might write, telling of the ways of fighting submarines. 2. Your cousin wishes to tell of the power and the efficiency of our destroyers. Give the talk that he might give. 3. Write a paragraph of contrast on the American way of treating prisoners, and the German way.

D. AMERICAN SOLDIERS AND AMERICAN HOMES. 1. Tell orally what the Commission on Training Camp Activities is doing for American soldiers. 2. Write an emphatic paragraph telling what such work shows concerning the United States.

#### II. Literature.

A. SHAKESPEARE IN THE TRENCHES. 1. Explain how the theater is being mobilized for the fighting front. 2. Write a description of an audience of soldiers. 3. Show in what ways the stages at the front are like and unlike the stages in the time of Shakespeare. 4. From plays you have read in school select passages that might be successful if presented to the soldiers at the front. 5. Select a passage that you think particularly good, tell the story of the play up to that point, and then read the passage as tho you were giving it before soldiers.

#### III. The News of the Week.

1. With the aid of a blackboard map explain the present situation on the western front. 2. Give an account of the recent activity of the American troops. 3. Give an account of the war in the air. 4. Explain what the Germans mean by "bread peace" and "petroleum peace." 5. Tell what progress the United States has made in shipbuilding. 6. What spirit is shown by the great interest of the American people in the Red Cross drive? 7. Give a talk explaining the operation of the German super-gun. 8. Write a paragraph of contrast on the results the super-gun was expected to accomplish, and the actual results.

#### IV. Articles of General Interest.

A. HOW TO GROW ROSE TREES. 1. You have a friend who has a large dooryard space. Give him directions for growing rose trees.

B. RAIN WHEN YOU WANT IT. 1. Write a very short, and clear, explanation of the different methods of irrigation.

C. NO STRIKES IN WAR TIME. 1. From the fundamental principles for doing away with strikes select one topic suitable for a long term-essay. Write a brief on the topic you select. 2. Explain why the fundamental principles, if adopted, would be likely to prevent strikes.

D. NOMADIC MOTORING. 1. Write an enthusiastic and somewhat poetic paragraph concerning the delights of rambling. 2. Write a letter, as if you yourself were indulging in "nomadic motoring."

E. A BUNGALOW IN TWO INSTALLMENTS. 1. Explain the full value of a bungalow home in the country. 2. Write an explanation of the way in which to build a bungalow.

F. EDITORIAL FLIDGETS. 1. Give oral explanations of the epigrammatic items. 2. Write a series of epigrammatic items about school work.

G. Tell why the following are excellent titles: American Malcontents; Rain When You Want It; Nomadic Motoring.

H. WINDOWS INSIDE AND OUT. 1. In a single paragraph give directions for making a window beautiful.

I. Write an original story based on any picture in The Independent.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Opposition to the War—"The American Malcontents," "The Irish Crisis," "An Irish-German Conspiracy."

1. Make a report upon the principles and practises of the opposition parties (a) in the Revolutionary War, (b) the War of 1812, (c) the Mexican War, (d) the Civil War. Does this report help you to settle the question as to how the opposition should be treated now?

2. In what respect is Irish opposition similar to that in this country? in what respect is it different?

3. What does the author mean by "marginal" periodicals? What elements of the American population does each of these periodicals appeal to?

4. What is wrong with each of the following groups: (a) the Non-partizan League, (b) the Friends of Irish Freedom, (c) the Marxian Socialists, (d) the People's Council of America for Democracy?

5. Explain the last sentence in the article.

#### II. The War at Sea—"Sims's Circus."

1. Outline the arguments in favor of the policy of secrecy maintained by the British and American Navy Departments. The arguments against it.

2. Why has the "irreverent ensign" named the American flotilla "Sims's Circus"?

#### III. The War on Land—"Gathering Forces," "Americans Join the British," "The Line-Up on the Western Front."

1. Compare the statement of the distribution of Allied and German forces with the distribution indicated on the map.

2. Why is it "generally assumed that the Germans [and not the Allies] will take the offensive"?

3. Indicate on the map the points at which the next attack will probably be made.

#### IV. The Stakes in the War—"Democracy We Fight For," "The American Purpose," "The Rumanian Peace."

1. Show by historical examples that "a good many things that were once believed to be valuable and enduring" have already been "consigned to the scrap heap" in democratic countries like England, France and the United States.

2. Show by reference to the revolutionary period in England and in France, that "anarchistic revolutionaries" are apt to gain temporary control of a government when "absolutists" are driven from power.

3. "The organization of democracy is by no means perfected in any part of the world." What are some of the things that must still be done in this country? In Great Britain?

4. Prove by quoting from the terms of the Rumanian peace that "every proposal [by Germany] with regard to accommodation in the West involves a reservation with regard to the East."

#### V. International Trade—"The Advantages of a Free Port."

1. Make a report on one or more of the following topics: (a) Venetian and Genoese trade centers in the Orient, (b) the concessions of the Hanseatic League, (c) European factories in India in the eighteenth century. How did these differ from the modern free ports?

2. What is the present practise in the case of goods landed in America designed for transshipment to some other country? What is the practise in London, Hamburg or Hong-kong?

3. Show how the establishment of a free port would greatly facilitate our trade with South America.

4. "The war has made the free port more necessary than ever." Why so?

#### VI. Capital and Labor—"No Strikes in War-time," "Local Labor Boards."

1. Discuss the theory and practise of wage adjustments which controlled the relations between labor and capital before the beginning of the war.

2. What is the significance of this sentence: "Sworn enemies are friends, working side by side to win the war"?

3. Show how the fundamentals upon which the work of the War Labor Board is based will "secure democracy here while fighting for it in France."

4. What took place between labor and capital in Great Britain during the early days of the war? How were matters settled over there?

## ADHESIVE PLASTER TAPE

The Every Day First Aid

### A Few of Its Thousand Uses

**H**ERE is a rubber-coated adhesive tape, which costs but little and is found in every drug store.

It is strong, enduring, almost waterproof. It sticks to anything that's dry, and stays stuck. It is instantly attached without wetting.

It is the same adhesive plaster that surgeons use. But it also has a thousand household uses. And these pictures suggest some.

Think of a strong, rubber-coated adhesive tape. One side sticks to anything, and clings like glue. The other side is fabric.

Think how many services that tape could render, almost every day.

In simply patching lawn hose it may save a hundred times its cost.

When you try it once—on anything—you will never be without it.

One should never go anywhere without having a spool along.

B & B Adhesive Plaster Tape is particularly adapted to these multiple uses. It is ever-ready, strong, enduring. And it has a perfect rubber base.

It sticks when you apply it. And it stays.

*Our Adhesive Book—which we send free—pictures many uses and gives many good suggestions. Write a postal for it.*

For mending use, or any use, be sure you get the B & B Adhesive. It is made for all-round Service.

It comes in various lengths and widths. For economy we recommend the five yard spools, or larger.

Your druggist will supply it.

## REMARKABLE REMARKS

**PRESIDENT WILSON**—The nation is awake.

**CHARLES REZNIKOFF**—The fingers of your thoughts are molding your face ceaselessly.

**DAVID LLOYD GEORGE**—Don't always be thinking of getting back to where you were before the war.

**HARRY LAUDER**—God tells us we must love our enemies. He can't expect us to love His enemies.

**THOMAS W. LAMONT**—We are in abnormal times and therefore must resort to abnormal measures.

**HON. MEYER LONDON**—Up to the very last minute there were mass demonstrations against war in Germany.

**MARK SULLIVAN**—At the present speed of operation it takes a ton of shipping a year to carry one soldier to France.

**HERB HAUSSMANN**—It is not improbable that Germany will very soon have to be preparing for a fifth winter of war.

**F. G. YOUNG**—The nations are all in one boat. They are among the rocks approaching a new world. America is the pilot.

**MAXIMILIAN HARDEN**—One principle only is to be reckoned with—one which sums up and includes all others—force!

**THEODORE P. SHONTS**—Every star in every service flag is a reason why all of us should give unsparingly to help the Red Cross.

**COUNT VON GOETZEN**—Some months after we finish our work in Europe, we will take New York and probably Washington.

**SIDNEY A. REEVE**—It is one of the most alarming symptoms of recent social evolution that the people are ceasing to inhabit the country.

**PROFESSOR GIDDINGS**—If the Central Powers obtain a substantial advantage in this war, justice and democracy will have thenceforth for generations no safe abiding place in the world.

**GENERAL FOCH**—France will keep the never-to-be-forgotten memory of the impulse which has brought Americans to the bedside of her wounded.

**THEODORE GERALD SOARES**—All the imperialistic endeavors to unify men were wrecked upon the rock of a passionate affirmation of nationalism.

**AUSTRIAN FOREIGN MINISTER BARIAN**—We are now on the lookout for peace without wishing to bind ourselves by definite and restrictive formulas.

**OSCAR S. STRAUS**—The highest form of patriotism is not limited by the boundaries of one's country but by a debt to mankind to safeguard the trust of civilization.

**ARTHUR M. WOLFSON**—The new ideal of democracy for which we are fighting must be something quite different from anything which has thus far existed in the world.

**CHARLES E. HUGHES**—The war is the fundamental fact in our life at this time, and the security of all our enterprises is dependent upon our conduct of the war.

**RALPH M. EASLEY**—Under the stress of doing things to save our country, we have discovered many weak spots and many

dark spots which our war experience will enable us to strengthen in the one case and to eradicate in the other.

**JAMES WILSON**—We are to maintain the standard of civilization as worked out by the free men of the world, and if posterity is to be guaranteed political and industrial freedom, the war must be won by the allied countries.

**REV. ROY B. GUILD**—Will we who have stayed at home be able to make of our communities fit habitations for the soldiers who have met the supreme test in the task of eliminating from the world's politics that for which the Kaiser and the Potsdam gang stand?

## LIBERTY SERVICE MEDALS

War medals are no longer awarded exclusively for bravery at the front. This story from the New York *Tribune* explains why and how Americans over here may win them:

The young sergeant who creeps out into No Man's Land and staggers back, severely wounded, with four German prisoners is pretty sure to get a medal sooner or later for "conspicuous bravery on the battlefield." The ambulance doctor who saves the life of the heroic sergeant also may get a medal; so, too, may the nurse who remains at her post taking care of him while her hospital is being bombed.

But somewhere there's a man whose brain and toil have evolved the system that made it possible for an ambulance and a surgeon to be on hand at the moment they were needed. Somewhere back home there's a man—or more likely a woman—who is making it her business to see that a goodly number—as great a number as she can muster together—of capable, well trained nurses are taking their places in hospitals overseas.

There are others—an infinitum. The man who sees to the transportation of food and guns and ammunition and hospital supplies, over here as well as over there; the man who is providing recreation in Y. M. C. A. huts for the soldier off duty; the man who is devoting all his time to stamping out German propaganda back home—these are the inconspicuous heroes who, until recently, have gone on working and planning, their labor unrewarded, almost unrecognized.

Altho the idea has been suggested before, it has remained for the National Institute of Social Sciences, of the American Social Science Association, to draw up the resolution that has materialized in the "Liberty Service Medal," to be bestowed for "notable humanitarian or patriotic service for the national welfare."

Three medals already have been given: To Major Grayson M. P. Murphy, formerly head of the American Red Cross in France; to Governor Marcus E. Holcomb, of Connecticut, and to Miss M. Adeline Nutting, head of the department in Teachers' College for nursing and health.

The medal is of gold and blue enamel, the design the same as that in the insignia of the National Institute—an eagle surrounded by a wreath of oak and laurel. The fob is a red, white and blue ribbon.

The resolution for the creation of the Liberty Service Medal, adopted last December by the American Social Science Association, read as follows: "In view of the fact that, except in the army and navy, no provision has been made by any competent authority for the recognition by a medal or other suitable insignia for notable humanitarian or patriotic services for the national welfare;

"Therefore, the executive committee of the American Social Science Association, one of the oldest of nationally incorporated bodies, recommends that a medal, to be designated 'Liberty Service Medal,' be authorized.

"The committee further recommends that the National Institute of Social Sciences be empowered, in accordance with the objects of its organization, to award and bestow said medal upon such person or persons as have rendered or may render notable services which merit such special mark of distinction and recognition."

The resolution is signed by Oscar S. Straus, chairman; George Gordon Battle, Simeon E. Baldwin, H. Holbrook Curtis and the late Ripley Hitchcock. Twenty-five medals are to be given each year, and committees are being formed, one in each state, to assist the national committee in New York in choosing the proper recipients of the medals.

It is the intention of the committee, according to its secretary, Miss Lillie Hamilton French, that the efforts of the modest, inconspicuous man from South Dakota or Idaho have equal recognition with those of the big fellows from New York—or Indiana.

# Learn Paragon Shorthand In Seven Days

## See For Yourself-Send No Money-Just The Coupon

### THIS TEST Is Made At Our Expense

To prove to you that you can learn PARAGON in seven evenings' study at home, and at the end of that time be so far advanced as to be able to write any word in the English language in Shorthand, we will send you the complete *Course of Seven Lessons on Seven Days' Free Trial*. If you are not entirely satisfied, remail the Course to us and you owe nothing.

Read this from the head cartoonist for *Collier's Weekly* and a Member of *Life's* staff.

F. G. COOPER,  
114 East 13th Street,  
New York, N. Y.  
I believe I have a report that will interest you. Within a very few days after I received your set of lessons I made all the notes in my pocket note book in your Paragon shorthand.

Please bear in mind, in this connection, that I had never so much as glanced at any other system before and knew nothing whatever about any shorthand system.

After five evenings' study I wrote the first two pages of a story in your shorthand. Six weeks later I got out the two pages and wrote them off on the typewriter with no trouble at all. It strikes me that such an instance is quite a recommendation for your system. Sincerely, F. G. COOPER.

In reply to my request for permission to publish the above, Mr. Cooper wrote as follows:

"I should consider it a humanitarian duty to encourage my friends and acquaintances in the use of your system, and you are welcome to the use of my testimonial."

### In Court Reporting

"I have been the Official Court Reporter for the Ninth Judicial District of Louisiana for a number of years, using Paragon Shorthand exclusively. Some years ago I learned this system in seven lessons. With Paragon Shorthand I am able to do any kind of work with as great rapidity as the occasion may demand."—J. MARTIN HAMLEY, Lake Providence, La.

### Learns In Five Hours

"I received your Course in Shorthand and mastered the entire theory in five hours after I received it. There is no reason why I shouldn't be able to write 150 words a minute after a little practice. To those who want to become expert stenographers, I commend your Course very highly."—CARL A. JACKSON, Shelbyville, Ill.

Paragon is also being taught in the High Schools of Alton, Ill., Lafayette, Ind., Johnstown, Pa., and elsewhere.

### In Big Corporations

"I am getting along fine with Paragon Shorthand. It is all you claim for it. It is easy to write, and as for speed—there's no limit."—JOHN WALLER, JR., Standard Oil Company, Sugar Creek, Mo.

### By Business Men

"I am using Paragon Shorthand in making my notes in the daily routine of the work. It is of incalculable help in aiding me in making my own notes of private business matters relating to my work in auditing, and I wish I had taken it up long since."—JOHN F. CAHILL, Auditor, Florence Electric Light & Utilities Co., Florence, S. C.

Now that the War is on, there are more things to do in this country than there are people to do them. One phase of war-time readjustment—possibly the most noteworthy of all—is this: It is to be a second sounding of opportunity for the thousands of men and women who have never been able to find themselves. They are to have a chance in business the like of which they never saw. In every large business there are capable men and women who feel that at one time or another time they have been side-tracked. They have been shunted off into routine instead of having a chance to fill an executive position that they looked for or one that offers a good chance to reach such a position.

Now, with the stripping of business organizations all over the country, these misfits—square pegs in round holes—men and women who for some reason or another have never quite made good, are going to have a fresh look-in.

Millions of people possess undreamed-of abilities—but they lie dormant for want of an opportunity or want of will power to use them. They fool themselves with the idea that someone else is to blame for their failure. Herein lies the very core of the problem in many people's lives.

### Shorthand Will Help You Win!

Shorthand is the greatest single instrument of efficiency in business today. It has enabled many of only ordinary qualifications to climb into positions of great promise. It has been the foundation of the wonderful success achieved by many of the most brilliant and famous men in business in America today.

But Shorthand as it is universally taught has been as difficult to master almost as a foreign language. The awful mental strain, the great memory tax and the many weary months of close application to study, to say nothing of the high cost of mastering the old-time systems, has prevented many from learning shorthand. But this has all been done away with now in PARAGON shorthand.

### Actually In 7 Days

Think of it!—in 7 days the master of shorthand! You don't believe it? Try the lesson at the right. See how quickly you learn it. In the few minutes it has taken you to absorb this knowledge you have learned 5 of the 26 characters in PARAGON. In seven evenings you can easily learn the 7 lessons comprising the Course and start using it at once. It is so amazingly simple that you will wonder why people will go through months and months of the most trying study and mental friction to learn the old-time systems with their thousands of word-signs and other intricate, involved and technical rules, when in seven evenings of the simplest imaginable instructions you can master everything there is to know about Shorthand.

### Marvelously Simple

All there is to learn:

1. An Alphabet of 26 simple signs,
2. 26 easy word-signs,
3. 5 Prefix contractions and 1 natural rule for abbreviation.

That is why you can learn it all during seven evenings. You can then use it at once for making your own notes. If you want to fill a shorthand position, you will then begin practice for speed.

### Paragon In Use 25 Years

It has been in existence for 25 years and is used by thousands of people in all walks of life in every country on the globe, in every business. It is used in the largest corporations, such as Standard Oil Co., U. S. Steel Corporation, in the office of the U. S. Government, etc., etc.

### You Need This Knowledge

You can use PARAGON for dictation, for taking down telephone messages, speeches, conferences, sermons, lectures, lessons, court testimony, etc. It is of inestimable value to every person in business and a wonderful aid to efficiency and accuracy.

### Only \$5 If You Keep It

This is exactly the same Course which the inventor, Mr. Alexander Lichtentag, taught personally by mail for 25 years at a regular fee of \$25, with examination. He has devised a self-examination system which enables us to give you the entire Course now for a limited time only for \$5.00—the lowest price for a Course of its kind ever known. And remember, you don't have to pay a penny of this \$5 until you have satisfied yourself that the PARAGON Course is as we represent it to be and that you want to keep it.

### Send No Money

Simply fill out the coupon below and mail it to us. We will immediately forward you the Complete Course prepaid. Then study it for one, two, three or seven evenings, and if you feel that you can afford to be without this precious knowledge another day, mail it back to the Institute and you will owe nothing. Send in the coupon or write a letter at once before, this special introductory offer is withdrawn.

### Try This Lesson Now

Take the ordinary longhand letter *d* Eliminate everything but the long downstroke and there will remain */* This is the Paragon symbol for D. It is always written downward.

From the longhand letter *e* rub out everything except the upper part—the circle—and you will have the Paragon E. *o*

Write this circle at the beginning of */* and you will have Ed. */*

By letting the circle remain open it will be a hook, and this hook stands for A. Thus */* will be Ad. Add another A at the end, thus */* and you will have a girl's name, Ada.

From *o* eliminate the initial and final strokes and *o* will remain, which is the Paragon symbol for O.

For the longhand *m*, which is made of 7 strokes, you use this one horizontal stroke *—*

Therefore, *—* would be Me.

Now continue the E across the M, so as to add D—thus */* and you will have Med. Now add the large circle for O, and you will have */* (medo), which is Meadow, with the silent A and W omitted.

You now have 5 of the characters. There are only 26 in all. Then you memorize 26 simple word-signs, 6 prefix abbreviations and one rule of contractions. That is all.

PARAGON INSTITUTE HOME STUDY DEPARTMENT, 366 Fifth Ave., Suite 782, New York City

You may send me the Complete Course of PARAGON Shorthand with the distinct understanding that I have 7 days after its receipt to either remail the Course to you or send you \$5.00.

# CHANDLER SIX

*Famous For Its Marvelous Motor*

Chandler  
Coupe

## Why Women Choose The Chandler

**W**OMEN choose the Chandler Six quite as much for the ease with which they may drive it on any kind of roads or in any kind of traffic, as for the grace of its body designs, the comfort of its deep-cushioned seats and the beauty of its finish. They choose the Chandler, too, because of its mechanical dependence, its ever-readiness.

Thousands of women drive Chandlers, and, even though they may not know the why of its mechanical excellence, they know and appreciate the extraordinary quality of this great car.

Chandler body designs offer a pleasing range of selection.

## BRITAIN'S NEW COMMERCIAL POLICY

THREE years ago in a series of articles on international commerce afterward republished in a monograph of the National Institute of Efficiency it was pointed out that

We may expect to see, as a result of the war, the formation of some sort of customs union comprizing the whole British Empire, and perhaps also one including its present Allies. In that case the United States would have to decide the momentous question of whether we should go into it or stay out. If we decided not to go into the union, or if England refused to admit us, we should be shut out of most of the markets of the world or enter them only under the handicap of differential duties. Such a customs union—it would be offensive to use in this connection the customary term *Zollverein*—would control all of Africa and Australasia and a large part of Europe, Asia and North America. The only undeveloped countries that would be open to our trade on equal terms would be Latin-America and for the present China minus Manchuria, Mongolia, and Shantung, which are already under the sway of the Allied Powers.

Evidently, then there will be after the war two great antagonistic groups of commercial powers in both of which the means of production and distribution will be more efficiently organized than ever before. The United States will be outside either group and will have to meet their competition alone unless it unites with the southern republics or other neutral nations to form a third trade group.

The war is not yet over, but events have moved so rapidly that already these two great commercial combinations are taking visible shape. Germany by her "bread peace" with Russia and her "petroleum peace" with Rumania and her new amalgamation with Austria and Turkey has definitely established and hopes to maintain a self-sufficient empire far more ambitious than the Mittel-Europa that three years ago was considered chimerical. On the other hand the Allies are forming—not like the Germans by conquest and compulsion but by mutual consent—a much more gigantic aggregation for the control of trade. It has been supposed by some that England would never consent to abandon the principles of free trade and *laissez-faire* to which she has long been committed and has hitherto found advantageous, but we see on the contrary that she is a leader in the new movement. The committee appointed by the coalition government of all parties in July, 1916, to make recommendations on Commercial and Industrial Policy After the War has just made its report, which shows that public opinion has made amazing progress during the war. Old England, which we are too apt to regard as hopelessly conservative and doctrinaire, has followed the lead of her offspring and is now ready to reconstruct her commercial and financial system in accordance with those of the five British dominions and the United States. This removes one of the obstacles toward the closer association of the six Anglo-Saxon commonwealths which is the hope of world peace. So long as England stuck to free trade and all the other self-governing countries were convinced of the necessity of governmental encouragement and protection of local industries there could be little harmony and no understanding with the Mother Country.

Hitherto the word "protection" has been tabooed in Great Britain. Even the followers of Chamberlain who some years ago were agitating for the adoption of custom duties on imports were obliged to employ the slogan of "tariff reform" instead of using the frank American term "protection." But the committee is not so squeamish. It declares that

(1) Producers in this country are entitled to *protection against "dumping"* and the *introduction of "sweated" goods*, and Government action on the lines adopted by Canada is recommended.

(2) "Pivotal" or "key" industries should be maintained at all hazards and *at any expense*.

(3) In other industries protection, by means of Customs duties, or Government help in other forms, should be provided only for reasons of national safety, or on the general ground that *no industry of real importance to our economic strength and well-*

*being should be allowed to be weakened by foreign competition, or brought to any extent under alien control.*

(4) *Preferential treatment* should be accorded to the Oversea Dominions and possessions in any Customs duties now or hereafter to be imposed in the United Kingdom, and consideration should be given to other forms of Imperial Preference.

(5) The present opportunity should be taken to promote our trade with our Allies, and consideration should be given to the possibility of *using for purposes of negotiation* with them and with present neutrals any duties which may be imposed in accordance with the foregoing principles.

These five conclusions and recommendations deserve careful consideration. We have italicized certain salient points. It will be seen that the committee has incorporated the most advanced ideas of protective policy as developed in the oversea dominions. The old-fashioned Englishman thought he had an inalienable right to buy in the cheapest market regardless of how the goods were produced. If the Germans were such fools as to sell England beet sugar at less than it cost them why so much the worse for them and so much the better for the British marmalade trade. But when it was perceived some years before the war that by this seemingly generous policy the Germans were ruining the British West Indies and gaining absolute control of the marmalade trade the British Government took measures to prevent the Germans from selling sugar too cheap.

The committee recommends protection not only against "dumping" but also against the introduction of "sweated" goods. This is what is called in Australia and Canada "the new protectionism" and its aim is to see that the advantage of a tariff goes to the workingmen and is not, as has sometimes happened in the United States, absorbed by the capitalist. The idea of the new protectionist is to have duties levied on imported articles corresponding to the difference in the wage scale of the foreign and domestic factories and these duties removed automatically whenever the wages in the home industry falls to the level of the foreign.

The importance of maintaining "pivotal or key industries," such as optical glass, metals, cotton, dyes and drugs, has become realized in every land thru the painful experience of the war. "Preferential treatment," that is, lower duties on importations from certain countries, has been the policy of the dominions toward the Mother Country, but hitherto the latter has failed to accord the same favor to the dominions. This declaration puts an impediment in the way of what Germany desires more than any annexations, that is, the insertion of "the most favored nation" clause in the treaty of peace, giving her equality of commercial opportunity. The fifth and last clause provides for "reciprocity," which James G. Blaine advocated a generation ago but which has never been fairly carried out. Tariff duties have been repeatedly raised by Congress with the avowed intention of using them for bargaining with other nations discriminating against our products, but the Senate has rarely been willing to confirm the reciprocity treaties when the administration had negotiated them.

Even more radical than this departure from free trade is the break with the English tradition of individualistic production and government control. The committee clearly sees that competition is the death of trade and it openly recommends the formation of what we should call "trusts" with government encouragement and if necessary, assistance. Traders in the future must, according to the committee, combine for at least three purposes; (1) securing supplies of material, (2) production including standardization and scientific research, and (3) marketing.

There are many other points of immense interest in the committee's report which we have not space here to discuss, such as the restrictions on foreign capital, the prohibition of the importation of goods of enemy origin for a year after peace "and for such further period as may seem

Darling in New York Tribune

GET BUSY

WORK OR FIGHT! THE SLACKERS' TIME HAS COME

Kirby in New York World

SIFTING THEM OUT

expedient," the licensing and control of foreign commercial agents, measures for making the empire self-sufficient in necessary raw materials, etc. The general aim is

to assure that the Empire in an emergency should be independent, for its supply of any essential commodity, of any single foreign country or possible combination of countries.

This in brief is the substance of this remarkable document. In how far it will be carried into effect remains to be seen, but as a report of an official non-partizan commission under the presidency of Lord Balfour of Burleigh, the British Foreign Secretary, it carries considerable weight. It is all the more significant from the fact that the chairman and many of the members have been lifelong free traders.

The adoption by the committee of many of the American policies which formerly were harshly criticized in England is naturally a gratification to Americans and it gives us an opportunity, such as we never had before, to come into closer relations with kindred peoples all over the globe. In the passage from *The Independent* quoted at the opening of this article we pointed out the desirability of entering this gigantic trade combination, but we express the apprehension lest England might not be willing to admit the United States, for at that time British opinion was rather hostile to America for keeping out of the war. Now this apprehension is removed. America is more than an ally in war and will be no longer regarded as an alien in time of peace.

## THE REAL END OF THE WAR

**N**OBODY now living will see the real end of this war.

When military operations cease and the armies are disbanded the Napoleonic wars, which European statesmen vainly imagined had happily ended a hundred years ago, will have been fought to a finish. A decision will have been reached whether the forces of popular power and progress which the French Revolution liberated, or the forces of monarchic absolutism and reaction which arrayed them-

selves against the republic and lifted Napoleon to a dizzy height of personal command, have finally established themselves in sovereign control of the European continent.

The titanic forces which this war has liberated will not then have spent themselves. Like the long roll of the sea after the hurricane has passed, they will surge and break thruout the world. Generations will be born, will live and will die, before the energies of wrath are spent.

The civil war in the United States was a small conflict by comparison with this one, but the real end of it was not attained until fifty years after Lee surrendered at Appomattox. In legal status the Union was restored, the emancipated slave was enfranchised, and the states that had been in rebellion were again represented in Congress, but in their hearts the people of the South cherished the lost cause and could not revere the Stars and Stripes. They sing the Star Spangled Banner now, and the Battle Hymn of the Republic. They are of the Union and are glad that it was not shattered. But the years were long and bitter thru which reconciliation came.

They were bitter because the conflict which rebellion precipitated could not end in compromise. No negotiated peace was possible. The pacifists entreated, the copperheads skulkingly gave aid and comfort to the enemy; but President Lincoln and the loyal millions of the North saw clearly what had to be done. They did not dally with delusion. They knew that rebellion not crushed would be rebellion triumphant. To conquer it was not enough. It had to be utterly destroyed. It had plunged a nation into fratricidal strife, and once was enough.

One experience of militaristic Kultur is enough. The world cannot contemplate another. It must be crushed as rebellion was crushed, and that will mean bitterness for generations. Let us not deceive ourselves or try to soften anything by hugging delusion. Germany will hate the world. That is the plain fact to be faced, and an embittered Germany will be an obstacle to every progressive development of civilization as the inevitable bitterness of the South was

an obstacle to every educational and economic attempt to repair the wasted fortunes of the Confederate states.

But why call attention now to this dark prospect? The blunt answer to this question is: Because the sentimentalists and the muddle heads are already calling attention to it and urging it as a reason for a negotiated peace. They must not prevail; they must not be listened to. Next to the Teutonic hosts they are the most dangerous enemies of civilization and peace. The hard facts must be faced. There is tough fighting ahead and grief to be borne. The fighting must be done, and the sorrows must be endured. And then, generations to come must contend with the sullenness of a conquered foe. Let us make no mistake about that. It will mean that the world cannot return to its old gay wantonness and spendthrift habits. It will have to "carry on" as it is learning now to carry on in economy, prudence, sacrifice and serious mindedness. We are in this thing, and our children and children's children will be in it, to a finish.

## DEMOCRACY'S STRUGGLE FOR LIFE

**T**HIS is a fight for democracy in a deeper sense than is generally supposed. It is a fight not merely to secure for democracies the privilege of existence. It is more than that. It is a fight to prove that democracies have a right to existence. Popular rule is on trial.

If, for instance, Russia should prove in the long run to be worse off without a czar than with one it would be a moral triumph for autocracy even tho the Czar should never regain the throne. Before the war we were perplexed to see that Germany, under the dominance of an hereditary military caste and a ruler claiming divine right, was making relatively greater progress than any of the free nations. Then she made a change of venue and appealed from the competition of commerce to the ordeal of battle. Now we see Germany and her three allied autocracies holding out against twenty nations including the republics of France and the United States and the camouflaged republics of Great Britain.

The defeat of the four autocracies is inevitable if the Allies hang together and persevere. But we must do more than conquer by weight of numbers, resources and geographical position. We must demonstrate the superiority of democracy man for man. Unless a democracy can show greater unity and capacity for coöperation than an autocracy, unless it can manifest more resourcefulness, inventive genius and power of organization, unless it can get the best out of every man and get the best men at the head of affairs, unless it is superior in foresight and in management, in economy and self-sacrifice, if in short a democracy cannot prove itself stronger than an autocracy in war or peace, then it has lost even tho its armies march in triumph thru Unter den Linden.

## ACADEMIC SECLUSION

**W**E wonder who it was that first set going the legend that the scholar's life was "isolated," "aloof from practical affairs" or "remote from the interests of actual life"? Was it a university professor who wished to feel superior to ordinary business men or a captain of industry who wished to feel superior to an ordinary college instructor? Or is it simply a legacy from the days when monastery and university were almost interchangeable terms?

Whoever may be responsible for this sort of conventional cant said something not only false but almost meaningless. We hear of college graduates "leaving the academic halls to go out into the real world," but no one condescends to explain why or in what sense the college is not a part of the real world.

Oh, but the scholar meets so few people! Assuming that he teaches five classes a year, which is a fairly light schedule, and that his classes average thirty apiece, which is small for an undergraduate class, the college instructor is in immediate touch with one hundred and fifty strange personalities each year, making no allowance for his colleagues and personal acquaintances. In comparison with the tidal wave of humanity which sweeps over the classroom year by year the average shopkeeper with his limited circle of regular customers lives the life of a hermit. Yet we speak of the mayor of a village of five thousand persons as a busy man of affairs, and of the president of a university of five thousand persons (replaced by an entirely new set at least every four years) as a sort of Robinson Crusoe, dwelling far from the madding crowd.

Oh, but the scholar doesn't have anything to do with actual material goods! It is true that universities do not sell coal or cheese or paste diamonds to their students; they sell services rather than goods. But is that uncommon in "practical" business? The waiter in a restaurant is not paid for producing food but for carrying it from the cook to the customer. The barber, so far from giving you anything material in return for your money, takes something from you, namely the superfluous length of your hair. The banker who spends his life amid ledgers, memoranda and accounts is just as "bookish" in his way as the teacher of Greek or mathematics. Knowledge is a commodity and the scholar is the merchant who deals in it; if we term the scholar unworldly because the commodity in which he deals is not to be estimated in inches or pounds we must apply the same term to the soldier, the waiter, the barber, the banker, the lawyer, the doctor, the actor and to every sort of administrative official.

Oh, but what the scholar "sells" to his students is not practical, it has no real value for daily life! This, if true, is a serious charge. But it is not a charge against the shrewdness and business cunning of the scholar; on the contrary, if he can sell for real money something which has no value for the buyer, he must be the sharpest of swindlers. If what is meant is that the knowledge retailed in the classroom is in every sense worthless, the scholar must be classed with such "unworldly" figures as the seller of fake medicines or bogus mining stock. But perhaps all that is meant is that academic knowledge does not increase the power of the student to make money; that "philosophy bakes no bread." If so, the only charge against the universities is that they are factories for producing what economists designate as "consumption goods" as contrasted with "production goods." If a knowledge of literature, philosophy or astronomy can give direct delight, inspiration or enlargement of mental outlook to the student, he is buying something as "real" with his college fees as when he buys cigars, ice cream soda or summer magazines. None of these goods directly increases the earning power of the buyer, and yet the customer does not feel that he has spent his money for a mere abstraction.

Of course it is very true that there are inefficient, absent-minded, impractical professors. Just so there are wool-gathering bankers, ultra-academic generals, unworldly cooks, inefficient lawyers, bookish clerks, society dames "aloof from the world," and crank politicians. But the individual is to blame and not the trade. The scholar should get off his pedestal, especially since people use the fact of his standing there to throw hard names at him. He should face the world without either boast or blush and say frankly: "I am a salesman like the rest of you. I have my trained services to place at your disposal and commodities to offer in return for my salary. I can sell you a new (1918 model) outlook on sociology, or a deep appreciation of the Elizabethan poets or an insight into the historical origin of the Papacy. Who'll buy?"

# THE STORY OF THE WEEK

## THE GREAT WAR

*May 23*—British transport, "Moldavia," carrying American troops, sunk. Costa Rica declares war against Germany.

*May 24*—Mexico breaks with Cuba. Soviets put down anarchists in Moscow.

*May 25*—Allied air raid on Liège kills twenty-six. Japanese and Chinese agree on action in Siberia.

*May 26*—German airmen bomb hospitals. Anti-Austrian demonstrations in Bohemia.

*May 27*—Germans start big offensive and cross Aisne. Americans take Cantigny.

*May 28*—Germans cross Vesle River. Secretary of State Lansing expresses sympathy for nationalistic aspirations of the Czecho-Slovaks and Jugo-Slavs.

*May 29*—Germans take Soissons and approach Reims. Russia agrees to cede Finland an Arctic port.

### German Drive on the Aisne

For the third time within three months the Germans have carried out a successful offensive. As in the former cases the gain was made by secretly concentrating overpowering forces on a front where the Allies were not expecting an attack. The German drive toward Amiens started on March 21 and that toward Armentières on April 9 were both directed westward and the Allies naturally expected that the Germans would make another effort to reach the sea. Consequently the British on the western front were reinforced by all the French and American troops available, but instead of striking westward the German General Staff decided to strike southward on the Aisne River between Soissons and Rheims, which General Foch, relying doubtless upon the great topographical strength of the position, had left weakly defended.

The range of hills lying along the north side of the Aisne was the position chosen by the Germans for their line of defense when in September, 1914, they were defeated on the Marne. These heights they held with great tenacity, but the French in 1916-17 succeeded by hard fighting and heavy sacrifices of men in driving them from the Chemin des Dames, or Ladies' Road, that runs along the hills and even behind the Ailette River to the north of it. But neither the hills nor the Aisne served as a sufficient barrier against the German thrust and the French lost in three days all and more than they they had gained in the last three years. The early reports that the Germans were slackening their pace as they advanced proved illusory. They gained more ground the second day than the first and on the third than the second. Their movement was even more rapid than in the March drive, for in these three days they went forward twenty

miles in the center of a forty mile sector. They seem to have had no difficulty in crossing the Aisne River and then the Vesle River, five miles beyond, and both in several places simultaneously. This new drive brings the Germans within eight miles of the Marne and sixty miles of Paris.

### Details of the Drive

The Aisne sector is under the command of the German Crown Prince with General Boehm in charge of the right wing and General von Below of the left. The German forces, which are said to have outnumbered the Allies four to one at the point of attack, seem to have been made up largely of the divisions which had been withdrawn from the British front for reorganization. Instead of being sent back to the Somme they were despatched to the Aisne.

The attack began on Monday morning, May 27, with a storm of gas shells lasting several hours. Then the German shock troops advancing from the Ailette River penetrated the French line on the Chemin des Dames ridge by following up a ravine. As soon as it was perceived that the German movement was not a feint but an offensive in force, the Allied troops evacuated their positions on the ridge and retired behind the Aisne River to avoid being cut off. In the vicinity of Craonne at the eastern end of the attacked sector the French had been replaced by British troops sent here to rest and recuperate from their hard fighting on the Somme. The Germans struck at the junction of the two forces as they had on the Somme, but here, as there, the French and British kept in touch as they retired.

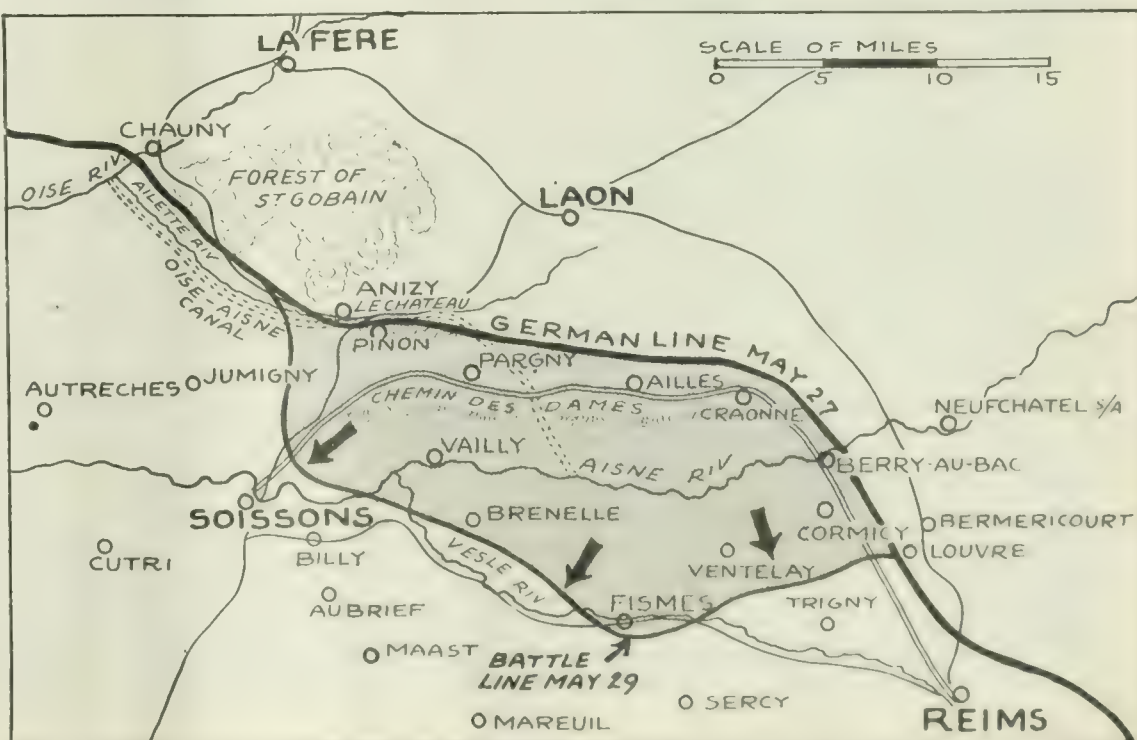

On the south side of the Aisne the

French and British were reinforced by reserves and hoped to make a stand on the low ridge between the Aisne and the Vesle. But the troops forming the apex of the German wedge who had crossed the Aisne at Pont-Arcy continued to move southward and crossed the Vesle at Fismes. This was accomplished by Tuesday afternoon. The wedge had cut the railroad running along the south bank of the Aisne and connecting Soissons with Reims, and gave the Germans a chance to approach both these cities from the side as well as the front. The French made a brave effort to hold Soissons, but General Wichura stormed Fort de Conde, on the north side of the Aisne, while General Larisch attacked Soissons on the southern side of the river. So Soissons had to be evacuated on Wednesday, altho the French still hold on to its western suburbs. Meantime on the German left General Ilse had taken by storm the heights northwest of Reims, which brought the enemy upon the western side of that city as they have been on the northern and eastern.

The Germans claim to have taken 35,000 prisoners including a French and a British general. It is to be feared that a considerable number of big guns must have fallen into their hands, for there was little time to carry them off.

### Our First Victory

The capture of the village of Cantigny on May 28 may seem insignificant as compared with the momentous movements on the Aisne of the same date, but Americans will regard it with especial pride, for it was the first action which they had carried out by themselves and nobody could have done it better. Cantigny, tho small, is not an unimportant place just now, for it is sit-

THE FIRST TWO DAYS OF THE GERMAN OFFENSIVE

On the third and fourth days the Germans took Soissons and all the towns on the map to the south of this except Reims, making a total gain of over twenty miles from their original line

## THE INCIDENTAL WAR IN IRELAND

Nationalists and Sinn Feiners joined in a great rally at Ballaghaderreen to protest the extension of conscription to Ireland. At the left is John Dillon, leader of the Nationalists, addressing the rebels

uated three miles northwest of Montdidier and its capture blunts the point of the German salient directed at Amiens.

The American artillery opened the bombardment at 5:45 in the morning, using gas shells as well as others. An hour later the infantry charged and made 600 yards in ten minutes in the face of machine gun fire. Twelve French tanks advanced in front and helped to clear the way. The attack was made at the time when the garrison was being changed and none of the troops escaped. The prisoners numbered 240 and the dead and wounded several times as many. A hundred Germans who had taken shelter in a tunnel and refused to surrender were wiped out with hand-grenades and flame-throwers. The village was pretty completely demolished by the bombardment and burning.

After taking the village the American troops dug in about 200 yards be-

yond and on the following day repelled three counter-attacks with heavy losses to the enemy. The French had twice tried to take Cantigny, but had failed because it was so strongly fortified.

## The War in the Air

During the interval of the last few weeks between the mass movements both sides have been active in the destructions of lines of communications far behind the front. From such information as we get, it seems that the Allies have been most successful at this and have seriously impeded and perhaps delayed the preparations for the new German offensive. A German prisoner reports that in a recent raid on the French city of Douai the British airplanes caused 300 casualties among the German troops congregated there. Two squadrons starting at dawn from the British front reached Liège and dropt twenty-two heavy bombs on the railway junctions, causing three large fires. One bomb, striking the Longdoz station, put to death twenty-six persons. The railroad station of Metz was destroyed near noon of the same day by twelve heavy bombs. During the succeeding night eleven tons of bombs were dropt by British airmen on the airdromes and docks of Bruges. Two tons of high explosives dropt upon a large chlorine factory at Mannheim on the Rhine set it on fire. The British aviators reached Bendorf in Rhenish Prussia and destroyed the station there with twenty big projectiles.

According to the Berlin reports, the British aerial attacks on Belgian territory have increased in frequency and "inflicted heavy damages and losses on the civilian population, but no military damage whatever," while, on the other hand, the German airmen dropt bombs on Paris and "destroyed large ammunition depots northwest of Abbéville." On the other hand, the Allied reports do not acknowledge any military damage, but tell of flagrant violation of the laws of war in the bombing of hospitals. On Sunday night four squad-

rons, each of five or more German planes, passed repeatedly over a large British hospital base and bombed it heavily. The enemy airmen even raked the huts and tents with machine guns as they flew over at low altitude. A third of the bombs used were of the largest kind, making vast craters in the grounds; others were charged with high explosive shrapnel. Several hundred of the patients, nurses and attendants were killed or wounded. One of the buildings most seriously damaged by an explosion was filled with wounded suffering from compound fractures and their limbs were strapped in the air. The nurses continued calmly to attend the patients during two hours while the raid lasted. Three of the sisters were killed at these duties.

One of the German planes was brought down by gunfire and its three occupants made prisoners. The captain was asked why he attacked hospitals and replied in good English that he did not see the signs, that he was following up the railroad seeking military objectives, and had no desire to molest hospitals.

On the night of May 28 a hospital, in which many French and some Americans were being treated, was bombed by German airmen. One French nurse and several civilians were killed.

**"Moldavia" Torpedoed** The British armored merchant ship "Moldavia" was torpedoed and sunk

early on the morning of May 23. She was going up the Channel and almost in sight of her port when a torpedo from an unseen U-boat struck her on the port side just forward of the engines. The explosion killed fifty-one of the American soldiers being convoyed across the Atlantic to England. As the sea was smooth and the moonlight bright the other soldiers and sailors were taken off without difficulty and with the loss of only two lives by drowning. The men were sleeping in their uniforms, but lost all their be-

Open Aces in London Passes a Shout

## THE STRAIGHT AND NARROW PATH

"Fear not the dogs—for they are chained. Keep in the midst of the path and no hurt shall come unto thee," is the modern "Pilgrim's Progress" advice to Lloyd George entering Ireland

longings. The "Moldavia" continued under steam for fifteen minutes before she sank, giving time for the launching of lifeboats. The destroyers convoying the transports circled about her and discharged depth bombs, but it is not known whether the U-boat was reached or not. The "Moldavia" was a steamship of the Peninsula and Oriental Line of 9500 tonnage. This is the third of the transports to be lost while carrying American soldiers. The "Tuscania" was torpedoed on February 1 with a loss of 238, and in October the "Antilles" was sunk while returning from France.

The steamer "Inniscarra," bound from Fishguard to Cork, was torpedoed and sunk within four minutes. Thirty-seven members of the crew were lost. The submarine came to the surface after discharging the torpedo and took the steward from one of the lifeboats. The commander of the submarine handed to the steward two letters to Premier Lloyd George, with instructions to post them when he got on shore. He was then put back in the boat with the survivors.

**Unrest in Bohemia** The liberation of the Czecho-Slovaks from Austro-Hungarian domination was incorporated into the first joint declaration of the war aims of the Entente, and the patriotic activity manifested by this people, both inside the Dual Monarchy and in other countries, has substantiated their claims to independence. The emigrants and exiles of the two kindred races are for the most part poor and widely dispersed, yet they have established a complete revolutionary government, with headquarters at Paris, supported by voluntary taxation. They have put three armies in the field, one in France, one in Italy and one in Russia, and now Professor Masaryk, the head of the movement, is in America for the purpose of raising a fourth army from among the Czechs and Slovaks of this country. On all fronts the Slavic soldiers are deserting to the Allied side whenever they get a chance.

An open revolt inside Austria is impossible so long as German troops are on hand to put it down, but the frequent rumors of local disorders and the courageous declarations of the oppressed peoples show that the spirit of independence is gaining force. A year ago last May, on the eve of the opening of the Austrian Parliament, the Czech deputies of all parties joined in a demand for the union of the Czechs of Austria and the Slovaks of Hungary into an autonomous national state. At the same time the Jugoslavs declared for a similar union of the Slovenes in Austria, the Croats and Serbs in Hungary, and the Serbs in Bosnia and Herzegovina. It was understood that the young Emperor was in favor of a federal solution, but the Polish deputies, as formerly, supported the Germans, and, after eleven months of turbulent sessions, the Austrian Parliament was adjourned by the Emperor.

Meantime the nationalist spirit had

grown and the various Slavic races began to coöperate. The Jugoslavs (Southern Slavs) of Austria-Hungary now insist upon union with Serbia and Montenegro. The Czechs and Slovaks will be satisfied with nothing short of absolute independence. The Poles, who hitherto have assisted the Germans of Austria in maintaining their dominance in the empire, have now been alienated, for at the Brest-Litovsk peace conference the district of Cholm, claimed by the Poles, was ceded to the Ukraine, and they fear lest eastern Galicia will go the same way.

The Austrian Government made wholesale arrests, ordered the Jugoslavs home, prohibited Czech newspapers for favoring the Entente Allies, and put Bohemia under martial law. Finally an imperial decree was issued to divide Bohemia into twelve districts, with the aim, as the decree says, "to take the first steps toward the reestablishment of order in Bohemia." The actual object, we may surmise, is to separate the Bohemians into small units and, by adroit gerrymandering, to increase the representation of the German minority.

**Bolsheviki and Anarchists** Those who regard the Bolsheviki as the *ne plus ultra* of radicalism will be surprized to read of the battles in Petrograd and Moscow, where the Bolsheviki have put down the anarchists in the same ruthless way that Napoleon suppress the revolution in Paris. In Moscow, now the capital of the Soviet (Bolsheviki) government, there were, according to the Russian papers, sixty thousand anarchists and they had secured possession of large quantities of machine guns and ammunition from the disbanded army. Early in May the authorities demanded the surrender of these munitions and upon refusal the Bolsheviki troops stormed the arsenals of the anarchists and captured them after an all-day

fight. Four hundred anarchists were taken prisoner and confined in the Kremlin or citadel of Moscow.

On May 12 the Bolsheviki attacked the anarchistic headquarters, over which the black flag was flying in defiance of the red. The anarchists fought stubbornly with bombs and machine guns, but were finally routed out. This, however, did not crush the movement, so at two o'clock on the morning of the 23d the Bolsheviki troops appeared simultaneously before twenty-six anarchistic centers and demanded the surrender of all weapons within five minutes.

In some cases the anarchists complied and where they resisted the artillery was promptly brought to bear upon the building. The fronts of the buildings were smashed in by four-inch shells and when the anarchists took to the cellars and kept up the fight they were forced out by smoke bombs. The streets were kept clear by cordons of Bolsheviki troops and by cavalry patrols. Three hundred anarchists were arrested and a large number killed and wounded.

Who the "anarchists" were and what their objects cannot be ascertained from the despatches which, of course, come only from their enemies. From some accounts it would seem that they were merely looters such as have infested the revolution from the first.

But it is more probable that so well organized a movement had a political purpose behind it, tho as to what it was reports differ. One says that it was a counter-revolutionary and pro-German conspiracy to restore the monarchy and that many Russian officers and German agents were found among those arrested in the raids on the anarchist headquarters. But according to another version they were incensed at the Bolsheviki for their acquiescence in German aggression and hoped to establish an independent Russia.

## IN NO MAN'S MUD

"Don't gallop past here," says the signboard, "it raises the dust"

Japan and China in Alliance On the evening of May 19 a secret treaty was signed at Peking between the representatives of the Japanese Empire and the Chinese Republic. It is given out that the agreement consists of twelve articles relating mostly to military affairs in connection with the proposed Chinese-Japanese expedition into Siberia and that it does not involve the loss of sovereign rights by China. A naval convention has also been concluded. It is understood in Washington that among its provisions are:

Japan and China form a defensive alliance against the menace to the peace of the Far East for a period covering the duration of the war. Japan will furnish arms and the sinews of war to the Chinese. Japan will furnish officers for the Chinese armed forces so far as China requests her to do so. Japan will furnish railroad operators to operate portions of the Chinese Eastern Railway which joins the Trans-Siberian. Japanese troops will operate with the Chinese in specified parts of Chinese territory to guard against the Germans. The alliance has in view the safeguarding of Manchuria and Mongolia as well as other areas.

It is also rumored from Shanghai that by the new agreements Japan se-

cures control of the Chinese dockyards and arsenals and the privilege of working mines in various parts of China. It is reported from Tokyo by the Associated Press that "efforts will be continued to prepare for a financial and economic understanding concerning the development of China and for the broad coöperation of the two great nations of the Orient."

Notwithstanding the assurances of the Japanese and Chinese governments that the new agreement is a temporary measure to meet the military menace of Germany in the Far East, it is regarded with much suspicion by the younger Chinese republicans as a step toward the domination of China by Japan.

In The week which marked the reopening of the great German Brief offensive was characterized in the United States by events which look toward the more effective and stern prosecution of the war. On the day of the renewed Teutonic drive, President Wilson put an end to the negotiations designed to secure an adjournment of Congress early in the summer by appearing before a joint session of House and Senate and requesting the immediate consideration of national finances. That Congress will remain in Washington thruout the summer while drafting and enacting the necessary revenue legislation is now regarded as a matter of finality. A day or two before, the Director General of the Railroads announced a wage increase amounting to some \$300,000,000, and, to offset this, a large freight and passenger rate increase. The breaking off of diplomatic relations between Cuba and Mexico presented peculiar problems in international relations which may prove to be of the greatest importance. The visit of Prince Arthur of Connaught to the United States, the announcement that American troops will soon fight on the Italian front, and the granting of power by Congress to the President to "go the limit" in mobilizing man power for the military forces were other significant occurrences of the week.

More Taxes That the new revenue legislation will bear down heavily on war profits, on incomes and on luxuries is now practically assured. The President's declaration to Congress on this point was enthusiastically cheered. He said, in part:

"Enormous loans freely spent in the stimulation of industry of almost every sort produce inflations and extravagances which presently make the whole economic structure questionable and insecure and the very basis of credit is cut away. Only fair, equitably distributed taxation, of the widest incidence and drawing chiefly from the sources which would be likely to demobilize credit by their very abundance, can prevent inflation and keep our industrial system free of speculation and waste. We shall naturally turn, therefore, I suppose, to war profits and incomes and luxuries for the additional taxes."

Another Liberty Loan of greater proportions than the first, second or

third series was announced by the President to be launched in the fall. Lest the public interest be jeopardized by undue pressure on Congress designed to serve private interests, the President served this warning:

"If lobbyists hurry to Washington to attempt to turn what you do in the matter of taxation to their protection or advantage, the light" (of publicity) "will beat also upon them. There is abundant fuel for the light in the records of the Treasury with regard to profits of every sort. The profiteering that cannot be got at by the restraints of conscience and love of country can be got at by taxation. There is such profiteering now, and the information with regard to it is available and indisputable."

## Work or Fight

At the request of the Secretary of War, the new army appropriation bill, as reported to the House, gives the President sweeping authority to call to the colors all men of draft age who can be equipt and trained. Under existing law power is limited to the drafting of one million men, in addition to special units. This limit will soon be reached, it is stated, owing to the speeding up of the despatching of men to the camps and from the camps to France.

Coincident with this step, the Provost Marshal promulgated an amendment to the selective service regulations popularly known as the "work or fight" amendment. This regulation requires every man of draft age either to get into the army or else get to work at some useful occupation, and a list of nonessential occupations for men of draft age is issued for the information of those concerned. There is no intention, the Administration explained, of "conscripting" labor or of forcing strik-

## THE RUSSIAN AMAZON

Madame Leona Botchkareva, who organized and led the famous Russian women's regiment, the Battalion of Death, is in this country now on her way to England. Madame Botchkareva was wounded by shrapnel during her fighting at the front

ing laborers to return to work. The aim is to increase the labor supply—or the army—by forcing men out of occupations in which the labor of men is not necessary for the winning of the war. To the extent that it is feasible, the replacement of elevator operators, waiters, clerks in stores, employees at places of amusement, “gamblers, fortune tellers, and race track and bucket shop attendants,” by women will consequently follow the execution of this order.

Writing to Speaker Clark last week, Secretary Baker urged that Congress legislate to raise the maximum age limit for voluntary enlistment in the army from forty to fifty-five years, men over forty being assigned, however, to non-combatant service. This proposition, if adopted by Congress, will permit the many thousands of the estimated 7,500,000 between forty and fifty-five who have applied for various kinds of non-combatant service to be accepted and utilized. Such men would serve in lines of communication, in hospitals, and at various headquarters and bases of debarkation.

The number of Americans in France at the present, a subject of much speculation, is to be made public officially by the War Department, if at all. Meanwhile the Government has asked the newspapers of the country to refrain from comment and speculation on this subject. “I am anxious,” said Mr. Baker, “that the people of the country be not unintentionally misled either as to the facts at any given time or by speculative possibilities of the situation. I will endeavor, from time to time, and whenever it can be done, to state thru the press approximate numbers. My particular request, however, is that such statements be not made the basis of inferences as to future intentions or possibilities.”

**A Railroad Raise** Two million railroad employees, now working for the United States Government, have been granted a total of \$300,000,000 in wages, effective as of January 1, 1918. Substantially the recommendations of the Railroad Wage Commission, the principles of which were summarized in the Independent for May 25, have therefore been put into effect, and in order to work out a multitude of acknowledged inequalities, the Director General created a new board of railroad wages and working conditions, consisting of three labor representatives and three railway executives which is to conduct extensive investigations and recommend other employment changes.

For the period of the war, the Government, while recognizing the justice of the basic eight-hour day for the railroad workers, will not reduce working time, and pays for overtime pro rata. Future adjustments of pay are to be made on the basis of eight hours.

Probably of more interest to the public in its capacity of consumer of railroad transportation, both passenger and freight, is the second announcement of the Director General, raising passenger fares to three cents a mile, and increasing freight rates by certain

#### THE RED CROSS IN SERBIA

The first victims of the war and perhaps the greatest sufferers now are the homeless, starving refugees from devastated Serbia. The American Red Cross has saved many of them by emergency relief at food stations like this

percentages which it is estimated will together bring in nearly a billion dollars of revenue. Statements from sources affiliated with the former private management of the carriers take the occasion to point out that the Government is adding to the income of the railroads to an extent which, two years ago, the Government as regulator of the railroads would not permit. The reply of the Government to this is that the war has brought new burdens which must be met, and that the public interest is conserved adequately thru public management.

**More Ships** Ships continue to come off the ways in increasing numbers, one a day for steel vessels being the latest record. The riveting contests have taken on an international aspect, American riveters vying with their British cousins in driving more thousands per day than the other fellow. From Canada came the news last week of a strike in the British Columbia shipyards involving 10,000 men. The purpose of the strike is to secure a wage scale equal to that of the United States.

From the offices of the Shipping Board announcement is made of the placing of orders for 500,000 tons of wooden barges to be used in the New England coal trade, thus relieving the strained rail transportation facilities which last winter broke down under the double burden of carrying material to be shipped to Europe and domestic products, including fuel, to keep the home industries running. It is not announced whether the new barges will be ready for this winter, but the deliveries are expected to be begun late in the summer.

**Settling Labor Troubles** Peaceful adjustment of labor disputes, or rather temporary cessation of strife, has marked the first few days of the activities of the new National War Labor Board, which has been meeting in Chicago as well as in Washington. In one locality some three thousand men went out on strike on a Saturday and returned to work on the

following Tuesday, pending decision by the board of the matters at issue between them and their employers. The dispatches indicate general acceptance on the part of both capital and labor of the terms of the agreement under which this “supreme court of labor appeals” was created.

Without having taken recourse to this board, the former president of the United Mine Workers, John P. White, announced at the annual convention of the International Railway Fuel Association at Chicago last week that the seven hundred thousand American coal miners are willing and eager to work every day, including Sundays and holidays, to keep business going and win the war. The only idleness in the coal fields, it was stated, is due to the shortage of cars in the western and southwestern fields.

**The Break Between Mexico and Cuba** Whether the break in diplomatic relations between Mexico and Cuba augurs anything serious for the United States, and if so, what, was not clear shortly after the announcement last week of this occurrence. In an interview given out in Washington, Señor Bonillas, the Mexican ambassador, pointed out that the crux of the situation lies in the fact that Cuba is at war with Germany, while Mexico remains neutral, and that consequently acts by the Cuban Government directed against transportation or communication with Germany and affecting Mexico's relations as a neutral with Germany, must be protested by the last named republic.

Juan L. Montalvo, Cuban Minister of the Interior, on the other hand, declares that Mexico is striking at the United States.

“I believe this severance of diplomatic relations,” he states, “is simply a maneuver on the part of the Mexican Government to obtain a greater amount of food and other products from Cuba, well knowing that in the case of sugar, at least our output for many months has been contracted for by the United States and her Allies,

excepting a small surplus, which has been available to Mexico and other countries not in the war.

"It is untrue that Cuba at any time has withheld sugar from Mexico, except as the exigencies of war and the obligations growing out of it have forced us to limit our exports."

In Full steam ahead has been the order of the day in Congress during the past week. The response to this order has been such that even to summarize every important action taken would fill a page. Aside from the revenue question, finally settled by Presidential "interference" and the determination to begin hearings on the revenue bill early in June, both houses were busy on a number of vast projects. The urgent deficiency appropriation bill, carrying the total of \$123,000,000 and affecting many miscellaneous activities of the Government, passed the Senate, as did the naval appropriation bill with its more than \$1,500,000,000. At the same time the Senate and the House agreed to a resolution limiting the price of rents in the District of Columbia and effectively checking profiteering by the landlords. The vocational rehabilitation bill, carrying the sum of \$2,000,000 and placing the work under the control of civilian rather than military authorities, went thru the Senate without a dissenting vote. Several committees renewed their activities, notably the aircraft investigation, an arrangement involving coöperation with the Hughes investigation having been effected. The long-dormant charges of disloyal utterance against Senator La Follette were defended by the Senator's attorney.

In the House the chief business has been and is to arrange for the revenue bill hearings, the House being by the Constitution the initiator of supply legislation. Following the President's address, a tentative agreement was reached for a summer recess of some weeks for rest and the repairing of political fences. The President's threat against lobbyists was taken up by Mr. Kitchin with the charge that the publishers of magazines and newspapers have formed a lobby to repeal the zone system scheduled to go into effect July 1. The truth of this charge was denied by Frank P. Glass of the Publishers' Association. Debate on the army bill, however, has prevented the House from going at length into this situation. The coal, oil and mineral conservation bill, passed by both bodies, has gone into conference with fair assurance of early agreement. By an amendment to the food production bill the President is practically forced to prohibit the use of foodstuffs in the manufacture of intoxicants.

**Government Control of Packing Houses** As a result of much investigating; the beef investigating commission, so called, has reported to the President, and the President has approved its recommendations. In general these provide for the extension of Federal control over the packing houses, followed by outright Government operation in case regula-

#### THE FIRST AMERICAN NEGRO TO WIN THE CROIX DE GUERRE

For conspicuous bravery in fighting off a band of German raiders in a hand to hand conflict with grenades, Private Henry Munson of the 369th Infantry has been awarded the Croix de Guerre. Private Needham Roberts was similarly honored. Both men were of the old New York 15th, a negro regiment

tion fails. A corps of Government accountants is now at work endeavoring to unify the bookkeeping of the packers.

The commission was composed of able economists—Secretary of Agriculture Houston, Secretary of Labor Wilson, Chairman Taussig of the Tariff Commission, Commissioner Fort of the Federal Trade Commission, and Herbert Hoover. Its recommendations, which promise an end to bitter controversies and high prices, are summarized as follows:

Continuation of the regulation of the meat packing industry by the Food Administration; placing of the stockyards under license and regulation by the Department

**BUILDING UP THE JUNIOR RESERVES** Palisades Interstate Park, in New Jersey, just across the Hudson from New York, is proving to be one of the biggest factors in the city-dwellers' campaign for health. Last summer it gave 20,000 campers, including 3000 Boy Scouts, a fresh air vacation at the lowest possible cost

of Agriculture; auditing of the packers' bimonthly profit returns; control of the packers' profits to prevent excessive charges and the making of prices to the public the same as to the Government where war purchases dominate the markets.

**A National Salvage Committee** An event of no little consequence is the formation, by the American Civic Association, of a National Salvage Committee whose mission it is to study and put into effect ways and means of saving waste products, marketing them, and turning over the proceeds to war purposes, such as the Red Cross and the Y. M. C. A. The idea has been tried on a small scale in Los Angeles and Kansas City in this country, and in England a military salvage plan brought in some \$26,000,000 in a couple of years. The plan involves the organization of state and local community committees which will collect waste paper, rubber, leather, cotton and woolen rags, old clothing, glass bottles, iron, brass and copper. Specifically, people are asked to save such articles as tooth-paste tubes, tin boxes such as those containing food and typewriter ribbons, and a host of other things. A sales adviser has been appointed whose function will be to seek and hold markets for the "stuff" which today is being thrown away by the ton in every city.

The headquarters of the national committee is in the Union Trust Building, Washington, D. C., and it is headed by Mrs. John Allen Dougherty, who organized the work in Kansas City.

**Disloyalty Suppress** Because she said in the public prints, "No government which is for the profiteers can also be for the people, and I am for the people while the Government is for the profiteers," Mrs. Rose Pastor Stokes was indicted for violation of the espionage act. She was subsequently convicted by a jury in a federal court of Missouri on two counts, the first charging her with wilfully attempting to cause insubordination, disloyalty, mutiny and refusal of duty in the naval forces; the second charging her broadly with obstructing recruiting and enlisting. The possible penalty in this case of a fine of \$10,000 or imprisonment, or both, on each count.

In order that there might be a clearing of the air relative to the new sedition act, the Attorney General last week issued these instructions to district attorneys charged with enforcing the statute:

The prompt and aggressive enforcement of this act is of the highest importance in suppressing disloyal utterances and preventing breach of peace. It is also of great importance that this statute be administered with discretion. It should not be permitted to become the medium whereby efforts are made to suppress honest, legitimate criticism of the administration or discussion of Government policies; nor should it be permitted to become a medium for personal feuds or persecution. The wide scope of the act and powers conferred, increase the importance of discretion in administering it. Protection of loyal persons from unjust suspicion and prosecution is quite as important as the suppression of actual disloyalty.

All cases which clearly violate this law should be promptly and vigorously prosecuted, but care should be exercised to avoid unjustified arrests and prosecution.

# ELECTION DOPE: A LUXURY IN WARTIME

STAFF CORRESPONDENCE FROM WASHINGTON

**B**ENEATH the surface, in Washington, politics is being played. This is not to say that there is a lot of secret, underground politics. Nothing of the sort. War has subordinated politics to such an extent that, try as they will, the professional politicians simply cannot command the space in the newspapers and

hence in the attention of the public which in former Mays and Junes of even-numbered years they easily secured. In normal times the congressional elections of the coming November would be a principal topic of general conversation thruout the United States. Today they are barely mentioned. Yet the elections are coming, and with them a decision which may seriously affect the war and the presidential election of 1920.

There are some campaign headquarters in Washington, and altho they are far from being thronged, busy, or merely interesting, nevertheless they are the official places wherefrom is supposed to emanate the "dope" about the struggle between Republicans and Democrats whose climax is due five months hence. Already the two great parties have begun in earnest to grind out literature, interviews and statements of fact and political theory for the benefit of orators, editors and voters. Their representatives in these headquarters will hand you statistics demonstrating that in all likelihood, for example, the House will go Republican, thus depriving the Administration of half its strength in Congress; or proving, for instance, that the Senate will surely remain Democratic, while the majority of the party now controlling the House is certain to increase by a handsome percentage.

This kind of thing, which is the necessary stock-in-trade of political parties, does not, however, get us very far. After all, the great question which the citizens of this country will decide in November is which party will best serve the interests of the country in the prosecution of the war; and what, therefore, are the guiding principles of thought and action of those parties?

The Democrats, being in power, possess, of course, the better position. They are entrenched behind their record of now more than five years. It is an astonishing record, no matter how much it may be discounted on the ground that much of the good legislation enacted had its origin in Republican days or in the necessities of the war. The fact of the record remains, and it is

the strongest line of Democratic defense, precisely as the record of the Republican party was its best asset till the arrival of the progressive movement and the failure of the Republicans to understand or assimilate it. In the campaign of two years ago the Democrats "pointed with pride" to their record. This year they have already begun to do the same.

But bigger than the record of the Democrats is their asset in Woodrow Wilson who, no matter what the reason, stands head and shoulders not only above the men from whom all Republican candidates must be drawn, but who is, in addition, a recognized leader in world statesmanship. Without leadership, no party can hold together and win victories. Wilson's leadership is admittedly the most difficult obstacle to Republican success.

The strategy for the Democrats to follow—and they are following it, if what is going on before one's eyes day by day in Washington be any guide—is to sit tight and saw wood. The strategy for the Republicans to follow is to watch like a tiger for the littlest weakness in the line, and drive for that. Up to the time of writing this piece of comment, it is not evident that the Republicans have found the spot.

"They think they have," said one of the oldest newspaper correspondents to me the other day. (The most accurate political gossip is in Washington newspaper circles, for every newspaperman knows every other newspaperman, and each tells the rest everything he hears from every side.) "As you know, altho I admire the President and think he's a great fellow, I am a Republican by conviction and habit. I have tried my best to convince myself that the Republicans are coming back. But I can't see it. Here's a small piece of proof. The Republicans have been looking around for a good, strong, popular catchword, something which would be taken up and appeal to every one. Well, Will Hays, chairman of the Republican National Committee, got to work and invented this: 'Win the war now.' He took it around to his friends, beaming as if he had just become the

father of a future president. His friends failed to convince him that there was nothing to it, and he announced it publicly a week or so ago as the new slogan. Of course it fell flat. Everybody, Democrat as well as Republican, wants to win the war just as soon as it can be done.

"What are you going to do to rejuvenate a party with such a poor idea of publicity as that?"

This man represents a great independent newspaper. It is fundamentally a Republican newspaper, but it is broad-minded and not narrowly partizan. He was—and is—in common with his paper, honestly endeavoring to help his party return victorious on the battlefield of national politics. But he does not see any immediate possibility of such an event.

A slightly different slant on the same aspect of the situation is afforded in an interview given to a local Capital paper by former chairman William R. Willcox, of the Republican National Committee. "If the Republicans do not try to make an old-fashioned campaign by attacking the opposition," he said, "they will win. But if they attempt to throw mud and criticize everything in the conduct of the war, they will lose their chance, I believe. The Republicans should take the position that it is not a party war; that it is everybody's war, and that the Republicans as well as the Democrats are heart and soul in the winning of it.

"The Republicans can win if they make their fight on purely economic issues. The Democrats have never shown the right kind of ability to run the government on an economic basis. When the war ends there will be need of the best equipt men to reestablish and reconstruct, and it will require the greatest brains in the country. These brains, I believe, are in the Republican party."

However, the campaign is yet young, and some sudden development in the war, some great reverse, perhaps, in which American troops were routed, might give the Republicans what they would really and truly like to have: a chance to belabor the Democrats on the old score of unpreparedness for the war. Such an opportunity *might* destroy the carefully builded structure of Democratic prosperity and switch the country overnight into the other camp. It is among the possibilities upon which both sides are reckoning.

Still another likely thing may happen before the campaign becomes red hot. The efforts [Continued on page 413]

This sometimes means help instead of danger, for it may be a friendly submarine bobbing up alongside ready to torpedo a Fritz.

## SIMS'S CIRCUS

### A Cruise with Our Destroyers Over There

PART II

In *The Independent* last week Mr. Whitaker began this story of his twelve days' cruise with the United States destroyers in the danger zone. His account of just one of the "shows" in "Sims's Circus," as the camouflaged flotilla has been nicknamed, is graphic corroboration of the order recently issued to the American destroyer flotilla by Admiral Sir Lewis Bayly, commander-in-chief of the British naval forces on the Irish coast:

I wish to express my deep gratitude to the United States officers and ratings for the skill, energy and unfailing good-nature which they all have consistently shown, and which qualities have so materially assisted in the war by enabling ships of the Allied Powers to cross the ocean in comparative freedom.

To command you is an honor. To work with you is a pleasure. To know you is to know the best traits of the Anglo-Saxon race.

(Signed) BAYLY,  
Commander-in-Chief.

Mr. Whitaker is now with the American forces in France.

**E**VEN the news that our fight with the U-boat had been won in waters thickly sown with mines was quite thrown into the shade by a radio picked up in transit to the base admiral from one of the destroyers on patrol down the coast.

"Submarine just fired a torpedo at us. We dropt a mine at head of his wake."

Evidently another "green" commander!

This was the base Admiral's busy day. The next radio came from a patrol boat that wanted to know if the captured submarine had not been engaged with them earlier in the day. It appeared that she, the patrol boat, had plumped several shots into a submarine in the course of an artillery duel and did not wish to be robbed of her prey. Hence a very polite inquiry as to whether the capture was due to injuries and disabilities previously inflicted.

The anxious patrol boat was assured of the contrary, and as no submarine ever travels in any other direction than the bottom with half a dozen shells in

BY HERMAN WHITAKER

AT THE BATTLEFRONT

her, I have reason to believe that she got credit for a sinking.

Still the next radio told of a steamer being shelled by a submarine. She was too far away for us to help, but it drew a reminiscence from the skipper, who had joined us on the bridge.

"Some one will go to her assistance and if she puts up a fight like the old 'L——' they'll stand a fine chance to be saved. We were ninety miles away when we got her first call and while we were smoking it over the ocean just hitting the tips of the waves, the 'L——' kept us posted on the fight. It was like reading the rounds of a championship battle on a bulletin board: 'Bridge shot away!' 'On fire in two places!' 'Have extinguished the fires!' 'We have thrown code books and papers overboard!'

"We were still thirty miles away when this happened, but we wirelessly her not to surrender and received a reply that would make a fine sub-title for a movie melodrama—'Never!' And she did not—thanks to the American naval gunners who refused to stop firing when the captain deemed it time to haul down his flag. It was their quartermaster who sent the radio.

"Since we adopted the convoy system," he went on after a pause, "there is not so much of that. We have lost only one-eighth of one per cent of our ships, and even that small loss is principally due to hard-mouthed old skipper who will bolt the convoy if they get half a chance.

"Of course it is hard to be held down to ten knots when your boat can kick off sixteen, but it is better than going to the bottom. One chap who ran away from us on our last trip was torpedoed just ten miles ahead. The sub was shelling him, too. But for the fact that our leading destroyer elevated her bow gun to the limit and by sheer luck dropt a shell within fifty feet of the sub at 14,000 yards he would have shared the fate of an oil tanker whose boats we towed in last month.

"God! What a sight! After sinking the ship the sub had sailed around and

thrown a shell into each boat and machine gunned them thereafter. Men, dead and dying, lay in the bottom of the boats. Some had been cut in two and half the body had fallen overboard. Others had arms and legs shot off. The few that survived—oh, I can't tell you about it! It beggars description.

"In another case the submarine commander took away all the oars, sails, provisions and life belts from the boats. They even emptied the water kegs and went to the trouble to refill them with sea water, then she steamed away, leaving the unfortunate people to die of hunger and thirst 200 miles from land. That was sheer torture, infernal deviltry that lacked even the German military excuse of extermination.

"After you have seen a few things like that you don't feel very tender toward Fritz. If we were to laugh when twoscore poor devils are sent to the bottom the feeling would spring out of righteous indignation. Fritz has drawn it on himself. He's the modern Ishmael, every man's hand against him, and his against every man."

All the time we were talking a stream of radios had been coming up to the bridge from shore stations hundreds of miles away, from ships far out at sea, from patrol boats and mine sweepers reporting subs. Some were so close that we were heading across their course. Others came from a great distance—up the Channel, the Bay of Biscay, north of Scotland; as far off as the Mediterranean.

While they were coming in the sun rolled down its western slant and hung poised for a few moments in a glory of crimson and gold before it slipt on down into a purple sea. Above stretched a dappled vault that blazed in rainbow color, save where in the west a great tear in the radiant tapestries revealed a wall of pale jade.

It was intensely beautiful, so lovely that the mind refused further commerce with the petty squabbles of man; refused to picture the sea murderers that were lying in wait beneath those jeweled waters. But they were there. Out of that cloud glory, over the sleepy, beautiful sea, came a strange radio.

"Listen to the chattering of the little subs." The skipper chuckled as he read

it. 'Have you seen any ships today? Look out for the strafed American destroyers. Muller does not answer my call. I am afraid they have sunk him.'"

A little later came a second call for help; again too far for our service. Other radios that floated in late that night told how the derelict, deserted by captain and crew, had been towed in by a patrol and safely beached. Of those streaming radios never a one that did not produce a tale or reminiscence from the "bridge." Usually tragic, recording the deaths of fine ships and brave men, their grimness was shot thru here and there with a gleaming thread of humor.

Such was the case of the "M—— L——," a fine munition ship that was carrying a million dollar cargo when she was torpedoed a hundred miles from the base. From afar the Admiral sent an anxious inquiry concerning her condition and progress. He received in reply: "We are making three and a half knots, but it is a d—— long way to Tipperary."

It was, alas! The poor ship foundered at sea.

Then there was the "Lovely Lucy," a trim little steamer that strayed away from her convoy during a thick mist. Late that evening a radio came in from a destroyer that had just picked up the estray. "What did you do to the 'Lovely Lucy?' Found her at dusk, without an escort, zigzagging wildly thru the mist."

© Kadel & Herbert

Herman Whitaker viewing the "Circus" from a destroyer

Also there were tales of Homeric encounters between English and German subs. Fancy a head-on collision under water? Well, it occurred. Two came to-

gether one evening at dusk, backed off, fired a torpedo apiece, then lost each other in the darkness.

Another English sub popped out of the water one day alongside a steamer that was being sunk by a Fritz's shellfire. The steamer lay between him and the Fritz, so, diving, the Englishman waited till Fritz came sailing around, then put a torpedo into his solar plexus. For some reason—perhaps it was loot from the steamer—Fritz had some cases of beer piled on his deck. His end is crudely but vividly described in the report of the English commander:

"When he went up, the air was full of beer, blood, Boches and broken bottles."

That evening displayed destroyer life at its best. A brilliant moon—which the "bridge" most fluently curst for an ally of the Boche—laid a path of silver along the sleepy sea. Our boat laid her long, slim cheek against the slow, soft waves lovingly as a girl on that of her lover. From the deck below a mixt tinkle of a mandolin and guitar came floating up to the bridge, accompanying a mixt repertoire of ragtime and those sentimental ballads which the sailor so dearly loves.

It had quite the flavor of a Coney Island picnic, but, once every hour, a dark figure slowly raised and lowered the guns and swung them the round of the [Continued on page 414]

# HOW THE BOLSHEVIKI GOT ON TOP

BY EDWARD ALSWORTH ROSS

Mr. Ross, professor of sociology at the University of Wisconsin, was sent to Russia in 1917 as a member of a commission appointed to investigate the social and economic conditions attendant upon the Russian revolution.

THE key to what happened in Russia between the political revolution in March, 1917, and the social revolution last November, is found in the *Sovyet* organization. *Sovyet* means council. In 1905, when for a few weeks the people had the Tsar's Government groggy, the revolution was in the hands of local *sovyets* of delegates picked by workmen according to their trades. After the overturn last March this form of organization sprang up again and spread everywhere. Let us take as an example the *Sovyet* of Nijni Novgorod. Any group of fifty or more in the same establishment or occupation has the right to a delegate in this *Sovyet*. For every five hundred more there would be an extra delegate. From one concern with 25,000 hands came fifty such. Not the city alone came into this, but all factories for some miles out—until you come to mills included in the sphere of the *sovyet* of some other center. Besides the work people the proletarian parties—the Peopleists, the Social Revolutionists and the Social Democrats—had the right to be represented in the *Sovyet* by delegates. The theory was that all workers with hand or brain are entitled to representation, but I never heard of professional men sending delegates. Perhaps they were too proud, altho I doubt whether their spokesman would have been admitted. "Useful men you are, no doubt," they would have been told, "but exploited you are not. This is a proletarian organization." Now that the *Sovyets* are masters, it is hardly to be doubted they will in the end grant representation to all groups of socially useful people, and perhaps they have already done so.

One thing was certain, however. No man who made a profit from another man's labor could have a share in the *sovyet* organization. This shut out all who employ labor in their business and all who live on the income from their property. Landlords, capitalists, factory owners, bankers, contractors were *bourgeois*, the particular class that the proletariat was fighting against.

Besides the Workmen's *Sov-*  
*yet* there was also

for the large local garrison a Soldiers' *sovyet* composed of delegates chosen from companies. In some centers, workmen and soldiers had a *sovyet* in common, but in centers where soldiers were numerous and had many problems of their own, they had a *sovyet* apart, altho they joined in maintaining an executive committee.

A *sovyet* met perhaps twice a month, but it created an executive committee which met once or twice weekly and thru sub-committees looked after every interest of its constituents. Every two or three months an All-Russian Congress of Workmen's (or Soldiers') Deputies would meet in Petrograd to hammer out a platform of demands, and before it adjourned it would choose a central executive committee of 250 members to sit almost constantly at the seat of government and look out for the interests of workers and soldiers.

The peasants, on the other hand, altho five or six times as numerous as the workmen, were slow in waking up and never gained a fifty-fifty representation in the central executive committee till some weeks after the November Revolution.

In March it was understood by all that as soon as possible a Constitutional Assembly should be elected, and from the moment it convened it should have all power. But who should govern Russia meanwhile? At first it seemed natural to say, "The Duma." But the Duma had been elected on a very restricted suffrage and was very far from really representing all classes of the people. It was soon seen that the Duma, top-heavy with the representatives of the propertied element, by no means shared the aspirations of the

masses. On the other hand, to make the Provisional Government responsible to the *Sovyet* organization would mean the submission of Russia to the working class, so weak in numbers in comparison with the peasantry. So for months the Provisional Government was responsible to nothing but public opinion.

Roughly speaking, the Kadets led by Lvov were ascendant for the first four months; then the Social revolutionists led by Kerensky for another four months; then down to the present the radical wing of the Social Democrat party, the Bolsheviks. The Kadets, nickname for Constitutional Democrats, later the Party of Popular Liberty, embraced the liberal wing of the propertied people. They stood for freedom of speech, of assemblage and of the press, for popular elective institutions and social reform, but they contemplated no great disturbance of property rights. The estates would have to go to the peasants, to be sure, but the owners must be compensated. They spoke for the comfortable class whose chief grievance against the old regime was that it stifled liberty of thought and speech.

But the masses thought of the Revolution as a bringer of economic relief. Liberty was not enough; they wanted more of the fruits of their toil. The Social Revolutionist party reflected the yearning of the peasants to take over the land of the nobles, the crown, the church and the monasteries without compensation and divide it among their communes. It was the party of Tchernoff, of Breshkovskaya, Spridonova and Kerensky.

The Social Democrats, on the other hand, were strong chiefly among the working men and the intellectuals. Marxism reached Russia about thirty

years ago and appealed to the thoughtful radicals as much more "scientific" than the older radicalism which saw the salvation of Russia in the village community. Twenty years ago the Social Democratic party was formed, and five years later came the split between Bolsheviks and Mensheviks. Originally these terms meant "majority" and "minority," but they came to distinguish [Continued on page 418]

# ORGANIZED LABOR COMES THRU

**W**HEN representatives of the United States Steel Corporation get together with representatives of the American Federation of Labor, it is a reasonably sure sign that something important has happened to the relations between organized business and organized labor. They did get together in Washington early in May.

The instincts of pugnacity and domination are probably a million years old. Groups of men—clans, tribes, nations have been fighting for the upper hand nobody knows how long. War of a more or less bloodless kind is always going on inside modern nations. At the outbreak of our war against Germany, wars were blowing hot and cold between Republicans and Democrats, between Individualists and Socialists, Protestants and Catholics, Suffragists and Anti-suffragists, between capital and labor. But the Great War has overshadowed these lesser wars; they are still on, but they have been greatly tempered by the common menace from without. That's how civilization grows—in ever widening circles of common purpose and common ideals.

If the war between capital and labor had continued after April, 1917, at the same pitch of intensity that characterized our near industrial anarchy before the war, we would be a beaten nation today, and the cause of the democratic allies a lost cause.

But we are not beaten and we are not going to be beaten; and one of the biggest counts in our assurance of ultimate victory is the new and active co-operation between the Government and organized labor. How did it happen that the cantonments, those vast improvised cities, were built so swiftly and so silently that we hardly heard of them between the day they were begun and the day they were finished? How did it happen that with practically no shipbuilders a year ago we have a quarter million of men working in our shipyards today? How did it happen that in spite of the transportation breakdown last winter, the miners kept getting out coal and stood at attention ready to go ahead with production as fast as cars could be furnished? How did it happen that the Government could take over the railroads with every engine on practically all the lines picking up speed on the upgrade of the most extraordinary reorganization in their history? Almost the largest figure in the answer is President Wilson's wisdom in inviting and securing the solid coöperation of organized labor.

Here is the point—President Wilson and certain of his Cabinet, Secretary Baker

BY ROBERT W. BRUÈRE

and Secretary Daniels for instance, really believed in democracy. They saw that the instinct that had created the labor unions was the same instinct that holds democratic America together. They were not like certain of our old-fashioned politicians, employers and individualistic laborers who say with an air of terrible finality that you can't get out copper or coal or ships with democracy; that democracy is a fine word and all right as a sleeping powder, but not in it with autocracy when it comes to getting results. Such men think that President Wilson was camouflaging when he talked about this war as a fight to make the world safe for democracy. But he wasn't. He believed that democracy, real rock-bottom democracy, is the greatest driving force in the world. And he saw that labor unions, like manufacturers' associations, were expressions of democracy, and that if they hadn't existed they would have had to be created to win a democratic war.

That is practically what the President said in his address before the American Federation of Labor in Buffalo last autumn. But he didn't stop with eloquent rhetoric. He had the courage to put his ideal faith into practise.

So when the war came he invited Mr. Gompers, as the representative of the democratically organized workers of America, to head the labor section of the National Advisory Commission. And Mr. Gompers called together the heads of the international labor unions and they pledged the support of organized labor to the nation's objects in the war as voiced by the President. And he

called together the largest employers of the country and he said to them in effect: "We've got a fight of our own to settle, and if I understand your position, it's going to be a long fight. But we are Americans first, and we labor leaders think that you and we ought to call a truce until the bigger war America has on her hands is won." Of course, it was as hard for the labor leaders as it was for the big anti-union employers to accept that challenge of patriotism. They do a good deal of growling still; they are doing a fair amount of fighting on the side. But taken by and large, they have managed surprisingly well to put a truce to their own fight for democracy as they see it at home, to attend to the bigger fight of the country for democracy in the world. That's what the United States Steel Corporation's new willingness to enter into open conference with the representatives of the labor unions seems to mean.

But that conference would probably never have taken place if organized labor had not made good on its pledge to President Wilson and the American people. When the cantonments had to be built, Secretary Baker sent for Mr. Gompers and they quietly agreed to apply trade union standards of hours, wages and employment conditions to the building of the cantonments, to cut out strikes and to set up an adjustment board to take up and settle the grievances of the workers and contractors. And the cantonments were built in record time.

The workers in the Navy yards were already organized into craft unions when the war came. But Secretary Daniels, thru his assistant, Mr. Franklin D. Roosevelt, got hold of the trade union leaders, went over the Navy's building program with them, appealed to them to keep the men steady—and they did. There have been no real strikes in the Navy yards. And that is one important reason why the old heckling of Secretary Daniels has turned into a chorus of praise.

Democracy was proving such a smooth-running machine in practise, that the Government went one step further. Under direction of the President, the Navy and the Shipping Board got together with Mr. Gompers and the national leaders of the unions whose crafts were needed in the shipyards, and drafted a working collective agreement between the men and the Government. The agreement creating the Shipbuilding Labor Adjustment Board, on which the public, the Government and organized labor are represented, was a revolutionary break with the precedents of a hun-

## Pebbles

Most people's reply to the suggestion to eat horseflesh is an indignant "Neigh"!—*London Opinion*.

One atrocity never committed by the Germans; they never strike a tent when it's down—*The Widow*.

Nearly everybody nowadays appears to be in favor of Government ownership of something if it belongs to somebody else.—*New York World*.

Officer—Have you mopped that floor yet?  
Private—No.  
Officer—No, what?  
Private—No mop.—*Awgwan*.

Captain—Charge!  
Ribbon Clerk Regiment (in chorus)—  
Just a moment, please. Name and address?  
—*Pelican*.

Prisoner (to jailer)—Put me in cell 38.  
Jailer—What for?  
Prisoner—It's the one father used to have.—*Awgwan*.

"Liza, what fo' you buy that udder box of shoe blackin'?"  
"Go on, nigga', dat ain't shoe blackin', dat's ma massage cream!"—*Awgwan*.

"I must say this khaki camping skirt is a loose fit."  
"Why auntie! That's the boys' tent you have on!"—*Louisville Courier Journal*.

Waiter—How will you have your steak, sir?  
Minister (absent minded)—Well done, good and faithful servant.—*Awgwan*.

"I suppose you had a great time when they presented you with the Victoria Cross?"  
"My oath! Talk about fuss—you'd ha' thought they was giving a bloke a gold medal!"—*Sydney Bulletin*.

The Girl Driver—Can I have some more petrol, please, Sergeant?  
The Flight Sergeant—Wot 'ave you done with the last lot wot I gave yer?  
The Girl Driver—Oh! I used that to clean my gloves!—*London Opinion*.

"You simply cannot trust anybody. Every one seems so dishonest nowadays," declared the woman. "My maid, in whom I had the utmost confidence, left me suddenly yesterday and took with her my beautiful pearl brooch."  
"That is too bad," sympathized the friend. "Which one was it?"  
"That very pretty one I smuggled thru last spring."—*Pittsburgh Chronicle Telegraph*.

The lawyer was trying very hard for his client and was setting the points out in a logical manner. There was one thing he was not quite clear about and he accordingly said:  
"Now, sir, you state my client knocked you down and then disappeared in the darkness. What time of night was this?"  
"I can't say exactly," the complainant answered dryly. "Your client had my watch."—*New York Globe*.

### A BOVINE HOARDER

"It doesn't seem right," said the man with worn-out shoes.  
"What doesn't seem right?"  
"That a mere cow can afford to wear all that leather."—*Washington Star*.  
Your hands were made to hold, my dear;  
Your hair to lure me on;  
Your eyes were made to sparkle clear,  
Your face to gaze upon.  
Your cheeks were made to blush, my dear;  
Your waxen ears petite  
Were made to catch the silver strains  
Of music soft and sweet.  
Your lips were made to kiss, my dear;  
Your arms were made to cling;  
Your voice was made to speak, my dear,  
NOT TO SING.  
—*Albany Knickerbocker Press*.

# War-Time Bread and Milk

## Use Puffed Rice Bubbles

Don't serve war-time breads in milk.

Float Puffed Rice in it—crisp, toasted, flaky bubbles. Or else Corn Puffs, which is pellets of hominy puffed to rain-drop size.

Here are airy, toasted morsels, vastly better than the best of bread or crackers.

## They Are Ten Times Better

Puffed Grains seem made for the milk dish. They are just the right size. They are airy and crisp, so they crush at a touch.

They are toasted in a fearful heat, which gives them a nut-like flavor. And they are ever-ready.

Then Puffed Grains are easy to digest.

These are the only grain foods with every food cell exploded. Ordinary cooking and baking doesn't break half of the food cells.

Some folks treat them like-food confections, because they are so delightful. They make them occasional dainties.

But they are scientific foods, invented by Prof. Anderson. They are steam-exploded to fit every atom to feed.

This is the ideal way to serve Rice, Corn or Wheat. When children so enjoy it, why not let them have it often?

**Puffed  
Rice**

**Corn  
Puffs**

**Puffed  
Wheat**

# THE NEW BOOKS

## Finding the Right Place

WHEN you hear of the greatest soldier in the war, you think of an iron man, huge chested, full girthed, seamy faced, with gray bristling beard and eyes of steel. You see instead a boy, eyes still big with youthful dreams, mouth still soft with youthful curves. This is Captain Georges Guynemer, called by many the greatest soldier of the war, called by some the greatest soldier in any war. If he had gone into infantry instead of air service, his genius would doubtless have been buried in the trenches and his name unknown. Chance or the foresight of his government saved him from the tragedy of the misfit. It has not saved hundreds of others. Every day, says Charles H. Grasty in his fascinating *Flashes from the Front*, men suffer the agonies of trying to serve as square pegs in round holes, because we lack the knowledge which comes only from long experience and high expertness.

"Men are not different from the lower animals," he writes. "Instincts or abilities are specialized in each breed and even in the individual members of a breed. A bird-dog that performs ideally in the field would be a sad failure trying to herd sheep."

To work out, then, the particular task for which every man is fitted, is, he says, one of the important problems of the war.

Nowhere else is this problem so important as in the air service. This service attracts the venturing but that process of selection is too rough to stop at; there should be a second comb-out which would restore to other services all except those with true flying instinct. As the war takes on permanent form its processes are standardized. The airman becomes more and more true to type, but there is still a haphazard mixture of big, strong infantrymen with the air forces, and high-strung racehorse types in the trenches. The six-foot, two-hundred-pounder, who as an infantryman would, if lost, find his way home with a Boche under each arm, perhaps lacks the nervous organism for quick perception and action. On the other hand the sensitive, feminine-looking man, who could make his fifty record in the air, might die of nervous agony in the funk-holes and on the firing-step.

There are many other thoughtful suggestions in a book that is remarkable, as a war correspondent's observations, for the combination of colorful glimpses of places, subtle sketches of people about whom every one wonders, and keen analysis of situations.

*Flashes from the Front*, by Charles H. Grasty. The Century Company. \$2.

## The Miracle of Transport

WHEN the real story of the Great War is written, the technical experts will probably call it a War of Artillery, but the men who have had to battle with the business of it will always know it as the War of Mechanical Transport. . . . Supply and transport are so closely related that one cannot exist without the other.

Isaac F. Marcossou, the brilliant war correspondent, has observed the war on all its sides and he pronounces the military establishment of the British Army and its big organization for the supply of its fighting men, in many respects "the most amazing business institution" that he has yet seen—and no writer has perhaps made a closer study of business in its many phases. *The Business of War* presents an imposing picture of "an institution of cheerful service," created in three years, that has blocked the German machine "that was faulty for forty years in brutal building."

*The Business of War*, by Isaac F. Marcossou. John Lane Company. \$1.50.

Christopher Morley, author of "Shandygaff"

## Shandygaff

THIS book is real fun. From the remarks on the cover address to the Hesitating Purchaser, to the delicious nonsense of the appendix "which shows how the volume may be made surpassingly valuable in the classroom," the author's high spirits carry us lightly thru his ideas, impressions and stories on a remarkable variety of subjects of common interest, from the President to the Art of Walking, from Rupert Brooke to Bachelors. When he is grave, he is vivid and natural, when he is gay he is irresistible. If any one is going to take a vacation this year, this is an ideal book to take along; for those who are going to work all summer, this book will provide holiday moments in the midst of toil. It is possible for the reviewer to pay Christopher Morley one of the highest tributes he can think of—the man is very human, and he can write:

Grant us, O Zeus, the tingling tremor of thigh and shank that comes of a dozen sturdy miles laid underheel. Grant us "fine walking on the hills in the direction of the sea;" or a winding road that tumbles down to some Cotswold village. Let an inn parlor lie behind red curtains; and a table be drawn toward the fire. Let there be a loin of cold beef, an elbow of yellow cheese, a tankard of dog's nose. Then may we prop our Bacon's Essays against the pewter and study those mellow words: "Certainly it is heaven upon earth to have a man's mind move in charity, rest in providence, and turn upon the poles of truth."

*Shandygaff*, by Christopher Morley. Doubleday, Page & Co. \$1.40.

## Frontiers of Freedom

THIS book is more than the spontaneous reflections and reactions of a Secretary of War in time of war; it is the reflection of the soul of a great democratic people. We hear in these extemporaneous addresses the roused anger and idealism of democracy, waging war in the cause of freedom against the medievalism of the Government of the Central Empires.

It is this that has made this war to America "not the military venture of a class, but the crusade of a people." It is cause for pride and heart-stirring that America, by the hands of Wilson and Baker, is lifting up to her young men a flag

unstained by selfishness and passion, that "this youngest and most hopeful of the nations of the earth, this young giant, fashioned from all the peoples," is marching to the worst, and perhaps the last, of the world's great wars with a larger than national aim.

Not to add a square inch to the territory of the United States; not to take from any man, woman or child living in the world a single thing which belongs to him; not even for the glory of successful arms; but in order to re-establish those principles of national justice without which national continuance and life cannot prevail. . . . Some people say that they do not know how long the war will last. I do. It will last until we win it. . . .

We know that whatever the struggle and whatever the cost, they will come back to us with the fruits of victory and that these will not wither in our hands as things we ought not to have, but they will be for a higher life and better uses for the sons and daughters of men everywhere.

War has become a thing of industry and commerce and business . . . it is the combat of smoke-stacks now . . . and the nation or group of nations . . . which is to prevail is the one which will best be able to coördinate and marshal its material, industrial and commercial strength against the combination which may be opposed to it.

We at home must fight for democracy here as our armies for it abroad. . . . We must not allow the hours and conditions of people who work . . . in factories and workshops to be interfered with. We must preserve the sweetness of our rights. . . . When our heroes step off the boats and tell us they have won the fight for democracy in Europe we must be able to tell them in return that we have kept the faith of democracy at home and won battles here for that cause while they were fighting there.

Secretary Baker gives tributes to women, to labor, to the solidarity and earnestness of the nation, and appeals for constructive rather than destructive criticism of the Government's method of conducting the war.

The book is a mine of stimulating thought and valuable information. It is one which should be in the hands, not only of every young soldier, but of his mother.

*Frontiers of Freedom*, by Newton D. Baker, Secretary of War. Geo. H. Doran Company. \$1.50.

## Grass in the Pavement

"God," cried the grass in the pavement,  
"Am I not worthy of living,  
Who am green in the waterless places  
And subsist in the clefts of the stone?"

"Where the feet of the horses trample  
And wheels go passing and passing,  
By strong desire of living  
I live, but am barren and lone!"

"Give me the fields of my birthright.  
The shade of the quiet cool places;  
There may I live to Thine honor,  
Abundant, rejoicing, full grown!"

"Child," came the Voice in the stillness,  
"Know I not well thou art worthy?  
Thou who declarest my glory  
Where death and destruction are rife?"

"Therefore have I set thee in lonely  
And parched and desolate places:  
Are the weakest and least of the legions  
Placed in the van of the strife?"

"Know I not well thou art worthy?  
I have chosen thee over all others,  
Thou who art potent, unyielding,  
And strong in the fullness of life!"

This is the title poem of a collection of rather serious verse by M. E. Buhler, colored, in spite of a slight didactic trend, by warm human sympathy, and enhanced by careful workmanship. At Amiens deserves a place with the real poetry inspired by the Great War.

Comes to my mind forevermore a vision  
Far over land and sea,  
Of troops that to encampment are returning  
After a victory.

Back to the city, back to Amiens slowly,  
In broken files they creep;  
'Tis midnight, and the darkness is upon them,  
And weariness and sleep.  
They clutch the backs of heavy laden wagons  
Filled with a ghastly load,  
Whose creaking wheels, slow turning, help their  
lagging  
Footsteps along the road.  
Too weak the horses, led by stumbling masters,  
To bear them any more;  
And slowly shuffling, drunk with sleep, and  
bleeding,  
Returns the conqueror.  
*The Grass in the Pavement*, by M. E. Buhler.  
James T. White & Co. \$1.25.

### Books in Brief

**MAN IS A SPIRIT**, by J. Arthur Hill. (Doran, \$1.50.) Telepathic communications, dreams, and messages from departed spirits, criticized in a scientific spirit.

**MY GERMAN CORRESPONDENCE**, by Douglas W. Johnson. (Doran, 50 cents.) A study and revelation presenting the marvelous and picturesque obliquity of the German mind.

**SHELLPROOF MACK**, by Arthur Mack. (Small, Maynard, \$1.35.) An American's account of his twenty-eight months in the British Army, told simply but with great interest.

**THE HIGH ROMANCE**, by Michael Williams. (Macmillan, \$1.60.) Story of an American who, thru his strivings for material success, never loses sight of a great spiritual ideal.

**FRENCH LITERARY STUDIES**, by J. B. Rudmose-Brown. (John Lane, \$1.25.) A scholar's first-hand criticisms which will appeal to students of French literature and poetry.

**ANGLO-IRISH ESSAYS**, by John Eglington. (John Lane, \$1.25.) An adequate collection of the author's more recent essays which have won the praise of George Moore, W. B. Yeats and others.

**MEMORIALS OF A YORKSHIRE PARISH**, by J. S. Fletcher. (John Lane, \$2.50.) The story of a Yorkshire parish from the earliest to the present times. Of interest to lovers of archeology, local history and folk-lore.

**THE ART OF PHOTOPLAY MAKING**, by Victor O. Freeburg. (Macmillan, \$2.) Book analyzes the moving picture, discusses psychology of cinema audiences, deals with delineation of character and structure of plots.

**PROBLEMS IN COST ACCOUNTING**, by De Witt Carl Eggleston. (D. Appleton, \$2.50.) Concrete examples of financial situations met in many different industries. All technical terms are defined and special reference explained.

**UNIVERSITY DEBATER'S ANNUAL, 1916-1917**, Vol. III, edited by Edith M. Phelps. (H. W. Wilson, \$1.80.) Speeches for both sides on Government Ownership, Universal Military Service, Compulsory Arbitration of Railway Disputes, and other present-day questions.

### ELECTION DOPE: A LUXURY IN WAR TIME

(Continued from page 403)

of men of both parties to eliminate unnecessary party strife for the term of the war may succeed, and an agreement may be reached between party leaders to the effect that there should be no contest in districts where the loyalty of the incumbent Congressman, be he Democrat or not, is beyond question. Conversely, the agreement would specify that the two parties would unite against a disloyal man bearing the label of either party. Theoretically, there is no reason why this would not work, but there are practical reasons against its success. These reasons may be imagined by reviewing the Lenroot-Davies campaign for the Wisconsin Senatorship.

Washington is not paying a great deal of attention to politics, either on or under the surface. There are plenty of Republicans in office today who will tell you privately that winning the war is and can be the only thing worth wasting energy on for the rest of the summer, and till it is all over. Even those Republicans who most bitterly dislike and distrust the Administration see the danger in carrying this bitterness into the open in these times. So after all is said and "doped out," it may be a perfectly flat and harmless campaign, resulting in no change whatever in the existing party alignment.

WILLIAM LEAVITT STODDARD.

## SIMS'S CIRCUS

(Continued from page 405)

firing circle. The gunners were taking no chances of the mechanism "freezing" thru cold stiffened grease, nor failure of the electric sighting lamps.

This remarkable weather held till we dropt our convoy well out of the danger zone and picked up a second inward bound at a rendezvous a hundred miles further south. Two days later we gave half of our charge to a British flotilla that led it on other ways. We had expected to drop the remaining ships on the following morning, but destiny alias the base admiral, decreed otherwise. Piqued, no doubt, by his small bag of one small ship the preceding week, Fritz had broken into waters which, for him, were extremely unsafe, and was shooting right and left, like a drunken cowboy on the Fourth of July. A radio informed us at dawn:

"Area X is closed."

This meant the delivery of each ship at its port. During the additional day and night required to do this subs were operating to the right of us, subs to the left of us, subs in front, subs behind us. Often we crost their courses, but tho they sank several ships around us that were unconvoyed, they left us strictly alone.

Twice the alarm sounded "general quarters" and we all piled out—a certain correspondent with his hair standing on end—to find the alarm was caused by a short circuit. Twice during the night porpoises charged the ship along gleaming wakes of phosphorescence and turned the hair of the engine room crews gray with emergency calls for full speed astern. But without hitch or mishap we delivered our ships at their destinations.

All the last day the wind had been stiffening. After we headed back for the base it raised to half a gale, real destroyer weather. As we sat at supper in the ward-room that night the twinkle in Admiral Sims's eye was recalled when, with celerity that almost equalled sleight of hand, the tablecloth slid with its load of food and dishes swiftly to the floor.

The casual manner in which the steward accepted and swept up the ruin betrayed familiarity with the phenomenon. When he reset the table we held the tablecloth down and had gotten safely to the coffee when, with his cup poised at his lip, the skipper tobogganed on his chair back to the transom. Swallowing the coffee while she hung in balance he came back to us on the return roll.

Profiting by his commander's example, the executive officer, who sat opposite, had hooked his ankles around those of the table; so took it with him to the other transom. When it returned further journeyings were restrained by a rope lashing, but that unfortunately had no effect on the motion. It kept on just the same; grew worse; more of it; then some.

By midnight the vessel was rearing like a frightened horse and rolling like a barrel churn, a queer mixture of metaphor and motion. A Western "outlaw" had nothing on that boat. She would rear, shiver with rage just as tho she were trying to shake the bridge off her back; plunge forward in a wild buck with her back humped and screws in the air.

It was sickening. When she did her best and beastliest the waves would drop from under, leaving two-thirds of her length exposed; then, when the thousand tons of her came down on the water she raised everything animate and inanimate that was not bolted down to the desk. I was lifted so often out of my bunk that I spent almost half the night in midair, and am now quite

convinced of the possibility of levitation.

I confess to making a modest breakfast on one dill pickle. While I was engaged in the gingerly consumption thereof the ward-room comforted me with the news that this was "only half the blow," and that we might "expect the other half before we made port." They assured me it was fair weather by comparison with a nine days' gale they had ridden out last month; fine weather when measured by a blow the preceding trip when for thirty-six hours the waves swept her from stem to stern; the living compartments were flooded; everything and everybody wet; freezing to boot, while the wind howled thru the rigging at 110 miles an hour. Think of it, you folks who live in warm houses, work in steam heated offices!

Fair or fine, the bridge was nearly dipping its ends when I climbed up there after—after the dill pickle. At every plunge her nose would go under a solid sea and we would have to duck to avoid flying water that went over the top of the bridge. Watery mist veiled the tossing seas. All night we had been shoved along by a five knot current running by dead reckoning. It was now impossible to take a "sight" to establish position; so just as a lost boy might inquire his way from a policeman we ran inshore to a lightship to get a new fix.

The lightship keeper megaphoned a direction which in his unnautical language amounted to this. If we would proceed so many blocks to the northward, then take the first turning to the left after we passed a lighthouse we should come into a harbor where lay the half dozen ships we were to escort back to our base.

The direction proved correct. As the convoy came filing out after us a few hours later I was able to see for myself one of those humorous flashes that sometimes lighten the gloom of the radios. Perceiving still another vessel in harbor after the convoy came out our skipper sent a radio to inquire if she would care to make use of our escort.

He received a polite reply: "Thanks very much. Think I'll stay in. I was torpedoed going out yesterday."

She was one of the luckless of the preceding day.

The delivery of this convoy at the base the following day completed my cruise. During a period of twelve days we had steamed 1600 miles and convoyed a total number of sixty-odd vessels to and fro in the danger zone. Under the old patrol system, when our fleet first began its labors, the Germans were sinking from thirty to fifty ships a week and the seas thru which we sailed were loaded with wreckage, dead cows, horses, pigs, lumber, barrels, anything that would float. Smashed boats were often found and sometimes drowned people held up from sinking by life preservers. But since the convoy system was adopted wreckage is seldom seen; will, with its extension to all ships in the near future, become a thing of the past.

In the great improvement already effected our crews and captains have displayed a fine part. The sixty vessels of ours were simply one small item in the thousands convoyed thru the danger zone with a loss, as aforesaid, of only one-eighth of one per cent. In the course of this duty the American flotilla has steamed jointly well over a million miles, a distance equivalent to the circumnavigation of the globe over forty times, and their journeyings have always been thru mined seas, subject to attack by submarines.

As I sit here in cosy London chambers writing before a cheery sea coal fire and think of my late messmates out upon those

## Threefold Co-operation

Every telephone connection requires co-operation. The slightest inattention or indifference on the part of the person who calls, or the company that makes the connection, or the person who is called results in a corresponding deficiency in service. Each is equally responsible for the success of the service.

Not only is it to the advantage of the individual himself to use the telephone efficiently, but his conservation of the advantages of these national lines of speech benefits all telephone users.

Accuracy in calling, prompt-

ness in answering, clear and deliberate talking, courtesy and patience on the part of both user and operator are essentials of service, and must be mutual for good service.

Efficient telephone operation is vital to the war work of this country. The army, the navy and the myriad industries contributing supplies depend on the telephone. It must be ready for instant and universal use. The millions of telephone users are inseparable parts of the Bell System, and all should patriotically contribute to the success of the service.

dangerous waters the thing which stands out most clearly in my remembrance is their loyalty to each other, the friendly spirit of the fine, clean sailor lads, the mutual respect for each other of officers and crews, the unswerving belief of both in their ships and commanders; finally, the faith and complete devotion of every man in the fleet to Sims, their Admiral.

I shall not soon forget my last view of the fleet. Looking down from a high hill behind the town I could see the destroyers that had cruised with us lying like tired dogs on the harbor's bosom. Far out on the heads signal lights began to wink and blink—no doubt the tale of a submarine. From the hights to my left the Admiralty station answered. Then, very slowly, a destroyer opened one eye and blinked a response. Shortly thereafter three slim, dark shapes slid down stream and headed to sea.

I was for home, but Sims's captains were again out on the job.

## ORGANIZED LABOR COMES THRU

(Continued from page 410)

dred years; it was the first definite collective agreement into which the Government had ever entered with organized labor! And it has worked well beyond all expectations. Beginning a year ago with a shipbuilding force in all American yards of a few thousand men, the Government has a quarter of a million men building ships today. And with a few trifling exceptions, there have been no strikes! The delays in our shipbuilding program have been almost entirely administrative delays, the kind of delays every housewife would experience if she were suddenly called upon to move from a three room cottage into a fifty room mansion and had to serve a banquet the next morning.

The place in our war preparations where delays (on account of labor unrest) have been most frequent and serious has been the Ordnance Bureau, and there no collective agreements, no democratically constituted labor adjustment boards exist.

When the coal situation became acute, Director Garfield invited Mr. White, president of the United Mine Workers, to enter his cabinet and keep labor steady: when the Government took over the railroads, Director McAdoo asked Mr. Carter, president of the Brotherhood of Locomotive Firemen and Enginemen, to head his labor administration. There have been no delays in the coal fields or on the railroads chargeable to organized labor.

I don't mean to suggest that organized labor as it exists today is a perfect instrument of industrial democracy: like most of our social, educational, industrial and political institutions it has its manifest limitations. The war is teaching us as a nation how many things we have to learn in the way of organization, teamwork and really democratic patriotism. But I do mean to say that organized labor has proved its right to take and hold a permanent place in the political and industrial structure of our commonwealth. The bonds of coöperation which the war has established between the labor unions and the Government are proving of undreamed service to the nation. They have opened up a new epoch in the history of industrial democracy in America. Organized labor has definitely acquired the status of an estate of the realm. That fact will have a decisive influence upon our successful prosecution of the war; and it is bound to have an equally important bearing upon the future development of our political and economic life after the war.

## CHALFONTE

Atlantic City, N. J.

## INDEPENDENT EFFICIENCY SERVICE

119 West 40th Street, New York

# A 4-Minute Lesson In Personal Efficiency

In Which You Will Discover the Biggest Ambition of Your Life and How to Achieve It Quickly

By Edward Earle Purinton

The Famous Efficiency Expert

**R**ECENTLY I talked with the highest salaried man in the world. I asked him how he had succeeded. He quietly answered, "I have not succeeded! No real man ever succeeds. There is always a larger goal ahead."

This multi-millionaire has outrun every rival on earth. But he has not reached the goal of his own satisfaction—any more than YOU have. But he is efficient. He began by wanting something so hard the whole world couldn't stop him.

## What DO YOU Want?

What would you like to be more than anything else? Look back ten years. How would you like to live that period all over again? If you could have known then what you know today, how much time, health, money, faith, energy you could have saved!

I have believed for many years that the right kind of a course in practical, every-day, human efficiency, would supply an effective and much needed, short-cut to highest achievement and would save many grinding, discouraging and expensive years of haphazard experience.

It is much better to learn and profit by the mistakes and false moves of others than to waste valuable days and years waiting for experience. Don't rely on your own bitter experiences in the hope of doing better "next time." With the proper knowledge you will save mistakes.

It has been my privilege to act as teacher and counsellor for thousands of ambitious men and women—from the million dollar corporation head to the most humble beginner in the ranks.

And I have concluded that the average man engaged in a large enterprise who has not yet applied efficiency methods to himself and his associates has been losing from \$1,000 to \$100,000 a year—while the individual, professional or industrial worker has been losing from \$100 to \$5,000 a year.

For twenty years I have been studying at close range, the exact reasons for these people's failure to get ahead. And into my new Foundation Course of Seven Lessons, I have put the results of this study of individuals and business concerns.

By showing you in my lessons what other men and women—just like yourself—have learned and done and been, I believe sincerely that I can save you about ten years of costly experimenting and can show you how to save your strength and energy and special abilities for clean-cut, economical and success-bringing work.

Efficiency is nothing less than the difference between wealth and poverty, fame and obscurity, power and weakness, health and disease, growth and death,

hope and despair. The step from one of these extremes to the other is a short and easy one—if you KNOW HOW.

Take one of my pupils whom I shall call Mr. X, because if I ever met an "unknown quantity" he was one when he first came to me.

He has increased by about 500 per cent his daily output of work, his optimism and will power, his health reserve and his financial resources.

How did he do it?

First, he analyzed *himself*. Have you ever done this—thoroughly? If not try it.

I can tell you I never saw such a change in a man.

## MR. PURINTON IS A WORLD-FAMOUS

**AUTHORITY** on Personal and Business Efficiency. After spending seventeen years learning how to increase human health, energy, productiveness and happiness, he has put into his new Foundation Course in Personal Efficiency the result of his rich experience.

He has been teacher, editor, lecturer, hygienist, psychologist, social service leader, efficiency engineer, and counsellor for men and women in every walk of life.

His best known previous work, "The Triumph of the Man Who Acts," has been read throughout the world. His works have gained more than a million readers. His help has been sought in every state in the Union and in twenty foreign countries.

This great audience includes bankers, business and professional men, educators, manufacturers, railroad executives and heads of million dollar corporations. They all have something to learn from Mr. Purinton.

A thousand important business houses and institutions have already ordered Mr. Purinton's works for their friends, patrons, clients or employees.

## A FEW OF THE MILLION AND WHAT THEY SAY:

**MELVIL DEWEY, President of The National Efficiency Society, says:**

"I have never yet picked up this work for five minutes without getting direct practical value from some new thought or some unusual or more telling presentation of an old one. These stimulating pages bristle with epigrams and sparkle with the texts of a thousand sermons. No man can read his work without getting ideas and better suggestions that will enable him to improve the greatest and most complex and most important of all machines he will ever use—Himself."

**IRA J. STEINER, Educational Director, Camp Cody, says:**

"Mr. Purinton has rendered a great service to the present cause by bringing out this wonderful Course in Personal Efficiency, which is the first of this particular type of Courses in practical, applied efficiency, and nothing I feel is more needed in this present conflict at the front, in the camp, in the shop, in the office, on the farm, and in the school than the matter of being personally efficient."

**TRUMAN A. DE WEESE, of the Shredded Wheat Company, says:**

"If I were rich I would distribute about a million copies of Mr. Purinton's Efficiency Work among the million Americans who I think need the sound wisdom and advice it contains."

**JOHN H. PATTERSON, President of the National Cash Register Company, says:**

"I began to mark passages in your writings which I wished especially to remember. I found after I had completed my reading that I had practically marked up the *entire* work."

For the first time he knew what he wanted to do, what he wanted to be, what he wants to have in life.

Then he went boldly at the attainment of his ambition.

He studied his possibilities—physical, mental and spiritual. He learned that his ambitions lay within reach of his natural gifts.

Finding that he was out of gear in certain ways—he set out to repair his faulty machinery. He made the most of his job. He learned to save two hours a day. He talked with men higher up.

He studied and tried every conceivable way of improving his work. He was always planning his *line of advance*. Every opening higher up found him prepared to fill it ably.

He changed his living habits and increased his daily output of energy about 200 per cent.

He stopped being a pessimist and grumbler and became the most cheerful man in the whole organization. Having grown friendly-minded, he attracted a host of new friends. He prospered. He advanced. He became a leader. He developed courage.

But remember this: Mr. X was not an exceptional man by any means. He was just *average* to begin with. When I first knew him he was making \$15 a week. Today he is probably without a rival in his chosen field—and his name is known throughout the business world. You can do the same or better.

## "Citizens of the World"

The patriarch Abraham and the apostle Paul, John Wycliffe and Christopher Columbus, Benjamin Franklin and Abraham Lincoln, were "citizens of the world."

They thought universally, to some extent saw every man as his brother's keeper, and were prophets of the day when a great contest would be waged to make the world one world, and that one safe for democracy.

### The Christian Science Monitor An International Daily Newspaper

embodies this idea in a daily newspaper. It publishes the news of all the world. It circulates throughout all the world. It advertises firms in all the world. Its editorial columns give courageous attention to all phases of the world's activities.

It regards all men as created free and equal, respects religious freedom, insists on medical freedom, and is a volunteer for service in the cause of all "citizens of the world."

## HOW THE BOLSHEVIKI GOT ON TOP

(Continued from page 406)

those who wanted to see the laboring class a powerful element in a *bourgeois* state from those who look for a state in which the *bourgeoisie* should have no share.

When on the morrow of the March Revolution, following the example of Petrograd, *sovyets* were formed in all the centers of Russia, the Mensheviki or moderates were naturally their leaders, for they were on the ground, even in the Duma, while the Bolsheviks, being a hounded, persecuted element, were scattered all over the globe. It is safe to say that probably not an observer in Russia last spring anticipated the development which actually occurred. The people who were to make this development were not then in sight. It was the returned revolutionists who gave the Revolution its unexpected trend. In Moscow last August *everybody* I talked with agreed that people were becoming a little alarmed at the radical tendencies the Revolution was showing and that opinion was veering toward the political right. Not until I got out among the peasants and the labor leaders and found radicalism marching steadily ahead did I foresee the bigger revolution that was to come.

How many revolutionists came back after Nicholas fell, no one could tell me. No one fixed their number at less than a hundred thousand. It is certain that eighty thousand were brought out of Siberia. Moreover, Russian consuls all over the world were ordered to provide travel money for all Russian political refugees. These consuls were holdovers from the old régime and certainly some of them maliciously facilitated the return of many who were not persecuted refugees at all but sordid, repulsive proletarians—the lowest type of Russian Jews.

Among those repatriated Russians were Social Revolutionists, Mensheviki and party anarchists, but I doubt not that the bulk of them were Social Democrats of the Bolshevik wing. They scattered to their old homes and almost at once began to be active in the nearest *Sovyet*. Here by their prestige as forefathers and sufferers for the people's cause and by the experience many of them had gained abroad they quickly gained influence and began to mold opinion in the radical direction.

Taking advantage of a thirst for listening to public discussions which would put to shame even the ancient Athenians, they plied the people with arguments that the Kerensky government was *bourgeois* and could not be trusted; that now was the time to put an end forever to capitalistic exploitation and that the *Sovyets* ought to make themselves masters of Russia. So in gatherings of soldiers and workmen a struggle went on between the idea that the *Sovyets* were there to watch over and protect the revolution and hold the Provisional Government to its duty till the Constitutional Assembly met, and the idea of "all power to the *Sovyets*" which implied that the proletariat should disfranchise the propertied, just as over much of the world the propertied disfranchise them.

In September I found the working class doubtful and hesitating. But developments were aiding the propaganda of the Bolsheviks. Early in the Revolution it was widely understood that the treaties between Russia and the Allies should be published before the soldiers should do any more fighting, in order that the people should know just what they had been let in for. The July offensive was deeply resented as a breach of faith. Kerensky begged the Allies to define

Address, LAKE BREEZE MOTOR  
545 W. Monroe St. Chicago

their war aims, but in vain. I believe if the declarations made by President Wilson and Lloyd George in January had been made last July, Russia might have been kept in the war. Then there were fears lest the Revolution be wrested from the people before the great reforms they looked for were realized. The landed proprietors were organizing. Tchernoff's attempts as Minister of Agriculture to get land reform under way were blocked by his colleagues in the Cabinet. A Minister of Labor attempted to dissolve the factory committees which the workmen looked upon as guardians of their rights. The shelving of all reforms till the Constitutional Assembly should meet, the postponement and postponement of the date of elections for this Assembly, and the fear lest after this Assembly met, a number of years would pass ere the constitution would be hammered out and go into effect, caused impatience to mount ever higher. The Korniloff affair widely shook faith in Kerensky and when in October the new Coalition Government was found to contain four big capitalists and this government refused to acknowledge its responsibility to the pre-parliament created for the very purpose of watching over the Government, the Bolsheviki walked out, cried "To your tents O Israel," and prepared to fight for *Sovyet* Government. The Bolshevik workmen in the factories got arms. The regiments were lined up by means of the Soldiers' *Sovyets* and in November the struggle broke out in various centers.

A hundred times I have been asked, "Was there no strong man in Russia who could have prevented the *debâcle*?" The question shows how little Americans think in terms of impersonal social forces. One might as well expect a "strong man" to restrain an earthquake or a tidal wave. How could the desires of the peasants for more land, of the workmen (who received less than a third as much of their product as our workmen) for a better existence, of all for the ending of a war which meant nothing to them, be held back once the dam of Tzarism was broken? It was inevitable that they should move toward their speedy fulfilment. Perhaps quick action in satisfying the land hunger of the peasants, in democratizing the war aims of the Allies, in convening a constitutional assembly might have averted the proletarian dictatorship. But the holders of property and power in Russia and abroad would not yield and the social forces moved like a lava flood toward their goal. Most of the propertied Russians stigmatized the old régime as iniquitous, yet failed to draw the obvious conclusion that, if this were so, the distribution of wealth which grew up under this régime could possess little sanctity. Illogically they expected that a great revolution of political power could occur without bringing in its train any disturbance of the excessive concentration of ownership of the instruments of wealth production.

"How dare you to insult the Kaiser's six sons!" exclaimed Hans.

"I didn't insult them," replied Fritz.

"You did. You said they took after their father."—*Exchange*.

"Well, this cook has the record."

"How so?"

"She broke something before she started in."

"What on earth was that?"

"Her promise to come." — *London Opinion*.

Sanford Bennett at 50

Sanford Bennett at 78

## An Old Man at Fifty A Young Man at Seventy

The Remarkable Story of Sanford Bennett, a San Francisco Business Man, Who Has Solved the Problem of Prolonging Youth

By V. O. SCHWAB

There is no longer any occasion to go hunting for the Spring of Eternal Youth. What Ponce de Leon failed to discover in his world-famous mission, ages ago, has been brought to light right here in staid, prosaic America by Sanford Bennett, a San Francisco business man. He can prove it, too, right in his own person. At 50 he was partially bald. Today he has a thick head of hair, although it is white. At 50 his eyes were weak. Today they are as strong as when he was a child. At 50 he was a worn-out, broken-down, decrepit old man. Today he is in perfect health, a good deal of an athlete, and as young as the average man of 35.

All this he has accomplished by some very simple and gentle exercises which he practices for about ten minutes before arising in the morning. Yes, many of the exercises are taken in bed, peculiar as this may seem. As Mr. Bennett explains, his case was not one of preserving health, but one of rejuvenating a weak, middle-aged body into a robust old one, and he says what he has accomplished anyone can accomplish by the application of the same methods, and so it would seem. All of which puts the Dr. Osler theory to shame. There isn't room in this article to go into a lengthy description of Mr. Bennett's methods for the restoration of youth and the prevention of old age. All of this he tells himself in a book which he has written, entitled "Old Age—Its Cause and Prevention." This book is a complete history of himself and his experiences, and contains complete instructions for those who wish to put his health and youth-building methods to their own use. It is a book that every man and woman who is desirous of remaining young after passing the fiftieth, sixtieth, seventieth, and, as Mr. Bennett firmly believes, the one hundredth milestone of life, should read.

### Partial Contents

Some idea of the field covered by the author may be gained by the following topics: Old Age, Its Cause; How to Prevent It; The Will in Exercising; Exercising in Bed—shown by fifteen pages of illustration; Sun, Fresh Air and Deep Breathing for Lung Development; The Secret of Good Digestion; Dyspepsia; How I Strengthened My Eyes; The Liver; Internal Cleanliness—how it removes and prevents constipation and its many attendant ills; External Cleanliness; Rheumatism; Varicose Veins in the Legs; The Hair; The Obese Abdomen; The Rejuvenation of the Face, Throat and Neck; The Skin, and many other experience chapters of vital interest.

### Don't Send Any Money

"Old Age—Its Cause and Prevention," with its 400 pages, profusely illustrated and handsomely bound in cloth, contains as much material as many Courses of In-

struction selling for \$25 or more. But you can secure a copy of this book for only \$3. Before committing yourself in any way, however, the publisher will send you "Old Age—Its Cause and Prevention" on approval without deposit. Sanford Bennett's system, as fully described and illustrated in his book, increases nerve force and nerve energy, benefiting every organ of the body—the brain included—by keeping the vertebrae of the spinal column young, flexible, elastic, and in perfect alignment. If after examination in your own home you feel you can afford to be without youth and health, send the book back within five days and you will owe nothing. If you decide to keep it, send your check for \$3. There are no strings to this offer. No money is required in advance. Merely fill out and mail the coupon and by return post "Old Age—Its Cause and Prevention" will be sent to you at once.

### Mail Coupon

For having solved the problem of prolonging youth during life, the world owes Sanford Bennett a vote of thanks. Of course, there are those who will scoff at the idea, but the real wise men and women among those who hear of Sanford Bennett will most certainly investigate further and at least acquire a knowledge of his methods. This the publisher will allow you to do without cost or obligation, through his "send no money" offer. But it is advisable to mail the coupon today, because this unusual no risk offer is liable to be withdrawn any moment. Address: CHAS. H. DESGREY, Book Publisher, Dept. 46, 5084 Metropolitan Building, New York.

MAIL THIS TODAY—NO MONEY REQUIRED  
CHAS. H. DESGREY, Book Publisher,  
Dept. 46, 5084 Metropolitan Building, New York

Send me Sanford Bennett's Book—"Old Age—Its Cause and Prevention." I will either return the book within five days after receipt and owe you nothing, or will send \$3 in full payment.

## Federal Farm Loan Bonds

**For Investors—Large and Small**  
*These bonds should command your attention*

**T**HEY bear five per cent interest, payable semiannually, May and November, and are exempt from all taxation—Federal, State, Municipal and local. The income from them is also exempt. Issued in denominations of \$25, \$50, \$100, \$500 and \$1,000, in either coupon or registered form.

They are acceptable at par as security for all public deposits, and are legal investments under the laws of the United States and a majority of the States.

They are instrumentalities of the Government of the United States and protected from counterfeiting, the same as money.

Federal Farm Loan Bonds issued by the Federal Land Banks are secured, dollar for dollar, by the pledge of first mortgages on farm lands, cultivated by the owner, worth at least twice the amount of the mortgage. That is to say—\$100,000 of Farm Loan Bonds have behind them \$100,000 of mortgages which are first liens on at least \$200,000 of farm lands. In addition to this security, the prompt payment of principal and interest is guaranteed by the capital of the issuing Bank (\$900,000 to \$1,500,000) and the joint liability of all 12 Federal Land Banks for every Bond issued by any one of their number.

All appraisements are made by Federal appraisers, and each loan is approved by the Federal Farm Loan Board at Washington.

The financing of the farmer is a great national task. Through Federal Farm Loan Bonds it is done with profit to the investor and for the upbuilding of the agricultural, financial, commercial and industrial power of the Nation.

Buy Federal Farm Loan Bonds from any one of the Federal Land Banks, located respectively at:

Springfield, Mass.	Omaha, Neb.
Louisville, Ky.	Berkeley, Cal.
St. Paul, Minn.	Columbia, S. C.
Houston, Texas	St. Louis, Mo.
Baltimore, Md.	Wichita, Kan.
New Orleans, La.	Spokane, Wash.

Orders may be transmitted through any investment banker, or recognized broker, or through almost any National Bank, State Bank, Trust Company, or the

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

##### I. Patriotism and Loyalty.

A. SIMS'S CIRCUS. (A graphic article, worthy of careful study.) 1. Explain orally what circumstances led to the writing of the article. 2. Why is "Sims's Circus" a most appropriate title? 3. Give a clear explanation of the term "camouflaged flotilla." 4. Write a thoughtful composition in which you point out, and comment on, "the best traits of the Anglo-Saxon race." 5. Write an explanation that will emphasize the characteristics of soldiers or sailors that make them worthy of the praise: "To command you is an honor. To work with you is a pleasure." 6. Give a "Four Minute Speech" in which you show that the same praise could not be given to the German armies. 7. Write an original story telling of the experiences of a wireless operator with the United States destroyers. 8. Write an original story telling of the experiences of a passenger on a steamer attacked by a submarine. 9. Write a long reminiscence that you assume the skipper told to you. 10. Explain what is meant by "code books." 11. Show how the name of Edgar Allan Poe is connected with secret writing. 12. Write a character exposition of an American gunner of today. 13. Describe American gunners of the past as presented in Fenimore Cooper's "The Pilot" or "Wing and Wing." 14. Explain what is meant by "the convoy system." 15. Give an indignant account of German treatment of shipwrecked sailors. 16. Explain in full the sentence: "He's the modern Ishmael." 17. Read aloud some of the sea-descriptions given in the article. 18. Write an original story that you assume the commander of an Allied submarine told to you. 19. Write a letter purporting to come from a common sailor with the American destroyers. 20. Point out figures of speech in the article.

B. ORGANIZED LABOR COMES THRU. 1. Give a patriotic talk in which you show that President Wilson believes in "democracy, real rock-bottom democracy." 2. Show in what way Mr. Gompers has been a powerful patriotic force. 3. Write an expository composition telling why the United States has been troubled by so few strikes during the war. 4. Imagine that you are speaking before an audience of workmen. Give a spirited talk on the ways in which "organized labor has proved its right to take and hold a permanent place in our commonwealth." 5. Write an impassioned, poetic description of the picture that accompanies the article. 6. Explain the symbolism of the picture. 7. Name, and comment on, the English text books that contain symbolic writing.

C. HOW THE BOLSHIEVIKI GOT ON TOP. 1. Give a talk explaining the composition and methods of the Russian Soviet. 2. Make an outline for a composition on "Russian Political Parties During the War." 3. Write an explanation of the ways in which American political methods are superior to Russian methods.

D. ELECTION DOPE. 1. Write a paragraph on the topic sentence: "War has subordinated politics." 2. Prove, in definite, argumentative form, that "Woodrow Wilson is one of the greatest leaders America has ever known." 3. Write a thoughtful composition telling what qualities are necessary for "a recognized leader in world statesmanship." 4. Give a spirited patriotic talk on the theme: "Winning the war is the only thing worth wasting energy on till it is all over."

E. DEMOCRACY'S STRUGGLE FOR LIFE. 1. Give a Four Minute talk on the only means of showing that democracy is superior to autocracy.

##### II. The News of the Week.

1. With the aid of a blackboard map give an account of the military movements in the recent German drive. 2. Give a talk explaining what American sailors and soldiers are now doing in the Great War. 3. Point out evidence of unrest in Austria, and comment on its importance. 4. Tell what recent events have displayed the good spirit and patriotism of the American people. 5. Write an editorial comment on the success of the Red Cross drive. 6. Write explanatory items concerning the important names that appear in the news of the week.

##### III. Articles of General Interest.

A. BRITAIN'S NEW COMMERCIAL POLICY. 1. Prove the proposition: "Britain's new commercial policy is pleasing to America."

B. ACADEMIC SECLUSION. 1. Express the thought of the article in the form of an argumentative brief, aiming to prove a definite proposition.

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

##### I. Congress and the Coming Election—"Election Dope: A Luxury in Wartime," "More Taxes."

1. Why did the leaders of the House of Representatives want to put off framing a revenue bill till after the election? Why does the President insist that the work shall be done at once?
2. From the point of view of political expediency would it be better to frame a new revenue bill before or after the election?
3. In what sense is it true that the Democrats have all the advantages in the coming election?
4. "The Republicans can win if they make their fight on purely economic issues." What does this mean?

##### II. The Russian Revolution—"How the Bolshieviki Got on Top," "Help for Russia," "Bolshieviki and Anarchists."

1. "In 1905 . . . the revolution was in the hands of local soviets," etc. Why, then, did that revolution fail?
2. Explain the terms *proletariat* and *bourgeoisie* as they are used in this article. Distinguish between the Kadets, the Social Revolutionists and the Bolshieviki and indicate the part that each party has played in the Revolution.
3. ". . . the Duma . . . by no means shared the aspirations of the masses." Why not?
4. "I believe if the declarations made by President Wilson and Lloyd George in January had been made last July, Russia might have been kept in the war." What is the basis for this belief?
5. How long is the present government of Russia likely to last?

##### III. The War on Land—Story of the Week.

1. Write a brief summary of the military operations which began on May 27. Indicate on a map the gains and losses of each side.
2. Look up the history of previous operations in the sector between Soissons and Rheims. Why has the region of the Aisne River been the scene of so much fighting?
3. Why did the Germans shift their attack from Picardy and Flanders into the region of the Aisne?

##### IV. The War at Sea—"Sims's Circus."

1. Describe as fully as you can the fighting methods and the accomplishments of the American flotilla.
2. Compare the work of the present convoy flotilla with the work of the blockading squadrons in former wars.

##### V. Organized Labor and the War—"Organized Labor Comes Thru."

1. ". . . they [these lesser wars] are still on, but they have been greatly tempered by the common menace from without." Give some evidences of this fact.
2. "President Wilson . . . really believed in democracy." Show that the President's labor policy justifies this statement.
3. Mention one or more cases in which the Administration has entered into an agreement with organized labor and show how this has affected general labor conditions in this country.

##### VI. The New Protectionism—"Britain's New Commercial Policy."

1. ". . . these two commercial combinations are taking visible shape." What are the two combinations referred to and what causes are bringing them about?
2. What is meant by (a) Germany's "bread peace," (b) her "petroleum peace," (c) her new amalgamation with Austria and Turkey?
3. "Hitherto the word 'protection' has been tabooed in Great Britain." What is the historical reason for this?
4. Explain the terms (a) "dumping," (b) "sweated" goods, (c) "pivotal" or "key" industries, (d) preferential treatment.
5. "Even more radical . . . is the break with the English tradition of individualistic production and government control." Discuss this statement from (a) the historical point of view, (b) the economic point of view.
6. Is there any evidence that the United States is following Great Britain in its new commercial policy?

# How I Improved My Memory In One Evening

The Amazing Experience of Victor Jones

"Of course I place you! Mr. Addison Sims of Seattle.

"If I remember correctly—and I do remember correctly—Mr. Burroughs, the lumberman, introduced me to you at the luncheon of the Seattle Rotary Club three years ago in May. This is a pleasure indeed! I haven't laid eyes on you since that day. How is the grain business? And how did that amalgamation work out?"

The assurance of this speaker—in the crowded corridor of the Hotel McAlpin—compelled me to turn and look at him, though I must say it is not my usual habit to "listen in" even in a hotel lobby.

"He is David M. Roth, the most famous memory expert in the United States," said my friend Kennedy, answering my question before I could get it out. "He will show you a lot more wonderful things than that, before the evening is over."

And he did.

As we went into the banquet room the toastmaster was introducing a long line of the guests to Mr. Roth. I got in line and when it came my turn, Mr. Roth asked, "What are your initials, Mr. Jones, and your business connection and telephone number?" Why he asked this, I learned later, when he picked out from the crowd the 60 men he had met two hours before and called each by name without a mistake. What is more, he named each man's business and telephone number, for good measure.

I won't tell you all the other amazing things this man did except to tell how he called back, without a minute's hesitation, long lists of numbers, bank clearings, prices, lot numbers, parcel post rates and anything else the guests gave him in rapid order.

\*\*\*\*\*

When I met Mr. Roth again—which you may be sure I did the first chance I got—he rather bowled me over by saying, in his quiet, modest way:

"There is nothing miraculous about my remembering anything I want to remember, whether it be names, faces, figures, facts or something I have read in a magazine.

"You can do this just as easily as I do. Anyone with an average mind can learn quickly to do exactly the same things which seem so miraculous when I do them.

"My own memory," continued Mr. Roth, "was originally very faulty. Yes it was—

a really poor memory. On meeting a man I would lose his name in thirty seconds, while now there are probably 10,000 men and women in the United States, many of whom I have met but once, whose names I can call instantly on meeting them."

"That is all right for you, Mr. Roth," I interrupted, "you have given years to it. But how about me?"

"Mr. Jones," he replied, "I can teach you the secret of a good memory in one evening. This is not a guess, because I have done it with thousands of pupils. In the first of seven simple lessons which I have prepared for home study, I show you the basic principle of my whole system and you will find it—not hard work as you might fear—but just like playing a fascinating game. I will prove it to you."

He didn't have to prove it. His Course did; I got it the very next day from his publishers, the Independent Corporation.

When I tackled the first lesson, I suppose I was the most surprised man in forty-eight states to find that I had learned—in about one hour—how to remember a list of one hundred words so that I could call them off forward and back without a single mistake.

That first lesson stuck. And so did the other six.

Read this letter from C. Louis Allen, who at 32 years became president of a million dollar corporation, the Pyrene Manufacturing Company of New York, makers of the famous fire extinguisher:

"Now that the Roth Memory Course is finished, I want to tell you how much I have enjoyed the study of this most fascinating subject. Usually these courses involve a great deal of drudgery, but this has been nothing but pure pleasure all the way through. I have derived much benefit from taking the course of instructions and feel that I shall continue to strengthen my memory. That is the best part of it. I shall be glad of an opportunity to recommend your work to my friends."

Mr. Allen didn't put it a bit too strong.

The Roth Course is priceless! I can absolutely count on my memory now. I can call the name of most any man I have met before—and I am getting better all the time. I can remember any figures I wish to remember. Telephone numbers come to mind instantly, once I have filed them by Mr. Roth's easy method. Street addresses are just as easy.

The old fear of forgetting (you know what that is) has vanished. I used to be "scared stiff" on my feet—because I wasn't sure. I couldn't remember what I wanted to say.

Now I am sure of myself, and confident, and "easy as an old shoe" when I get on my feet at the club, or at a banquet, or in a business meeting, or in any social gathering.

Perhaps the most enjoyable part of it all is that I have become a good conversationalist—and I used to be as silent as a sphinx when I got into a crowd of people who knew things.

Now I can call up like a flash of lightning most any fact I want right at the instant I need it most. I used to think a "hair trigger" memory belonged only to the prodigy and genius. Now I see that every

man of us has that kind of a memory if he only knows how to make it work right.

I tell you it is a wonderful thing, after groping around in the dark for so many years to be able to switch the big searchlight on your mind and see instantly everything you want to remember.

This Roth Course will do wonders in your office.

Since we took it up you never hear anyone in our office say "I guess" or "I think it was about so much" or "I forget that right now" or "I can't remember" or "I must look up his name." Now they are right there with the answer—like a shot.

Have you ever heard of "Multigraph" Smith? Real name H. Q. Smith, Division Manager of the Multigraph Sales Company, Ltd., in Montreal. Here is just a bit from a letter of his that I saw last week:

"Here is the whole thing in a nutshell: Mr. Roth has a most remarkable Memory Course. It is simple, and easy as falling off a log. Yet with one hour a day of practice, anyone—I don't care who he is—can improve his Memory 100% in a week and 1,000% in six months."

My advice to you is don't wait another minute. Send to Independent Corporation for Mr. Roth's amazing course and see what a wonderful memory you have got. Your dividends in increased earning power will be enormous.

VICTOR JONES

## Send No Money

So confident is the Independent Corporation, the publishers of the Roth Memory Course, that once you have an opportunity to see in your own home how easy it is to double, yes, triple your memory power in a few short hours, that they are willing to send the course on free examination.

Don't send any money. Merely mail the coupon or write a letter and the complete course will be sent, all charges prepaid, at once. If you are not entirely satisfied send it back any time within five days after you receive it and you will owe nothing.

On the other hand, if you are as pleased as are the thousands of other men and women who have used the course send only \$5 in full payment. You take no risk and you have everything to gain, so mail the coupon now before this remarkable offer is withdrawn.

### FREE EXAMINATION COUPON

**Independent Corporation**  
Division of Business Education, 119 W. 40th St., New York

Please send me the Roth Memory Course of seven lessons. I will either remail the course to you within five days after its receipt or send you \$5.

## REMARKABLE REMARKS

**MAX. HARDEN**—Force, the fist—that is everything.

**P. B. NOYES**—The success of the war is likely to depend on the supply of coal.

**PREMIER CLEMENCEAU**—We shall win the war in the last quarter of an hour.

**EDWARD EARLE PURINTON**—You don't need a gun to be a fighter in this war.

**PROFESSOR BLUME**—Germany will become the schoolmaster of all the world.

**ANNE MORGAN**—We should think twice before sending our old clothes to France.

**A. I. R. WYLIE**—I believe men marry in order to have a good excuse always on hand.

**SIDNEY A. REEVE**—New York City is housing some 500 new inhabitants each night.

**F. G. YOUNG**—World-encircling democracy is the appealing challenge of humanity today.

**GENERAL PERSHING**—I believe that the personnel of the army has never been equaled.

**PRESIDENT WILSON**—There must be not organized rivalries, but an organized common peace.

**THE KAISER**—I have dreamed a dream of German world empire and my mailed fist shall succeed.

**LORD FREDERICK HAMILTON**—It's a lone-some washing that comes home without a man's shirt in it.

**DUKE ERNST DUNTHER**—Wilson has succumbed to plutocratic influences in their most frightful form.

**LOUIS ANNIN AMES**—I believe that Congress should be loyal not only first and last, but all the time.

**PROF. GILBERT MURRAY**—America is a nation built up by refugees of all creeds and types, and sprung from all the races of Europe.

**HON. MEYER LONDON**—I believe that we can out of this very fire, out of this very danger which faces the world, make a better humanity.

**OTTO H. KAHN**—There is every expectation that we shall emerge from the war in a position of commanding economic potency and prestige.

**RUPERT HUGHES**—A book is that most unusual kind of friend who talks only on request and can be made to shut up without hurting his feelings.

**SAMUEL GOMPERS**—There is a group of faddists in this country who advocate ultra aims and who are intolerant of and hostile to the bona fide practical and constructive labor movement.

**RALPH M. EASLEY**—In the midst of all this hullabaloo and camouflage sentimentalism for revolutionary changes put out by the American Bolsheviks, there emerges the Magna Charta of our national industries.

**GEORGE REBEC**—That the different peoples must be allowed to decide their own allegiance has come to be almost the central touchstone of liberalism in connection with the present world struggle.

**WILLIAM ENGLISH WALLING**—Economic interdependence among nations, great and

**PRESIDENT LOWELL**—Civilization as we know it has reached a point where it must preclude war or perish by war.

**JOHN GALSWORTHY**—America, after the war, is going to be more emphatically than ever in material things the most important and powerful nation of the earth.

**RUDYARD KIPLING**—Nothing—nothing we may have to endure now will weigh one featherweight compared with what we shall most certainly have to suffer if for any cause we fail of victory.

## SOME NEW VERSE

Springtime brings with it not only nature poems and love poems, but a third variety—child poems. In the last few months many excellent ones have appeared in magazines and newspapers. From among them comes the following, reprinted from *Scribner's*:

### THE CHILD IN THE HOUSE.

By Madison Cawein.

When from the tower, like some big flower,  
The bell drops petals of the hour,  
That says "It's getting late";  
For nothing else on earth I care,  
But wash my face and comb my hair,  
And hurry out to meet him there,  
My father at the gate.

It's—oh, how slow the hours go!

How hard it is to wait!  
Till, drawing near, his steps I hear,  
And up he grabs me, lifts me clear  
Above the garden gate.

When curved and white, a bugle bright,  
The moon makes magic of the night,  
A fairy trumpet blowing;  
To me this seems the very best—  
To kiss good night and be undrest,  
And held against my mother's breast,  
Like snow outside that's blowing.

It's—oh, how fast the time goes past!  
How quick the moments leap!  
Till mother lays me down and sings  
A song, and, dreaming many things,  
She leaves me fast asleep.

From the New York *Tribune* we have taken:

### ETHICS OF THE NURSERY.

By Sarah Noble Ives.

My mother says the nicest thing  
In all the world to do  
Is to give up the things you like,  
When others want them, too.  
She says when other folks enjoy  
The things that you love best,  
It's wonderful the joy and peace  
That crinkle in your breast.

So I let Little Brother have  
My dear old rockinghorse;  
I thought when he got tired, he  
Would give it back, of course.  
But no, sirree! He kept it, and  
He had it put away  
On his side of the nursery,  
To use again next day.

The next thing that he wanted was  
My little Teddy Bear.  
(The head was coming loose, and so  
I really didn't care.)  
But after that he asked me for  
My fav'rite picture book;  
And then—you never would believe  
The precious things he took.

Well, last he asked me to give up  
The thing I loved the best—  
My fine, new air gun—so, of course,  
It went with all the rest.  
I thought: "He'll soon be scared enough;  
He'll surely give back that!"  
He shot it off, and never winked,  
And almost hit the cat.

My things were gone, and still I felt  
No peace, nor any joys—  
So I tied Little Brother up,  
And took back all my toys.  
I left him yelling, while I went  
And tip-toed into mother;  
And told her she could have "for keeps"  
My selfish Little Brother.

# NEW KIND OF WAR MAP

**WAR MAP**  
OF THE WESTERN FRONT  
SPECIALLY INDICATING SCENES  
WHERE AMERICAN TROOPS ARE ENGAGED

**THE AMERICANS IN FRANCE**

Follow every move of our boys "over there." They are now in the "heat of it"—holding important sections on the Western Front.

## There Fight Our Boys!

There—right *there!* And in this spot too! Put your finger on their battle-ground. Isn't it great to have an "American" map of the Western Front! A map that shows just where "we" are "over there." A map that will take you in two seconds from the news headlines to the spot where "it happened." That's the kind of a guide you now have in this new War Map of the Western Front, specially indicating where American troops are engaged! A wonderful map in colors, showing the present fighting zones in detail and over 5,000 villages, towns and hamlets.

### Also a Military Map of the U. S. A.

This new kind of a War Map is really two maps in one. On the one side you have the map of the Western Front, on the other side you have a United States Military Map showing—

Posts and Stations of Army	Naval Training Stations
National Army Cantonments	Marine Barracks
National Guard Camps	Aero Training Stations

**MAIL THE COUPON** A limited number of this new War Map will be offered at the special introductory price of only \$1. There is a great demand for this map and we do not know how long the \$1 price will hold. An increase in price may come any day—so please order promptly to secure the \$1 price. Fill out and mail the coupon or just pin a dollar bill to a letter. If you are not more than delighted with this splendid new map, just return it to us, and your \$1 will be promptly refunded. Order today—**NOW!** Clip the coupon before you forget.

## Independent Corporation

119 W. 40th St., New York City

### Special Features

Map measures 27½ x 38 inches when spread. Folds up into heavy manilla cover, 5¼ x 10¼ inches.

Cover shows flags of the sixteen Allied Nations in actual colors.

Map of Western Front printed in colors. All names printed to be easily read.

Military Map of the U. S. A. printed in black.

A wonderful two-in-one Map. The more you use it, the more you will prize it.

Around the margin of the map is printed the various insignia showing the rank of commissioned and non-commissioned officers, and the different branches of the service. Be able to tell a Lieutenant-Colonel or a Major when you see one. Be able to tell the branch of service of every soldier and Marine you see—a wagoner from a medical man, a coast artilleryman from a cavalryman, etc. You can learn it all from this new map.

### SPECIAL \$1 COUPON INDEPENDENT CORPORATION

119 W. 40th St., N. Y. City

Enclosed is \$1 for which you will send me the new U. S. A. War Map of the Western Front.

## ITALY AND AMERICA

By Cable from the Editor of The Independent

THE third anniversary of Italy's entrance into the Great War was celebrated at Rome on May 24 by a pageant as imposing and significant as any that city has seen in the twenty-five centuries of its existence. All the nations now allied with Italy were represented in the procession by troops or delegations. The veteran Garibaldians who freed Italy marched with a detachment of the Czecho-Slovak army just organized to free Bohemia. The flags of Udine, Venice, Vicenza and other north Italian cities captured or threatened by the Austrian invaders were received with cheers by the people. As the parade passed the Palazzo Venezia, formerly the property of the Austrian Government and now used as a hospital, the windows were filled with wounded men, the victims of Austrian cruelty. From the steps of the ancient capitol the Mayor of Rome, Prince Colonna, addressed the throng and paid a tribute to America and President Wilson.

Several hundred thousand people participated in the demonstration. The vast auditorium of the Augusteum was packed to capacity to hear the speeches of the delegates of the Allied nations. There were present the royal family, the diplomatic corps, cabinet officers, senators, deputies and military and naval officers. The Prince of Wales spoke for England, M. Jules Simon, colonial secretary, for France, Premier Orlando for Italy and Ambassador Thomas Nelson Page for the United States. In my address on America's war aims I spoke particularly of our determination to make the world safe for democracy and to establish a League of Nations as the only security for the peace of the world. In conclusion I read President Wilson's cabled message of greeting to Italy on her war anniversary. This, like every other mention of the name of the President, was received with enthusiastic applause.

I have had the opportunity of conversing with the Premier, Foreign Secretary and other notables and find that in this crisis party divisions are forgotten and all Italy is united for the winning of the war.

Later I visited the Adriatic front where the Austrians press close upon Venice and thru the Trentino front where the mountain barrier has been held for three years against the invader. Even the pictures that you have seen in print and on the screen cannot convey an adequate idea of the grandeur and difficulty of this theater of the war. The morale of the Italian troops seems excellent and they have been reinforced by French and British regiments.

At the field headquarters of the Italian army I had an audience with King Vittorio Emanuele. He is very democratic and gracious in his manner. I was received without ceremony and for three quarters of an hour we had an informal conversation on the questions of the hour and of the future. The King spoke in terms of the highest appreciation of America's great efforts in the war. The participation of the United States would, he said, have a decided effect upon Germany. He expressed the hope that American troops would soon be seen on the Italian front not merely for their material aid, but also as a proof of the unity of the two countries in feeling and aims.

HAMILTON HOLT.

## CHILD LABOR AND THE CONSTITUTION

THE decision of the Supreme Court of the United States that the Federal child labor law is unconstitutional must be a shock and a disappointment to every one who cares for the well-being of children and the future welfare of the race. It is the one serious backward step in the great movement for the protection of the nation's children which has made such splendid progress in the past fourteen years.

We do not question the sincerity or the legal ability and acumen of the five members of the Supreme Court who found themselves constrained to declare the law at variance with the Constitution. But four other members of the court, of equal sincerity and no less ability, have declared by their dissenting opinion that the five have made a mistake. We trust, therefore, that we shall not be adjudged guilty of lack of respect for the Supreme Court of the United States if we express our conviction that the four judges are right and the five are wrong.

The majority of the court declare that the production of goods within a state is a purely local matter, to the control or regulation of which the Federal power does not extend. They express the fear that, if the precedent involved in the Federal child labor law were to be upheld, our system of government would be practically destroyed.

In this view of the case Mr. Justice Holmes does not concur. In a brilliant and weighty dissenting opinion he makes a convincing case for the directly opposite view. He admits, as every one must, the exclusive control of the

states over methods of production. But he lays equal emphasis upon the power of the Federal Government over interstate commerce. He points out that the constitutionality or unconstitutionality of a law such as the one under consideration is to be determined by its *immediate* effect upon the rights and powers of the states and not by some *indirect* effect that the law may have. Of course Congress has no right to exercise direct control over "a purely local matter," as the majority rightly declares the production of goods to be. But it is quite a different matter to maintain that Congress may not prohibit certain things in interstate commerce because of the indirect effect which the prohibition may have upon production within the states.

Nevertheless, it does not practically matter now whether the five judges or the four are right. The decision of the majority makes the law.

But this is by no means the end of the movement for the use of the power of the Federal Government to prevent the premature putting to labor of the children of the nation. Another attempt will be made to enact a Federal law which shall pass the constitutional test. We cannot believe that some proper legislative form cannot be found through which this righteous purpose can be achieved. If it were conceivable that such would really be the case, it would mean that the Constitution of the United States is a barrier against the humanitarian impulses of the people whose creation it is and a bulwark of injustice and oppression. That is unthinkable.

## IMPRACTICAL POLITICS

THOSE who scribble of *Weltpolitik* are accustomed to divide statesmen into two general classes: the Realist, who pursues no goal but immediate national interest and is not hampered by any ill-timed scruples in the choice of methods to attain his aims, and the Idealist, a sentimental bungler filled with phrases and dogmas, who has no business in the realms of Higher Politics. From another angle the contrast is between the professional and the amateur in the game of diplomacy. The Idealist statesman enters the Concert of Europe as a novice and takes his seat among the hard-eyed, tight-lipped Realists who have played at diplomacy for years and know all the traditions and tricks of that dangerous form of gambling. He shows his hand too openly, he hesitates to take unfair advantage of his opponents, and he sacrifices his own game needlessly to support the play of his more or less treacherous partners. As the inevitable result of such lack of skill he leaves the table a sadder and wiser man, and in doing so leaves behind him the forfeited power, prosperity and prestige of his country.

The capital error of those who argue thus is that they forget that a single game of diplomacy is but a part of the much greater and very much longer game of constructive statecraft. In this greater game the unscrupulous may sometimes succeed, but the merely cunning never. A certain consistency, magnanimity and breadth of vision are essential to the statesman who would write on granite instead of quicksand. The cleverness which scores a cheap and premature victory is often the surest omen of ultimate ruin. Every Idealist, unless he is also something of a master of practical politics, fails from the point of view of the next decade; but every Realist, unless he cherishes some purpose which is to him ultimate and sacred, fails from the point of view of the next century. The French Revolutionists of 1789 were visionary and doctrinaire; their constitutions and governments failed disastrously. Napoleon was a very "practical" ruler with quite worldly aims, and he conquered Europe. But today who is the more influential? No vestige of Napo-

leon's Empire remains; whereas the democratic and republican ideals of the Revolution are embodied in the political structure of modern France and have profoundly modified every constitution in the world. The Abolitionists came and went as a small and fanatical minority in the generation before the Civil War. The great compromisers, such as Clay, Webster and Douglas, won votes, filled offices and dominated the political life of America. But the total abolition of slavery was the only solution of the question which proved final.

The contrast between the Idealist and the Realist has never been more sharply emphasized than in the careers of the two leading British statesmen of the last half of the nineteenth century. Gladstone was commended even by his political opponents for his skill in finance and the success of his domestic reforms, but they insisted that he knew nothing about the realities of foreign politics and was moved only by unregulated sympathies when he championed Home Rule for Ireland, the unification of Italy and the expulsion of the Turk from the Balkan peninsula. Disraeli's foreign policy, on the other hand, was agreed by all Europe to be his greatest achievement. Scorning the nationalist sympathies of internationalist aspirations of the English Liberals, he passed by on the other side when the cry for liberation came from Italy, Greece, Bulgaria, or Ireland. He devoted himself wholly to the aggrandizement of the British Empire and the maintenance of the "Balance of Power" in Europe. In pursuit of this latter aim he supported Turkey against her oppressed subjects and arranged the nefarious "peace with honor" at the Congress of Berlin.

Well, who seems the wiser in the light of the twentieth century? If the prudent and practical Disraeli had wholly had his way the Italian peninsula would still be a hodge-podge of small despotic states under the direct rule or indirect control of Austria. Turkey would still extend west to the Adriatic, and Greece, as well as Bulgaria, would be an enemy of the Entente Allies. All the Irish Nationalists would follow the banner of the Sinn Fein as their only hope of

Home Rule. On the other hand, if the idealistic Gladstone had wholly had his way this war might never have arisen, or have ended long ago in complete victory for the Allies. Turkey would have been confined to Asia Minor, and all the Balkan States, united in a common league, would be warm friends of England. Bulgaria, with her national rights satisfied, would not have had the pretext for joining Germany which she found in the present war. The Irish question would have been removed from British politics a generation ago and not now arise at an untimely hour to perplex the councils of the British Empire.

A question often debated is whether international alliances should be based on sympathy or interest. In practice it is usually found that alliances which are not based on some underlying principle are unreliable in the hour of greatest need. The British-French Entente was a good example of the international "love match." The two nations were alike in their democracy, in their liberalism, in their responsibilities as the two leading colonial powers. Moreover, after centuries of conflict and misunderstanding, the two peoples had gradually come to respect and appreciate each other. This alliance has had the happiest results. It is hardly too much to say that without it both nations would have been destroyed by Germany.

Very different are the international "marriages of convenience," where the prestige of the bridegroom or the dowry of the bride is the determining factor. Such was the unnatural alliance of democratic, republican, industrial France with the old Russia of the Czars, despotic, superstitious, illiterate, backward in material civilization and in every respect a contrast to France. France thought that the might of Russia would save her from another invasion by Germany and prevent another war in western Europe. On the contrary, Germany used the alliance as a pretext for dragging France into a war which began in eastern Europe on Balkan questions which were vital to Russia, but concerned France only remotely. Still worse are the international matches which are accompanied not even by indifference, but by active dislike. France and Russia were strangers; Austria and Italy were enemies at heart. What wonder that Italy gladly seized the event of war to repudiate the unnatural alliance with her ancient oppressor and present rival for the mastery of the Adriatic?

The moral for Americans is that our diplomacy should be based on national principle as well as on immediate national interest; that we should not be ashamed of the candor and idealism of Jefferson, Lincoln, Roosevelt and Wilson, in spite of the cynical gibes of Mr. Worldly Wiseman and his friends at our "shirtsleeve diplomacy"; that we should only conclude such alliances as are also friendships; that we should think of the effect of our public acts upon the position of the United States in the world of the year 2000 and realize that history will not end by the next Presidential election or the conclusion of the present war. Perhaps the subtlest stroke of irony in the whole Bible is that tremendous text which says, "for the children of this world are in their generation wiser than the children of light." In *their* generation, yes; but in the perspective of the centuries what fools they are!

## FLAGS AND GAMES

WHEN the authorities of Germany or Austria-Hungary are engaged in their favorite occupation of repressing nationalist movements among their Slavic subjects, one of the agencies of sedition to which they direct their attention is the athletic club. From the Baltic to the Adriatic the *sokol*, or gymnastic association, is everywhere the nursery of nascent nationalism. At first sight it seems that patriotism has never assumed a more skillful disguise than this. A political party, a literary society, a labor union, a land association, a secret fraternity, or even a church might easily afford camouflage for a revolutionary

propaganda, but what could be more harmless than dumbbells and running tracks?

Yet this strange alliance of the battle flag and the athletic pennant is no invention of the Slavs. One of the greatest factors in the mighty revival of national spirit in Germany which marked the course of the nineteenth century was the *Turnverein*. Like everything else in Germany, this result was not accidental, but deliberately calculated. "Turnvater Jahn," as the great founder of the gymnastic movement was affectionately called, worked avowedly to build patriotism on the basis of sturdy manhood, believing that only a virile race could make a virile nation. He is ranked most deservedly with Frederick, Blücher, Bismarck, Moltke and the other architects of modern Germany, and in nobility of personal character he towers above them all.

Other nations, of a more careless philosophy and a happier temperament than the harsh Teuton or the oppressed Slav, have expressed themselves in sports rather than in routine exercise. We cannot come closer to a definition of an ancient Greek than to say that he was a person who attended the Olympic games.

This nationalization of sport is equally true of the modern nations of the west. You will find few communities in any corner of the earth where a strong sentiment of British patriotism exists and yet no attempt has been made to start a cricket club. And is not the true ethnic border between the United States and Mexico the line where baseball leaves off and the bull fight begins? If the symbolism of flags were derived from existing national institutions rather than from religious or heraldic tradition, Scotland might well float a banner emblazoned with crost golf clubs on a field vert dotted with divots. Norway might rejoice in a design with crost skis on a white field. There may be nations without a common language, without a common religion, without native songs and legends, even without a national style of cookery; but it is open to question if a true nationality can exist without a favorite sport.

ANOTHER SUCH VICTORY AND WE ARE LOST

# THE STORY OF THE WEEK

## The Battle for Paris

The German drive starting on May 27 from the Ailette advanced straight south till it reached the Marne, a distance of thirty miles in five days. This beats the record that the Germans made on the Somme last March, thirty-four miles in seven days. On the fifth day, when the headlines of our papers spoke of the drive as "checked" or "slackening," the map showed a movement from Fère-en-Tardenois nearly to Château Thierry, a distance of ten miles, which is considered as a fair day's march for an army in peace time. It has been regarded as settled by the experiences of the past three years that an offensive can be driven to a depth about equal to half its original front, but in this case the depth of the German salient is greater than its base. General Bridges, the head of the British Military Mission to the United States, surmizes that the Germans themselves did not anticipate such a swift and easy advance as they have made.

Arrived on the Marne, the Germans extended their front along the north bank of the river for a distance of fifteen miles from Verneuil on the east to Château Thierry on the west. They made no attempt to cross the river in force, but instead turned toward the west. After taking the old town of Château Thierry, they endeavored to move on down the Marne as well as the Ourcq River toward Paris. The French journals, now regarding the capital as the German objective, call it "the battle for Paris."

In this westward drive the Germans made their usual daily gain of five miles in the first day, but by this time Foch's reserves began to come up and German progress toward Paris was checked. At several points on the western side of the salient between Soissons and Château Thierry the French regained villages by their counter-attacks. Two American contingents are reported to be stationed near the Ourcq River in this sector.

North of Soissons also the Germans have been thwarted in their westward movement.

## How the Drive Began

We are now beginning to get a little light upon the reasons for the Allied reverse. As in the former offensives of this spring the Germans adopted the new tactics devised by General von Hutier, which are discussed on another page of this issue. It is said that several of the same divisions employed by Hutier on the Somme were transferred to the Aisne for the use of the Crown Prince in this new drive.

The Hutier method was especially favored by the facts that the forests about Laon afforded concealment for large bodies of troops and that the Allied front was weakly held. The French occupied most of the line from the Soissons side, but the defense of the other end northwest of Reims was in charge of three British divisions, composed in part of raw recruits, which had been hardly handled in the Somme fighting and had been sent to Craonne to recuperate, as this was supposed to be a restful sector. The Germans were

careful not to disturb this illusion. They indulged in no sniping or bombardment. Their big guns, as they were brought up to the front by night, were allowed only a few rare shots to register their aims. The troops were forwarded by long forced marches during the last few nights. The German forces at the beginning numbered about sixteen divisions, including some of their choice shock troops. During the week of active operations the number of troops was raised to forty divisions, or more than half a million men.

The Germans also brought into action a hundred of their new tanks. Four of these were captured near Reims by a joint counter-attack of French and British, and they were found to differ considerably in construction from the British type. They are divided into three compartments. The middle one contains two 100 horse power engines of the Daimler-Mercedes six-cylinder model, run by two drivers and provided with 200 quarts of gasoline. The front compartment is ten feet long and is armed with a machine gun on each side and a two-inch gun in front. The rear chamber is somewhat shorter and carries a machine gun on each side and two in the rear. Overhead is a turret sheltering the pilot.

The Allies received warning of the impending attack in time to bring their forces to the front, but not to get reinforcements. At one o'clock on the morning of May 27 the Germans began the attack with a terrific bombardment, alternating high explosives with gas shells. The infantry in their charge were accompanied by tanks and by

## THE STORY OF THE BRITISH EXPLOITS AT ZEEBRUGGE

This birdseye sketch of Zeebrugge harbor and the Mole shows just how the British ships proceeded in their raid last April to blow away part of the railway viaduct and block the channel for U-boats. The port was shelled by guns in Flanders and by monitors distracting the enemy's attention from warships and barges which crept into the channel, destroyed part of the Mole and blocked the entrance to the canal with concrete

Kirby in New York World

## SHARK-HUNTING

swarms of aeroplanes flying low and firing machine guns. The British and French held their positions along the bluffs of the Chemin des Dames until they were overpowered and then fell back upon the Aisne. But the enemy had already broken thru and reached the bridges before all the retiring troops could cross. Some swam the river or crost in boats, but 25,000 were taken prisoner.

## Americans Hold the Marne

One of the chief objectives of the Germans in their southern drive was to reach the railroad which runs along the south bank of the Marne and connects the capital with Chalons and Verdun. The Marne here is deep and runs between high banks, but is bridged at Château Thierry. This ancient stronghold, which gets its name from the castle built in 720 by Charles Martel for King Thierry or Theuderich IV, was captured by the English in 1421 and by Charles V in 1544. It was here in 1814 that Napoleon beat the allied Russian and Prussian forces.

To defend this strategic point a body of French colonial troops was rushed into that part of Château Thierry which lies on the northern bank, while an American machine gun detachment was brought by riding all night in motor trucks to the southern part of the town to hold the big stone bridge connecting the two. The Germans had already gained an entrance on the north and were making their way toward the bridge, but the French colonials drove them out of the town. On the following night, June 1, the Germans renewed their attack, using smoke bombs to conceal their movements, and shelling the southern side, where the Americans were stationed. But our gunners held their ground and protected the approaches to the bridge until all the French had come across. The Germans followed, but then the bridge was blown up, killing many of those who were on it, while those who had crost were captured. Now while the Germans nominally hold the part of Château Thierry north of the river, it is actually untenable because of the American fire from the southern side. American machine gunners also frustrated an attempt of the Germans to cross the

Marne at Jaulgonne, east of Château Thierry. All the Germans who succeeded in getting over the river here were killed or captured.

North of Château Thierry, on the edge of Neuilly Wood, American troops are aiding the French to bar the way to Paris. At first the Germans drove the Americans out of the wood with casualties, but the Americans rallied and regained the position.

## Help for Russia

President Wilson's declaration in his Red Cross speech, "I intend to stand by Russia as well as by France," is recognized as setting a new keynote for the policy of the Allies. It has been very strongly intimated from German sources that Germany would be willing to make liberal concessions to France and Belgium, possibly even the cession of part of Alsace-Lorraine, if she were allowed a free hand on the Russian side, and certain parties in France and England were not indifferent to such a proposition, for the defection of Russia put the Allied armies on the western front in a dangerous position, and the repudiation by the Bolsheviks of all Russia's debts meant the loss of the billions that the French and English had loaned or invested in Russia. In France the Russian troops, who had a year before been received with such enthusiasm when they landed at Marseilles, mutinied when the Russian revolution broke out, and the French had to turn their own guns against the Russian encampment and decimate their ranks before they could be subdued and disarmed. The Bolshevik press, reinforced by the refugees who had returned from America, France and Eng-

land after the Czar was overthrown, has attacked the bourgeois governments of these countries with more virulence and malice than the aristocratic government of Germany and Austria. No mail can get into Russia from the west since Finland has been occupied by the Germans, and telegraphic communication is also cut off—except via the Arctic or Pacific or by wireless from Petrograd. So the pro-German propaganda in Russia has full sway and the slanders of America and the Allies circulate without contradiction.

Great Britain and France favored Japanese intervention, but the American Government opposed it, fearing that the Russians, who only a few years ago were at war with the Japanese over eastern Siberia, would regard the occupation of that region as an unfriendly act. So the Japanese, rather than offend the United States, confined themselves to the policing of the port of Vladivostok.

Now, however, pressure is again being brought to bear upon Washington to favor and to participate in a joint military expedition into Russia from the Pacific side. Such an expedition would of course be chiefly composed of Japanese, since Japan, from her geographical position and available forces, is the only one of the Allies capable of effective intervention. General Semenov, the Cossack leader, has organized in Manchuria an army of 3000 men, one-third Russians and the rest Japanese and Chinese, and with this force he is trying to wrest the Trans-Siberian railroad from the Bolsheviks. The proposed Japanese or international expedition from Vladivostok could join this

Committee on Public Information, from Underwood &amp; Underwood

## OUR ANSWER TO THE U-BOATS

This crowd of soldiers and sailors somewhere on our Atlantic coast is cheering a scouting plane's maneuvers. Beyond are cruisers ready for patrol duty

force and very likely gain control of the railroad, at least as far as Lake Baikal, but whether this would better the situation in European Russia is doubtful. It would inevitably tend to confirm the Bolsheviki claim that the Allies are as greedy for territory as the Germans on the other side, while at the same time it does not appear that any considerable part of the Russian population would welcome military intervention from either side.

#### U-Boat Raid on Atlantic Coast

A German submarine, possibly with a companion, has been ranging up and down the coast below New York, and within ten days made fifteen victims. Those known to have been sunk or bombed between May 25 and June 4 are the steamships "Carolina," "Winneconne," "Herbert L. Pratt," "Texel" and "Eidsvold," and the schooners "Edna," "Hattie Dunn," "Hauppauge," "Edward H. Cole," "Isabel Wiley," "Jacob Haskell," "Edward R. Baird," "Samuel Hathaway," "C. C. Mengel, Jr." and "Dessaus." The total tonnage of the vessels lost amounts to about 20,000. Twenty-five persons from the passenger steamship "Carolina" were drowned while trying to make their way to the shore in open boats. Otherwise no lives are known to have been lost. The first vessel bombed, the little schooner "Edna," was not sunk, but later found derelict and towed in. The large tanker "Herbert L. Pratt," of 7200 tons, loaded with crude oil from Tuxpam, Mexico, was hit, apparently by a mine, near the mouth of the Delaware, but ran ashore and was saved. The "Texel," one of the Dutch vessels taken over by the United States Shipping Board, was sunk fifty-eight miles east of Atlantic City. The loss of the ship and her cargo of sugar amount to \$2,000,000. The French steamer "Radoleine" came upon the U-boat as she was overhauling a sailing ship. The

U-boat fired upon the "Radoleine" from a distance of six miles some fifteen times, but the French vessel fired back and speeded up until an American destroyer appeared upon the scene and the submarine submerged.

#### On Board the "U-151"

In order to prevent the alarm from spreading prematurely, the officers and men of the vessels that were sunk on May 23 and 25 were taken on the submarine, where they were kept for a week and then put off in boats. The crews thus captured numbered forty-eight and came from four schooners and one steamship. From their narratives some idea can be obtained of the character and cruise of the submarine. It is said to be about 250 feet long and carries two guns of about six inches caliber. It came out from Zeebrugge about two months before and had been cruising in the Caribbean and up the Atlantic coast. The crew numbered seventy-six, and there was an extra captain and two other officers on board to be put on any vessel which could be seized and converted into a raider. The wireless was often used, apparently for communicating with another submarine in the vicinity.

The captains of the captured vessels agree that the U-boat officers treated them with as much consideration and courtesy as was possible under the circumstances, or, as one of them put it, "They were so polite that they got on my nerves."

The American crews fraternized with the Germans, playing pinocle and swapping phonograph records. The Germans had got tired of their records and enjoyed the American music for a change, except the medley of patriotic airs containing "My Country, 'Tis of Thee." The submarine seemed to be adequately supplied with food and served one good meat meal a day as well as black bread, mashed potatoes,

#### THE GREAT WAR

May 30—Greeks attack Bulgar lines taking 1700 prisoners. American hospitals bombed by German airmen.

May 31—Germans reach Marne. Americans raid German lines as in Woeuvre.

June 1—Americans prevent Germans crossing Marne. Germans take Château Thierry and Verneuil on Marne.

June 2—Steamers "Carolina," "Texel" and "Pratt" sunk. Germans drive westward on Ourcq River.

June 3—Viscount French, Lord Lieutenant of Ireland, calls for 50,000 Irish volunteers. Schooner "Mengel" sunk.

June 4—Premier Clemenceau gets parliamentary vote of confidence, 317 to 110. Steamer "Edwin Baird" and Norwegian schooner "Eidsvold" sunk.

June 5—Allies declare for united independent Poland and approve American declaration of sympathy with national aspirations of Czechs and Jugoslavs. German drive checked by French and Americans.

beans, bacon, cheese, sauerkraut, tea and jam. The storekeeper of the U-boat said he had been for eight years a boatswain in the United States navy. His chief desire was to get back to his sweetheart in Philadelphia.

The commander of "U-151" was also in the American service, as it appears from the following remark, which he made to the captain of the "Texel" just before he sank that ship:

I hate to do this. I used to command an American liner, and I have some good friends among the commanders of American steamers, but war is war so we will go right thru with this little job.

The steamship "Carolina" of the New York and Porto Rican Steamship Company was sunk by a submarine off the Delaware Capes on June 2. There were 218 passengers on board, chiefly Porto Ricans, and 120 in the crew. Of the 338, sixteen are known to have been drowned in the storm and twenty-four are missing. At six o'clock on Sunday evening the U-boat, which had sunk the "Texel," rose to the surface close to the "Carolina," displayed the German flag, and fired across the bow as a signal to stop. The German officer who commanded it said, "Proceed to get into your boats with all possible speed because it is our intention to destroy the ship." The ten boats were dropt and filled leisurely and in good order. A supply of food and water was put into each boat. After the boats had left the Germans went thru the vessel, and, finding one of the firemen had been left behind, ordered a lifeboat to return for him. The "Carolina" was then sunk by three shots from the submarine.

The sea was calm at the time when the passengers left the ship, but during the night a sudden squall came up and drove the boats apart. The motor launch, carrying thirty-five of the passengers and crew, was capsized and filled with water, but all who could clung to her and finally bailed out

#### ANOTHER WAR USE FOR THE TRACTOR

The Army Ordnance Bureau has announced successful tests of this five-ton caterpillar tractor designed to haul field artillery. Dragging a 4.7 inch gun on its trial trip, the tractor traversed ground so rough that it balked the big British tank "Brittania"

enough water to get in. Nineteen survived, but sixteen were drowned. The launch had no gasoline or oars and so could only drift. A Porto Rican girl who had been washed overboard from the launch without a life preserver kept herself above water by clinging to the bodies of two drowned men with life belts, and so was finally rescued. This party was picked up twenty-five miles out by a British vessel and landed at Lewes, Delaware.

Another party of twenty-nine came ashore at Atlantic City on Tuesday afternoon just as the Mystic Shriners in their gorgeous uniforms were parading the Boardwalk. The throngs of bathers and pleasure seekers crowded the beach and the band played "The Star Spangled Banner" as the exhausted survivors were taken out of the boat and carried to the hospital.

#### THE WAR TAX QUESTION

Isn't it about time to put the colt to work?

© Clinedinst, from Central News

#### THE SOLDIERLY IDEAL

There is inspiration for every man in the American army in Major-General Leonard Wood's farewell to the troops of the Eighty-ninth Division, trained by him for service overseas and removed from his command just before their embarkation. "I will not say good-by," said General Wood to his officers, "but consider it a temporary separation—at least I hope so. I have worked hard with you and you have done excellent work. I had hoped very much to take you over to the other side. In fact, I had no intimation, direct or indirect, of any change of orders until we reached here the other night. The orders have been changed and I am to go back to Funston. I leave for there tomorrow morning. I wish you the best of luck and ask you to keep the high standard of conduct and work you have in the past. There isn't anything to be said. The orders stand and the only thing to do is to do the best we can—all of us—to win the war. That's what we are here for, that's what you have been trained for. I shall follow your career with the deepest interest, with just as much interest as though I were with you. Good luck and God bless you."

constitutional by the Supreme Court, with four out of the nine members dissenting. A new law will be framed and urged on Congress.

**Congress Goes to It** Congress is catching up with itself. Six of the biggest of the big appropriation bills, the naval supply bill, the post office bill, the legislative bill, the rivers and harbors bill, and the military academy bill, are all in conference. The Senate had before it the army bill, whose early passage is confidently expected. There remain before the House committees the fortifications bill, carrying more than \$3,000,000,000, the sundry civil budget, and one or two others. This gradual clearing of the decks is for the purpose of securing early consideration of the many and complicated problems involved in the new revenue bill which from now on will be the chief business of Congress.

In the Senate, Mr. Underwood, of Alabama, made an attempt to secure action on his cloture measure to limit debate in the upper chamber during the war. Army investigations by the Senate military subcommittee continued, and the aircraft committee left Washington to visit several factories, identity not disclosed. Later in the week it was planned to begin a similar tour of inspection of the ordnance plants.

In the House agitation for the repeal of the zone second class mail law be-

gan to take form, Representative Johnson, of Washington, sponsoring a substitute bill. Coincident with the refusal of the telegraph companies to accept the decision of the War Labor Board, talk of government ownership of the wires was rife.

Revision of the tariff to assist the revenue-raising campaign of the Government was advocated by Representative Fordney, ranking Republican member of the Ways and Means Committee. Mr. Fordney estimates that if a Republican tariff law were put on the statute books instead of the Underwood Democratic tariff law, it would produce an additional revenue of \$350,000,000. "I say to you," Mr. Fordney declared to the House, "that the time has come, if we must raise more war revenue, then we should raise a portion of it from our import taxes. . . . It is the easiest tax in the world for the people to pay, because when they pay it they do not know it. There is where the Republicans have the advantage over the Democrats in imposing taxes upon the people."

**Labor and the Western Union** Refusal of the officials of the Western Union Telegraph Company to abide by the decision of the new National War Labor Board in the case of employees discharged for endeavoring to form a union, brought the case unofficially up to President Wilson. At the time of going to press the President

THE TELEPHONE CHIEF

Colonel John Joseph Carty has been presented the Edison medal for his services as director of assembling and installing the telephone equipment for all the army cantonments in the United States and for the American forces in France

has not made public his views, but the dispatches from Washington indicate that, rather than permit a strike or a violation of the principles under which the War Labor Board is acting, the Government will take over and operate the wires. The issue of this case, whatever it may be, is important in that it will establish a precedent for future action under the "covenant between capital and labor," as the agreement under which the board operates is called.

The decision of the board, arrived at after hearings and investigation, was unanimously opposed by the representatives of the employers on the board, with the notable exception of former President Taft, joint chairman for the employers, who voted with Mr. Walsh and the labor men. The decision was based on the principle, previously adopted by the board, that employees should not be discharged or discriminated against on account of peaceful labor union activities. In Mr. Taft's own words, the proposition put before the telegraph companies and by them refused amounts to this:

By it (the proposal of Taft and Walsh), you do not recognize the union or deal with it. You deal only with committees of your employees. You take back your men discharged for joining a union, which, under our principles, an employer should not prevent their doing. The union would agree with the board not to order or permit any strike under any circumstances, but to rely for a redress of grievances solely on the lodging of complaints by committees of your employees with our board and the board's action thereon. You would be given the express right under such a compromise to discharge any employee who sought remedy for grievance in any other way and the board would sustain the discharge. Under such a compromise, which would be consistent with our principles, the board would have the power to secure you against the danger of a strike as completely as practical machinery can provide against it.

Last week also the new railroad wage board, created by the director

general of railroads for the adjustment of industrial disputes, took cognizance of several cases arising from dissatisfaction due to the recent wage award by the Government. Here, as in the cases brought before the National War Labor Board, the representatives of the Government insisted that there should be no strike, and made every effort to bring employer and employee together so as to keep industries running for the prosecution of the war.

A confusion as to the status of the War Labor Board and the Labor Policies Board under Prof. Felix Frankfurter was cleared up last week by the statement that the two are entirely independent, the former being judicial and legislative in its functions, the latter administrative. As assistant to the Secretary of Labor—not Labor Administrator, as was erroneously reported—Professor Frankfurter is engaged in coördinating labor officials of other government departments with the central Labor Department. The War Labor Board is separate from the department and may review cases passed on by the department.

**Paying for the War** Why Congress is now engaged in framing a revenue bill may be a puzzle to those of us who have subscribed heavily to Liberty Loans—but a study of a cold statistical statement of our national income and outgo, issued the other day by the Treasury Department, should convince the most skeptical that the upward curve of expenditures is such that the present income curve can never meet it.

In May, 1917, the national revenue from "regular" sources, which excludes loans, war savings and the like, was a little more than \$197,500,000. At the same time the monthly outgo was \$114,000,000. In addition, we were lending to the Allies something like \$407,000,000. During the twelve months just passed, our revenue increased—but not regularly—so that the books give us \$650,000,000 for May, 1918. But—our "regular" expenditures for the same month went up to

\$1,000,000,000, the loans to the Allies remaining about the same. This is comparing May with May. Other months in the year just gone show a better balance for the common purse—and others show a poorer one. That the reader may see for himself how the Treasury figures it up, and, seeing, may realize the rate of speed at which we are using money and granting credit, the following tabulation is appended:

MONTHLY EXPENDITURES.

1917:	Ordinary	Loans to Allies	Total
April .....	\$81,599,000	\$200,000,000	\$281,599,000
May .....	114,102,000	407,500,000	521,602,000
June .....	134,304,000	277,500,000	411,804,000
July .....	208,299,000	452,500,000	660,799,000
August ...	277,438,000	478,000,000	755,438,000
September.	349,013,000	396,000,000	745,013,000
October ...	462,045,000	480,700,000	942,745,000
November .	510,954,000	471,929,000	982,883,000
December .	611,297,000	492,000,000	1,103,297,000
1918:			
January ..	715,302,000	370,200,000	1,085,502,000
February .	665,400,000	325,000,000	990,400,000
March ....	820,126,000	317,500,000	1,137,626,000
April .....	910,756,000	287,500,000	1,198,256,000
May .....	1,067,578,000	450,000,000	1,517,578,000

The figures for May include estimates for the last few days of the month.

Monthly revenue since the United States entered the war, not including receipts from Liberty Loans, certificates of indebtedness, war savings and similar sources, are as follows:

April, 1917..	\$53,257,000	November	\$139,368,000
May .....	197,632,000	December ..	104,432,000
June .....	289,433,000	Jan'y, 1918.	103,053,000
July .....	83,755,000	February ..	98,513,000
August .....	73,912,000	March .....	155,701,000
September ..	75,460,000	April .....	208,683,000
October ....	90,181,000	May .....	650,000,000

"If we win this war," declared Judge Elbert H. Gary, speaking at a recent annual convention of the American Iron and Steel Institute last week, "it will not matter much in dollars and cents to us. If we lose the war it will not matter much whether we have anything at all or not. The outlook is good."

Judge Gary was speaking on the subject of the proposed heavy taxation of excess profits and of incomes, and, coming, as this address did, a few days after the President's insistence that Congress remain in session to enact a revenue bill, this speech had a reassuring effect on the business world.

THE MEN IN CHARGE OF THE CHAPLAINS' TRAINING CAMP

Major A. A. Pruden (center) is commander of the training camp for chaplain candidates in the U. S. Army. The five faculty officers, left to right, are: first row, Captain John T. Chenoweth, Major A. A. Pruden, Captain R. R. Fleming, Jr. Second row, Lieutenant Ignatius Fealy and Lieutenant D. D. Brinkley. Classes are held in Military Law, Military Customs, International Law, French, Military Hygiene, First Aid, and Recreational Work

© General Wartime Commission of the Churches

#### ARMY CHAPLAINS ARE SOLDIERS PLUS

Far from being merely a spiritual adviser, the army chaplain nowadays is called on to combine the duties of preacher, executive, social worker, teacher, recreational director, information bureau, censor and friend to all the men. Obviously the job requires some special training, and a U. S. training camp for chaplains has been established at Camp Zachary Taylor, Louisville, Kentucky, where Protestants and Catholics, theological school graduates, Y. M. C. A. Secretaries, and pastors of long experience all work together. Each candidate has been recommended first by his denomination and then by a Government board. He must have had successful experience in organizing and handling groups of men, and he must be a man of broad Christianity, large sympathies, tact and understanding. The training at the chaplains' camp includes regular rookie drill, intensive class work, and religious conferences

Incidentally, Judge Gary reported the heartiest kind of coöperation with the steel men of the country on the part of the Government. He is reported further as saying that whereas "in the dark days of 1907, when we did not know where we stood with the Government," today, "our general committee, working under the direction of the Secretary of the War and the Secretary of the Navy, have been able to get fair decisions."

If the keynote of Judge Gary's speech is responded to by the business world broadly, the prospective long drawn out "fight" over the revenue bill may come down to a mere summer frolic and early adjournment of Congress may yet be secured.

**Our Shipbuilding Record** Probably the "biggest news" in the shipping line last week, if we except the depredations of the German submarines, was the launching at San Francisco of the torpedo boat destroyer "Ward" seventeen and a half days after the laying of her keel. This astonishing feat was made possible largely because before the keel was laid much of the structural work was already done, or as good as done, ready for quick assembling. But it was a record, anyway.

Fourth of July this year is to be celebrated with a heavy output of tonnage from every yard in the country. Sixteen vessels, it is announced, will be ready for launching on the Pacific Coast on that day, and the eastern and southern yards are expected to "come across" proportionately.

What about riveting contests? Union labor, both here and in England, has indicated its disapproval on the ground that such races lead to strain and a kind of speeding up which does not in the long run produce the most. "It seems to me," declared Chairman Hurley, "that the introduction of the sporting element into shipbuilding lent a zest which would turn out the ships more quickly. Certainly, it has been a big jump from a few hundred rivets to 5800 in a working day. The contests have shown what can be done."

The Department of Labor has made

public correspondence to show that, contests or no contests, there is no slacking among the ship construction workers.

#### The Campaign Against German Propaganda

The announcement of the National Security League that it has begun a nation-wide campaign against German language newspapers and the teaching of German in the public schools may well mark the beginning of the end of the scattered outbursts against certain persistent forms of Teutonic propaganda in the United States. This announcement comes simultaneously with the campaign of the New York *Tribune* against the Hearst papers as a pro-German influence, and a boycotting of such publications by the public rather than a legal enactment forbidding their publication, or suggested as a remedy:

"In towns where there is a strong patriotic sentiment, a hostile minority should be persuaded by a clean and forceful expression of the views of the majority that ours must be, from this time forward, a one language nation," declares the league. "If a community will not support a newsdealer who handles the daily papers printed in foreign tongues, it can thereby force him to deal only in English language papers."

#### Food Reserves

The winning of the war by food is more important now than it ever was, and as time goes on it is apparent that the gentle Mr. Hoover is becoming more and more drastic in his actions. Whatever reserves of food there were and are in the United States are fast being used up. Thanks to our economy in the matter of beef and pork products, the British workingman, last winter close to the low-line of subsistence, is now getting square if simple meals. Over twice the shipment of these foodstuffs made in April, 1917, was made in April, 1918. Commenting on the general situation here, an official of the Food Administration states: "No reserve of any food is in sight, however, in spite of the decreased consumption

which has accompanied strict enforcement of rationing."

Hence it has become the duty of the United States to build up a reserve of food stuffs against our own future needs and those of our allies. In a message from Mr. Hoover to the Federal Food Board for New York this theory is thus exprest:

"With the arrival of a large harvest, some of the most inconvenient restrictions no doubt can be lifted, but we must continue to use some substitutes. So long as the war lasts, with its increasing drafts for soldiers and munition workers, the world will produce steadily less food. If we are wise, a great harvest will mean the willing building up of a great national reserve of grain."

The Federal authorities have already laid plans for a wheat reserve—not a reserve held for the profit of higher prices—and only last week the news came from Cuba that the inter-allied sugar committee has signed a contract for the purchase by the United States of the remaining twenty-five per cent. of this year's crop.

**Senator Lodge on Peace** A Republican view of the terms of peace—which may be significant should the terms of peace become a political issue—was set forth by Senator Lodge, of Massachusetts, in a speech at a notable dinner in Boston last week. Declaring that he was laying down what is necessary to win the war rather than defining peace, the Senator is quoted as saying, in part:

We seek no territory. We have no selfish motives to serve. We are seeking to protect as far as we can our own independence and the independence of mankind. But we look for the end of the war in these things:

First, the restoration of Belgium. We believe that Alsace-Lorraine must be returned to France. Italy must have the Trentino. We agree most cordially with what the President said in New York when he declared that we were just as interested in defending Russia in the east as in our own work on the western front. If Germany gets Russia and retains possession of it that is a great victory, and this war would have been fought in vain. Finally, there must be a free Poland on Russia's western boundary, and a free Yugoslav state on her southwestern boundary.

# THE WORLD OF SCIENCE

## More Calking and Less Talking

This shipbuilding slogan, which Charles M. Schwab, general manager of the Emergency Fleet Corporation, credits to his wife, is being exemplified in the rapid production of steel ships. The first of the new fabricated vessels, the "Agawam," was launched on Decoration Day. For the Emergency Fleet Mrs. Woodrow Wilson has selected Indian names, and the "Agawam" is peculiarly appropriate, for it means "Great Salt Meadow." The place where the "Agawam" was constructed was until last winter the great salt meadows of Newark Bay. Now these waste flats are filled with piles of structural steel, and along the shore twenty-eight ships of the same type are being put together. The keel of the "Agawam" was laid on December 20.

The fabricated ship is a large scale application of the American principle of standardized construction. The plates and girders are manufactured in various parts of the United States and then assembled here by the Submarine Boat Corporation. All the plates are curved for their proper places and the rivet holes bored so they can be rapidly fitted together. It is expected that these ships will be turned out at the rate of three a week, which is faster than the U-boats can sink them.

The "Agawam" and the other ships of her type have a displacement of 7800 tons when loaded to the Plimsoll mark and a dead weight carrying capacity of about 5500 tons. They are 343 feet long, have a beam of forty-six feet and have a speed of ten and a half knots fully loaded. They are driven by Westinghouse steam turbines operating at 3600 revolutions a minute and driv-

ing the single screw propeller ninety revolutions a minute. They are equipt with duplicate electric plants, refrigerating plant and cargo handling machinery. They burn oil and are equipt to carry a sufficient quantity in the double bottom to make the round trip to Europe.

## An Anticipation of Aviation

Few better illustrations can be found of what Tyndall called "the scientific use of the imagination" than that once popular but now almost forgotten poem, "The Botanic Garden." In this Erasmus Darwin suggested some of the theories of biological evolution which his more famous grandson substantiated and also anticipated many of the advances of mechanical science. The two lines in which he prophesied in 1789 the coming locomotive and steamship have been often quoted since these inventions appeared, but the succeeding lines are not so familiar, for to the nineteenth century they seemed too fanciful for consideration. But now that we have aerial navies we may quote further lines of this curious passage:

Soon shall thy arm, Unconquer'd Steam!  
afar  
Drag the slow barge or drive the rapid car:  
Or on wide-waving wings expanded bear  
The flying-chariot through the fields of air.

Fair crews triumphant, leaning from above,  
Shall wave their fluttering kerchiefs as  
they move;  
Or warrior-bands alarm the gaping crowd,  
And armies shrink beneath the shadowy  
cloud.

It must not be supposed that Darwin had merely in mind the dirigible, altho that in itself lay a hundred years ahead. He knew, of course, of the experiments of Mongolfier, and in another passage

of the same poem he gives this vivid description of a balloon ascent:

So on the shoreless air the intrepid Gaul  
Launch'd the vast concave of his buoyant  
ball.—

Journeying on high, the silken castle glides  
Bright as a meteor through the azure tides;  
O'er towns and towers and temples, wins  
its way,

Or mounts sublime and gilds the vault of  
day.

Silent with upturn'd eyes unbreathing  
crowds

Pursue the floating wonder to the clouds.  
—The calm philosopher in ether sails.

Views broader stars, and breathes in purer  
gales;

Sees, like a map, in many a waving line  
Round earth's blue plains her lucid waters  
shine;

Sees at his feet the forked lightnings glow,  
And hears innocuous thunders roar below.

But Darwin perceived what it remained for the present war to prove, that a heavier-than-air machine would have the advantage over the balloon provided some motive force of sufficient power could be discovered. In commenting in one of the footnotes to the poem on the machine which "a few years ago Mr. Watt of Glasgow much improved," he says:

There is reason to believe it may in time be applied to the rowing of barges and the moving of carriages along the road. As the specific levity of air is too great for the support of great burdens by balloons, there seems no probable method of flying conveniently but by the power of steam or some other explosive material which another half century may discover.

**The Lack of Oxalic Acid** If your clothes come back from the laundry imperfectly purified or so friable as to be untrustworthy, or if your straw hat turns yellow, blame it on the Kaiser, for it is probably due to the substitution of mineral acid for the milder oxalic acid as a bleach. Before the war the United States was importing some seven million pounds of it a year, and six million of it was "made in Germany." Consequently, when the war broke out the price of oxalic jumped from eight to eighty cents a pound. Only one firm in America had been turning out oxalic acid in quantity before, and this was dependent upon Germany for the caustic potash used in its manufacture. Calls for potash came from various industries as soon as the Stassfurt salts were shut off, and we have not been able to scrape up enough potash from our lakes and freflaces to meet these needs.

Yet oxalic acid is easily made by a variety of reactions. Freshmen make it as a laboratory exercise. And the main material can be had for little or nothing—sawdust, for instance. In Germany waste producer gas (CO) is used. But things that are easily made are not always profitable to make, and even the present high prices has not yet brought out a practicable process. Perhaps the new cyanide process invented by Professor Bucher, of Brown University, may lead to it.

THE LAUNCHING OF THE "AGAWAM"

The keel of the new fabricated steel freighters was sent down the ways into Newark Bay on Decoration Day

# WHAT ARE THEY THINKING?

BY HERMAN WHITAKER

CORRESPONDENT OF THE INDEPENDENT AT THE BATTLEFRONT

Let the little "slavey," who lit my first fire in London, give answer. She was small, insignificant, almost dwarfish. Her snub nose and weak watery eyes were not improved by a periphery of coal dust. Not by any stretch of imagination could she be considered a heroic figure, yet not Lloyd George himself, nor President Poincare, could have answered more to the point. "Yes, sir, we are tired of the war. But we can't stop now. It's too terrible a thing to ever 'ave 'appen again. We 'ave got to fight it out to a proper finish. That's how we working folks feel."

IN New York some months ago, a couple of editor friends of mine exprest grave anxiety concerning the food situation in England and France; also the spirit of their peoples. They feared that the diabolical censor was sitting on the safety valve suppressing truth that would presently generate a head of steam and blow our sanguine hopes to atoms. They had heard that England was starving, France "bled white," their peoples so "fed up" with the war that they were ready for peace at any old price.

"Let us know the truth when you get over there, old man," one of them pleaded. "Send me only a line. Make it cryptic as you please. I'll understand."

I promised and here goes—omitting the "cryptic," which my own dealings with the censor have proved unnecessary.

The food situation is just about what one reads in the papers. In England the prices were high, food was plentiful; people appeared to be observing their usual standard of living. Food regulation had, as yet, hardly begun. Even sugar was still to be bought in quantities. In fact I had left a stricter economy in practise in San Francisco at the beginning of September than I found in London six weeks later. Not until after Christmas was a pinch really felt, and it was popularly attributed then to the withdrawal of supplies by the food controller preparatory to placing the nation on rations. This, no doubt, was partly true, for it is self-evident that there could be no rations without rations to ration.

During January the pinch became more severe. Queues formed in front of butchers' and provision shops. Meat was hard to get. In our household we had none for three weeks, but this was principally due to our housekeeper's pride, which would not brook her standing in queues. Finnan haddock for breakfast, a sole for lunch, a rabbit, hare or chicken for dinner, with bread, vegetables and a dessert, can hardly be termed starvation as it existed in the imagination of my New York friends. Prices were high, of course, but so were wages. As a matter of fact, the British workman's family receives more money than ever before; is better able to buy food than the middle classes.

My observation had not been restricted to the upper classes. Frequent visits to Whitechapel, Cheapside, Petticoat Lane, as well as good artizan neighborhoods like Pimlico, proved that London as a whole was getting enough to eat. Since then, the nation has been put on rations—with what results it is still too early to say.

Now for France!

Paris, its heart, exactly duplicated in the first week of February the London situation during the last weeks of October. Food stuffs were plentiful but dear. Everybody seemed, however, to be living as usual. First warnings of restriction had just been issued to be put in force at the end of the month. Now milk can be served in the cafes only with the breakfast coffee. Cream cheeses and cream, pastry and a few trifles of that order are prohibited. Neither butter nor sugar can be served at restaurants. They must be bought by card.

Yet even with these restrictions, a good square meal can still be obtained with a half bottle of wine at almost any middle class restaurant for ninety cents. By eating like the French, coffee and buttered bread for breakfast, a light lunch, and a square meal at night, it is still possible to eat in Paris for a dollar a day. People who do their own cooking can, of course, live much cheaper.

France is eating well—and will till the end of the war. She has Spain, Italy, Switzerland to draw from by rail, and the remainder of the world by shipping. Over twelve hundred ships a week enter her ports. Two thousand five hundred go into British harbors. Contrast their condition with that of Germany, de-

barred for three years and a half from the eighteen hundred ships that used to enter her ports every week, and it is easy to form a conclusion as to which nation will be starved out first.

If England and France are not to be starved out, then what of their spirit? Are they really so war weary, so "fed up," as my friends hinted, that they are ready to take peace at any price?

It would be foolish to propound such a question—say in the British Commons, to the French Deputies, the newspapers of either country, to their leaders of thought or men of large affairs. They have already accepted President Wilson's statement of war aims—no peace till democracy is made safe in the world. But what of the common people? The dumb millions that, in Russia, recently brought the plans, first of an autocracy, then of a democratic administration to naught?

Let the little "slavey," who lit my first fire in London, give answer. She was small, insignificant, almost dwarfish. She snivelled from the chronic cold one contracts in these Isles. Her snub nose and weak watery eyes were not improved by a periphery of coal dust. Not by any stretch of imagination could she be considered a heroic figure, yet not Lloyd George himself, nor President Poincare, could have answered more to the point.

"Yes, sir, we are tired of the war. But we can't stop now. It's too terrible a thing to ever 'ave 'appen again. We 'ave got to fight it out to a proper finish. That's how we working folks feel."

All over England, to cabmen, bus drivers, shop- [Continued on page 450]

Making munitions is only one way in which women are helping the men fight it to a finish

# FROM THE AISNE TO THE MARNE

BY THE MILITARY CRITIC  
OF THE INDEPENDENT

**H**ISTORY reverses itself. In September, 1914, the French and British drove the Germans back from the Marne to the Aisne. In May, 1918, the Germans drove the French and British back from the Aisne to the Marne. Our old maps serve us for this new campaign. The familiar names of rivers and towns reappear in the dispatches, the Ourcq, the Vesle and the Oise, Château Thierry, Villers-Cotterets, Fère-en-Tardenois, Fismes, Soissons, but read now down the page instead of up.

On three distinct fronts this spring the Allies have been caught unprepared. We cannot say that they were taken by surprise, for in each case they had warning of the intended attack from the logic of the situation, from the observations of their avions, and from the information of deserters. But the Allied commanders either ignored the warning, underestimated the danger, or were unable to meet it.

Last winter, for instance, the press of England, France and Germany frequently discussed the probability of a blow upon the British front in the early spring. According to Premier Lloyd George, the Allied War Council had

accurate advance knowledge of the sector to be attacked and the number of troops gathered for that purpose. American officers returning from France confirmed this, and the German General Staff has admitted the accuracy of the British information. Yet the Chancellor of the Exchequer on March 8 said in Parliament that he was skeptical about a German offensive, and on March 15, General Maurice, Director of British Military Operations, gave out the statement:

Disbelief in an early development of the much-talked-of German offensive on the western front is growing, owing to the fact that, after a period of weather favoring the air work preliminary to an offensive, there are still no indications of the opening of operations on a big scale.

Within less than a week the blow was struck. We may excuse these statements on the ground that they were given out, as is proper in war time, for the purpose of reassuring the public or deceiving the enemy, but unfortunately the Allied commanders acted as tho they were really skeptical of a German

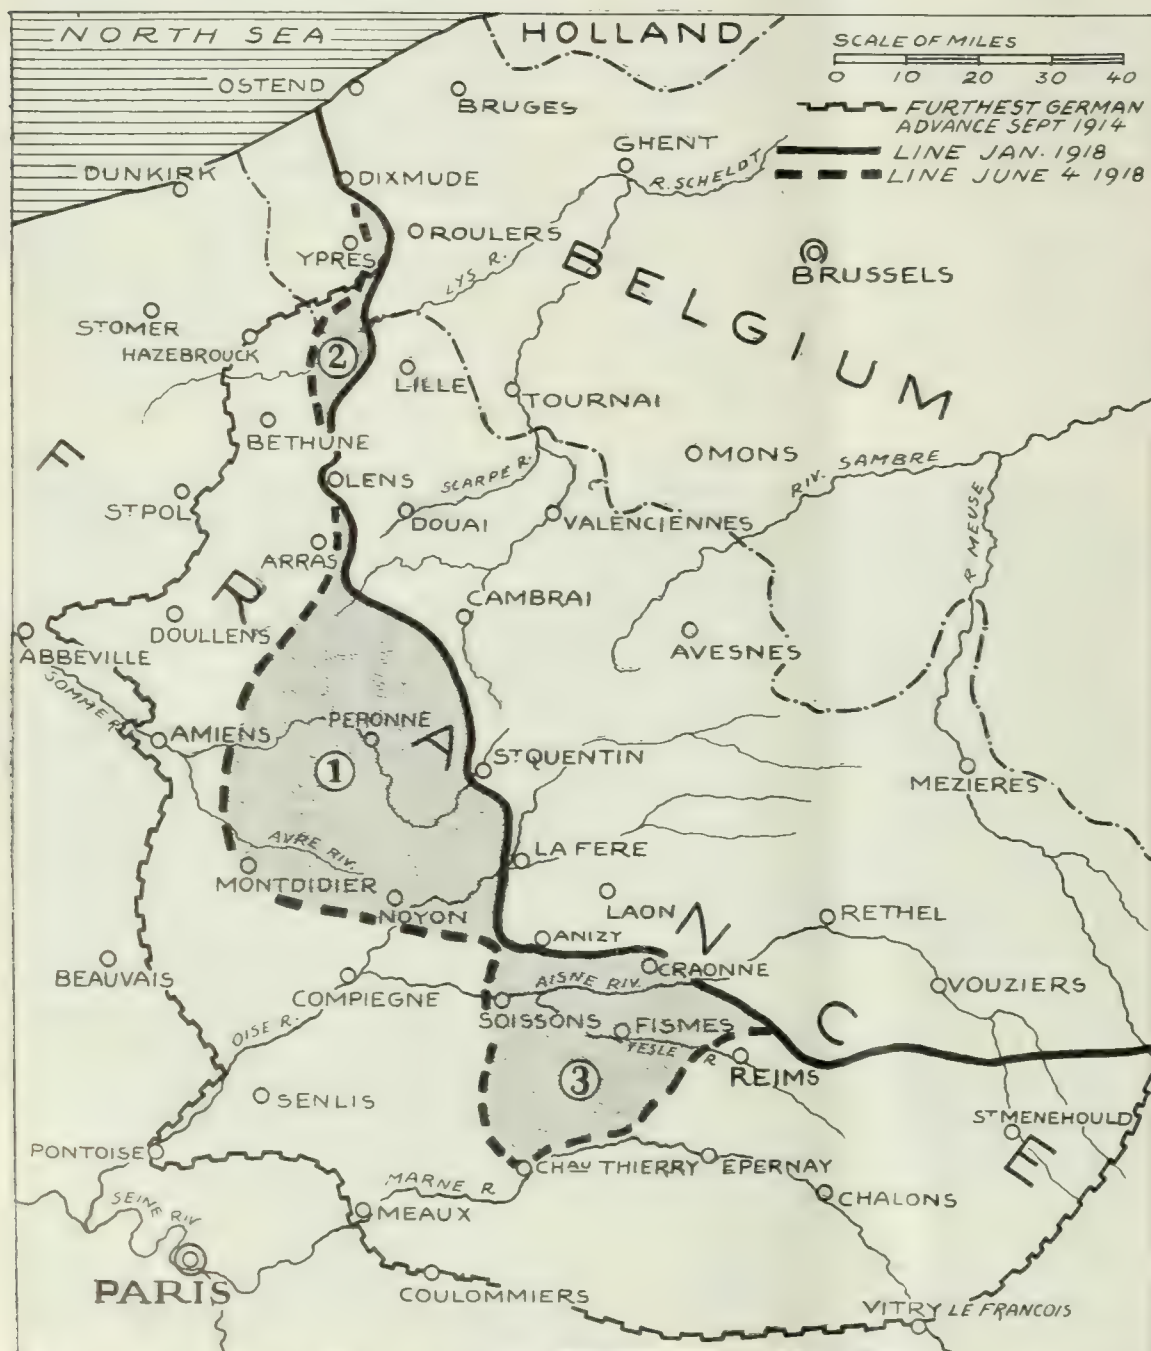

attack, for at any rate they neglected to take adequate precautions to meet it. According to rumor, General Gough was left on the extended British front with only fourteen infantry divisions to meet the shock of forty German divisions reinforced by eight or ten more during the next two days.

In April the Allied troops at Arras were likewise taken unprepared and overpowered. In May the same thing happened on the Aisne. Here it appears there were stationed along the Chemin des Dames four divisions of French and three of British troops, but the enemy brought forty-five divisions against them, and of course they gave way.

A deserter from the German side told of the intended attack on the Aisne, but he was disbelieved. Stegeman, the Swiss military critic, pointed out on May 24 that since Foch had concentrated his forces on the British side the Germans would be more likely to attack the French front between Compiègne and Reims. But Stegeman was discredited because of his German name, and Major de Civrieux, military expert of the Paris *Matin*, argued that such a change of plan was practically impossible because of the colossal preparations necessary for a modern offensive. Therefore he concluded that the preparations apparent on the Aisne were mere camouflage and that the Germans would attack the British front on the west as formerly. Three days after this opinion was published the Germans crossed the Aisne.

All three of these German victories were then achieved in the same way, that is, by the swift and secret concentration of troops upon a weak sector. This new plan of attack is to be credited to French rather than Prussian genius, for its invention is ascribed to General von Hutier, who, as his name implies, is of French descent. His grandfather was a captain in the French army, but his father, Cölestin von Hutier, entered the German service and became colonel. Oskar von Hutier, the present general, married Fanni Ludendorff, presumably a relative of Quartermaster General Ludendorff, who planned the present German offensive in France. This was carried out by the tactics that Hutier first employed in the capture of Riga last year.

The essential feature of the Hutier method is night work. Parallel roads leading to the front, two for each army corps, are constructed at night. Ammunition dumps and heavy guns are placed as near as possible to the enemy lines. For the Somme offensive a book of 100 pages, giving full information and illustrated with maps and diagrams of the proposed movements, was printed weeks in advance and distributed to all officers down to the company commanders for study. Models of the terrain were constructed on a large scale and the operations rehearsed and timed. Finally the infantry were marched to the front by night, in some cases making sixty miles in three night

In March the Germans made the advance marked (1) down the Somme toward Amiens. In April a slighter salient was driven toward the sea between Ypres and Lens. In May they penetrated the French front between Soissons and Reims, reaching the Marne

marches. Then after a brief but intense bombardment, in which gas shells play a prominent part, the attack is launched, even in the face of machine gun fire. As it goes forward fresh troops are constantly sent to the front to replace those who have been exhausted. This, so far as can be ascertained, is the way in which the Germans achieved their recent advances.

It is now clear that the Allied commanders have made two mistakes. They have assumed, first, that entrenched positions adequately provided with artillery could not be forced beyond a few miles, or, in other words, that because they could not break thru the German line the Germans could not break thru theirs. Second, they have assumed that "the eyes of the army" had made it impossible to mass troops on a given front without the knowledge of the opponent. These two mistakes are really one, the mistake of relying too much upon modern mechanism, such as artillery and airplanes, the mistake of supposing that engineering could thwart ingenuity.

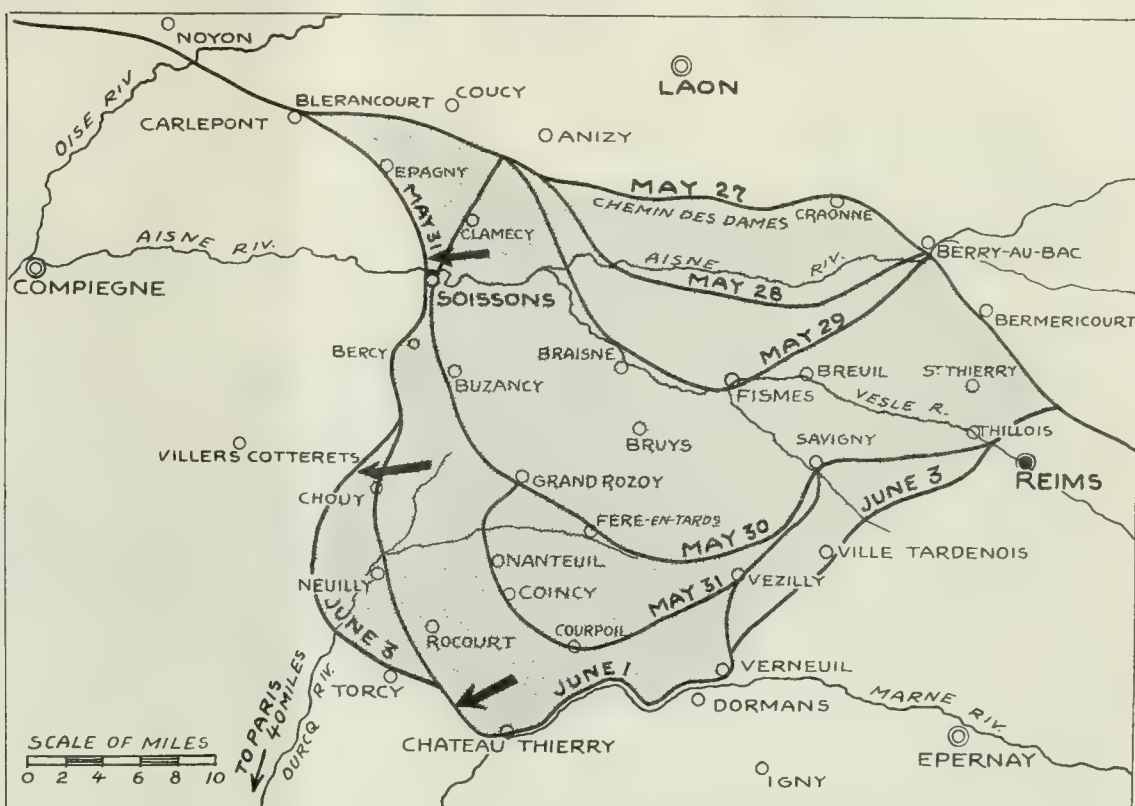

The first illusion, that modern military science had made the defensive stronger than the offensive, antedated the war and was the dominant opinion among strategists in England and France, tho not in Germany. The Allied experts were confirmed in this opinion by the experience of three years of warfare on the western front, where the utmost efforts of French, British and Germans had not sufficed to carry a drive more than about five miles forward. The fact that the Germans had repeatedly broken thru entrenched lines on the Russian, Rumanian, Serbian and Italian fronts did not shake Allied faith in the superiority of the defensive over the offensive, for these defeats were ascribed to deficiency of ammunition or inferiority of troops. The Germans, however, gained from these successes in the east confidence in their offensive policy and experience in practise of new tactics, which they have now applied in the west.

The prevailing British opinion was expressed by Sir Arthur Conan Doyle in his volume on "The British Campaign in France and Flanders, 1914." After describing the vain attempt of General Haig to carry the Chemin des Dames heights above the Aisne River in September 12-18, 1914, in which 10,000 British soldiers were sacrificed, he says:

The net result was one more demonstration upon both sides that the defensive force has so great an advantage under modern conditions that if there be moderate equality of numbers, and if the flanks of each be guarded, a condition of stalemate will invariably ensue, until the campaign is decided by economic causes or by military movements in some other part of the field of operations.

Yet this "stalemate" has been three times broken by the Germans in the last three months under just the conditions he specifies, and, lastly, in the very field from which he drew this deduction, the Aisne front! How it was done we must try to understand.

We have no difficulty in understanding the general aims and methods of

Six days of the German drive. The dated lines show approximately the gains made by the Germans from day to day. It will be seen that having reached the Marne they are now trying to push westward down the Aisne toward Compiègne and down the Ourcq and Marne toward Paris. Americans are near Neuilly and Chateau Thierry

German strategy, for it was expounded in innumerable volumes before the war and is discussed with great frankness in the German journals at the present moment. Here, for instance, is the way the *Frankfurter Zeitung* in a recent issue explains the new offensive:

It can be regarded as the intention of the German Supreme Command first to loosen the whole front of stationary warfare and to convert the stable wall of cement into an improvised front consisting of masses of reserves, and shaken at several points of vital importance—human bodies instead of armored works. As soon as this aim has been achieved, and as soon as the whole position of the English and French armies has become, so to say, ripe for storming and the development of the enemy reserves has been forced, the time has come for the last and decisive strategic blow.

It is, no doubt, a matter of very great importance whether Amiens or the English position on the heights in Flanders falls. . . . But the point of view which alone is decisive for the strategy of this campaign lies beyond these outward and visible battle successes; the ultimate question is the question of the measure in which the preparatory strategic operations eat up the forces on both sides. When all the introductory blows have succeeded in loosening the rigid mass and our army undertakes the last and decisive stroke, will the German Command still have preserved so much fighting strength that the favorable strategic situation can be thoroly exploited?

This German statement of the German aims agrees with opinions on our side. What Hindenburg is after in the present drive is not such ruined cities as Ypres and Reims, tho the capture of these would give a good excuse for flagging the streets. It is not primarily the taking of Amiens or Calais or even Paris, great as would be the advantage of their possession. The ultimate German aim is to reach and destroy the armies under General Foch, and the territorial gains are rightly regarded as subsidiary and preparatory to this. In August, 1914, General von Kluck turned aside from Paris, which was

within his reach if not within his grasp, to seek out the armies of Joffre and Foch on the Marne beyond. He found them, but failed to defeat them, otherwise the war would have been over in three months. The German command is pursuing the same plan as four years ago, and if Below and Böhm should get as close to Paris as Kluck in 1914 they would, like him, sweep past it if they thought they could get the armies on the other side. The Germans have succeeded in their first intention of loosening up the stationary warfare on a total front of more than a hundred miles. The great question is now—and we are glad to see that it is also worrying the *Frankfurter Zeitung*—whether they have enough fighting strength left to take advantage of the favorable situation that they have gained.

Loosening up the line makes a game that two can play at. It is an advantage to whichever side can take advantage of it. The new situation opens up to the Germans an opportunity to approach Paris from the northeast. But it also opens up to the Allies an opportunity to attack eighty miles of new and unfortified German lines. In March, as we were assured by the British and French governments, the Allies outnumbered the enemy. Since then the Germans have gained ground, but they have lost men. The Allies have lost ground, but not so many men as the enemy, while thru the new recruits pouring in from England and America they are continually gaining in man power compared with the Germans. Their latest drive has, it now appears, been brought to a halt, like the other two, without reaching any decisive objective. Their three salients are left hanging in the air, subject to assault from all sides. The enemy in his new position is more threatening, but also more vulnerable. It is easier—as the Allies have found—to defeat him on the Marne than on the Aisne.

# THE U-BOATS OFF OUR COAST

BY PARK BENJAMIN

AUTHOR OF THE HISTORY OF THE U. S. NAVAL ACADEMY

© Committee on Public Information; from Underwood & Underwood

The collier "Cyclops" which disappeared while homeward bound

OWING to the arming of the Allied merchant ships in the danger zone and the efficiency of their convoys, the Hun U-boats in the danger zone abroad have become afraid to show themselves on the surface and the sinking of vessels by their gunfire has practically ceased. But because the coasting vessels on this side of the Atlantic are neither armed nor protected by convoy and because the German psychology always assumes that whatever would scare Germans

will scare other people, two Hun submarines have arrived off the New Jersey coast and, at the present time, have apparently sunk six schooners and three steamers by surface attack. As any armed raider could have done the same thing, the submerging capacity of the assailants merely shielded them from detection by the Navy patrol, until their prey was reached.

The military value of this proceeding is nothing. It was no surprise whatever. It has been expected from the very beginning of the war, when the Government took over the private yachts and started building the great fleet of 110-foot patrol boats, which we now have. Other and ample preparation has been made. We can dispose of Hun submarines on this side of the water as easily and just as efficiently as we are dealing with them on the other side. The Government has supplied over a thousand guns to the transatlantic vessels—and may now think best to equip the coasters.

There never has been any question as to the ability of modern submarines to cross the Atlantic. The voyages, before our entrance into the war, of the "Deutschland" and the "U-53" rather created than removed doubts in the matter, for the first was not a war vessel but a mere cargo shell and therefore not subject to the same conditions, constructive and otherwise, and the second is believed to have had a "mother ship" in attendance. Since the war started, British submarines have gone to the Dardanelles, Italian submarines have gone to Archangel, German submarines have operated in the Mediterranean and we have sent our own submarines across the Atlantic, and they are now off the German ports.

As for the type of U-boat which is temporarily sojourning with us, the descriptions given by the survivors of the attacked vessels are too meager for any accurate identification. The latest reports are that the German output is now approximately ten U-boats per month of which the great majority are of from 800 to 1000 tons displacement. For nearly two years we have heard

of bigger boats carrying 6 inch guns in armor plated hoods—and there are even reports that from the usual length of about 200 feet, the Hun's submarine has grown to 450 feet, "carrying seventy-five torpedoes" (instead of from eight to twelve) and a whole battery of six inch guns—all of which is "important if true," but looks like Teutonic camouflage. But as submarines on the surface are not intended to engage surface war ships, which of course have every advantage, the need for any great increase in their size at the expense of greater draft of water, less maneuvering capacity and becoming a much better mark for depth bombs and howitzer fire is not at all evident; nor has any convincing proof been published that such large vessels are in actual use. Submarines of 15,000 tons armed with 12-inch guns are quite conceivable and so are land "tanks" as big as battleships, but the need is not yet compelling. The Germans have had the power to extend their danger zone to our coasts whenever they liked. If they have not done it until now it has been for good reasons—chief among which is that the submarine menace being intended to starve England and France, therefore must be directed to the food ships arriving there. Our lumber schooners and passenger coasters are not food ships and don't converge on the west coast of Europe. But for some months past there has been great activity at the German naval bases, and much shouting of Hun war cries. The present raid is merely a part of the bluff. If a U-boat attack on this side of the Atlantic had been regarded as of any earthly use, it would have been made long ago. It is started now for several perfectly obvious reasons, among which are: (1) to show the only kind of naval offensiveness which the otherwise bottled German navy can exhibit, coincidentally with the now weakening offensive on the west front; (2) to scare the people on the Atlantic coast into demanding the return of the portion of our navy now abroad, for the purpose of protecting them from imag-

inary coast raids; (3) to try to sink troop ships conveying our men to Europe. The whole of it is the most abject confession of weakness and terror which Germany has yet made. She knows the military futility of such an attack, knows that the coast raids have been obsolete since the time of Queen Elizabeth, knows that we can protect troop ships here easier than we can when they are 3000 miles away, and knows that in such circumstances every principle of naval strategy calls for attack on

them as they converge to their destination. The really important question is how the U-boats are to maintain themselves. They can do it from supply-carrying "mother ships" or from land bases. The first are practically ruled out, as too easily found and destroyed. There may be German bases on the Mexican or Yucatan coast despite the vigilance which we have maintained in those regions. No doubt we shall redouble the watch. These particular submarines are probably among those rendered homeless by the closing of Zeebrugge and Ostend and unwilling to take their chances of getting thru the mine fields and destroyers which crowd the three hundred and odd miles of North Sea necessary to be traversed before another German base can be reached. It might have seemed desirable to run to one of the German bases in pro-German Spain—where some have already been detected and Spain compelled to drive them out—or to a base in the little frequented Spanish Canary Islands. Supplies being there obtained, the voyage across to the West India Islands would be a short one, and operations might begin at once on vessels in that region.

Meanwhile, or nevertheless, the mystery of the "Cyclops" still stands. Did these submarines which have just appeared off New Jersey sink that vessel nearly three months ago somewhere around the Windward Islands? The "Cyclops" was a large navy collier which left a West Indian port on March 4 last to return home by one of the ordinary ocean lane routes. She then vanished.

She was comparatively new (launched in November, 1910) and was one of seven auxiliaries which represent our high water mark in this type of naval construction. Like the "Jason," "Orion," "Nereus," "Proteus," "Neptune" and "Jupiter"—all 19,000 ton ships—she could carry 10,500 tons of coal and over 2000 tons of oil. She was 542 feet long. On her trials she developed a speed of 14.6 knots per hour with about 6000 horsepower. [Continued on page 447]

# BARUCH—INDUSTRIAL STRATEGIST

**T**HE strategy of war is a far larger thing than the strategy of the battlefield, of coast defenses, or of the surface and underwaters of the sea. In this war of nations, a prime element in strategy is industrial strategy, and the task of bringing our vast industrial armies under unified strategic control is one which involves no less a task than bending productive resources to the sole end of achieving victory. These remarks may be considered, perhaps, as commonplace. But there is nothing more difficult of execution than a commonplace, a fact which is attested to by certain recent developments in Washington which have somewhat generally escaped public notice.

© Harris & Ewing

B. M. Baruch, chairman of the War Industries Board

With the personality of "Barney" Baruch, otherwise Bernard M. Baruch, chairman of the War Industries Board, the country is a little familiar. Very vaguely, however, does the country realize what Mr. Baruch has done, is to do, will do, or how he and his board fit into the new industrial scheme of government which is developing along with the military developments in Washington. It is difficult to tell the story in human terms of flesh and blood, but by the exercise of imagination the intensely human side of the work can be visualized.

A year or so ago Mr. Baruch was popularly considered to be a "Wall Street gambler." It is an undoubted fact that he was a financier. When, shortly after taking office with the Council of National Defense, he succeeded in checking the price of copper, in forcing the "copper barons" as we like to call them, to lower the contract figure of their product to Uncle Sam, Mr. Baruch sprang into instant fame, and his past was forgiven by those who knew what he was up to. But still the suspicion prevailed in many quarters that the Administration had "sold out to business" and that capitalists rather than public servants were being given positions of tactical control. With the passage of more time and the realization of the enormousness of the war, such talents and contacts as men of the Baruch stamp possess became of increasing value to the government. This value is but just being appreciated by the public.

One of the biggest fights which the President has had on his hands since the war began was the fight to bring order out of what at times threatened to be anarchy within the government itself. Not the least of these problems has been the struggle to provide machinery which would keep the essential war industries going, maintaining both a supply of labor and a supply of raw materials. Fortunately in the Department of Labor there was the United States Employment Agency which has

article, the work of allocating men to jobs and jobs to men. Then in the National War Labor Board, a kind of supreme court of labor appeals, the President established an independent, authoritative and so far eminently successful body for the adjustment of labor disputes. What was lacking a week ago was the broadening of the functions of the Baruch board so that this "right arm for war production," to quote the phrase of a man closely associated with its work, might have the strength to wield the power implied in its creation. And now, in the midst of one of those situations which arise in Washington overnight and which confuse issues vastly more vital than personal ambitions and energies, comes an executive order from the White House designating Mr. Baruch's board as a separate administrative agency, reporting directly to the President, and clothed with many and tremendous powers.

"What does the new scheme mean?" an official connected with the board was asked.

"You might call it a cabinet or board for War Industrial Policy and Administration," was the reply. "Besides exercising supervision over virtually the entire industrial fabric of the nation, with power to commandeer plants or take other drastic steps to assure adequacy of war supplies and speed up production, the board will from now on direct the purchasing for the Allies, eliminate competition for supplies between the various departments of the government, and in addition allocate materials and contracts. In addition, the board has the unpleasant but necessary job of curtailing the output of non-essentials, fixing also the prices to be paid by the Government. It is expected that arrangements can be made so that the public will obtain the same lowered prices as the Government secures. You probably noticed that the President has decided that this shall be the case with regard to the products of the packing houses—meats, provisions,

and their by-products." It is very apparent to any one who goes for his information directly to the men who are running Washington's war government today that this war government has at last settled down into its stride. The experimental days are over. The shaking down process is complete—or nearly so. The main lines of action have been mapped out and the men selected to head the main administrative concerns. There will be few more appointments and there may be a few un-appointments to clear the air of certain confusions due to over-zealousness. A whole chapter might be written on the camoufleurs who have caused untold damage to the progress of the war, but there is too much that is constructive to waste time on destruction.

The industrial strategy of this war, having called into being the War Industries Board, made it necessary as a matter of course, to regionalize the country and establish some twenty little war industries boards which will be in the charge of men whose function it will be to camp where they are stationed and direct the execution of the strategy determined in Washington. What the national government has never done, and what the state governments alone could not hope to attempt, namely, the absolute control of production, will thus be accomplished.

"We are not divided into capital and labor now, we are one nation, and the job now is to keep that nation running," Frank P. Walsh said to me in reply to a question about the relation of the National War Labor Board to the War Industries Board. "The President, the great employers, and the federated employees have agreed that there should be no strikes or lockouts during the war. It is my duty as one of the chairmen of the War Labor Board, to bring parties to industrial controversies together. When conciliation thru established channels has failed, we come in. We have several clubs. One is the club of the moral force of the agreement between capital, labor and government which made this board. In the majority of instances that will work, I think. If it does not work, we go to the War Industries Board and tell them what has happened. We say, 'We have tried to keep the peace, but the employers, or the men, which ever it may be, will not abide by our decision. We hand the case over to you.'

"Of course I am not speaking for the War Industries Board, but it is quite clear that since it is the desire of the Government to keep every war industry going, that board will act. It can act in two ways: either it can commandeer the plant where the trouble is, take it over and operate it by and for the Government; or it can bring that plant to time by refusing to let it have raw materials. [Continued on page 458]

# UNION FOR EFFICIENCY

## AN ANNOUNCEMENT

**T**HE Efficiency Society has joined forces with the National Institute of Efficiency.

Before the war, human efficiency meant an opportunity for personal advancement.

Now, it is a patriotic duty.

Before the war, industrial efficiency meant scientific saving of energy, materials and time, for individual and corporate profit.

Now, it is a national responsibility.

Before the war, efficiency in government meant a new method that would bear looking into.

Now, the kind of government to which this nation aspires, and which it is developing solidly, is synonymous with efficiency in the finer sense that efficiency means preparedness, elimination of waste effort—service to the people.

Efficiency has taken on a new meaning. It is the commanding need of this new day in American life and the greater day to come.

America needs still more efficiency—in government, in her workshops and offices, in her churches and schools, in her homes—and will need it still more when the war has been won. Three powerful allies in this vital field of human progress—the National Institute of Efficiency, the Efficiency Society, and The Independent—have been working shoulder to shoulder to increase the ratio of personal and business achievement to the effort expended.

The Efficiency Society, founded in New York City in 1912, has devoted its energies first of all to scientific research in efficiency as applied to organized industry and has published many papers, lists, suggestions and reports of permanent value. William R. Willcox, the chairman of the New York Public Service Commission, was the first president of the society.

The National Institute of Efficiency, founded on Lincoln's Birthday, 1916, under the educational laws of the District of Columbia, has directed its activities to the popularizing of efficiency—in thinking, in language, in buying and selling, in governing and being governed, in doing man's and woman's daily work. It has promoted and extended the art and science of individual efficiency in personal, business, domestic, corporate, educational and community relations.

The Independent, besides acting as the official organ of both these organizations, has been doing its bit toward preparedness in the specialized attention it has given for the past four years to industrial and personal service—presenting a monthly program of articles and departments on Personal Efficiency by Edward Earle Purinton, its Director of Efficiency, with messages from the most distinguished leaders in the field of industrial efficiency, business achievement and professional endeavor.

These articles, together with the consulting service of The Independent's Division of Efficiency, have organized factories and offices; they have transformed human lives, by helping people to live better, to work harder, to think more effectively, to act more decisively, to achieve more easily, to serve more fully their business, profession, community, family and nation.

The Efficiency Society was organized by a group of leading men of the nation, in manufacturing, commerce, finance, economics, law, engineering and journalism, for the purpose of scientific research in efficiency, of its laws and principles in industry and life.

M. M. Mix, President Dodge Mfg. Company  
Alton B. Parker, Former Chief Justice of the Court of Appeals of New York  
Winston Paul, Delco Light Company  
Robert E. Peary, Explorer, Rear Admiral United States Navy  
Raymond B. Price, Vice-President United States Rubber Company  
Herbert W. Rice, President U. S. Gutta Percha Paint Company  
Edward Earle Purinton, Efficiency Expert  
W. B. Richards, Gunn, Richards & Company  
John A. Stewart, Publicist  
Conrad H. Syme, Corporation Counsel of Washington, D. C.  
R. P. Tinsley, Vice-President American International Corporation  
Henry R. Towne, Chairman Yale & Towne Mfg. Company  
Richard B. Watrous, Nestle's Food Company  
William R. Willcox, Former Chairman Public Service Commission of New York  
Henry A. Wise Wood, Vice-President Aero Club of America  
Leonard Wood, Major General United States Army  
Henry Woodhouse, Governor Aero Club of America

During its six years the society's purpose has been summed up in its own definition: "The ratio of achievement to effort is the true measure of efficiency."

Its papers and discussions as preserved in printed books, in bulletins, in its monthly journal, and more recently in The Independent, constitute a cyclopedia of efficiency in many important phases.

From the Efficiency Society's own outline of the efficiency movement in America as presented to its members by Charles Buxton Going, editor of the *Engineering Magazine*, we have an x-ray of its original scope, field and purpose.

"The history of the efficiency movement is a record of independent partial contributions of discovery or interpretation which later are found to be all inter-related parts of one great harmonious and comprehensive whole.

"There are eight manifestations of the single faith of efficiency which have come into being and have gathered force and volume within the last century, some within the last generation and a few within the last decade.

1—*The Profession of Engineering*—to apply efficiency in the use of power and mechanical effort.

2—*The Conservation Movement*—to prevent waste in natural resources and the fundamental materials of industry.

3—*Fire Prevention*—to protect from a special form of waste, structure, equipment and manufactured products.

4—*General Hygiene and Eugenics*—applying the ideals of waste-prevention to the individual human unit and the race at large.

5—*Welfare Work*—including the reduction of industrial accidents.

6—*Scientific Management*—concrete policies and methods to raise efficiency of processes and lower waste of human production.

7—*Cost Study and Analysis*—sensible and scientific application of effort toward efficiency in the realm of money.

8—*Efficiency in Government*—applying efficiency to the problems of the business management of the United States.

To study American achievements, institutions and methods in the light of these cardinal principles is an important part of the working plan of the National Efficiency Society. It passes on to its members the advantages of the knowledge and research of the many specialists who give the society the benefit of their work. It provides a common meeting ground where men and women interested in business and personal efficiency may become acquainted and exchange ideas.

The original member's handbook of the National Institute of Efficiency gives this definition of its central idea:

Efficiency is doing one's best work and doing it in the best way.

"To develop this simple but fundamental idea has been the purpose of the National Institute of Efficiency.

"It is an educational and scientific organization with its chief purpose the promotion and extension of the art and science of efficiency in personal, business, domestic, corporate, educational and community relations."

The men who organized this Institute, brought together on one common platform by the late William Bailey Howland, its first president, and creator of the plan on which it was founded, are distinguished for high achievement in many walks of life. They came together in the spirit of service to humanity, believing that in association with a great number of like minded people in many sections they would, thru the Institute, be able to assemble and distribute the results of extended and varied experience, and so stimulate the spirit of efficiency in all.

To accomplish this chief purpose, which is service, the Institute has been developing efficiency for man and woman, for the state, in business, and in industry of all kinds.

This must be accomplished thru the individual, whose increasing efficiency reflects the greater

[Continued on page 449]

# CORNERSTONES OF A GREAT CAREER

**W**HY are great men so few? In a hundred thousand population we have scarcely a hundred men who have made a world place for themselves. And we are the nation of born leaders—in other lands the proportion of supremely great men will be found to be considerably less than 1 to 1,000,000. Russia, for example, has not more than five or six big men, China has not more than a dozen.

Of all the human beings now on earth, it is probable that not more than 300 will finally be classed among the immortals. Reckoning the population of the globe at a conservative estimate of 1,500,000,000 we conclude that only one person in 5,000,000, the world over, is likely to attain the eminence that marks the work or character of supreme excellence.

The secret of immortality is to do something greater or better for the world than was ever done before. Incidentally, fame and wealth follow. But when we have really earned fame and wealth, we do not care for them any more. Supreme endeavor has for its motive the joy of accomplishment, the pride and thrill of leadership, the responsibility of service, the ideal of improvement, the spur of a task impossibly hard, the hope of proving worthy of the one you love most, or the satisfaction of knowing that you have done your best. The beginning of greatness is to have an incentive that grips your mind and heart, and forces you to act without regard to public opinion, your own pocketbook, or any superficial consideration.

Who is the biggest man of your town, city, community or state? Why is he the biggest? Did he grow strong by *leaning on his early advantages*—or by *climbing over his early disadvantages*? Were his life opportunities showered upon him—or did he hunt them and create them? How many failures, disappointments and heart-breaks has he gone thru? Do the people who live near him understand his motives? How far could his principles and methods be applied successfully to other branches of commercial, industrial or professional work? Has he met and surmounted problems or difficulties that you are facing at this moment? How could he be persuaded to teach, announce or demonstrate his rules for success to the young people of the neighborhood? Questions like these should be discussed fully and demonstrated practically whenever young people from ten to forty years of age meet

regularly—in the home, the school, the church, the business organization. To be educated is not to memorize the facts of the past but to energize the possibilities of the present. There is more to be learned from one big man than from a dozen big books.

A good foundation for any vocation is a good foundation for any other. Your profession, trade or business merely forms the visible superstructure of your life building—the foundation consists of your personal habits, traits, principles and methods. You cannot build a lofty career without knowing what these foundation elements are, what they mean to your career, how to select the good and reject the bad, how to combine the best in the best way, how to dig into your character and lay the foundation deeply, how to cement the foundation to stand hard as a rock, how to judge it, prove it and build on it.

Every man is a builder by occupation. Whatever his work may be, every day he builds for himself his own life structure. How he builds today will be shown to all the world in the height and breadth of his career.

The average person starts to build a life with no more sense or system than a child uses in building a toy house of blocks on a nursery floor. It is only a question of time until a cruel circumstance hits the frail thing and it topples over. Ninety per cent of the men past sixty-five years of age are industrial, social, financial and moral failures; they have no place in business or society, no established life work, no income adequate even to support themselves, no character sufficient to control their environment and influence the world for good. These men built haphazard, they

used no moral principles in the foundation, no scientific methods in the construction, of their life dwelling.

A man's career may be likened to a house in ten or more points of similarity. The chief points are: plan, place, use, material, quality, size, occupancy, arrangement, construction, price. We will formulate a few questions on these points to help you analyze and organize the building of your career as you would the building of your house.

**Plan.** Have you a definite purpose in living? How far does each fact, word and thought every day carry out this purpose? How do you know the purpose is both desirable and attainable? Have you planned your life ahead as completely and scientifically as you would plan your house? Does your performance fail to measure up to the plan? Can you change minor details of the plan to accommodate yourself to circumstances, without destroying or hindering the final outcome? When it fails to work, do you hold yourself responsible?

**Place.** Are you in the right job? How do you know? Can you make a better place for yourself with your present concern, or must you go somewhere else? How far can you build future development on the basis of present knowledge and past experience? How many openings are there to a higher position? How many promotions have you had where you are? Why have they been so few? How would you get another job if you lost the one you have? How would you make sure it was a better one, before you took it? What are you doing now to improve your methods of work? Is everybody satisfied with results?

**Use.** What do you wish to be the main output of your life? A product of commerce, or of character, or of both together? Do you want more to sell things and make money—or to serve people and make friends? Which means more to you, recognition and appreciation by the public, or your own satisfaction with your own work? Are you happier when getting something—or giving something? Have you classified your talents, your physical, mental and moral possibilities, in relation to your work? How are you planning to enlarge their scope of expression? Are you working toward financial independence in order to be free, to do better and bigger things than money can pay for? If somebody gave you a million dollars, would you devote \$900,000 of it to the extension of

Press Illustrating

*"There is more to be learned from one big man than from a dozen big books." The men who have worked under Thomas A. Edison agree to that*

your purposes and realization of your ideals in connection with your work? Do you love your work so much that nobody with any amount of money could pull you off the job?

**Material.** Do you know that every thought or emotion either tears up or builds down your mind and body? How many of your thoughts and emotions, regular and occasional, are constructive? Have you lined up all your daily habits to carry forward your life purpose? How many "small" vices have you? Are you informed as to the proven specific ways in which they shorten your life and impair your efficiency? Are your opinions always reasonable and impartial? Do you know more about your business than anybody else connected with it? Would you back up your life plan with all the money you possess?

**Quality.** Is your word as good as your bond? Are you famous for good workmanship? When you make a mistake do you always rectify it promptly and fully? Do you never make the same mistake twice? Have you conducted a national investigation to learn whether anybody is making a better product of your kind than you are? What scientific tests of your product do you require to guarantee it the best possible? Are you employing business psychology to get the most and best work from your associates and subordinates? How do you know you are giving adequate pay, and sufficient other rewards better than pay? Do you thank everybody who brings a complaint or criticism about your work? Is quality of output more important to you than quantity, when a choice between the two is necessary? Do you consider your trade mark worth at least \$100,000 to you?

**Size.** How many people do you expect ultimately to reach with your sales and your services? Could you not by improved methods of production, advertising or distribution easily double, triple or quadruple your present number of patrons, so as to reduce overhead expenses, and the price of your goods, thus making every one better satisfied? Are you building up a professional or business organization that will live for generations after you are gone? Did you ever plan how to make each client or customer one of an endless chain of new patrons? Is your number of business friends growing? Do people in large numbers come or send at least 100 miles for the product or service you offer? When you lose a patron, do you always know why? What are you doing to make your business a profession, or your profession a business? When a poorly dressed person comes to your place of business, does he receive as much courtesy as a millionaire?

**Occupancy.** Do you realize there should be a place in your career for hundreds of helpers, each one of them as much interested in making the work its best as you are? How are you going to select, equip, sustain and reward these helpers? What branches or departments of your industrial or professional organization will finally be necessary? Have you laid these all out in your own mind, with every department conducted by an expert? Who among your present associates or employees is of the right stuff to make a leader out of, and will be competent later to shoulder a big responsibility? Has your organization studied and prepared all the new profit-sharing or stock-holding or insurance-giv-

ing plans now being worked by the largest corporations? Has the idea of a "boss" been cut out of your concern? Does everybody working under you feel that he is working with you, not for you? Is each member of your organization planning his or her life work ahead, as you are planning yours?

**Arrangement.** Are you doing today's work today, instead of wasting time dreaming about the future? Have you correlated departments and individuals, so that there is no friction or envy or lost motion or material or money? Are your tools, implements and machines arranged on the principles of scientific management? Have you ever counted the number of needless motions you regularly make in your day's work? Do you know the exact cost of every operation? Do you always make sure that the other fellow gets a square deal before you do? Are you getting all you earn and earning all you get? Have

keeps most men from doing anything worth while? Is your deepest joy the satisfaction of a hard job well done? Would you rather work than play? Do you regard your vocation the finest in the world? If you were offered the job of President of the United States on condition that you never went back to your present work, would you promptly, proudly and firmly refuse the offer? In carrying out your life plan are you willing to undergo any amount of pain, hardship, failure, grief, loneliness, misunderstanding, abuse? Will your life plan bring you large financial rewards in the end—but is the money the last thing you care about? Is personal happiness or even comfort immaterial to you so long as you get your work done? Have you studied the sorrows of the great men of all time? Could you wait twenty years for success to come and be as sure of it every minute as you are now? Would you rather fight to the death for a personal or professional

ideal than live and work without it? Have you reached the point of supreme wisdom where nothing matters but doing the one thing you know to be right?

What is a great career? It is the utmost expression of one's physical, mental, moral and spiritual power in the best ways known to advance the progress of humanity. How much you can do, how well you can do it, how far you want to do it for the benefit of other people rather than yourself are the main points to consider. Wealth or fame or social position or some other material reward may come as the crown of your career, but will not come if you think of the crown when you should be utterly absorbed in constructing the base. A tribute is only the echo of an attribute. Before the world will look up to you, you must call the world to something higher. The only force to lift a man above the crowd is the force of an ideal. Put new ideals into your work, visualize them with practical methods, and watch your business boom. Every great industry was founded on a great personality, and a great personality is but the human embodiment of great principles. The sign of real genius is not eccentricity but impersonality. When

you can tell a man's business from the way he looks or acts or dresses or talks, he is not a great man. Rudyard Kipling doesn't wear his hair long as imitation poets do; Billy Sunday doesn't require a ministerial frock to label him a preacher; Luther Burbank resembles a student more than a farmer; General Pershing hates the idea of military badges on his coat; President Wilson easily throws away presidential dignity, runs off to the circus and eats peanuts with the rest of the boys. A man is great in proportion as he does not care to appear great.

If you were planning to build a home you would probably make a study of other homes, that you might include the good features and omit the bad when building. Why not do as much in planning a life? The first thing in a life, as in a house, must be the cornerstones. The cornerstones in the lives of most great men have been HEALTH, KNOWLEDGE, CHARACTER, INDUSTRY. Health is largely physical, Knowledge is largely mental, Character is largely moral, Industry is physical, mental, emotional, moral, spiritual, a scientific blend of the powers of the whole man. Looking back thirty years from now, you will see that the quality and

© Underwood & Underwood

This photograph of Premier Lloyd George bears out the statement that "a great man does not care to appear great"

you trained yourself to look for new opportunities where you are, and to take advantage of them?

**Construction.** What proportion of your life plan has been accomplished? How long will it take to finish at the present rate of construction? Do you know all the reasons why the development of your work is slower than it should be? What supplies, materials, resources, facilities or helpers do you lack? Where and how can you secure these? Have you a complete set of principles, policies and methods worked out and written out for each department and each individual? What personal defects or deficiencies of your own have you to prevent your doing big things? Have you learned how to study and profit by each disappointment or failure? What are you reading and studying outside of work hours to advance yourself and your business? Why and how are the biggest men in your line doing things better than you are?

**Price.** Do you know how many and what kinds of sacrifice every great man has made to achieve an immortal purpose? Is your purpose the greatest thing in your life? Have you under the force of it swept away forever the trifling personal desires for ease, pleasure and self-indulgence that

{Continued on page 444}

# FROM FARM TO TABLE BY MOTOR TRUCK

**I**N the plans formulated and already under way for extending parcel post services so that the producer on the farm can ship directly to the consumer in town and city, the Post Office Department is aiming to accomplish three purposes: to increase the nation's food supply, to provide quick delivery of farm products to the consumer, and to make money for the Government. There will be other results from these plans, which in the transportation field at least will be considered of equal importance. For example, the initial plans call for fifteen hundred motor trucks. This will be the largest motor truck fleet in the world, if we except those in military service and the fleet of motor omnibuses in London. With such a motor transport service in operation a most influential department of the Government will become a strong advocate of highway improvement. And as the plans provide for utilizing army motor trucks when no longer needed for military service, there is that much less likelihood of a demoralization of the motor truck market after the war, thru a wholesale disposal of army equipment to the highest bidder.

The Post Office people refer to these plans as the "farm to table movement." Last winter the necessary Congressional action was secured. This included raising the maximum weight on parcel post matter from fifty to seventy pounds, an appropriation of three hundred thousand dollars, and an arrangement whereby unneeded army motor trucks would be turned over to the Post Office Department. Prior to the establishment of the first farm to table route last December the department had had several years of experience in operating motor trucks in a number of cities thruout the country, considerable data covering the use of motor vehicles on rural delivery routes, and a little experience of its own in transporting mail matter over the country highways. For example, a motor truck route from Washington to Leonardtown has been in operation three years, with a two-ton truck and a one and a half ton trailer. It carries the mail for 104 post offices, serves 102,000 people, and has paid a profit since the start.

One of the new parcel post routes established last winter served mushroom growers at Oxford, Pennsylvania. The growers had been shipping over a ton of mushrooms each day into Philadelphia by express, but the express service broke down and within three days the Post Office Department had a heated motor truck on the job. In the first three days' service the truck not only made quicker and more economical deliveries than had been the case with express service, but also made thirty dollars profit each day for Uncle Sam. It is estimated that this one motor truck on this particular

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT  
MOTOR SERVICE

route will earn \$12,000 a year and cost to operate, including depreciation and overhead, about \$4200. Similar data covering a dozen or more other routes now established in different sections of the Eastern states could be given if our space permitted, but the foregoing is typical and will suffice.

In order to demonstrate the possibilities of its farm to table plan the Post Office Department recently sent 2900 pounds of eggs, butter and honey, and in addition a few hundred day-old-chicks, from Lancaster, Pennsylvania, to New York by motor truck. The distance is 180 miles and the shipment reached its destination just twelve hours after it left Lancaster. New York is in the second parcel post zone from Lancaster and the postal receipts were \$31.61. As operating costs for the truck were just under twenty dollars the Government made more than eleven dollars on this single test trip, while cost and speed of delivery from the shippers standpoint were better than express service even in pre-war days. On this particular shipment the products were handled four times, having been reloaded on wagons at the main post office in New York. With direct delivery to consumer there would be only two handlings. In customary express and freight shipments of this character the products would be handled up to fourteen times. This test trip was the longest run of the kind in the history of the Post Office Department. It was made by one of the first twenty motor trucks placed in the farm to table service.

**T**HE system adopted in this new parcel post service is slightly different from the customary parcel post service, in that the sender is not obliged to go to the nearest post office to mail his package, but may give it to the driver of the postal truck. In other words, the postal truck is a United States Post Office on wheels, the driver exercising all the duties of a postal clerk. He sells stamps, cancels the package and can make deliveries en route. It is not difficult to realize what such service means to the farmer. He need not leave the farm, but can ship from his front gate direct to a consumer or a retail store as many packages as he wants, with a maximum weight of seventy pounds for each package, with quicker and cheaper delivery than under the old method. The seventy pounds is applicable to shipments to points within the first, second and third postal zones.

It has been estimated that enlistments, the draft and other war duties have re-

duced available farm labor by one third. Only thru a greatly increased use of power machinery can the remaining two thirds produce normal crops or better. This is the reason that many states have procured tractors for the farmers within their borders. By taking up the entire task of distribution the farm to table service will aid materially in making farm labor one hundred per cent productive. A motor truck will haul as much as three or four farm wagons, thus keeping this number of men and double the number of horses on the farm all the time. Parcel post statistics show that heretofore rural sections receive eight packages to every one sent, so that the postal trucks will have paying loads both ways. Under the farm to table service the Post Office Department can supply motor truck avenues of transportation for a distance of fifty to one hundred miles from any market and tap a source of supply that has never yet produced to capacity. Regular scheduled service will surely stimulate increased production of butter, eggs, poultry, garden truck, and other food products, that would not pay for transportation in small lots from one farmer.

Motor truck operators in general will be interested in figures just announced by the Post Office Department covering six days of operation on seven routes in the Baltimore-Philadelphia section. These show 47,134 pounds of mail matter carried, with receipts totaling \$3062.15 and operating costs of \$591.30. The average cost per pound of over six cents is due to the fact that considerable first class mail matter as well as parcel post shipments are included.

James I. Blakslee, Fourth Assistant Postmaster General, in a recent address made the following summary of the farm to table movement: "Motor truck postal service will ultimately be one of the biggest things in the history of the Post Office Department. A motor truck can collect and deliver mail, including farm produce, over a hundred miles of highway in a day of twelve hours. By using 1560 motor trucks this service could be performed twice within the twenty-four hours on the 156,000 miles of well-improved highway in the United States. The cost of operation would not exceed twenty cents per mile. This fleet of trucks would thus cover 312,000 miles each twenty-four hours. The cost, based on the present price of gasoline and maintenance, would approximate \$19,531,200. Their earnings operating 200 miles per day would exceed seventy dollars per truck a day, or \$34,179,600 per annum, based on the present rates of postage, and the earnings of the few trucks now in this rural service. These estimates are based on working six days a week. Therefore the Government is assured a handsome profit."

The post office on wheels gives quick and economical service to the farmer and earns a substantial profit for Uncle Sam

# THE U-BOATS OFF OUR COAST

(Continued from page 438)

She was, therefore, abundantly able to meet any and all vicissitudes of sea and weather. Nothing has appeared to discredit her staunchness. Nor have any unusual storms recently occurred along her homeward course. Of the many vessels which must have been near her path not one has reported sighting her. She was not mistakable for any other craft save one of her sisters, for she looked like a skeleton iron building which contrary to all laws of gravity has betaken itself to sea. This was because her spar deck was spanned by seven lofty rectangular steel frames carrying multitudinous derricks, abaft which rose her two smokestacks after the fashion seen on the ore-carriers of the Great Lakes. No seafaring person once perceiving her on the horizon, especially if her hull happened to be below the edge and so invisible, would ever forget her looks, even if he did not make an entry of the singular vision in his log-book.

Altho fully equipt with wireless apparatus, no radio signals of distress or otherwise have been received from her since she left her last port. Radio calls sent out to her from every possible station have not been answered. Fast scouts have been despatched to traverse and retraverse the route she was to follow, and every sea area into which she might possibly have betaken herself has been combed in every direction, all without avail. One of her engines is known to have been injured so that she was proceeding at reduced speed under the other, but there was nothing in that to cause trouble.

No internal disaster has been suggested which before sinking her would not have left ample time to send the S O S emergency signal broadcast thru the ether. Everywhere along her well-traveled lane were steamers within easy calling distance. Her cargo of manganese ore involved no hazards, and even such explosives as were stored in her two widely separated magazines are reported as not sufficient if detonated, to cause total, sudden destruction.

Not only has the ship herself not been seen, but no flotsam and jetsam from her has been encountered, nor even her life raft or boats, which would remain afloat after her submergence.

The usual bombs stowed with the cargo have, of course, been suggested, but the care with which all naval ships are guarded negatives any such crude supposition. So also it may be safely concluded that there was no "mutiny" or seizure of the vessel followed by a buccaneering voyage across the Atlantic.

All of the three hundred people on board were well known and many of them were passengers, including the United States Consul General at Rio Janeiro. Furthermore, the "Cyclops" did not have enough coal on board to go to Europe; and it is enough to say that, if afloat, vessels 542 feet long do not get where inquisitive people cannot see them.

Did these submarines, which appeared on June 3, sink the "Cyclops" in March? Where have they been ever since, and doing what? They could not have kept the sea all that time, or gone without supplies no matter where they were. In what base on this side of the Atlantic could they have lurked? If they had no such base then they must have come straight across the ocean to sink what they can of unarmed coasters by gun fire and use up their torpedoes on whatever armed vessels fate may throw in their way. All this, of course, before the magic of our destroyers and patrol craft turn them into grease spots on the sea.

## Another Exclusive Fox Feature

There are two extra keys on every Fox typewriter. The ordinary typewriter gives you forty-two keys. The Fox gives you forty-four, which means four extra characters. These four characters can be anything you wish, and they cost you nothing extra. They can be made to apply to your individual work.

The Fox typewriter is famous for its light running and ease of operation. It is substantially built and will stand hard use. For this reason it is being used by thousands of railroad telegraphers in every section of the country.

## Try a Fox Typewriter At Our Expense

The Fox agent in your territory will be glad to give you a free demonstration and allow you to try this typewriter in your own office. If we did not absolutely know that the Fox typewriter will give you satisfaction in every detail, we could not make you such a liberal offer. But we do know that if you knew a Fox typewriter as well as we know it, you would not hesitate a minute in ordering a "Fox" every time you are in need of a new typewriter.

If there is no local Fox agent in your territory, write us direct and we will make it easy for you to try a Fox typewriter in your own office.

Write for the Fox typewriter catalog. It will be mailed free on request.

## War in the Air

WHEN I left for my leave to England, I was not very keen on going. The excitement of the chase had a tight hold on my heart-strings, and I felt that the only thing that I wanted was to stay right at it and fight, and fight and fight in the air. I don't think I was ever happier in my life. It seemed that I had found the one thing I loved above all others. To me it was not a business or a profession, but just a wonderful game. To bring down a machine did not seem to me to be killing a man; it was more as if I was just destroying a mechanical target, with no human being in it. Once or twice the idea that a live man had been piloting the machine would occur and recur to me, and it would worry me a bit. My sleep would be spoiled perhaps for a night. I did not relish the idea even of killing Germans, yet, when in a combat in the air, it seemed more like any other kind of sport, and to shoot down a machine was very much the same as if one were shooting down clay pigeons. One had the great satisfaction of feeling that he hit the target and brought it down; that one was victorious again.

The splendid thrill of the straight, clean game—that is the appeal of this "winged warfare" that Major Bishop paints so vividly in his graphic narrative of a flying season on the western front. Only a single season, to be sure, but in that time he destroyed forty-seven German machines and burned two enemy observation balloons. A glowing achievement this! Quite enough to merit his M. C., his D. S. O. and his V. C. Quite enough also to account for the order that took him away from the fighting front and sent him back to train others to follow his glorious lead and to continue the dauntless conquest begun by him.

It may have been his lucky star—it may have been his consummate skill in the air, but he has time and again escaped unharmed from such encounters:

The battle seemed to be about at evens when suddenly I saw a German machine, brightly colored, fall out of the *mêlée*, turning over and over like a dead leaf falling from a tree late in autumn. I watched it closely for what seemed an awful length of time, but finally it crashed, a complete wreck. Turning my eyes to the fight again, I saw one of our own machines fall out of control. Half way between the scrimmage and the ground I thought it was coming into control again, but it turned into another dive and crashed near the fallen Hun. A moment later a second German machine came tumbling out of the fight. Eaten up with anxiety to get into the fight myself, I could not help having a feeling akin to awe as I watched the thrilling

struggle. A mass of about twelve machines was moving around and around in a perfect whirlwind, and as I approached I could see our smoking bullets and the flaming missiles of the Huns darting in all directions.

This was but one of many struggles in the clouds and what sheer satisfaction there was in ending one as here:

The machine I got on the 20th of April was the first I ever destroyed in flames. It is a thing that often happens, and while I have no desire to make myself appear as a bloodthirsty person, I must say that to see an enemy going down in flames is a source of great satisfaction. You know his destruction is absolutely certain. The moment you see the fire break out you know that nothing in the world can save the man, or men, in the doomed aeroplane. You know there is no *camouflage* in this; you have no fear that the enemy is trying any kind of a flying trick in the hope that he will be left alone.

This is winged warfare in its best moments and there are few moments that are not of the best. Here there is none of the sordidness of trench fighting, the merciless slaughter of artillery fire or the cold blooded murder of infantry attacks. Here up in the free air is a free game and a clean fight. This is the appeal of winged warfare to the sportsman and this is the appeal of Major Bishop's book to all who have the sporting spirit at its best.

*Winged Warfare*, by Major W. A. Bishop. V. C., D. S. O., M. C. George H. Doran Company. \$1.50.

## The Happiest Time

WE have a three-ringed circus in *The Happiest Time of Their Lives*. Mathilde, who "looks like cream in a gold saucer," and Pete Wayne, who is very much of a person in spite of assertions to the contrary; Mathilde's mother and stepfather, the one a beautiful, materialistic vulgarian, the other so genuine and human that one wonders what he loves in her; Mathilde's hidebound but likable grandfather and the one shining personality in the book. Pete's mother—these are the three couples whose stories run along side by side until they meet in the happiest time of their lives.

Faith is the young love which believes that the miracle of an undying flame will be theirs; hope is the married love, hope

in spite of some bitter memories: charity is behind the grandfather's offer of his hand and fortune to the woman whose pitiable bank-account he is balancing; and the most fascinating of these is charity. For the interest crescendos in intensity from the sweetness of young love at first sight, thru the more complex passion of the mother and stepfather to the utterly charming and fresh and natural scene between the snobbish grandfather and Mrs. Wayne, an "elderly wood-nymph," whose chief recrea-

Mrs. Mary Roberts Rinehart

tion is reforming and aiding inebriates.

It was when he saw how small was the margin between the amounts paid in and the amounts paid out that he rose to his feet.

"I'm going to tell you how much I want you to honor me by becoming my wife."

She said "Oh," as crowds say it when a rocket goes off. . . .

"I'd make you a poor wife but I'm a wonderful friend," was her answer.

"Your friendship would be more happiness than I had any right to hope for. But friendship is so uncertain. You don't make any announcements to your friends or vows to each other, unless you're at an age when you cut your initials in the bark of a tree. That's what I'd like to do. I suppose you think I'm an old fool."

Presently a ring came at the bell—a telegram. The expected guest was detained at the seminary. Lanley watched with agonized attention. She appeared to be delighted.

"Now you'll stay to dine," she said. "I can't remember what there is for dinner."

There was no real cloud in his sky. If Mrs. Wayne had accepted his offer of marriage, by this time he would have begun to think of the horror of telling Adelaide and Mathilde and his own servants. Now he thought of nothing but the agreeable evening before him, one of many.

When Pete came in to dress, Lanley was just in the act of drawing the last neat double line for his balance. He had been delayed by the fact that Mrs. Wayne had been talking to him almost continuously since his return to figuring. She was in high spirits, for even saints are stimulated by a respectful adoration.

*The Happiest Time of Their Lives*, by Alice Duer Miller. The Century Company. \$1.40.

## The Amazing Interlude

FROM the ever-growing field of war fiction every now and then stands out a story that combines reality of experience with sound psychological insight, setting down for us more truly than mere facts can do the record of the human side of war. Such a book is *The Amazing Interlude*, by Mary Roberts Rinehart, the story of an American girl's service on the Belgian front.

The early days of the war saw Sara Lee playing her part in the setting of a city in

Major W. A. Bishop tells his experiences in "Winged Warfare"

Pennsylvania. An ugly city, but a wealthy one. It is only fair to Sara Lee to say that she shared in neither quality. Great days were before Sara Lee. She sat by the fire and knitted, and behind the backdrop on the great stage of the world was preparing unsuspected the *mise en scene*.

Sara Lee went to Belgium, backed only by her own infinite desire to serve, and the promise of a hundred dollars a month from the Sewing Circle. The hundred dollars was to buy supplies for a soup kitchen. Sara Lee was to make the soup. How she found her place finally in "the Little House of Mercy" at the front, the comfort that she gave to weary soldiers there, the lessons that she learned, make a novel of unusual interest—and something more. Mrs. Rinehart has seen for herself what the war has brought in Belgium and in France; there is the appeal of deepest understanding in her story.

*The Amazing Interlude*, by Mary Roberts Rinehart. George H. Doran Company. \$1.40.

Books in Brief

THE THRESHOLD, by Marjorie Benton Cooke. (Doubleday Page, \$1.40.) Tells of an American college girl on the threshold of life and of love.

THE FOOLISHNESS OF LILIAN, by Jessie Champion. (John Lane, \$1.40.) Engaging story of an English factory girl who set about to become a lady.

UNION FOR EFFICIENCY

(Continued from page 443)

efficiency of the nation itself. The working plan of the Institute has involved a wide range of activities and the use of many agencies for carrying on its fundamental propaganda.

By the union of the Efficiency Society with the National Institute of Efficiency this greater society has an enlarged opportunity for practical, far-reaching, constructive work—and a responsibility to carry it on which calls for the thought and effort, the interest and support of all its members. Never in the history of the United States was there a more fitting time to develop extensively such an institution as this.

The service of the National Efficiency Society in furthering the truth of efficiency and in making this vital subject better understood, is so worth while as to be a patriotic opportunity.

It will be the welcome privilege of The Independent to act as the official organ of the National Efficiency Society, and to carry monthly, and perhaps weekly, its official department or bulletin marking the progress of efficiency, recording activities of the society, carrying messages on efficiency from authorities and experts in this great field, especially those who are members of the society.

The new quarterly publication of the National Efficiency Society will be a continuation and enlargement of the *Efficiency Society Journal* hitherto issued monthly, and *Monographs of Efficiency* of the National Institute of Efficiency. This magazine, *The National Efficiency Quarterly*, will contain the scientific papers, bulletins, charts, official announcements and record of activities of the society.

Every man and every woman who is interested in the study of efficiency in its application to business, government, community and individual development is eligible for membership in the National Efficiency Society. Members are elected by the board of governors on nomination of any member.

The governing board and the members of the National Efficiency Society look forward to the greater opportunity confident that their work will be far-reaching in its usefulness.

What Is Nerve Force?

NERVE Force is an energy created by the nervous system. What it is, we do not know. just as we do not know what electricity is.

We know this of Nerve Force: It is the dominant power of our existence. It governs our whole life. **It IS life;** for if we knew what nerve force is, we would know the secret of life.

Nerve force is the basic force of the body and mind. The power of every muscle, every organ; in fact, every cell is governed and receives its initial impulse through the nerves. Our vitality, strength and endurance are directly governed by the degree of our nerve force.

If an elephant had the same degree of nerve force as a flea, or an ant, he could jump over mountains and push down sky scrapers. If an ordinary man had the same degree of nerve force as a cat, he could break all athletic records without half trying. This is an example of Muscular Nerve Force.

Mental Nerve Force is indicated by force of character, personal magnetism, moral courage and mental power.

Organic Nerve Force means health and long life.

In our nerves, therefore, lies our greatest strength; and there, also, our greatest weakness—for when our nerve force becomes exhausted through abuse, worry and overwork, every muscle and brain cell becomes sluggish and weak.

How often do we hear of people running from doctor to doctor, seeking relief from a mysterious "something-the-matter" with them, though repeated examinations fail to indicate that any particular organ is weak or diseased. In nearly every case it is Nerve Exhaustion.

The symptoms of nerve exhaustion vary according to individual characteristics, but the development is usually as follows:

**First Stage:** Lack of energy and endurance; that "tired feeling," especially in the back and knees.

**Second Stage:** Nervousness; sleeplessness; irritability; decline in sex force; loss of hair; nervous indigestion; sour stomach; gas in bowels; constipation; irregular heart; poor memory; lack of mental endurance; dizziness; headaches; backache; neuritis; rheumatism, and other pains.

**Third Stage:** Serious mental disturbances; fear; undue worry; melancholia; dangerous organic disturbances; suicidal tendencies, and, in extreme cases, insanity.

If only a few of the symptoms mentioned apply to you, especially those indicating mental instability, you may be sure your nerves are at fault—that you have exhausted your Nerve Force.

Paul von Boeckmann, the noted Nerve Culturist, who for 25 years has been the leading authority on Breathing, Nerve Culture and Psycho-physics, has written a remarkable book on the Nerves which teaches how to soothe, calm and care for the nerves and increase your Nerve Capital.

Nerve Force is the most precious gift of Nature. To be dull nerved means to be mentally and physically dull, incapable of experiencing the higher things in life. So fill in the coupon below and send for the book today. It will be a revelation to you. If you do not agree that it teaches you the most important lesson on Health and Mental Efficiency you have ever read, return the book and your money will be refunded without question.

The author of Nerve Force has advertised his various books on Health in The Independent Magazine during the last fifteen years, which is ample evidence of his responsibility and integrity. The following are extracts from letters written by grateful people who have read my book:

"I have gained 12 lbs. since reading your book, and I feel so energetic. I had about given up hope of ever finding the cause of my low weight."

"Your book did more for me for indigestion than two courses in dieting."

"My heart is now regular again and my nerves are fine. I thought I had heart trouble, but it was simply a case of abused nerves. I have re-read your book at least ten times."

"The advice given in your book on relaxation and calming my nerves has cleared my brain. Before I was half dizzy all the time."

A physician says: "Your book shows you have a scientific and profound knowledge of the nerves and nervous people. I am recommending your book to my patients."

A prominent lawyer in Ansonia, Conn., says: "Your book saved me from a nervous collapse, such as I had three years ago. I now sleep soundly and am gaining weight. I can again do a real day's work."

## WHAT ARE THEY THINKING

(Continued from page 435)

keepers, porters, to tinkers, tailors, soldiers, sailors. I put the same question. They stood in a solid phalanx behind Nellie, the little "slavey."

But it took an air raid to show the spirit that dictated it at its best. Your Englishman is rather slow to "catch on." When the Germans invaded Belgium he viewed the situation thru his monocle and remarked, "Seems to be trouble over there. Send a few men over." But he soon woke up, and when he did begin to think—it was in millions of men and munitions.

In the same way he was quite unable to imagine the Germans bombing London. His London? It was quite impracticable, you know! Or if they tried it, the Royal Flying Corps would soon make hash of them! So it went on until one very fine day when the birds were chirping in the gladness of their hearts in the London parks, a fleet of thirty Gothas sailed at midday right over Westminster Abbey and knocked chips off several cherished institutions. Then the Englishman awoke again and established the barrage fire of a thousand guns that roused me my third night in London.

The week before, a bomb had fallen within half a block of our house, killing eleven people and maiming many more. It had lit up every room in the house with its flash. The concussion had shaken things off the mantel. Yet there was no sign of trepidation in my hostess's gentle knock, or her quiet invitation to come down to the flat on the ground floor.

Pajamas and blankets were quite *au fait* in the mixt company there assembled. Officers from the front, a few business men with their wives, mingled with the servants on equal terms, for air raids are great levellers. Quite indifferently, they singled the crashing, rending roar of the Hun bombs from the thunder of the barrage, and their count of seven was confirmed by the official report next day. After each they would pick up the conversation where they had left it—probably concerning the shortcomings of "the little Welsh lawyer," Lloyd George, in the case of the men: the fashions among the women.

This fortitude was by no means confined to the upper classes. Next day I went to see a house that had been bombed in one of the poorer districts—the "bombed" is too weak a word to describe the effects. Of the center building in a solid brick street, nothing was left but the cellar. Yet in place of the fear one might have reasonably expected, its inhabitants displayed seething rage.

"Afraid?" A middle-aged woman whose roof had been smashed in by one of our own "duds," scornfully repeated my question. "No, I wasn't; only crewel mad. All I ask, Mister, is to get me 'ands on one of them bloody devils. It 'ud be the last bomb 'e'd drop."

The Boches caught me, during another raid, out in the street, and I stayed there watching the flash of the guns, the searchlights weaving and interweaving long white fingers up in the sky, while the guns roared, the shells shrieked, and one caught above all the rending crash of a bomb. By hugging the wall, I could avoid the spent shrapnel that dropt now and then with a heavy, leaden patter.

Presently the thunder of the barrage died in one of those deadly silences which tell that the guns and searchlights have lost the Gothas. It was quickly broken by the burring hum of a German plane; always distinguishable from the British by

**Health Culture Magazine** 501 St. James Bldg.  
New York City

the louder sound and uneven rhythm. With diabolical ingenuity this individual Boche had dived below the shell explosion area, and was roaring along over the roof tops, certainly no higher than five hundred feet. I saw him pass, dimly as a flitting bat in the night. About quarter of a mile further on he dropt four bombs, one of which pierced the boiler of a public bath. Three others fell within a few hundred yards of London's largest railway station, no doubt his objective. But—it speaks badly for German munitions—not one of them exploded. Following along, I came in a few minutes to a policeman who was standing astraddle of a hole in the road.

"No, this isn't no dud," he replied to my question. "It's a bomb. Clean buried itself, too, it 'as, in the paving."

I took one look at him, straddling that live bomb, then said, "Good night!" and passed on. But the picture of him, quiet and serene, remains with me to typify the spirit of London.

In the four raids I shared with Londoners of different classes, the same quiet courage was always in evidence. Some must have been nervous. Others, no doubt, were frightened. But they hid it under that marvelous English reserve that dreads the least exhibition of feeling. The spirit of the Londoner is clearly set forth in the letter a clergyman's wife wrote to her soldier son at the front.

"When they bombed the steeple off our church, your father said: 'Thank God! I'm on the fighting line at last!'"

Now for France—the "bled white."

The old saw tells us that "sauce for the goose is sauce for the gander," and if the Gallic cock is ready for the basting, what about the German eagle? No one would attempt to deny that France lost heavily in men during the first two years of the war, or that she has not felt the drain on her life blood; but she certainly did not lose as heavily as the Germans.

It is said that the "Old Contemptibles" of the first British Army killed three times their number before they were wiped out. That would give even three hundred thousand Germans to their individual bag. At Verdun alone the Hun lost half a million. From the firing of the first gun the Belgians were killing Germans, the Russians were killing Germans, the Serbians, Australians, Canadians, Africans, Afghans, Hindus, were all killing Germans. A year later Italy and Rumania began to kill Germans and have been killing them ever since.

At its first great stretch France never held more than four hundred miles of battle line, and as the allied armies grew and took over additional sectors, the French line shrank to half its original length. But Germany? On a two thousand mile line that begins at the Baltic, runs down nine hundred miles of Russian front, along the Rumanian, Serbian, Italian lines to the French, English, American and Colonial fronts, Germany has been losing men. Russia's collapse does not alter the fact that for three years she killed Germans on almost a thousand miles of front. If France has been "bled white" on two hundred miles of front, then Germany must have lost ten times as many men on her two thousand miles; and tho the German imagination has elevated Hindenburg and Ludendorff and endowed them almost with the attributes of God, it has never been claimed for them that they can raise the dead. Even with Russia out, Germany still has to face the man power of a dozen nations on a thousand miles of front.

Next comes the question—is France "bled white?"

Ask the waiter in your cafe; the taxi driver that brings you from the station; the girls in the stores; the old woman who

## LOCKWOOD, GREENE & CO. ENGINEERS

**T**HESE war days are demanding increased manufacturing facilities especially to fill government orders. Maximum production and quick deliveries are vital factors which make it necessary for many concerns to reorganize their plants.

In accepting a large government order, the Stephenson Underwear Mills engaged Lockwood, Greene & Co. to make a thorough study of the existing plant at South Bend, Ind., and work out a logical plan of development to meet every possible demand.

This involved a complete rearrangement of departments and rerouting of goods, and the mill illustrated below is the first unit constructed under the comprehensive plan adopted. The result is greatly increased production—taking care not only of present

government contracts but adapted to future business as well.

Lockwood, Greene & Co. service is applicable to any industrial problem. If you are interested in a new project, or aiming at larger results from an existing plant, it will be to your advantage to know the scope and character of our work.

Write our nearest office for the new book, "Building with Foresight"—illustrated with typical examples of our achievement in the industrial field.

THE LEEDS COMPANY

It is best to make reservation ahead for Chalfonte. Write for illustrated booklet and rates.

sweeps the Parisian gutters with long besoms; ask the *poilus* from the front—but be careful how you frame the question, for the French are excitable and may take you for pro-Boche. Their answer invariably runs: "We will never quit, Monsieur, so long as the Boche holds one square inch of French soil including Alsace and Lorraine!"

Now what of their flesh? Every officer and *poilu* I have talked to returns the same answer again: "We were never so strong in guns and men. We are looking and longing for the German offensive." And they are, looking and longing with intensity of feeling that finds expression in a yearning cry: "If they will but come? If they will only come?"

By the time this article sees print that yearning will probably have been answered. For the Hun is in great straits. He must do something soon, and victory is only to be won on the western front. If he attacks, the ensuing slaughter combined with the collapse of the underseas war—which is due this summer—will break even his stiff neck, for he cannot stand much more.

Returning to the question of my New York friends—France is tired of the war, but she will stick! England is tired of the war, but she will stick! The Russian fiasco has made this more imperative for democracy could never again be safe in the world if Germany were permitted to reap and organize the vast power gained thru her present conquests.

Surely England will stick, for it is the same British bulldog that sank its teeth in the throat of Napoleon, the conqueror of Europe, and clung and clung and clung till it dragged him down after twenty years. With our help—and both she and France are depending upon us—she will do it again to the Hohenzollern.

## BARUCH—INDUSTRIAL STRATEGIST

(Continued from page 442)

In other words, Mr. Baruch has literally life-and-death power over the industries which must be kept going."

Something has been said in the papers about the "cabinet" of "administrators" which sits with the President as a kind of special war cabinet. When such meetings occur, Mr. Baruch is there. So is Mr. Hoover, Mr. Ryan, Mr. Garfield, Mr. Schwab, and the rest. They tell their troubles, and it is not difficult to imagine the President, with whom coördination and common counsel is a passion, sitting back and watching things coördinate under the auspices of the common counsel in his presence. Of course the President is the supreme industrial strategist of them all, but Baruch is the chief of the general staff of industrial strategy so far as it relates to all production and raw materials, just as Herbert Hoover is chief of the general staff of food strategy so far as it relates to consumption, just as Houston is chief of food production strategy, and as W. B. Wilson is chief of labor mobilization strategy. As a matter of fact, it is a mistake to draw too sharp a distinction between the council of administrators and the regular, orthodox cabinet. For the two groups are closely interrelated and coördinated, and while—or because—none of the really big men are given to personal publicity—the fact is that in the formal and informal meetings, at which rigidly demarked jurisdiction is obliterated, the public, all unrealizing, is benefiting by this efficient and practical introduction of the method and principles of business into the tangled fields of law and industry. WILLIAM LEAVITT STODDARD

**"My, What Shiny Clubs!"**

"How in the world do you keep your clubs so bright and clean, Mrs. Brown? They're the envy of all of us."

"I polish them just as I do my piano and furniture—with 3-in-One Oil. First I wipe off the dirt and moisture; then I put a few drops of 3-in-One on a soft cloth and a few seconds' rubbing produces this rich, lasting lustre you admire. The 3-in-One prevents rust on the metal parts, too, and softens and preserves the leather grips. Try it on your own clubs—or tell the man at the clubhouse."

## 3-in-One Oil

is great stuff for golf clubs. Try it on your fishing tackle, too. Lubricates the reel just right—makes any reel work smooth and easy. No sticking, jerking or back-lashing.

3-in-One prevents rust on steel fishing rods, metal guides and joints. Preserves bamboo and cane rods. Prevents lines from rotting. Waterproofs floating flies. Try it.

Sold at all stores—in 50c, 25c, and 15c (Small Size) bottles; also in 25c Handy Oil Cans.

**FREE** Write for a liberal sample of 3-in-One Oil and Dictionary of Uses—both sent free.

**Three-in-One Oil Co.** 165-UM Broadway New York

## POWDER IN SHOES AS WELL AS GUNS

**Foot-Ease to be Added to Equipment of Hospital Corps at Fort Wayne.**

Under the above heading the *Detroit Free Press*, among other things says: "The theory is that soldiers whose feet are in good condition can walk further and faster than soldiers who have corns and bunions incased in rawhide."

The Plattsburg Camp Manual advises men in training to shake Foot-Ease in their shoes each morning.

One war relief committee reports, of all the things sent out in their Comfort Bags or "Kits," Allen's Foot-Ease received the most praise from the soldiers and men of the navy. It is used by American, French and British troops, because it takes the Friction from the Shoe and freshens the feet. There is no foot comforter equal to Allen's Foot-Ease, the antiseptic, healing powder to be shaken into the shoes and sprinkled in the foot-bath, the standard remedy for over 25 years for hot, tired, aching, perspiring, smarting, swollen, tender feet, corns, bunions, blisters or callouses.

Why not order a dozen or more 25c. boxes to-day from your Druggist or Dep't store to mail to your friends in training camps and in the army and navy.

## "let's go fishin'"

How many times have you made that suggestion since you were a boy in "knee pants?" Do you still heed the call of lake and stream and the great outdoors, bidding you come and drink deep from the one spring of eternal youth—clean healthful sport in the open air? A day spent on the lake or river matching your strength and skill against plunging muskies or fighting bass, those are the days that no one can afford to miss. A few moments practice with a South Bend Anti-Back-Lash Reel will make an expert caster of the most inexperienced. The use of the **BASS-ORENO** bait will coax the big gamey fellows to strike, as thousands of anglers have learned. See South Bend Quality Tackle at your dealers. Write to us for your complimentary copy of the book "The Days of Real Sport," illustrated by Brices. Full of fun and fishing information. Send dealer's name.

## CORNERSTONES OF A GREAT CAREER

(Continued from page 445.)

extent of these four cornerstones made the foundation of your career.

*The first cornerstone is Health.* In war, and in business, the successful fighters are the men who keep themselves fit. Recent investigations by Government officials, famous doctors, and experts of the life insurance companies go to prove that 80 per cent of the adult employees in the United States, whether manual or mental workers, are below normal health conditions to such an extent that their work materially suffers, in quantity, quality or both.

It is estimated on the other hand that 80 per cent of the leaders in American life today have specialized in health study and practise for themselves. The few men at the top who, because of a powerful constitution, seem able to defy the laws of health and pay no penalty are likely to die suddenly and prematurely, just when they want to live most because they are beginning to achieve most.

The average man loses thirty years of his life by living wrong. You can't live long when you live wrong.

*The second cornerstone is Knowledge.* The man who grows is the man who knows. And the more he knows the faster he grows. Hundreds of corporation presidents and other high officials in the United States are now studying technical and general business courses even while managing vast enterprises—a phenomenon without parallel in any other country. A \$50,000 man still going to school is a typical American performance, combining Yankee wit and Yankee grit. The measure of what you can earn tomorrow is what you can learn today.

When the classics were in vogue young people tried to learn things just from books. Later it became fashionable to learn by doing, as in the trade schools. Now the combination method, and the right one, is for a student of a business, trade or profession to get a job in it, study principles, theories and plans from authorities and recognized leaders, then apply such knowledge directly to the job. A man who works with head or hands alone is but a part of a man.

When I see a crowd of young fellows go wildly excited over a ball game, I think what a lot of better fun they are missing by failing to study their job. If your work doesn't take all your wit, you have no wit or you will have no work.

The strongest faculties and keenest sensibilities you possess will be taxed to the utmost in solving problems like these: How to improve the quality and quantity of your work together; how to increase the varieties of your product; how to advertise and sell them; how to serve your patrons better; how to put all competition far in the rear; how to set up a new record for yourself in twelve months; how to enjoy your work more than your play; how to find what your real work is; how to save time and energy for yourself and all your helpers; how to reduce overhead; how to stop complaints; how to build a professional library; how to develop a profit-sharing plan; how to increase wages and profits at the same time; how to make every worker proud of his work; how to eliminate the "boss" idea and substitute the partner idea; how to teach employees to think for themselves; how to turn every loss, disadvantage and failure to account; how to combine practical methods with ideal principles; how to insure healthful surroundings and mental conditions; how to incorporate social service. When you have mastered these points of the business game,

we shall be glad to give you harder ones to sharpen your wits upon, so that you will not need billiards or poker to keep them properly active.

The way to reach the head of your business is to have your head reach all over the business. Don't work without thinking, or think without working, but think about your work when you are not working, then apply the result of your thinking when you are working. The world bestows the crown of leadership on the man whose head, heart and hands are united in his work. Failure is merely a habit of doing something with your hands while your head and heart are somewhere else. Failure is the willingness to be a fraction of a man.

The third cornerstone is Character. Character is the kind and quality of wood under the varnish. Character is a natural rose in a world of artificial roses. Character is the revelation and radiation of your inmost self. Character is what you are when nobody is looking. Character is the sum total of your convictions. Character is the triumph of your determination over your inclination.

In a recent contest to determine who is the best employer in America it developed that what the employees of a large concern trust, follow and obey is the character of their employer—not his wealth or his power or his shrewdness, but just his plain old-fashioned character. The men who control 5000 to 30,000 employees are men of supreme force of character. A beneficial exercise for any young man is to pick out the ten most famous men he knows, whether teachers, doctors, bankers, merchants, manufacturers, inventors, scientists, warriors, philanthropists, or something else, and find what the character foundation of each man really is, what moral qualities have made each man great, and what ones they all have in common.

The fourth cornerstone is Industry. The higher a man gets the more he has to work but the more he likes to work. The habit of doing hard work and lots of it puts a man straight in line for leadership. The biggest men of this country work at their job ten to fourteen hours a day. And some of them, while they were getting their start, worked sixteen to eighteen hours a day. Their employees insist on an eight-hour day, which fact explains why they are still employees. No man ever got promoted while arguing for an eight-hour day.

A lazy man is always sick. And a tired man is generally foolish. It isn't hard work that wears you out, but the habit of taking your work hard.

When a man doesn't like his job there is something wrong with both the job and the man. If the man is an employer he should first find what is wrong with the job; if the man is an employee he should first find what is wrong with the man. The function of the new science of work is to make over jobs, employers and employees in such a way that everybody can do more work and better work with less fatigue, the profits of the owners and the wages of the workers are increased together, and all results and relationships are satisfactory.

The best work a man can do is what he came here for. Unless he finds it and does it he might as well not be living. Your job calls for everything in you that makes you a man. It is a fight, a game, a challenge, a problem, a puzzle, a gold mine, a school, a religion, a philosophy, a crusade, a service to humanity, and a measure of all the powers of your manhood. Look into your job. Learn its possibilities. Make the most of them. Life has no more fascinating and fruitful a study. The way to become great is to get the will and skill to do great work.

# NORTHCLIFFE

## BRITAIN'S MAN OF POWER

Alfred Harmsworth, owner of The London Times and other newspapers reaching millions of people daily, former Chairman of the British Mis-

sion to the United States, England's exponent of "the big stick" and the very apostle of efficiency, is one of the most picturesque of the world's self made men. W. E. Carson has written a biography which is not only an inspiration to all with red blood in their veins, but a record of achievement destined to outlive this generation. Northcliffe's rise to power reads like a romance.

### The Man Who Does Things!

- THE MAN WHO Makes and Unmakes Cabinets
- THE MAN WHO Was the Genius of the Allied War Council
- THE MAN WHO Roused England to Highest Efficiency
- THE MAN WHO Is the Most Influential Journalist in the World
- THE MAN WHO Is Aggressively American in His Methods
- THE MAN WHO Is Hated and Feared by the Kaiser

Brooklyn Eagle—"The most commanding figure in the Empire."  
Chicago News—"The energy of Lord Northcliffe is a subject of most fascinating interest."  
Philadelphia Ledger—"Not one page that is not a valuable contribution to the history of our time."

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

##### I. Patriotism and Loyalty.

A. THE U-BOATS OFF OUR COAST. 1. Give an oral account of the work of the U-boats off our coast. 2. Explain why the Germans have found it comparatively easy to attack our coast boats. 3. Write a paragraph on "German Character as Revealed by the War." 4. Tell orally how we may defend our shipping against the U-boats. 5. Write a brief for a long composition on "The Size, Equipment, and Speed of the Modern U-boat." 6. In a single paragraph explain the reasons that have led to the recent attacks by U-boats. 7. Give a talk in which you present theories concerning the U-boat bases. 8. Write a purely imaginative story founded on the disappearance of the "Cyclops." 9. Imagine that you have found a bottle, cast up on the seashore, containing a message from one of the passengers on the "Cyclops." Write an account of your discovery, and present the message found in the bottle.

B. FROM THE AISNE TO THE MARNE. 1. Give a talk in which you explain the details of the "Hutier Method" of attack. 2. With the aid of a blackboard diagram explain the recent movements on the Western Front. 3. Write a short composition telling of the part American troops are playing in the great battle.

C. WHAT ARE THEY THINKING? 1. Explain why the editors gave the account of "the slavey" such an important position. 2. Show in what respects the first three paragraphs form a most satisfactory introduction. 3. Write a letter purporting to come from England, explaining the food conditions in that country. 4. Write a similar letter from Paris. 5. Imagine that the Germans have made an air raid on your own town. Write an account of the event, and tell the characteristic actions of the people. 6. Write a short oration in which you answer the question, "Is France Bled White?" 7. Read the last paragraph aloud. Explain in what respects it is a satisfactory conclusion.

D. UNION FOR EFFICIENCY. 1. Write a paragraph based on the topic, "Efficiency has taken on a new meaning." 2. Join with seven of your fellow students in an "Explanation Contest" based on the eight movements for efficiency named in the third column. The winner of the contest will be named by a vote of the class when all the topics have been presented.

E. BARUCH—INDUSTRIAL STRATEGIST. 1. Give a talk in which you explain what is meant by strategic control of industrial armies. 2. Write an emphatic character sketch of Bernard M. Baruch. 3. Give a talk in which you explain what important work Mr. Baruch has accomplished.

F. FROM FARM TO TABLE BY MOTOR TRUCK. 1. Show in what respects the motor truck gives important war service.

##### II. The News of the Week.

1. Give an oral account of the event in the news of the week that has interested you most. 2. Select any five items of news, and show the importance of every item you select. 3. Write a very short item in which you emphasize the importance of the new shipbuilding record. 4. Write a composition in which you prove that "The United States should stand by Russia." 5. Give an oral explanation of the present situation in Russia. 6. Explain what is meant by "a joint military expedition into Russia."

##### III. Literature.

A. AN ANTICIPATION OF AVIATION. 1. Point out, and explain, the metaphors in the quotations. 2. Point out, and explain, important adjective and noun combinations that add to poetic effect. 3. Point out and explain the unusual words in the quotations.

##### IV. Character Building.

A. CORNERSTONES OF A GREAT CAREER. 1. Write a brief of the entire article. 2. Show in what respects the spirit of the article is like the spirit of Carlyle's Essay on Burns. 3. Answer in writing the question: "Why are great men so few?" 4. Give clear explanations of the following: "The immortals," "The secret of immortality," "The joy of accomplishment," "The responsibility of service," "The ideal of improvement," "The spur of a task impossible," "Proving worthy of the one you love most," "The satisfaction of knowing you have done your best," "The beginning of greatness," "To be educated is not to memorize the facts of the past."

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

##### I. The War on Land—"From the Aisne to the Marne," "The Battle for Paris," "How the Drive Began," "Americans Hold the Marne."

1. How far are the campaigns of September, 1914, and May, 1918, alike? In what respects are they different?  
2. "On three distinct fronts this spring the Allies have been caught unprepared." How do you account for this fact?  
3. From a study of the News of the Week determine how far the Germans have been successful in this their last drive. How far have they failed to attain their desired results?  
4. Where is the next German attack likely to be made?  
5. Can you find any evidence of a probable counter-attack by the Allies?

##### II. The War at Sea—"The U-Boats Off Our Coast," "U-Boat Raid on Atlantic Coast," "On Board the 'U-151'," "The Story of the Carolina."

1. Give an account of the activities of the U-boats as described in the News of the Week.  
2. "The military value of this proceeding is nothing." Prove that the author is justified in making this statement.  
3. "It [the U-boat attack] is started now for several perfectly obvious reasons." What are they?  
4. "The really important question is how the U-boats are to maintain themselves." Discuss this question and the methods necessary for adequate defense.

##### III. Congress and the War—"Congress Goes to It," "Paying for the War."

1. Make a list of the various bills now under consideration; show what connection each of them has to the war.  
2. What is meant by "cloture"? Why does the Senate refuse to limit debate?  
3. What is your opinion as to Mr. Fadney's proposal for the repeal of the Underwood tariff law?  
4. Compare the income and expenditures of the United States since April, 1917. What are the outstanding facts?

##### IV. Effects of the War in Europe—"What Are They Thinking?"

1. Is there any evidence "that England was starving, France 'bled white,' their people 'fed up' with the war"?  
2. Compare the food situation in England, France and Germany with that which exists in the United States.  
3. "If England and France are not to be starved out, then what of their spirit?" Answer the question.  
4. What has been the effect of the air raids on England?  
5. "For the Hun is in great straits." What is the evidence of this?

##### V. Our Industrial Organization—"Baruch—Industrial Strategist," "Labor and the Western Union."

1. "In this war of nations, a prime element in strategy is industrial strategy," etc. What does this mean?  
2. Show that this war has introduced an entirely new problem into our scheme of government. How is this problem being solved?  
3. What are the functions of the so-called "Board of War Industrial Policy and Administration"?  
4. "We are not divided into capital and labor now, we are a nation," etc. Is Mr. Walsh justified in making this statement? Test this statement by applying it to conditions existing in the Western Union.  
5. Why are Mr. Baruch, Mr. Hoover, Mr. Ryan, Mr. Garfield and Mr. Schwab included in the meetings of the "War Cabinet"?

##### VI. Problems of Transportation—"From Farm to Table by Motor Truck."

1. Describe the method of food distribution from farm to table in use in your own community at the present time.  
2. What is the purpose of the Post Office Department in establishing a motor truck parcel post service?  
3. "It is not difficult to realize what such service means to the farmer." What does it mean?  
4. Compare the beginnings of motor truck postal service with the beginnings of railroad postal service. Is the statement, "Motor truck postal service will ultimately be one of the biggest things in the history of the Post Office Department," justified by the facts?

## PRIVATES PREFERRED

This is the story of a little gentle-voiced, old Frenchwoman, who runs the best restaurant in France—or so its patrons think, at least. There are, or have been, in times past, restaurants aplenty for officers only, but here is a place most jealously guarded for enlisted men, privates preferred. Not that a colonel cannot get his dinner there, but it will not be so cheap nor so abundant nor so quickly served, for Madame Cocaud cooks for the love of the thing and her heart is with the boys in the ranks.

It has only been since the arrival of the Americans that Madame Cocaud has run a restaurant at all. For nine-and-twenty years she kept a small, lazy little *buvette* in the square opposite the *Mairie* in a morsel of a French town so old that, with some one to guide you, you can still find portions of the wall the Romans built back in the days when the Germans were just beginning to be a nuisance. There she lived with her son and toiled mightily in order that he might have as good an education as any boy in all that part of the country.

She had her way, and he was rapidly gaining reputation at home and abroad as a teacher and lecturer—a lecturer on peace, as it happens—when the war came and off he went to the front. It was in the second fall of the war that word of his death came to the little house across the way from the *Mairie*, and the light of Madame Cocaud's life went out.

Then one fine day some one hit upon her town as the very site for what is now a rapidly expanding American army post, and one hot midsummer afternoon the first Americans came rattling over the flagstones of its narrow streets. Most of them made for the taverns, where the signs swung free and the little green tables invited all to sit down in front.

But one tired, dusty boy put his head in Madame Cocaud's door and asked for some eggs. He called them "woofs," but she understood, and as he looked very young and very hungry she prepared a great plate of them and retired into the back room to wipe her eyes furtively on the corner of her apron. It was only when he insisted with great vehemence on paying something that she reluctantly named some preposterously small price and so found herself launched unexpectedly in the restaurant business.

Since then it has not been easy, any night, to find a corner at Madame Cocaud's—a cramped little place at best, all hung with strange brass pots and pans and festooned with still stranger strings of sausages. From that corner, thru the mist of smoke that hangs like a heavy fog in the old, time-stained kitchen, you can see her bending over the hearth, chuckling to herself as, from a single fire of crackling twigs, she brings forth marvels in the way of omelettes and *bifteks*; and *pain perdu* and *saucisses* (country style).

It was to such a place, lured by the growing renown of the *crêpes et saucisses*, that a great American lady—known to every reader of society columns and women's pages back home—descended upon Madame Cocaud's for one of her "sweet little dinners" and the "quantities and quantities of atmosphere" that went with them.

She was so obviously a grand lady that Madame Cocaud pardonably assumed (or pretended to) that she was at least the wife of the President of the United States. For that one night the place was disorgan-

ized, the enlisted men could hardly get waited on at all and there was great sulking in the corners. Madame Cocaud was desolated, and the next night, when the great lady came again, it was not the dinner of the enlisted men that was slow in reaching the table.

Why the enlisted men were treated with such special consideration few of them guessed and none knew for sure until one memorable night not long ago, when a passing captain took *la chambre privée* and ordered wine while the ban was still on it. He was much surprised when the handmaiden replied that they never served it.

Madame was summoned. She confirmed the dreadful rumor. The captain assured her he had the money to pay for it. One did not have to be rich, she replied, to dine at her place. Besides, to sell wine, it was *défendu*.

"But," protested the captain, "I am an officer and these rules are local and are for enlisted men at that."

"So is this place," said Madame Cocaud, her voice trembling, but her eyes alight. "I prefer them. My son was in the army, monsieur," and this was the end of the conversation, "my son was in the army and he was a *simple soldat*."—*Stars and Stripes*.

## REMARKABLE REMARKS

FOREIGN MINISTER BALFOUR—I have no secrets.

EDWARD N. HURLEY—We are beginning to fulfil our destiny.

HENRY P. DAVISON—The Allies are down to their real business.

EDWARD E. PURINTON—A tribute is only the echo of an attribute.

F. G. YOUNG—Reliance on might and cunning is to be discredited.

PROF. GILBERT MURRAY—It is not wise to speak confidently about the future.

P. B. NOYES—The success of the war is likely to depend on the supply of coal.

DAVID STARR JORDAN—Now that we are in the war the shortest way out is forward.

ED. HOWE—If honor will not save a man, and selfishness will, let selfishness do it.

SAMUEL GOMPERS—Intellectuals usually suspend their labor programs from sky hooks.

BARON BURIAN—With the sword in one hand and the olive branch in the other we shall still hold on.

CHARLES STELZIE—The trade unionist should be the last man in the world to talk about "personal liberty."

MAXIMILIAN HARDEN—Germany has the right to extend the area of her dominion according to her needs.

GENERAL SMUTS—Ludendorff is one of our greatest benefactors. He has awakened not only Great Britain but America too.

JOHN GALSWORTHY—On Americans, and America's conduct after the war, I verily believe the destiny of civilization for the next century will hang.

## WELL DONE, AMERICA, BUT—HURRY!

By Cable from the Editor of The Independent

*Somewhere in France, June 13, 1918.*

I have just spent two days with the American Army which is holding back the Hun from the English Channel. Their base is at the apex of the wedge which the Germans have driven toward Amiens. This was the first time that a civilian had visited them since America's first offensive on May 28th, when our troops took Cantigny. They have held this strategical point ever since in spite of eight desperate counter attacks by the Germans. Officers and men are wild with excitement to make a counter advance. An intense artillery battle was going on all the day of my visit. It is quite possible that the Germans might start a colossal offensive in this direction at any moment in their effort to reach the Channel ports, but our boys are not afraid of them. The General said that when the soldiers first took prisoners they were astonished at their dejected appearance and poor physique, and exclaimed, "To think that these are the men we were told to fear!"

I found the same spirit prevailing among the American troops in the Toul sector when I visited them three weeks ago. Judge Wadhams and I were driven in an auto many miles across beautiful French rural country over perfect roads filled with a stream of soldiers and ammunition trains. In the afternoon we visited two American aviation camps. Our airmen are doing splendid work in their daily duels with the Germans in this sector. Before going to the front line we were given a lesson for three-quarters of an hour in the art of putting on and wearing gas masks. As we put our lips over a tube and breathe thru the mouth while a pair of pincers prevents our breathing thru the nose, you can imagine it is not a very agreeable affair. As a final test we were put in an air-tight room, and after having our masks adjusted, a deadly gas was turned in to see if the masks worked all right. Fortunately they did and as we breathed we could detect no odor of gas. Then the Sergeant told me to take off the mask. As I hesitated to obey he took off his, so I followed suit. Instantly I was almost suffocated, and if I had not run for the door I would have been overcome. I was told afterward that they did that to prove to us the seriousness of the gas, for many people think it does not amount to much and do not take the proper precautions.

The Colonel of one of the field batteries took me to where one of his guns was concealed under camouflage and let me fire a gun after having my ears stuffed with cotton to prevent my drums bursting. The lookout in the front trenches gave us the range in code as the Germans have wireless instruments to catch all telephone conversations. At the word of command I pulled the string, and I afterward learned that I came within ten yards of hitting a German lookout post on a ridge eight miles away. The Colonel gave me the brass case of the shell I fired, which will polish up beautifully for a flower vase.

Then we walked ahead of the batteries a couple of miles in the front trenches where, thru a periscope, I saw the batteries fire at the same outpost and could see where the shots hit. The shells tore great gashes in the hillside, shooting earth and rocks in the air like spray forty or fifty feet high. The troops here are the Irish boys from New York.

Next day we visited another part of the front held by the Americans. Here the General had taken over for his headquarters a beautiful old French chateau, and he received me in a noble room with old portraits on the walls and delightful gold and pink furniture. After we had talked for a while, he invited us to go with him out to see the Connecticut and Massachusetts boys. We went over a mile at the rate of fifty miles per hour over a road in full view of the German observation balloons, but it was misty and they did not see us, or decided that it was not worth while to fire at us. When I got among the Connecticut boys and told them that I was a Connecticut boy, too, they gathered around me a hundred deep and told me the whole thrilling story of their first fight at the battle of Siecheprey, where the Americans repulsed the enemy with heavy losses. I knew the families of many of them and promised to take word back that they were well. That evening we dined at a hospital manned entirely by Yale men, nearly fifty of them, with ten Connecticut trained nurses. After the Chaplain conducted vesper services I gave them an old fashioned Yale talk. Everywhere I found men at white heat of enthusiasm to continue the attack. Even the poor fellows in the hospital told me that their only desire was to get back with their brothers in the line.

As I have followed the American Army thru all stages from disembarkation at the port to the front line, I am amazed at what has been accomplished. They have established and put into work all communicating lines with storehouses at the docks, gigantic supply stations and reserve depots. The railroad locomotives are supplemented by motor trucks, and there are extensive machine shops for assembling and repairing all artillery and airplanes. Bakeries and cold storage plants provide food for the troops. Our American engineers have done marvelous work, and the Red Cross and Y. M. C. A. are giving efficient service. The hospitals are superbly equipped and managed. It is a thrilling sight, but it cannot be realized without seeing it.

Line and staff all unite in a message to those at home to hurry! Unwavering England and lionhearted France are still holding strongly. The supreme moment of the war is now evidently at hand.

Hurry! Hurry!

HAMILTON HOLT.

## HURRY, AMERICA!

**T**HE vivid message from the front line trenches which the editor of The Independent cables to its readers must arouse a double response in every American heart. We cannot escape a deep gratification that our boys are acquitting themselves so well. How can we help responding to that stirring appeal to "Hurry" with a new flame of enthusiasm and a new outpouring of energy?

It is good to have our confidence in our boys confirmed. The news that they are proving themselves worthy to stand shoulder to shoulder with their gallant, long-suffering brothers of England and France and Italy is no more than the American people expected, but it is none the less welcome. It is now for the American people to prove that they themselves are fully worthy to be represented by those eager, generous and fearless boys on the other side of the ocean.

These are bad days for Germany. The news that slips into Berlin by devious ways from these shores must be giving many anxious moments to the masters of the Prussian war machine.

In May we sent 200,000 men overseas. This makes something like three-quarters of a million American fighting men on the western front. The account they have given of themselves is one by which every Prussian would do well to take warning.

In May there were completed and delivered to the United States Shipping Board forty-four steel and wooden ships,

of an aggregate tonnage of 263,571. The deliveries of newly built ships since September last have mounted to 170, with a tonnage of a million and a seventh. This for nine months. The best shipbuilding record for a year before our entrance into the war was made in 1901—402,136 tons. If the May rate should be continued for the next three months, the twelve-month output would be almost two million tons, or five times the best pre-war record. The German submarines will have to do better than they have been doing to take care of such a product of American shipyards.

Not only are we producing fighting men and ships in gratifying quantities, we are raising wheat with equal success. There is every prospect of a bumper crop, which may well be the third or perhaps the second largest in twenty years. It promises to mount well up toward the billion bushel mark.

We are doing splendidly. But that must not make us more confident; it must make us more determined. There are two moments in a fight when the fighter must pull himself together and fight twice as hard. One is when defeat is in sight; the other is when victory is in sight.

Germany can be defeated. We are making good progress in our contribution toward that indispensable end. But we must not relax our efforts; we must redouble them. Germany can be beaten; but not easily nor quickly. It will take all that we have to do it. We must not hesitate, delay or bungle in our giving. There is but one answer we can make to that call of "Hurry, hurry!"

## FULL SPEED AHEAD!

**C**OMPARISON of war purpose and activity in America now with American war purpose and activity a year ago reveals the greatest liberation of human energies and the most stupendous reorganization of human efforts that has ever occurred. As a war machine the United States is under headway. Its weight is in proportion to its speed, and its striking force, when it begins to batter, will crack Germany open from end to end.

Recall a few details. After two years of hesitation and divided counsel the people of the United States, clarifying their vision rapidly at the last, and steeling their wills for contest, threw themselves into the war in common cause with the Entente Allies. Our army was a corporal's guard of hardy and dependable regulars, and a national guard that was made up of good material, but was not, in organization, discipline or hardness an army in any modern sense of the word. For augmentation of force we had no resource but the call for volunteers.

In fourteen months we have established conscription and put it in operation; we have created a real army organization in place of an association of military amateurs in jealous conflict with a nucleus of professional soldiers; we have built camps and trained men, and we have transported across the Atlantic Ocean more than 700,000 of them; we are putting shipping afloat on a scale that a year ago would have seemed incredible; on a like scale we shall soon turn out and deliver on the fighting line in France aeroplanes of good fighting quality. Before the first of October we shall be producing more munitions than Germany can make, and adding them to the supplies delivered by Great Britain and France.

All this has been possible because the Administration and Congress have advanced to new attitudes of mind and have developed their policies with corresponding rapidity and in a practical fashion. The President of the United States—we speak respectfully and with appreciation—is a far better intellectual machine today than he was a year ago. He sees more clearly, he is less swayed by doubts and hesita-

tions, his trial and error processes are more swift and sure. The Congress has given him its confidence and loyal support, and authority to cut red tape and to dispose of all the forces of the nation—industrial, business, financial and military—and to organize them in the most effective manner. The Commander-in-Chief has received the mandate of the people to use the full power of the people effectively and relentlessly.

The mandate, in turn, has been given because the American people, not long ago hesitant and divided, are now unitedly for the war. They have arrived at a solidarity well-nigh incredible and as momentous as fate. The traitor and the pacifist have been suppressed, and mental reservations as to the righteousness of the cause and the stark necessity of crushing German power and arrogance forever are dead and forgotten. Our thinking has become clear and thoroughgoing. We no longer delude ourselves with the notion that the Imperial German Government is wickeder than the German people. We know now that the whole German nation is militaristic and brutal, and that kultur is the systematic organization and scientific exploitation of faithlessness, unscrupulousness, bestiality and murder.

What, then, is the purpose and what will be the action of this gigantic engine of war, created with a swiftness unparalleled and amazing? It will strike to destroy, and destroy it will beyond any possibility of repair. It will pulverize the empire of the damned.

Only the hour awaits. France and Britain, aided by American forces now on the fighting line, will sufficiently hold back the Teutonic drives until our preparations are complete. Then the word will be spoken, as quietly as Dewey said at Manila, "You may fire, Captain Gridley, when you are ready." And when the firing begins it will annihilate. The American nation does not go to war for nothing. When it took up arms against rebellion it crushed it. When it took up arms against the power of Spain it destroyed it.

What will it do this time? It will go to Berlin. The articles of peace will be signed in Potsdam.

## THE NATIONAL WILL AGAINST CHILD LABOR

FEDERAL control of child labor is not killed by the adverse Supreme Court decision. It is only postponed. Within a brief time a new bill will be introduced into Congress to accomplish what the court has decreed may not be accomplished in the way first selected by Congress. Perhaps it will be proposed to put a heavy tax upon all articles produced by child labor, or in factories where child labor is employed. This is the method successfully employed to prevent the sale of oleomargarine colored to simulate butter and to prevent the manufacture of matches containing poisonous substances. Perhaps some other way will be devised by which Congress may, without doing violence to the interpretation of the Constitution held to by a majority of the Supreme Court, prevent trade across state lines in the products of child labor.

We cannot believe that a workable scheme will not be devised. The public opinion of the nation is opposed to the premature labor of children. The astonishing thing is that anyone should be willing to favor it. But the things that human greed will cause men to do sometimes go beyond the limits of easy belief. Nevertheless the cupidity and heartlessness of a few factory and mine owners cannot stand long against the aroused opinion of a whole people. Child labor will go. The hand of the National Government will be laid upon it sternly and effectively. It is only a matter of finding the way which the majority of the Supreme Court will hold to be not repugnant to the Federal Constitution.

## OUR DUTY IN MEXICO

SINCE our entrance into the war public interest has been transferred to the other side of the Atlantic, but it must not be assumed that Mexico no longer needs consideration. On the contrary, the little we hear now from the other side of the Rio Grande indicates that the situation there is more critical than before the war and may at any moment require our serious attention and possibly prompt action. The Central American and West Indian nations have lined up beside the United States in the war against Germany. Brazil also has joined us in active hostilities and most of the other American republics have shown that their sympathies are with us. But Mexico, which stands between the United States and its southern sympathizers, has taken an antipathetic if not an inimical attitude. We all know that pro-German and anti-American intrigue has been persistent for years in Mexico, tho in how far such influences prevail at present we have no means of knowing.

We have not forgotten that on April 21, 1914, it became necessary for American marines to occupy Vera Cruz to prevent the landing of a cargo of 10,000 rifles and 15,000,000 rounds of ammunition from the Hamburg liner "Ypiranga" to arm Huerta, whom the United States had declared to be a usurper but whom Germany favored. This was at a time when, as we now know, Germany was actively preparing for the war. We have not forgotten that in February, 1917, Dr. Zimmermann, the German Foreign Minister, offered to finance and aid Mexico "to reconquer New Mexico, Texas and Arizona" in case the United States entered the war. And lastly, we have heard that Mexico has broken off diplomatic relations with Cuba because that country has joined the United States against Germany.

President Wilson was at first criticized by some for his use of armed forces at Vera Cruz and on the Rio Grande, but later when the information on which he acted was made public, the necessity of his intervention was generally recognized. We should beware, therefore, of hasty judgment in case he should have to take similar action at some time in the future on what may seem to the public insufficient

Kirby in The New York World

### THE WILL O' THE WISP

provocation. If such an emergency should arise it would be recognized as a fortunate thing that General Leonard Wood has been retained on this side of the ocean, for it was on the Mexican border that he won his spurs in 1886 and he has had experience in Cuba. Possibly also Colonel Roosevelt could raise a force of volunteers sufficient to head off any danger from this quarter without drawing extensively upon the conscripts so much needed in Europe.

It is greatly to be hoped that intervention in Mexico may be avoided. The United States has no intention of entering upon a career of conquest. Neither has Mexico, in spite of Zimmermann's hint. But it is obviously Germany's aim to distract our attention and divide our energy by starting trouble in the south. Unhappily there are abundant opportunities for her dirty work. The U-boat that sank seventeen ships on the Atlantic coast came from the Caribbean and possibly from a Mexican nest. The British navy gets its oil largely from the Tampico region and if this source should be shut off by the Mexican Government or a revolutionary band it would be as bad as the loss of a battle in France. Great Britain rightly relies upon the United States to protect its petroleum supply. Before the war the United States asserted and Europe acknowledged the responsibility of this country under such circumstances. We have recently recognized Japan's Monroe Doctrine and we cannot repudiate our own. In 1866 we saved Mexico from French domination and it may also be our duty to save Mexico from German domination. Mexico is not, as some would call it, a "sideshow." It is part of the main performance. If we intervene it will be for the protection, not of American interests, but of world interests.

Germany is now said to be unpopular in Mexico. That makes it unanimous.

"Give me the corn of a nation and I care not who makes its laws!" Such is the independence Germany grants to Rumania and the Ukraine.

Travel is simplified in eastern Europe by the incessant shifting of national boundaries. Instead of having to take a train to reach Finland or the Ukraine the Russian stays at home until the country he wants to visit is brought to him.

# THE STORY OF THE WEEK

**The Fourth Offensive** German strategy has followed in most cases the plan of carrying a drive forward until it meets with stubborn resistance and then shifting suddenly to some weaker point in the line. In their drive westward on the Somme in March they made thirty-four miles and in their drive southward from the Aisne in May they made thirty miles. In both cases, according to the opinion of British critics, the Germans advanced farther and faster than they expected to and so were not able to take fullest advantage of their new positions. Since the two drives were directed at right angles to one another this left a re-entering angle between them with the apex on the Oise River toward Noyon by which the Allies whenever they took the offensive might strike the German lines either to the right or left. The new German offensive is intended to cut off this threatening salient and to straighten the line between Montdidier, the terminus of the March offensive, and Château Thierry, the terminus of the May offensive.

This drive was entrusted to General von Hutier, who devised the new system of tactics employed in the former German offensives. But this time they were not so successful, for the French were ready for him and his gains were comparatively slight and very costly. Hutier opened the attack early Sunday morning, June 9, by a heavy and long range bombardment. Then the attack was launched with some 200,000 troops on a twenty-mile front between Montdidier and Noyon. In spite of the terrific fire of the French artillery the Germans pushed on and at the end of the first day had gained more than five miles on the right or Montdidier end. But their left on the Oise was held and on the following day the French counter attacks recovered a large part of the lost ground. The Germans were obliged to throw in more troops, until now probably 350,000 are engaged.

Finding their right held and even driven back the Germans brought forward their left on the east side of the Oise between Noyon and Soissons. Here they were able on Tuesday and Wednesday to advance some seven miles down both banks of the Oise toward its junction with the Aisne near Compiègne, an important railroad and military center, whose loss would be serious.

The new drive is aimed directly at Paris, about fifty miles away, but the German losses have been so heavy that it is not believed they can push forward much farther against Foch's strong defense. The Germans claim to have taken 13,000 prisoners in the first three days, but the French have captured a thousand in counter attacks.

The stand of a detachment of dismounted cavalry on the height of Le Plemont will be remembered as one of the most heroic episodes of the war. Sur-

## THE GREAT WAR

June 6—Norwegian vessel "Vinland" and British steamer "Harpathan" sunk by U-boat off Virginia Capes.

June 7—Soviet troops attack Cossack general Semenoff on Onon River, Siberia. French and American marines drive back enemy northwest of Château Thierry.

June 8—American steamer "Pinar del Rio," from Havana with sugar, sunk off Maryland. Russia cedes to Finland port on Murmansk coast.

June 9—Germans start drive on twenty-mile front between Montdidier and Noyon. Secretary Baker reports 700,000 American troops in France.

June 10—Norwegian steamers "Vindeggen" and "Henrik Lund" sunk off Cape Charles. Italian torpedo sinks Austrian dreadnought.

June 11—American marines take Belleau Woods. French drive back Germans from Aronde River.

June 12—Germans gain five miles east of Oise. Americans repel attack between Bouresches and Belleau Wood.

rounded Sunday morning at four o'clock they resisted until Monday noon against repeated and most ferocious enemy assaults. Every two hours they sent back a wireless message which always read: "We're holding." Finally, when the hour of noon was striking on Monday, one word came thru: "Doomed."

## HOSPITALS BOMBED WITHOUT EXCUSE

Here is an answer direct to the German explanations that it is impossible in an air raid to distinguish hospitals from places of military importance. This photograph of a French hospital on the Aisne was taken from an airplane at a considerable height, but the sign of the Red Cross on each building stands out sharply

**Marines on the Marne** Now that our War Department reports 700,000 troops in France and 7000 casualties, of which 700 are killed in action, it is evident that America is at last fully participating in the Great War. Even the Germans are aware of it, for our marines on the Marne have achieved the honor of being "mentioned in the dispatches" of the enemy, who has hitherto avoided reference to them. But the Wolff Bureau of Berlin says:

For the first time an American division advanced, on June 7, to the attack on the front northwest of Château Thierry. The hottest point was Belleau Wood, where a German regiment inflicted severe losses. It repulsed the Americans, who got as far as the edge of the wood, in a fight at close quarters with hand grenades and bayonets.

Nevertheless, the American marines renewed the attack day after day, until on the 11th they were masters of the whole of Belleau Wood. In the final assault that carried them to the north-eastern side our men took 800 prisoners, including ten officers, and captured two three-inch field pieces and thirty machine guns. Barbed wire stretched among the trees made it difficult to penetrate the woods.

The villages of Torchy and Bouresches in the same sector were also carried by the American marines using machine guns, followed by bayonet work among the houses. The counterattacks of the Germans on these positions were repulsed with heavy losses, altho the Germans preceded the assault with intense bombardment, using a new kind of black gas. One company of marines fighting in a wheatfield was outnumbered and surrounded, but fought its way out, carrying with it several of the German machine guns.

The fighting here is open and irregular, and many curious incidents are reported, such as the following:

An American corporal found himself behind the German lines two days ago. By keeping himself hidden and crawling a foot at a time he reached the American line during the height of today's battle and in time to take part in the victory.

One marine who was taking back a prisoner ran into two German officers and ten men. He tackled them singled handed with his rifle and bayonet, killed both the officers and wounded seven of the men.

Another sergeant was about to take a prisoner when the German threw himself on the ground and discharged his revolver at the American after calling "Comrade." That settled the German, for the sergeant shot him, as he did four others who also had surrendered but refused to put up their hands.

A corporal captured three Germans and was leading them away when twelve others surrendered to him and joined the procession.

This sort of fighting affords opportunity for the individual initiative, for which the marines are famous. Their methods surprise the Germans, who have given them the name of Teufelhunde, or "Hell Hounds." They are

French Official

#### ONE OF THE TANKS MADE IN GERMANY

In their recent drives the Germans have used effectively large numbers of tanks patterned after the "unwieldy Willies" of the British. This one, captured by the French in the battle of Picardy, overturned at the foot of a steep embankment. The photograph shows the bottom of the tank and the gun at the front with the black cross beneath it

picked men of the "one in seven" type, only one being taken out of seven examined. They were taken to France and trained by General Doyen, who was unable at the last to lead them into action because of failure of health. So he has been sent home and the Marine Corps put under the command of General Harbord, Chief of Staff to General Pershing. General Harbord received his education at Kansas Agricultural College instead of West Point. He enlisted as a private in the regular army in 1889 and worked up from the ranks to the grade of lieutenant during the Spanish-American War.

The position held by the American Marine Corps, on the line between Veuilly and Château Thierry, is especially important because it bars the road toward Paris. The day before the Americans got there the Germans had made seven miles in that direction. Since then they have made no progress, but on the contrary have had to fall back several miles. The Saxon troops here at first were replaced by the choice Prussian Guards, but they have had no greater success.

**Aerial Warfare** Every month shows an increased participation of the flying machines. During the month of May, 1137 airplanes are reported to have been brought down on all the battlefronts. Of these 971 were in France, 120 in Italy, 25 in Macedonia, 8 in Palestine and 3 in Mesopotamia. On the western front the British brought down 492 German machines, the French 234, the Americans 13 and the Belgians 5, while on the other side the Germans brought down

222. Eleven German observation balloons were destroyed during the month.

The British aviators have repeatedly raided strategic points behind the enemy lines. For instance, on the night of June 1 they dropt about sixty tons of explosives on the mole at Zeebrugge, the railroad station of Bruges and other Belgian towns. The munition works on both sides of the Rhine are visited by day and night and the people of the valley are in a constant state of alarm. The British raid on Cologne May 18 did terrible damage. It is reported that eighty-eight of the persons killed in

Cologne were buried in a common grave. The Archbishop of Cologne sent thru the Vatican a request that the British airmen abstain from bombing the city during the Feast of Corpus Christi, May 30. The request was complied with and the Pope thanked the British Government for sparing the city on that day. But the Archbishop of Cologne, declaring that he could not trust the English, prohibited the Corpus Christi procession and even church assemblies. Altho the Archbishop of Paris had presented no such petition to the enemy it was expected that the Germans would exercise a similar forbearance, but on Corpus Christi day the bombardment of Paris by the long range gun was continued as usual and one of the shells struck a church, wounding eighteen persons.

It is now announced that an aerial squadron has been operating on the Toul front, using Nieuport machines in pursuit of the German Gothas. American airmen are also aiding the French and British on the western part of the line.

**Intervention in Russia** The question of armed intervention in Russia is being actively agitated in the United States, but what form it should take and what side it should take are yet to be determined. Some of the American papers urge that an army be sent to support the Grand Duke Nicholas and fight under the old banner of the Czar. Others argue that the invasion of Russia by a military expedition, especially one consisting largely of Japanese, would drive Russia into the arms of Germany. There are now

Esquella, Barcelona

#### THE BIG NOISE

A Spanish conception of the long-range gun that continues to bombard Paris

in the United States the representatives of three factions, each trying to get American support. On the conservative wing there are the Constitutional Democrats, commonly called Cadets, who want a limited monarchy. At the other extreme are the Bolsheviks, who ask recognition for the present Soviet government of Moscow and assert that it is the bourgeoisie who are pro-German. Between these extremes stand the former members of the Kerensky government, who have escaped from Russia thru the back door and sought refuge in America. They would favor the establishment of a socialistic republic, but not of the radical Bolshevik type.

It is almost impossible to find out what is going on in Russia, for mail communication is broken off and the dispatches of American correspondents are held up or mutilated by the British censorship. Our Government, at the instigation of the Associated Press, has protested to Great Britain against censoring American news. It seems, however, from what can be learned, that the Soviet government of Lenine is threatened with counter-revolutionary plots of a formidable character. Moscow has been declared in a state of siege and an effort has been made to raise a Red Army by conscription among the workmen and peasants. But there is considerable disaffection among these classes, taking the form of political strikes. In several provincial cities anti-Soviet candidates have been elected. In the southern Urals a

body of 15,000 Czecho-Slovak prisoners, who were captured or who deserted from the Austrian army, have organized an army and seized the railroads and munition depots.

General Semenoff, the Cossack commander, who with an army of Russians, Japanese and Chinese, organized in Manchuria, has been pushing westward along the Trans-Siberian Railroad, is said to have met with a reverse on the Oise River, east of Lake Baikal. A Bolshevik force crossed the river and his hastily recruited and composite forces could not stand the attacks. The Bolsheviks were, it appears, pushed back over the river, but Semenoff is outnumbered and can hardly hold the railroad unless the Japanese come to his aid.

**Finland Under German Rule** The independence of Finland has been recognized by Russia and foreign governments. The Russian flag, that has for 110 years flown over the fortress of Sveaborg in the harbor of Helsingfors, has been hauled down and replaced by the old Finnish flag. The Diet, which the Czar abolished, has resumed its sessions. The exiled judges have returned from Siberia. Yet the last end of Finland may be worse than the first, for practically the country is dominated by the Germans, who were called in to help the White Guard subdue the Red. General Mannerheim, the Finnish officer who organized the White Guard to put down the Bolshevik rising, has resigned now this has

been accomplished. Altho he invited the aid of the Germans and officially thanked them afterward for assisting in the liberation of Finland, he refused to acquiesce in their rule over the country and their plans for the acquisition of Russian territory. His place has been taken by the German General von der Goltz, and Germans have taken over the military school, arsenals, shipping and fortresses of Finland. The Russian military stores at Helsingfors, which have thus fallen into German hands, are valued at \$75,000,000. The Bolshevik Foreign Minister of Russia, Mr. Tchitcherin, has protested in vain against this violation on the part of the Germans of the treaty of Brest-Litovsk.

Seven British submarines and four Russian submarines of American make that were held in the harbor of Helsingfors by the ice were blown up and sunk to prevent their falling into the hands of the enemy.

The Germans have assumed control of all importations into Finland, including food supplies. The Finnish people are in imminent danger of starvation, because they are always dependent on outside sources, and in the recent disturbances crops and stores were destroyed. The bread ration has been reduced to less than two ounces a day. Denmark has sent 20,000 tons of grain, two-thirds of it taken from the government stocks at the expense of the home bakeries, but this is not half enough. Representatives of Finland in America are trying to get the grain that was purchased here for their starving countrymen, but there are no ships to spare, and besides it is feared that any food now sent to Finland would aid the enemy. It is said that a shipload of rice contributed by Denmark was diverted to the German army.

From Russian sources we get reports of wholesale massacres of the Red Guard and their sympathizers more horrible even than the reports we were getting a few months ago of Bolshevik atrocities in Finland. It is said that the White Guards and Germans, after subduing the Reds, have imprisoned and ill-treated 70,000 persons, of whom 30,000 are civilians. Hundreds of prisoners have been shot without trial; 158 women in a single day.

By the execution, imprisonment or exile the republicans and Socialists, who once were in the majority in the Finnish Diet, have been so far reduced that the monarchical party has gained control, and it is expected that the Finnish throne will be offered to Prince Oscar, fifth son of Kaiser Wilhelm. General Mannerheim is said to have declared that the White Guard favors a monarchy. Meantime Judge Svinhufvud has been made dictator. Svinhufvud (translated into English the name would be hogshead) was in 1910 president of the Finnish Diet, but because he refused to surrender the liberties of Finland at the command of the Czar he was exiled to Siberia. In 1917 he was released along with the other political prisoners and became head of the provisional government of Finland.

THE DRIVE TOWARD PARIS

The first drive carried the Germans westward from La Fere to Montdidier. In May they drove southward to the Marne. Their new drive is intended to fill up the angle in between Montdidier and Soissons and reach Compiègne. On their right they advanced to the Aronde River, but the French drove them back of Belloy. On their left they took Ribecourt. American forces are holding the flanks, above Château Thierry and Montdidier.

**Finland's Expansion** As soon as the Czar was overthrown, the Finns began to assert their independence of Russia and also to lay claim to Russian territory in the east and north of the present boundaries of Finland. The border land of eastern Karelia is largely inhabited by Finns, who would, it is assumed, vote for annexation to Finland if they had the opportunity. This territory, as well as Esthonia, was acquired by Peter the Great at the peace of Nystad in 1721, after twenty years of war with Charles XII of Sweden. The present Bolshevik government of Russia, having laid down as one of its fundamental principles the right of every people to determine to what country it shall belong, cannot consistently refuse to submit the question to the vote of the population concerned.

Germany championed the Finnish cause for obvious reasons, and her ambassador at Moscow, Count von Mirbach, negotiated a treaty with Foreign Minister Tchitcherin by which Russia agrees to cede to Finland a strip of territory, boundaries later to be defined but certainly extending to the Murmansk coast on the Arctic Ocean. Finland on her part cedes to Russia the fortresses of Ino and Raivola on the frontier near the Baltic, but on condition that they are to be unfortified.

Finland's new Arctic outlet is said to be Petchenga Bay, just east of the Norwegian border. The Germans are already constructing a railroad to this port, which is some 250 miles beyond the terminus of the Finnish road leading from the head of the Gulf of Bothnia into the interior. The completion of such a railroad would enable the Germans to send submarines to Petchenga and launch them on the Arctic Ocean, where they could prey upon the French and British shipping as it passes this port on its way to Kola or Archangel. It probably would be possible for the Germans to capture these ports or the railroads connecting them with Petrograd, for they have doubtless more forces in Finland than the Allies could send to the Arctic. If Germany gets control of the Murmansk coast, the only way for the Allies to send relief to Russia would be by Vladivostok, a distance of five thousand miles after that port is reached.

**Reassuring Mexico** Acting on his governing principle that the peoples of democracies can maintain friendly relations best by knowing each other, President Wilson last week received at the White House a delegation of Mexican newspapermen to whom he spoke frankly and fully on Mexican-American matters. A Washington correspondent who talked with several of the newspapermen after the conference declared that "the delegation, without exception, could hardly choose superlatives strong enough to express their gratitude and appreciation of the President's plain-spoken words."

President Wilson said in part:

The policy of my administration toward Mexico was in every point based upon the

#### FARTHEST FRONT

The German flares over No Man's Land light up this British patrol going over the top for a night's work making new trenches. They are carrying trench mats, strips of duck board used to line the bottom of a trench to keep the men from standing in the mud. The soldiers with bayonets fixed are on the alert in the trench which the working party is just leaving

principle that the internal settlement of the affairs of Mexico was none of our business, that we had no right to interfere with or dictate to Mexico in any particular with regard to her own affairs. When we sent troops into Mexico our sincere desire was nothing else than to assist you to get rid of a man who was making the settlement of your affairs for the time being impossible. We had no desire to use our troops for any other purpose and I was in hopes that by assisting in that way and thereupon immediately withdrawing I might give substantial truth of assurance that I had given your government thru President Carranza.

We are the champions of those nations which have not had the military standing which would enable them to compete with the strongest nations in the world, and I look forward with pride to the time which I hope will come when we can give substantial evidence not only that we do not want anything out of this war, but that we would not accept anything out of it; that it is absolutely a case of disinterested action. And if you will watch the attitude of our people you will see that nothing stirs them so deeply as the reassurances that this war, so far as we are concerned, is for idealistic objects.

In speaking of the Pan-American agreement proposed by the United States some time ago, President Wilson took especial pains to reassure Mexico as to the disinterested motives of the United States. He pointed out that the Pan-American agreement, like the plan of the League to Enforce Peace,

is the kind of agreement that will have to be the foundation of the future life of the nations of the world. The whole family of nations will have to guarantee to each nation that no nation shall violate its political independence or its territorial integrity. That is the basis—the only conceivable basis—for the future peace of the world, and I must admit that I was anxious to have the states of the two continents of America show the way to the rest of the world as to how to make a basis for peace.

Peace can only come by trust. If you can once get a situation of trust, then you have got a situation of permanent peace. Therefore, every one of us owes it as a patriotic duty to his own country to plant the seeds of trust and of confidence instead of the seeds of suspicion and a variety of interest.

**Congress Is Speeding Up** The new war revenue legislation is still nebulous and highly debatable, but the hearings have been resumed, and while these are under way the plan is to clean up the slate of other measures. It is still possible that there may be a short summer recess, necessary for fence-repairing and genuine vacation on the farm or in the Congressional kitchen gardens. At the rate at which the revenue bill is progressing in the hands of the Ways and Means Committee of the House, there is a chance that the tentative draft may be begun about the 20th of the current month. According to the usual procedure, this would mean that the bill would come before the House within two weeks, probably under a special rule limiting debate. Trouble is expected in the Senate, however, as that body, proverbially conservative, will refuse to be stampeded into enacting hasty and radical tax legislation.

The conference committees of House and Senate met last week to settle several important differences of opinion. Hope of settlement of the agriculture, the postoffice, and the rivers and harbors bills is still strong, tho the \$2.50 price for wheat in the first named bill is still a sticking point. The emergency food appropriation of \$11,000,000 has resulted in an unexpected Prohibition fight in the shape of the Randall amendment forcing the President to exercise his authority to stop the manufacture of beer and wines.

"Cloture," or limitation of debate in the Senate, continued to be discussed during consideration of the rule proposed by Senator Underwood. The debate took an unexpected turn when Senator Borah proposed that treaties be discussed in the open instead of in executive or secret session.

**In Brief** Last week saw many accomplishments of note. One was the completion of the first of four great Government plants for filling shells with high explosives. The rest of the plants will be finished within six months, and have a capacity of 179,000 shells of all sizes daily. Another event was the tightening of the grip of the Government on the steel supply of the country so as to ensure that the armies of the Allies and the war industries back of the armies will get the steel that they need. Thru the War Industries Board, of which Mr. Baruch is chairman, tabs will be kept on the daily output, and the daily outgo will be regulated solely from the point of view of the prime necessities of the nation.

Just before adjourning for the term the Supreme Court of the United States upheld federal court decrees prohibiting newspapers from publishing articles held to embarrass the administration of justice. The case involved an Ohio newspaper, and Justices Day and Clarke, both from Ohio, took no part in the decision. Justices Brandeis and Holmes dissented. The right of the press "to state public things and discuss them," declared the judgment of the court, "as every other right enjoyed in human society, is subject to restraints which separate right from wrong doing."

The drastic compulsory work law of Maryland will be tested in the courts in the case of a man engaged in selling stocks and bonds for a concern doing Government work. A police judge had ruled that this was not essential, and had imposed a fine of \$100 and costs.

**Labor Stands True** A year ago doubt was expressed in many circles as to the loyalty of labor. Today there is no longer any doubt. The rank and file of organized labor and the officials of organized labor are loyal. For this reason interest in the convention of the American Federation of Labor which opened in St. Paul last week centers chiefly on the constructive ideas and action which may come

from this meeting and the subsequent deliberations. Concerning the labor policies of the Government, with whose framing he has had much to do, President Gompers declared, in part:

"Workers in war production are practically a part of the fighting force. No action should be taken in the shops or on the field not in harmony with the purposes of the war. No strike should be inaugurated which cannot be justified to the man risking his life on the firing line in France. . . .

"Those contributing to production should have a part in its control. Every worker has a right to be freed from all avoidable uncertainties of employment, both from those arising thru poor labor administration and from mismanagement in production and the effects of speculation in raw materials or finished products. In looking toward the future, we feel keenly that the nature of social development will depend largely upon the principles which workers shall demand as the basis of relationships."

#### **To Keep Things Moving**

Another and important step toward "keeping things moving" was taken by the Government last week when the United States Employment Service, an agency of the Department of Labor, took over exclusive control of the employment of all dock workers along the coasts—in every port of the United States. The first place where the new move will be felt is New York. It appears that ships for France and England have in the past frequently been held back for days because of a lack of trained men and because of friction between labor and private interests. The new plan is expected to overcome these obstacles, adding at the same time anywhere from ten to thirty per cent to the service obtained in overseas transportation by reason of speeding up the supplying of labor, and the right kind of labor, for the ships.

The Employment Service is to act as a switchboard. Employers needing laborers, and laborers needing employment will be brought together thru this

medium. This new system has been compared to the Federal Reserve Bank system in that it renders labor "fluid" and capable of mobilization to the point where it is most needed.

**Ships of All Kinds** Regarding ships: They are coming off the ways at a fair rate of speed. Last week at Savannah the "Quinnebec," a "composite" ship, the first of its kind, was launched. Before she struck the water the keel of another ship was laid in the record-breaking time of 13 minutes.

But the big news of the week as far as ships are concerned was the speech early in the week at South Bend, Indiana, of Chairman Hurley of the Shipping Board. In round numbers, Mr. Hurley said, we have added nearly 4,500,000 tons of shipping to the American flag since the war against Germany. We are now prepared to go on and add some half a million tons each month. The program calls for the building of all kinds of ships, passenger, cargo, refrigerator, and tanker, ranging from 5000 to 12,000 tons each. "Exclusive of this," said Mr. Hurley, "we have 245 commandeered vessels, taken over from domestic owners, which are being completed by the Emergency Fleet Corporation. These will aggregate a total deadweight tonnage of 1,715,000. This makes a total of 2101 vessels, exclusive of tugs and barges, which are being built and will be put on the seas by the Emergency Fleet Corporation in the course of carrying out the present program, with an aggregate deadweight tonnage of 14,715,000.

Five billion dollars will be required to finish our program for 1918, 1919 and 1920. but the expenditure of this enormous sum will give to the American people the greatest merchant fleet ever assembled in the history of the world, aggregating 25,000,000 tons.

American workmen have made the expansion of recent months possible, and they will make possible the successful conclusion of the program. From all present expectations it is likely that by 1920 we shall have close to 1,000,000 men working on American merchant ships and their equipment.

We have a total of 819 shipways in the United States. Of these, a total of 751, all

of which except 90 are completed, are being utilized by the Emergency Fleet Corporation for the building of American merchant ships.

In 1919 the average tonnage of steel, wood and concrete ships continuously building on each way should be about 6000 tons. If we are using 751 ways on cargo ships and can average three ships a year a way, we should turn out in one year 13,518,000 tons.

The total gross revenue of our fleet is very impressive. From the ships under the control of the shipping board a total gross revenue is derived of about \$360,000,000.

Weeding Out Disloyalty

The iron hand of the Government is bearing down heavily these days on spies, suspects, and "conscientious objectors" who refuse to wear the uniform. At San Antonio the other day a court martial imposed the heavy sentence of twenty-five years imprisonment each on nearly half a hundred objectors. The men are members of the Mennonite faith. Those of them who refused to bear arms were allowed to work in a civilian capacity in the army, but those who would not work in uniform were tried, convicted and sentenced. Washington despatches intimate that other offenses were undoubtedly involved, such as disloyal propaganda. One of the first cases of conscientious objectors in the country brought a sentence of death which was later modified by the War Department when brought for final review.

Last week also indictments charging conspiracy to commit treason were returned in the United States District Court in New York against several men of more or less pro-German reputation. Jeremiah A. O'Leary, John T. Ryan, Willard Robinson, Emil Kipper, Albert Paul, Lieut. Commander Hermann Wessels of the German Navy, and Baroness Maria von Kretschmann, said to be a kinsman of the Kaiserin, were involved. Federal officials declare that this is the most important case of the kind since the beginning of the war. The charges date back to April, 1917, and the evidence as it comes out promises entertaining and enlightening reading for all loyal Americans.

A Discriminating Draft

Many men on the list in various classifications awaiting call to the cantonments are to have their present status examined with a view to sending into the army "every last one" who is fit to go and who is not needed elsewhere. This combing process has aroused friction thruout the country. But according to the news dispatches it is friction of a relatively unimportant kind—far less annoying than the kind of friction to which we would all be subjected if Germany won. The Government at Washington is endeavoring to set a good example. The several executive departments have shown no favoritism in attempting to secure exemption for men of draft age, and in spite of outbursts of criticism in Congress against some of the secretaries, it is common knowledge that if any one in the Government service is hiding behind a desk, the will and the power exists to put him into the trenches. There are on record many cases of men who have wanted to leave civilian jobs in the service of Uncle Sam to take military employment, but who have been discouraged from doing so for the present by their superior officers. There is still plenty of opportunity for most necessary duty behind the lines, and the sudden displacement of men in strategic positions can cause endless confusion and delay to war plans.

Do We Pay Too Much for Food?

How about the price of foods? We have been saving and saving, and yet the prices do not go down—do not stop going up. What has Mr. Hoover to say about this?

These questions have hitherto been answered by the Food Administration with the statement that the first object of Mr. Hoover was not to benefit the domestic food situation, but to supply food to our armies and our allies; and that, in addition, the control so far exercised over prices has been strong enough to prevent them from soaring to impossible levels—as sugar might

have done at the time of the scarcity last winter.

But this week the intimation comes from the Hoover administration that retailers who hereafter charge over what the Government, in coöperation with the public and the trade determine to be a "fair price," will be cut off from their profit-making supplies by no less a person than Uncle Sam. Such action, plus pitiless publicity, is expected to accomplish the desired end.

Getting Coal to New England

New England, nearly frozen and paralyzed industrially last winter for lack of coal, is preparing now for the coming zero weather, and the Federal Fuel Administration is conducting a hot weather campaign of coal preparedness for New England and the other coal-dependent sections of the country. Dr. Garfield has announced an apportionment of anthracite coal for the year ending April, 1918, and another apportionment for bituminous. This year New England will get 10,331,000 tons as compared with 9,833,379 tons for the normal year. The entire group of Atlantic states will be granted 31,417,154 tons as compared with 27,878,233 tons two years ago. The increases are of course due to the increased demands of war and growing population. Regarding bituminous coal, it is already apparent that the demand exceeds the supply by some 80,000,000 tons. The mines must get busy—if they are not already producing to capacity.

Local fuel administrators thruout New England are carrying on the work of the Federal Administration in anticipation of a hard time ahead. The submarine warfare along the Atlantic coast has threatened the success of the coal-barge service which was planned to relieve the railroads, tho it is still probable that the menace of the U-boats may be removed or guarded against before it does too much damage. Full use of the New York state barge canal is urged by officials both for the carriage of coal and the moving of grain and other materials to the seaboard.

# THE WORLD OF SCIENCE

Persian Lambskins  
Made in America

The extension of German power over the trans-Caspian region makes it more important that we should become independent of one of the peculiar products of that district, that is, the soft and curly "Astrakhan" fur that ladies like for opera cloaks and gentlemen for overcoat trimmings. This commonly goes by the name of "Persian lamb," but is more apt to come from Bokhara or some other province of Russia. The best of the skins come from the high, arid plateau about Kara Kul or "Black Lake" in eastern Bokhara, and hence are called "Karakul fur," which the average American persists in transforming into the more comprehensible form of "curlicue fur." This district produces every year about 1,500,000 lambskins and by the time they get to America they bring five or ten dollars apiece, altho they measure only twelve inches by six. The Karakul lambs are killed within three days of birth while the black fur is soft and tightly curled. There is plenty of land in the United States that is as high and dry as the Central Asian plateaux and there seems no reason why the efforts of the Department of Agriculture to introduce the Karakul sheep into America should not be successful.

**The Bitterness of Grape Fruit**  
The quality that makes the grape fruit or pomelo delectable to some people and detestable to others is its bitter taste. The growers of grape fruit have been trying to get rid of it with the result that when they do they find that they have nothing but a big lemon on their hands. So making a virtue of necessity as everybody should they have advertised the grape fruit for its medicinal value, apparently on no more basis than the old folk theory that anything that is bitter is good for whatever ails you. Since quinine is also bitter and quinine kills the malarial germ, grape fruit is extolled as "one of the pleasantest and surest antidotes imaginable for malaria." Or if not quinine it must be some other alkaloid equally valuable for some other disease. The grape fruit is also commended to the public on the ground that it is rich in phosphates and essential oil.

Now a Kansas chemist, H. F. Zoller of Manhattan Agricultural College, has taken the trouble to analyze the grape fruit and in the May issue of the *Journal of Industrial and Engineering Chemistry* explodes all these legends. We could get as much phosphate, he says, in a glass of milk as in a dozen grapefruit and as for the essential oil "a tablespoonful of pure gum-turpentine will furnish the same amount of the remedial as an entire crate of citrus fruit, provided we eat the peel and

SKIN OF A KARAKUL LAMB

These furs come from the parts of southern Russia over which Germany is securing control, but America might as well raise the Karakul sheep

all." As for the bitterness no quinine or other alkaloid is to be detected in any of the citrus fruits.

The bitter principles, he finds, is a glucoside, that is, a compound of glucose or some similar sugar with some benzene derivative. The glucoside of grape fruit is "naringin," as was discovered by de Vry in the Java fruit sixty years ago. Naringin exists in the peel to the extent of about half of one per cent. It forms fluffy glistening cream-colored crystals, much bitterer than quinine. Dissolved in 8000 times its weight in water the solution is intensely bitter.

## Waterproofing Cloth

The term "waterproof" does not apply merely to such impermeable fabrics as made the name of "Mackintosh" famous but is extended to cloth which by some process has been made repellent to water. A waterproofed overcoat since it is still porous will let rain thru if it comes down hard enough, but the cloth will not soak up water and consequently will exclude drops that are sprinkled upon it. A bath towel, as the reader may have noticed, will sometimes go on a strike and while remaining rough and porous as ever will refuse to take up water. The reason is apt to be that it has been treated alternately with soap and hard water whereby the insoluble calcium stearate has been precipitated in its threads.

This is the ordinary method of waterproofing except that aluminum is used instead of lime. A solution of sugar of lead (lead acetate) is mixt with a solution of aluminum sulfate or alum. Lead sulfate is precipitated out and aluminum acetate left in solution. This solution, known as "red liquor," is used for soaking the cloth, which is then

passed thru a bath of hard tallow soap (sodium stearate). The aluminum and the sodium exchange partners and the insoluble aluminum stearate or alum soap impregnates the threads. The cloth then sheds water instead of absorbing it and after a shower the little round drops of rain stick on the outside instead of soaking in.

## Liquid Air Explosives

The war is to be won by high explosives and inventors on both sides are racking their brains to find still "higher" explosives than the enemy. The power of an explosive depends upon the extent and rapidity of its expansion. This expansion is due first to the change from the solid or liquid state to the gaseous, and second upon the expansion of the gases caused by the heat of the explosion. The first is about the same for all explosives, but the second, the heat evolved, varies greatly. The explosion is in most cases due to the combination of carbon and hydrogen with oxygen forming carbon dioxide and water. In gunpowder the required oxygen is in a separate compound, the saltpeter, from the carbon and sulfur with which it combines. In nitroglycerin it is in the same compound. A third way is conceivable, to add oxygen in the elemental and liquid form, and this has actually been found practicable. The Germans in the coal mines of Silesia are now using cartridges of coal dust soaked in liquid air which, owing to the evaporation of the nitrogen, is more than half oxygen. The American Bureau of Mines has found that a cheesecloth bag filled with carbonaceous matter and dipped in liquid air has about three fourths the strength of forty per cent dynamite. Such an explosive, tho not very powerful, has the advantage that if a charge is not set off the oxygen evaporates harmlessly, so there would be less danger to the miners from striking unexploded cartridges.

Nitroglycerin develops on combustion 1580 calories of heat per kilogram, but a mixture of some hydrocarbon with liquid air would give 2200 calories. If we could use liquid ozone, which is a condensed form of oxygen, and mix it with liquid hydrogen we might get 4500 calories, which is three times as strong as nitroglycerin. But liquid hydrogen is too hard to make and evaporates too readily to be used for such a purpose.

Combinations of hydrocarbons with ozone such as ethylene ozonide and benzene triozone give off fifty per cent more heat than nitroglycerin and explode more quickly, which makes them more effective. If instead of the trinitrate of glycerin (nitro-glycerin) we make the tri-chlorate we should have a compound evolving 3000 calories on decomposition and therefore nearly twice as strong as nitroglycerin.

Only twenty-seven basic plans are used in homes for twelve thousand people in Yorkship Village but the houses all look different

# BUILDING A WAR TOWN

BY RICHARD S. CHILDS

**W**HEN the shipyard workers — sixty per cent of them married — came flooding by thousands last year to Camden, New Jersey, to work in the great new yards of the New York Shipbuilding Company, rents in Camden began to soar, beds began to work three shifts a day, transportation became congested and good wages were nullified by an inflated cost of living—all, to the enrichment of sundry local property owners. For every hundred men on the pay roll, fifty threw up their jobs each month and departed, which did not help along Uncle Sam's ship program. Still higher wages would have meant still higher rent. The housing shortage was far too great to be solved by the slender resources of local speculative builders.

Accordingly Uncle Sam organized a special local realty company and loaned it sundry millions at five per cent. The realty company's manager, Mr. Wallace Benedict, with the aid of Electus D. Litchfield, a leading New York architect, is proceeding to build the first American garden city.

The site is the 225 acre "Cooper

Farm" on the outskirts of Camden across a wide wooded creek and a mile back from Gloucester. On a beautiful rolling landscape, Mr. Litchfield has drawn a charming town plan for a population of twelve thousand. Town planning is a fascinating art and rarely is an opportunity offered to practise it on so extensive and unrestricted a scale. The tricks of the trade are to

make use of natural beauties, provide gentle street grades, guide traffic to a few broad, straight avenues and leave narrow residential streets that will be quiet and safe, and economical to pave; make short, closed vistas and winding roads, instead of the usual dull grid-iron street plan; and find the closest fit to the natural lay of the land, so as to reduce grading expenses to a minimum. By such devices Mr. Litchfield gives grace and charm and variety to his new town—and saves a lot of money for Uncle Sam at the same time!

To a visitor, the outstanding feature of Yorkship Village will be the universal harmony and good taste of its architecture. The houses, the stores, churches and public buildings will all [Continued on page 487]

The spacious central square is surrounded with stores with apartments above, and traffic is guided thru a few broad avenues

# THE LAST TO LEAVE

## How Smith College Girls Helped Refugees and Troops in the Great Battle

*Miss Wolfs is a Belgian girl who was graduated from Smith College in 1908. She was living in Liège when the Germans bombarded it in the first few weeks of the war, and after the city was captured she escaped to the United States. Miss Wolfs was one of the first volunteers for the Smith College Relief Unit, which was organized last spring and financed by Smith graduates. Eighteen members under Mrs. Harriet Boyd Hawes sailed in August to undertake the work of reconstruction in some of the villages of northern France; thru the fall and winter they worked in Ham, Grecourt and neighboring towns distributing supplies and helping the French refugees reestablish themselves. This article is taken from a letter written by Miss Wolfs to Mrs. Thayer, head of the Smith Unit over here.*

I am writing this time from an entirely different world. The Smith Unit is in the quaint old city of Beauvais and has been granted the privilege by the French of feeding the thousands of wounded pouring into the railroad station day and night.

We had just succeeded in moving the last inhabitant of Grecourt out of the stables of the chateau into the little house across the road by the pump. Frances and Marion rose early and went forth in search of horses to finish plowing in the small gardens in our villages. The members of the unit spent every spare moment in weighing out vegetable seeds into fifteen and thirty gramme packages. Every dishpan and pail in the store as well as every pot and kettle from the kitchen was full of home-made paper bags, labeled long, short and medium carrots, lettuce for more seasons that we ever knew existed, beets for humans and beets for animals; turnips, radishes, beans, and many more. The seed potatoes were in the station at Nesle, ready to be called for and distributed.

The British had just sent us several men from a labor company to help us, so they put up their tent in our meadow and helped Alice finish the shelves in the portable house to be known as the library. The books were all arranged and by Thursday, March 21, the little house was to be ready for use. A casual visitor on Wednesday afternoon repeated to us the rumor that a German offensive was due to start at midnight. There was some firing heard in the evening, but as that was a common occurrence we paid no attention. The following morning, however, we were awakened at four o'clock by the rattling of our windows and the shaking of our houses caused by terrific cannonading, and we understood that the renowned offensive had begun. It was after ten o'clock when a Red Cross driver came in and said that some of the villages near Ham had been given orders to evacuate. It struck us like a thunderbolt, as we were so far from the main road that no signs had yet reached us.

BY MARIE L. WOLFS

We decided at once to take out our machines and help all we could. Elizabeth set out for Verlannes, which was her village, and the one nearest Ham, and stayed there all day, taking charge of the evacuation. As the people were pouring into Esmerly-Hallon we sent one car over to the cross roads with our entire supply of milk and all the bread, biscuits and chocolate we could find. The evacuation of the villages was a sad sight; we could carry only the aged, the sick and the children, every one else had to walk. The roads were choked with troops, guns and supplies going in one direction, and peasants with bundles and carts going in the other, driving their cattle before them.

In the meantime word came to us indirectly from the Sous-Prefet at Nesle and directly from Mr. Barton of the Red Cross that it was time for us to leave Grecourt. Miss Mather, Daisy and I being the only members of the committee at Grecourt, held a council of war to decide just how much we would take with us and what things we ought to take. We found out that the cars would hold a suitcase and dufflebag with blankets for each girl, one wicker basket for the records and another for food.

"Many of the refugees were fleeing from their homes for the second time since the war started. All had confidence in the army and hoped to return soon and rebuild their homes. Of course we promised to help them"

We had packed the papers and food and were bemoaning the supplies in our pantry that it seemed impossible to distribute, when some British officers rode in to see how many men could be billeted in the chateau. We took them into the Mairie-Ecole and when we got to the pantry one of them asked if we could give them some bread, as they had had nothing to eat for two days. Our bread was all gone, but we got a hot lunch for them while they went to give orders for their men to follow. Soon the men and officers began to come straggling in and such a tired, bedraggled and forlorn lot I have never seen.

At this time some large guns were placed in the road outside of our gates. We started food for five, but were still serving and cooking at twelve o'clock at night, when the last hundred arrived, and too tired to sit up, fell full length on the stone floor of the orangerie. We made coffee and the officers took it out to them. We were so busy looking after our soldiers that we decided to spend the night. We collected our bags and had the cars all ready to start at a moment's notice, and then lay down with our clothes on. The excitement was so great and the cannon so noisy that we did not sleep much and at four in the morning, when the machine guns could be heard quite distinctly, we called the commanding officer. He went out on the road and came back to say that he thought that we should start within an hour. While the soldiers helped us load we turned over the keys of our supplies to Major — and told him if they had to leave Grecourt to burn everything that belonged to us, so that nothing would fall into the hands of the Boches.

You will be glad to know that our blankets and food went to the soldiers and that a hospital corps received our medical supplies. We put our prize hens into the jitney, counted the girls and the gas masks and started out. There was a heavy mist and it was very cold, so our four cars traveled rather slowly on the road to Erchon, keeping as close together as possible. Now and then forms loomed up ahead of us and we passed tired people who had walked all night driving their cattle out of harm's way.

We passed thru Erchon without stopping and took the straight road to Roye. By this time it was beginning to be light and the people who had left their home the day before and spent the night in the fields, were starting on the second stage of their journey. We arrived in Roye only to find that orders to evacuate the town had already been received.

We found Dr. Baldwin's hospital, unloaded one truck and took in some nurses and sick children. We were advised to proceed to Montdidier, which we did at once, leaving two cars to go back and pick up refugees which we had been obliged to pass on the road.

Frances returned to Moyancourt and started Joseph and the live stock on the road to Roye.

We could see from the mass of people on the roads that Montdidier was to be a refugee center, so we found a hotel near the main square, which we could use as headquarters. One room was turned into a temporary hospital for sick children. We then went shopping for coffee and kettles and begged the stove in the hotel kitchen to cook on. We put up tables in the courtyard and were able to serve hundreds of tired and hungry people that night. We were lucky in being able to get condensed milk, which Mrs. Goodale, one of the nurses from Dr. Baldwin's hospital, diluted and heated for the babies.

Some of the girls in the meantime had taken the cars back to Roye and spent the day and late into the night evacuating villages beyond Roye and helping the poor, tired stragglers on the road with their bundles to get into town. We decided on one of the first trips that our chickens, which had been left in the hospital yard at Roye, would have to be abandoned, as space in the machines was too valuable, so we presented them to a British hospital we found on the road, where they kept chickens and were grateful for the gift. Montdidier was, of course, totally unprepared for the rush of refugees. It seemed as tho they might stay there for some time—and at any rate it was plain some place would have to be found for them to spend the night. We finally located a school where the school mistress did everything in her power to help us make the people comfortable for the night on the straw. Some of the Quakers from Ham had joined us and were of the greatest assistance.

I went out early in the morning and there stood Marie Rose Marie, one of our regular milk customers from Gre-court, bottle in hand waiting for milk for the baby. I gave it to her, glad that we could reward her faith

*"Except for the very aged, the sick and the children every one had to walk"*

*"The roads were choked with troops, guns and supplies going in one direction, and peasants with bundles and carts going in the other, driving their cattle before them"*

in us. We served most of our children in the course of the day.

Daisy and I went to Roye, as I was anxious to get some light on the refugee situation from some one in authority, as no one seemed to know whether the people were to be allowed to remain in Montdidier or to be sent on. While looking for the proper official we met a man connected with the French mission,

who asked us if we would mind going out to Marguy with him to evacuate the people who were either too sick or too old to walk.

The work of taking care of the people in the town, of feeding them and getting them on the trains was left entirely to us. I spent the remainder of that day and all of the next in the public square as a sort of information bureau for refugees. From there I could also direct the cars in making trips for people unable to walk to the station. Alice and Margaret kept up the canteen at the school, while Ruth and Catherine started another at the station, for fear people who were no longer allowed in the town might go hungry. Elizabeth and Miss Mather helped the people into the trains, hunted up lost children and baggage and tried to make some order out of the confusion at the station.

Hundreds of people who passed thru were our own people. Our presence there meant more to them than I can possibly tell you, and their joy in finding us gave confidence to others who

had never seen us before. It is no easy matter to tell a mother with five children, who has been walking for the past two days, that she cannot stay in town overnight but must continue to the station and take a train for an unknown destination. I cannot tell you how patient and uncomplaining they were. Many were fleeing from their homes for the second time since the war started. All had confidence in the army and hoped to return soon and rebuild their [Continued on page 485]

"YOU are a writer," said the "runner" as we walked along. "I've read a lot of this wah stuff, but I've never seen that correctly described. How would y'u go about to do it?"

"That" happened to be the whistling rush of a *minnenwerfer* shell high overhead. While listening till it merged in a distant explosion, I also realized that it had never been described—for a cogent reason; it can't be done. When I say that it is a cross between a whinny, a whine and a whistle, I'm as far from the mark as the best of them. The note of a high explosive shell that followed was shriller and cleaner cut, but equally indescribable. When it plugged a big hole like those one sees in the battle pictures close to our road, I got my first real war thrill; one that was the keener, perhaps, because I really had no business there.

G. H. Q., alias General Headquarters, is more careful of its correspondents than their own mothers could possibly be. Both for their sakes and that of the troops upon whom German fire might be drawn, we are restrained from unnecessary movements along the front. Very politely, but most positively, I had been informed that an "Observation Post"—usually a few kilometers behind the front trenches—would be about the best G. H. Q. could do for me. Thanks, however, to a lucky combination of a low visibility, produced by a misty rain, and a complaisant southern major whom I found with his staff burrowed under the ruins of a village, here was I marching along a camouflaged road to the music of bursting shells to spend the night in a front line trench.

Thru shell-pocked fields and past shattered farmsteads, the "runner" led on into a wet wood. Than a weeping wood in winter, one can hardly imagine anything more comfortless; and the prospect was not improved by zigzag lines of clayey trenches fenced with belts of rusted wire that criss-crossed it everywhere. But, perhaps because of a faint resemblance to their own south-

"From the wet woods our patrol went forward toward the Boche trench and I

ern "piney woods," the troops that held it appeared quite at home. Tho it was just past five, supper was in full swing. Blue smoke from half a hundred shacks and dugouts hung low on the wet air, mingling with satisfying odors. Introduced by the "runner" at "Delmonico's," a real Bairnsfather shack, I joined a brace of lieutenants in soldiers' chow of steak and potatoes, bread and coffee, topped off with rice and syrup.

It was still light when we finished, and viewed thru a thin haze of tobacco smoke from the changed viewpoint induced by comfortable repletion, the shacks and dugouts, clayey trenches, rusted wire tangles, even the weeping wood appeared, if not homelike, at least liveable. One could understand how a man can get so accustomed to shrapnel, helmet, trench coat, mud boots, gas mask and other impedimenta, as to feel uncomfortable without them.

Thru the open doorway I could see men passing to and fro along the duckboards that led from post to post. They were strong southern types—mouths thin-lipped and firm; eyes steady; brows broad but sloping quickly to short, sharp chins. The faces, quiet almost to the point of sullenness, bore in hard print the whole story of the South—mountain vendettas, family feuds, moonshining, the Klu Klux Klan, race wars, all of that dread atmosphere which Mark Twain caught so wonderfully in "Huckleberry Finn."

"They're shuah natural soldiers." The elder lieutenant confirmed my impression in a slow, southern drawl. "All

have twenty generations of private wa'h behind them. Very few of their ancestors, S'eh, ever died in their beds; and even yet a revenue officer isn't what you could call a good insurance risk in the back counties. Instead of a rattle their mothers gave them a gun to play with in the cradle. At five they'd be knocked head over heels by the recoil of pop's shotgun. At ten they'd be trailing deer in the mountains. Shuah, they're sullen fighters, and thar goes a fine specimen."

In the face of the man who passed just then was concentrated all of the hardness, almost vindictive reserve, undiluted by the softer qualities that toned it in the others. Carrying his rifle in the hollow of his arm, he lounged along in a swinging hunter stride quite unmilitary. One glance at him supplemented the lieutenant's short biography.

"He was a Tennessee 'moonshiner,' and simply can't stand discipline. But he's the finest shot we've got; can pick the eye out of a Boche at three hundred yards. To get the best out of him, we just gave him a pass good anywhere along the lines and let him go to it. So every day he goes on his lonely to stalk Boches thru No Man's Land. When he draws a bead on one, it's good night nurse; for he never let's loose till he's certain. Some day Fritz will get him, I suppose; but not before he's paid an awful price in lives."

"And he's not the only one," the other lieutenant put in. "We have a dozen snipers that go out like that—not to

# OVER THE TOP

HITAKER

AT THE BATTLEFRONT

*rustle of their passing thru the wire till it was drowned by the pattering rain"*

mention the raids we pull off almost every night. Fritz over thar tho't he was going to have a cinch with us raw Americans. But he's found our chaps so nasty I believe he'd just about as soon change back to the French."

"They're so keen for it," the other continued, "we have an embarr'ing choice of volunteers for the raids. All today they've been sidling up to me in ones and twos and threes—'Any chance tonight, S'eh?' When I say no, they look glum as a pack of girls that have been done out of a dance; but if I'd taken all that offered we shuah would have had to attack in fo'ce. If you want some action for yu' money, S'eh," he concluded, "you had better come along."

"Better come along?" I, whose ambition had been to "go over the top" ever since the beginning of the war! Lives there a correspondent who would not have jumped at the chance. I saw myself putting one over on our dear grandmother, the G. H. Q. I took him up at once.

It was then only half past five. The patrol would not go out till nine, and I spent the remainder of the daylight following a "runner" thru the wicker-lined trenches from one to another of the company's four posts. The more I saw of them, the more I wondered that troops could ever be got to go up against them. Imagine thousands of miles of rusted barbed wire running in a tangled belt forty feet wide in front of a trench laid out with frequent salients that permit enfilading fire on attacking troops. Behind the first line, a second wire belt;

then another trench system, finally belt after belt of wire running back into the open country thru which I had come.

Tho it had been raining for days, steady pumping had kept the water below the level of the duckboards in the trench bottoms. The "runner" spoke quite proudly of their "dryness;" and I suppose they were dry—as dryness goes in a wet wood. The dugouts, too, each had a well below the floor level, from which excess water could be pumped out. Judged by war standards, these southern troops might be said to be living in the lap of luxury.

At Post Two, from where the raid was to be launched, I looked across No Man's Land at a low ridge that marked the first Boche trench. The dull winter prospect, misty with rain and partially veiled in evening gloom, appeared so quiet and peaceful it was difficult to imagine the Boches over there—on sentry, in their dugouts, eating, drinking, sleeping, just like the men about me. But, proving their presence, a *minnenwerfer* shell passed overhead.

"Better not look too long, S'eh," the "runner" warned. "It's true they kain't see yew, but they have machine guns trained on this post and turn 'em loose, now and then, on gen'ral principles."

In a dugout, six by five outside of the bunks, I sat out the remainder of the evening with its inhabitants, three lieutenants. The eldest could not have been twenty-four; but all had led night raids on the Boche trenches, and while the guttering candle lifted and lowered their bright boys' faces in and out of

the gloom, they drawled with the soft southern speech of risks and dangers that, if they knew of them would turn gray the hair of their friends at home.

One had been shot thru the shoulder only a couple of weeks ago while stalking a Boche sniper out in No Man's Land. Grinning, he explained: "You see, S'eh, thar' happened to be two of him, and just when I was about to draw a bead on one, the other plugged me. What did I do? Run, by golly! Shuah, how I do run. A bounding had nothing on me. I leaped sideways and endways, just tangoed it over the tops of the bresh, for three of my snipers were squirming up behind them and I knew if they kept firing long enough something was due to happen. It did, too, for my boys got both of them."

Fine work! But fancy making a shooting gallery out of yourself for the benefit of your snipers. Tho I did not catch the name, I felt sure it was he the patrol was discussing while, an hour later, we filed along the duckboards on our way to Number Two. "He's a nervy cuss, that lieutenant. But if he don't take care, Fritz is going to present him with a steel medal one of these days."

That was something of a march—thru wet woods in black rain along narrow duckboards that crost deep trench systems and threaded barbed belts of wire. Tho I held on to the belt of the man ahead, he was invisible. Sometimes, too, we left the duckboards and wallowed along snaggy paths that I found difficult enough to follow in broad day next morning. How the leader found his way I cannot say. But a subdued challenge presently told that he had. While we filed up to go over the top and out thru the wire, I grinned guiltily but delightedly as I thought how cleverly I was doing up G. H. Q. They could not stop me now. I was going over the top—even if I got sent home for it or was shot at sunrise. But, alack and alas! thru that black rain G. H. Q. extended its mandate from headquarters forty miles away. The soft drawl of the lieutenant sounded close to my ear.

"I really [Continued on page 486]

# WHAT ARE WE FIGHTING FOR?

BY JOHN DEWEY

PROFESSOR OF PHILOSOPHY IN COLUMBIA UNIVERSITY

This is the second of a series of forward-looking articles on America's aims and ideals in the war, written for The Independent by the leaders of thoughtful America. The first article was written by President Lowell of Harvard University; later articles in the series will be presented by Gerald Stanley Lee, author of "Crowds," "We" and "Inspired Millionaires"; and by Corra Harris, author of "In the Valley," "A Circuit Rider's Wife," "Co-Citizens" and other stories interpreting the philosophy of plain folks

SEVERALLY and collectively mankind always builds better or worse than it knows. Even in the most successful enterprizes, aims and results do not wholly coincide. In executing our immediate purpose we have to use forces which are outside our intent. Once released, however, they continue to operate, and they bring with them consequences which are unexpected and which in the end may quite submerge the objects consciously struggled for. Such an immense undertaking as the present war is no exception. The will to conquer describes the immediate aim. But in order to realize that end all sorts of activities are set going, arrangement made, organizations instituted, as incidental means. After they have been called into being they cannot be whisked out of existence merely because the war has come to an end. They have acquired an independent being and in the long run may effect consequences more significant than those consciously desired. If, for example, one takes a cross section thru the warring countries at present, one finds a striking rise in power of the wage-earning classes. Thru the necessities of war, their strategic position in modern social organization has been made clear, and the Russian Revolution has brought the fact to dramatic self-consciousness. Is it not conceivable that some future historian may find this consequence outweighing any for which the war was originally fought?

If it is the unintended which happens, a forecast of the consequences of the war seems doubly futile; for it is hard enough to disentangle even the professed aims in such a manner as to make them precise and definite. Yet it is possible to see some of the forces which have been released by the war. Thru fixing attention upon them, we make some guess about the future in its larger outlines. The first result which I see is the more conscious and extensive use of science for communal purposes after the war. Changes which are effected by embodying scientific discoveries in mechanical inventions and appliances endure. The transformations brought about first in industry and then in general social and political life by the stationary steam-engine, the locomotive, the internal combustion engine, etc., have stayed put, while matters which absorbed in their day much more of conscious attention and made much more of a stir in the realm of thought, have sunk beneath waves of oblivion. Mechanically speaking, the greatest achievements of the year have been, of course, the submarine and air-

Doctor Dewey is the author of "How to Think"

plane, the mastery of the undersea and the air. Is it not likely that the combined effects of the two will do more to displace war than all the moralizing in existence? Anticipations of the future are too readily couched in terms of the fantastic rather than of the commonplace; or rather the miraculous, once established, becomes commonplace. But considering the social revolution wrought by steam and electric transportation on land and water in abolishing parochial and provincial boundaries, it seems probable that air navigation will round out their work in obliterating nationalistic frontiers. The war has, in addition to specific inventions, made it customary to utilize the collective knowledge and skill of scientific experts in all lines, organizing them for community ends. It is unlikely that we shall ever return wholly to the old divorce of knowledge from the conduct of social affairs—a separation which made knowledge abstract and abstruse, and left public affairs controlled by routine, vested interest and skilled manipulation. The one phase of Prussianism, borrowed under the stress of war from the enemy, which is likely permanently to remain, is systematic utilization of the scientific expert. Used for the ends of a democratic society, the social mobilization of science is likely in the end to effect such changes in the practice of government—and finally in its theory—as to initiate a new type of democracy. With respect to this alteration, as with respect to the airplane, there is more likelihood of underestimating than of exaggerating the consequences which are to follow.

Another consequence, not directly willed but made necessary as an incident of the war, is the formation of large political groupings. Almost all the nations of the world are now arrayed on one or other of the two sides. Not only is such a world-wide organization including the peoples of every continent a new and unique fact, so much so that the world for the first time is politically as well as astronomically round, but the character of the alliances is quite unprecedented. In order that the military alliance may be made effective, there is in effect if not in name a pooling of agricultural and industrial resources, a conjoint supervision of shipping and hence of international trading, a world-wide censorship and economic blacklist. In addition each nation now has an interest in knowing about other nations, which has put the world as a whole on the map for the citizen of Little Peddlington and Jay Corners. The kind of knowledge and interest that was once confined to travelers and the cultured has become widely distributed. When a million or two young men return from France, the jolt given to our intellectual isolation by the very fact of the war will be accentuated. And Europe, it is safe to say, will have learned as much about us as we about it. The shrinkage of the world already effected as a physical fact by steam and electricity will henceforth be naturalized in the imagination. All of these things mean the discovery of the interdependence of all peoples, and the development of a more highly organized world, a world knit together by more conscious and substantial bonds.

WHATEVER the immediate decisions of the statesmen who sit in the peace conference at the end of the war, this means that an international state is on its way. Few people realize what a small number of independent states remained in the world even before the war—many times less than there were within the present German Empire a century ago. Consolidation has proceeded with the same certainty and acceleration as in the case of the multitude of small local railway systems which once sprawled over this country—and from the same causes. The war has speeded up the movement, and in the various commissions and arrangements which it necessitated will leave behind mechanisms which are bound to continue in operation—first in order to meet actual post-war needs and then because there is no way of getting rid of them with- [Continued on page 480]

## WHY THE BOCHES FEAR OUR MARINES

"They fight with one hand, dig in with the other and keep smiling all the time." The "Devil Dogs"—or "Teufelhunde," as Germany has named the U. S. Marines—are bringing increased glory to their fighting reputation in the present battle along the Marne. The photograph above suggests the spirit with which the Marines thrust into the German attack gaining six miles and eight hundred prisoners in one day.

© International Film

## A "TEUFELHUNDE" OUTPOST

Like "Ladies from Hell," the epithet applied to kilted Britishers by the Germans early in the war, the name of "Devil Dogs" is an involuntary tribute from the enemy to fighting courage of the U. S. Marines. The men above are in charge of a flash-light signal station nearest No Man's Land.

## THE FIRST TO FIGHT

A few weeks after the United States declared war on Germany these U. S. Marines "at an Atlantic port" were stowing their supplies aboard the transport that carried them overseas. On the left, lined up for inspection in the little French village where they were billeted en route, are some of the Marines now famous as the heroes of the Marne.

## UNDER COVER

This photograph of a French aviation base was made for the French official records. The big hangars are camouflaged so that to an air observer they melt into the surrounding terrain. The roof of the garage and camps are camouflaged, too. In distinct contrast are the tents and cloth covered piles of supplies in the foreground, the ambulance along the road and the planes ready for flight.

# CONCERNING CLOTHES

BY CHARLOTTE PERKINS GILMAN

Waking up women has been Mrs. Gilman's especial mission for twenty or thirty years; in ethics, sociology and economics she has written and preached sound theories of radical common sense. Mrs. Gilman is the author of "Suffrage Songs" and the "Crux" and is the editor of *The Forerunner*.

THE Commercial Economy Board of the Council of National Defense is urging new sacrifices upon our women, sacrifices in clothing. We have as yet no sartorial Hoover to start a campaign of "substitution" and "conservation." We are not asked to pledge ourselves to a silkless year, a woolless winter or even a furless summer. Our soldiers do not dress in fancy pelts, so women may continue to feel miserably hot and look miserably foolish in their August furs.

But good wool the soldiers do need, both for outer and inner garments, and for all the knitted comforts which are added to them.

So the "Clothing Interests," moved patriotically, offer two suggestions: to give civilians shoddy instead of long-fibred wool, and to give them less of it.

When it comes to asking for such a change in the garments of women, no one is so foolish as to appeal to them directly. No one imagines that these citizens who never yet made definite conscious decision as to what they wear would do so now.

No, the utmost range of purpose in this most reasonable effort to save cloth is to alter the fashions for 1918, to make those fashions simpler, to eliminate as far as may be the over-copious pocket, the needless spread and flare of overskirt, even the supererogatory cuffs on coat and trouser. There is no suggestion, fortunately, of making skirts shorter.

In quality of goods, it may be possible to make women's garments cheaper, but in the name of that ancient power known as Common Decency let us not try to make them any scantier. With a narrow skirt coming but little below the knees, and a body covering which, in evening dress, rises little above the waist, it would seem dangerous to ask them to use less material. Never, in modern times, since the first Empire of France, have women gone about with as little covering—white women, that is. But they could use a lesser number of coats, gowns and sweaters, they could use cheaper qualities, in some instances they could reduce the needless fulness of cloak or wrap, and they could save in money even more than in cloth.

The women of our country are fully as earnest in their war work as the men. They have come forward eagerly in the food conservation service; have saved and substituted and striven with their men folks and with their servants to make them accept the new restrictions. Yet when it comes to clothing we hesitate even to ask them to change, we seek only to change their fashions. Note the sharp distinction and seek the reasons.

Suppose Mr. Hoover had called to-

gether only representatives of the "Food Interests," had urged upon them that there was need of great saving in food, and would they please change the fashions for 1918, so as to call for less wheat, less meat, especially less pork and bacon. Exhibitions, with sample tables, temptingly set forth with meatless meals. "Daily hints from Paris" as to new kinds of wheatless bread and creamless butter. Attractive foreign letters from "Ysabel" and "Angeline" describing delicious seafood menus for the spring.

This might have been done, might it not? What was done was to make direct appeal to the brain and conscience of the women of America to do their part in saving the world by saving the world's food.

Proper instructions were given them, new recipes for new dishes; dietary specialists were set to work to plan balanced rations, at minimum rates, to show the food values of different ingredients and how to combine them properly. A nation-wide canvass was undertaken and our women responded by millions, signing the food-cards, agreeing to serve by saving. Why not parallel this in a cloth saving campaign?

Because women do not choose what they shall wear. It is chosen for them, decided by those clothing interests and other interests more obscure, and issued as a mandate from season to season. Women look eagerly for these authoritative bulletins, not to find what they want, but what they must have. If the mandate said "Wool, twenty yards of wool to the garment," it is small use to ask the woman to say "Shoddy, if you please—six yards." But if the mandate offers a short and skimpy coat, half cotton, as what "they" are wearing, then we need not ask the woman anything at all. She wears what she is told.

WHAT we most need in this field is a general awakening among women on the subject of Voluntary Dressing. Before their clothing is criticized upon any other ground, it should be criticized on this, that it is not their conscious choice. It descends upon them from unquestioned, unknown sources, and is received with unreasoned submission. But in a time like this, surely there can be a change in their attitude.

In the drive for cloth conservation it is not merely less wool that we should be asked to use, and inferior goods; it is less expense for clothing in all lines. We must steadily remember that if we put two million men in the field, this requires, it has been estimated, four workmen to each soldier for ammunition and transportation alone; probably five, counting all the labor to feed

and shelter the fighting men and to carry on the mass of office work behind him.

That makes twelve million withdrawn from productive industry. They are working, to be sure, but the soldier's immediate work is destruction, and all who serve him help destroy. They are not at the time adding to the wealth of the world. We have some thirty-eight million engaged in productive industry. Over eight million are women. If we take out twelve million, we reduce the country's wealth by nearly one-third, and this at a time when we need far more than we had before.

We must save, not only food, not only cloth, but money, all that we can. We need it for ourselves, to carry this enormous burden of war, and we need it for our suffering neighbors and friends. Every true patriot, man or woman, should reduce personal expenses to the minimum, and put his savings to the service of the country.

THERE are twenty-six million adult women in this country, probably ten million more young girls, whose dress costs as much as that of women. Half these are farmers' wives and daughters who with the best of intentions can spend little on dress. Of the rest, we may roughly count off two million as never having proper clothing, leaving sixteen million. Half these again may be counted out as wives of wage earners, unable to spend much on clothes. But that leaves us perhaps eight million women and girls who can and do dress more expensively than is necessary.

If the woman who now dresses on five thousand dollars a year reduces it to four; if the woman who manages on four hundred makes it three; if that eight million who could save would, at an average of even two hundred dollars apiece, it would make an annual fund of one billion six hundred million; quite a help in war time. Put into Liberty bonds, instead of gowns and furs, the women would be no poorer and the country that much richer, in its hour of need.

Can we not form a new sort of patriotic league among our earnest women? Young ones, preferably, who care a good deal about how they look, but whose minds are open to change and whose wills are strong to carry out new decisions; older ones, too, women of established position and wide influence. Sample budgets could be prepared and distributed over the country, local groups could be formed in all our cities, original and simple patterns designed, competitions started, essays written by school girls, original suggestions asked for by magazines. # How to Make Your Salary Worth 10% to 30% More

A Simple Device That Anyone Can Apply With Quick Results

By Peter Rhodes

**H**OW much are you earning—twenty, twenty-five, fifty, one hundred dollars a week, or more? It doesn't matter. Whatever your income you can increase its buying power 10% to 30% and you don't have to change your job. You don't even have to speak to your boss.

I don't deny that it is unusual to make such a sweeping statement. But let me tell you my story. Then decide for yourself.

Two years ago I made \$2,000 a year, and I was always in debt. Try as I could I was unable to get ahead. Nor could I figure out from week to week where my money went. Neither my wife nor I were spendthrifts. Our tastes were simple. We had two little children whom we dressed well but not extravagantly. Yet our income was absolutely inadequate.

Finally things came to such a state that I decided something had to be done. I already had a pile of unpaid bills amounting to about \$300, and things were going from bad to worse. I simply had to have more money—not only was I failing to save anything for a rainy day but I couldn't make both ends meet.

In a quandary I consulted a friend of mine, a Mr. Underwood, whom I admired very much because I knew him to be quite successful—at least with the same size family as mine he lived better than we did and I had heard him talk about investments he had made, so I knew he was getting along much better than I.

Imagine my amazement when this friend confided in me that instead of an income two or three times as much as mine he was earning exactly the same amount that I was—\$2,000 a year—and that he was able to save \$600 a year—in other words, he was really earning about 30% more than I was on the very same salary!

I couldn't understand how he did it. The Underwoods seemed to have so much more than we did. Of course there wasn't any grand opera in their program, but they did go to the theatre regularly; enjoyed most of the pleasures of life; they wore good clothes; entertained their friends on Sunday evenings; had two well-dressed children and were about the happiest and most contented couple of all our married acquaintances.

My friend, Mr. Underwood, saw my amazement and told me the secret. It seems that a few years ago he had gone through the same experience that I was going through.

They had no plan; they were living in a happy-go-lucky fashion, without any system—in fact, the very same way we were now living.

Finally, he came to the realization that what was keeping them poor was the money that they frittered away. He realized that the little leaks in personal and household expenses were preventing them from saving money and even meeting their bills on time.

Then he determined that he *could* easily

live within his income and also save money if he could in some way make his money go further. With this idea in mind, Mr. Underwood worked out a plan which enabled him to save \$600 each year and still enjoy the pleasures and enjoyment that make life worth living.

This plan which has worked so successfully for my friend has been incorporated in the Ferrin Money Saving Account Book and Budget System, a system that can add anywhere from 10% to 30% to your savings just as it has for him and for me. For no sooner had I heard my friend's story than I followed his example and it has worked out just as successfully in my case as it did in his. It really is the same to me as an increase in salary because I can enjoy more pleasures now than I ever did—and I get *real* joy out of them—because I *know* I can afford them.

*Letter from Head of Financial Department of Largest Corporation of Its Kind in the United States.*

### INDEPENDENT CORPORATION.

Gentlemen:

I consider your account book a remarkable contribution to the people of this country at this time. I refer especially to your discovery of the absolute necessity of the budget idea as applied to personal and household account keeping and I am amazed that this fundamental and absolutely essential idea has not been employed in a simple form long before this.

In our company we have 5,000 employees and it was a revelation to me in giving them advice regarding the making out of their income tax returns to find how few had any intelligent idea of their income and their living expenses. It was that perhaps more than anything else, that brought home to me the great service that your new budget account book will render to the people who need it most, no matter what their income is.

The simplicity of your plan, which by comparison with previous methods of account keeping, would seem to be well-nigh automatic, appeals to me strongly.

They say you can't teach an old dog new tricks, but I will say to you that I am going to use the Ferrin Book for my own family expenses and consider it will make money for me right from the start.

(Signed) D. S. BURTON.

### The Ferrin Account System

grew from the realization that a simple automatic system of accounting was absolutely essential to success in personal money matters.

This amazingly simple method has been introduced by the Independent Corporation, because the publishers of The Independent (and Harper's Weekly) recognize the nation-wide need of such a device—at this time especially—and because the founding of such a system of money saving fits closely with the program of efficiency which is being developed by its Efficiency Service and its Division of Business Education.

The Ferrin Money Saving System is encompassed in a handsome dark blue seal grain semi-flexible, imitation leather account book, stamped in gold. It contains 112 pages, size 8½x10½ inches. This wonderful aid to money saving, this watch dog of your income and expenditures, will tell you to a penny where the money goes. It

will keep actual track of your spending and enable you to plug up the leaks. It will keep you out of debt. It will help to keep money in the bank.

### The Budget System

The Ferrin Money Saving Account Book is the first and only device of its kind. It is the only account book based on the BUDGET idea. It is the only one that provides for the income as well as the classified items of expense.

You simply lay out your budget according to the sample budgets given for incomes of one to five thousand dollars a year. This can be modified easily to suit your special conditions, or we will gladly arrange a budget for you, whatever your income.

BUDGETING your income on the simple Ferrin System is the most important factor in money saving and this is the only book that shows you exactly how to do it. It is more than a book—it is a system and contains compact information on keeping expense accounts; making an inventory of household goods; making safe investments and other financial matters of vital interest to every family.

### Two Minutes a Day

The Ferrin System takes only about two minutes a day. No knowledge of bookkeeping is required. Any child who can read can keep the accounts. Instead of being a hardship, saving becomes fun. Keeping records the Ferrin way is more enjoyable than a game. And the pleasure lasts for ever.

### Examine It Free

So confident are we of the great value of this Ferrin Money Saving Book, that we will gladly send it to you on approval, without a penny in advance. Keep it five days. See how simple it is. See how much you have missed by not reading it before. See how much it must mean to you from the very day you get it. Then if you feel that you can afford not to have it, return it and you will owe nothing.

But if you feel that it means the beginning of a new era of financial independence for you, send only \$2, the small sum asked The Ferrin Money Saving Account Book is an investment and will return its cost many times over every year. The system is good for four years, which makes it cost about 4 cents a month! And you need send no money until you see it and examine it and are satisfied that it will pay you big returns.

Mail the coupon or send a letter now, while the matter is on your mind.

## SCHOOLS AND COLLEGES

### RANDOLPH-MACON WOMAN'S COLLEGE

LYNCHBURG, VIRGINIA

Offers courses for A. B. and A. M. Four laboratories, library, observatory, gymnasium, swimming pool. Liberal endowment makes possible very moderate charges. Officers and instructors, 60. Students from 35 states and countries. Address

WILLIAM A. WEBB, Pres., Box 46

The Carnegie Library School offers the following courses in librarianship for the year 1918-1919:

General Library Work  
Library Work with Children  
School Library Work

For information, address the Principal,  
Carnegie Library School, Carnegie Institute, Pittsburgh, Pa.

### SKIDMORE SCHOOL OF ARTS

CHARLES HENRY KEYES, Ph. D., President  
SARAH GEIDLEY ROSS, A. M., Dean

A college for the professional and vocational training of women. Offers four years courses leading to B. S. degree in

Household Economics, Fine Arts, Music,  
Physical Education, Secretarial Studies

A special diploma, securable upon the completion of two or three years, commands teacher's or supervisor's certificate.

Residence accommodations for two hundred students. Outdoor sports. Non-sectarian. Summer session. For catalogue address

LOUISE HOLMES WATERBURY, B. A., Registrar  
SARATOGA SPRINGS, NEW YORK

### ATTEND Chicago "Tech"

The nation is calling for technical men. Engineers and Draftsmen are needed. Demand for our graduates is greater than we can supply. Study now. Faculty of consulting experts. No unusual entrance requirements. Low tuition fees. Our intensive methods bring quick results.

**ARCHITECTURE ENGINEERING DRAFTING**  
CIVIL-MECHANICAL-STRUCTURAL-ELECTRICAL

No time wasted on unnecessary studies. Complete course in two years. Short courses for special students. Chances for self-support while studying. Write us for catalog and full particulars.

DAY AND  
EVENING  
CLASSES

Convenient  
Study and  
Practice Hours

Chicago Technical College  
2721-E Michigan Ave.  
Chicago

### Pacific School of Religion

An undenominational union school of religion. Admits both sexes and all denominations. College graduation required for regular course leading to B. D. All privileges of University of California open to qualified seminary students. Term begins September 30, 1918. Address President C. S. Nash, Berkeley, Cal.

**Isolator**  
Garbage  
Consumer

**3¢ a day Will Rid Your Home of the Garbage Can**

The garbage can is the most un-healthy article in the home. It breeds and attracts flies and disease germs.

Isolator Garbage Consumers are now made in small sizes for homes. Reasonable in price. Operate with gas, automatically controlled. Do not radiate heat.

Every home should be equipped with an Isolator.

**Send Now For Literature**

Also manufacturers of stationary and portable sanitary incinerators for unsewered districts, and coal and gas garbage types for hospitals. Ask your plumber. Distributors Wanted

**Buffalo Co-Operative Stove Co.,**  
100 Amherst Street, BUFFALO, N. Y.

### Florida (Hulvey) Military Academy

Barracks new and modern. Military work directed by War Dept. Prepares for universities, business and Government academies. Personal instruction and attention. Perfect health record. Cadets from 18 states. Tuition \$460. Col. Geo. W. HULVEY, Supt., Jacksonville, Fla.

### DEAN ACADEMY

FRANKLIN, MASS. 52nd YEAR

Young men and young women find here a home-like atmosphere, thorough and efficient training in every department of a broad culture, a loyal and helpful school spirit. Liberal endowment permits liberal terms, \$325-\$400 per year. Special course in Domestic Science.

## "THE MOST STIMULATING MAGAZINE IN AMERICA"

Though only four months old, The Liberator (edited by Max Eastman) has been received by its readers with an enthusiasm unprecedented in present-day journalism. "I shall read and re-read and cherish these copies until others come," writes a soldier. And here are a few other sentences selected at random from our correspondence: "One of those very few magazines that compel reading, not filing."—"The Liberator has a breadth of beam and a buoyancy."—"I should be fearfully disappointed if I missed a single number."

Year's Subscription, \$1.50

Single Copy - 15 Cents

**Address: THE LIBERATOR**  
34 UNION SQUARE, NEW YORK

## WHAT ARE WE FIGHTING FOR?

(Continued from page 474)

out uprooting too many other things which will have got linked up with them. It is a mistake to think that the movement for the self-determination of nations, the releasing of nationalities now held in dependence, will arrest, much less reverse, the integrating movement. Cultural emancipation of nationalities and local autonomy within a federation are to be hoped for; if they are not attained, the war will have been fought in vain so far as its most important conscious objective is concerned. But even if this goes beyond local autonomy to the point of complete political independence of a new Bohemia, Poland, Ukraina, Palestine, Egypt, India, it will not militate against the virtual control of the world by a smaller number of political units. The war has demonstrated that effective sovereignty can be maintained only by states large enough to be economically self-supporting. New nations could exist permanently only if guaranteed by some large political union, which would have to be more closely knit together than were the treaty-alliances which "neutralized" (till the war broke out) some of the smaller states of Europe.

To say, however, that the world will be better organized is not—unfortunately—the same thing as to say that it will be organized so as to be a better world. We shall have either a world federation in the sense of a genuine concert of nations, or a few large imperialistic organizations, standing in chronic hostility to one another. Something corresponding to the present anti-German federation, with minor realignments in course of time, might constitute one of these; the Central Empires and southeastern Europe another; Russia, it is conceivable, would go it alone, and the Oriental countries might make a fourth. In this case, we should have a repetition of the Balance of Power situation on a larger scale, with all its evils, including the constant jockeying to secure by threat and bribe the allegiance of Scandinavia, Spain and some of the South American countries to one imperialistic federation or another. The choice between these two alternatives is the great question which the statesmen after the war will have to face. If it is dodged, and the attempt is made to restore an antebellum condition of a large number of independent detached and "sovereign" states allied only for purposes of economic and potential military warfare, the situation will be forced, probably, into the alternative of an imperially organized Balance of Power whose unstable equilibrium will result in the next war for decisive dominion.

The counterpart of the growth of world organization thru elimination of isolated territorial sovereign states is domestic integration within each unit. In every warring country there has been the same demand that in the time of great national stress production for profit be subordinated to production for use. Legal possession and individual property rights have had to give way before social requirements. The old conception of the absoluteness of private property has received the world over a blow from which it will never wholly recover. Not that arbitrary confiscation will be resorted to, but that it has been made clear that the control of any individual or group over their "own" property is relative to public wants, and that public requirements may at any time be given precedence by public machinery devised for that purpose. Profiteering has not been stamped out;

doubtless in some lines of war necessities it has been augmented. But the sentiment aroused against profiteering will last beyond the war, while even more important is the fact that the public has learned to recognize profiteering in many activities which it formerly accepted on their own claims as a matter of course.

In short, the war, by throwing into relief the public aspect of every social enterprise, has discovered the amount of sabotage which habitually goes on in manipulating property rights to take a private profit out of social needs. Otherwise, the wrench needed in order to bring privately controlled industries into line with public needs would not have had to be so great. The war has thus afforded an immense object lesson as to the absence of democracy in most important phases of our national life, while it has also brought into existence arrangements for facilitating democratic integrated control. This organization of means for public control covers every part of our national life. Banking, finance, the supervision of floating of new corporate enterprises, the mechanism of credit, have been affected by it to various degrees in all countries. The strain with respect to the world's food supply has made obvious to all from the farmer in the field to the cook in the kitchen the social meaning of all occupations connected with the physical basis of life. Consequently the question of the control of land for use instead of for speculation has assumed an acute aspect, while a flood of light has been thrown upon the interruption of the flow of food and fuel to the consumer with a view to exacting private toll. Hence organization for the regulation of transportation and distribution of food, fuel and the necessities of war production like steel and copper. To dispose of such matters by labeling them state socialism is merely to conceal their deeper import: the creation of instrumentalities for enforcing the public interest in all the agencies of modern production and exchange. Again, the war has added to the old lesson of public sanitary regulation the new lesson of social regulation for purposes of moral prophylaxis. The acceleration of the movement to control the liquor traffic is another aspect of the same fact. Finally, conscription has brought home to the countries which have in the past been the home of the individualistic tradition the supremacy of public need over private possession.

It may seem a work of supererogation to attempt even the most casual listing of the variety of ways in which the war has enforced this lesson of the interdependence, the interweaving of interests and occupations, and the consequent necessity of agencies for public oversight and direction in order that the interdependence may become a public value instead of being used for private levies. It is true that not every instrumentality brought into the war for the purpose of maintaining the public interest will last. Many of them will melt away when the war comes to an end. But it must be borne in mind that the war did not create that interdependence of interests which has given enterprises once private and limited in scope a social significance. The war only gave a striking revelation of the state of affairs which the application of steam and electricity to industry and transportation had already effected. It afforded a vast and impressive object lesson as to what had occurred, and made it impossible for men to proceed any longer by ignoring the revolution which has taken place. Thus the public supervision and control occasioned by this war differ from that produced by other wars not only in range, depth and complexity, but even more in the

## The help you need—

It is not men alone, but men *and* methods

**B**USINESS methods can always be improved. If there are better records for your business, quicker or more accurate ways of handling your work—you want them badly and, of all times, *now*.

Invite us in to go through the plan of your record systems and your filing systems

and to give you our ideas of how to bring them down to date.

Proper records intelligently used cut down waste and show where to expand. They are the core of the business. In fact they *are* the business. Nowhere in these times should any but the most modern type of records be kept in use.

**Office Systems**  
That Simplify

Records of that type are "Y and E" records, developed by thirty-eight years of study and experience—years in which we have been making nearly a million system installations, covering every line of business; and to be most intelligently used, records should be kept in "Y and E" files, where

they are protected against disarrangement, and made quickly available for constant use.

Write us about what record-keeping problems confront you. Let us look into the thing and see if we can help you to a solution. There is no charge for our "Y and E" System Planning Service.

fact that they have simply accelerated a movement which was already proceeding apace. The immediate urgency has in a short time brought into existence agencies for executing the supremacy of the public and social interest over the private and possessive interest which might otherwise have taken a long time to construct. In this sense, no matter how many among the special agencies for public control decay with the disappearance of war stress, the movement will never go backward. Peoples who have learned that billions are available for public needs when the occasion presses will not forget the lesson, and having seen that portions of these billions are necessarily diverted into physical training, industrial education, better housing, and the setting up of agencies for securing a public service and function from private industries will ask why in the future the main stream should not be directed in the same channels.

In short, we shall have a better organized world internally as well as externally, a more integrated, less anarchic, system. Partizans are attempting to locate the blame for the breakdown in the distribution of fuel and the partial breakdown in food supplies upon mere inefficiency in governmental officials. But whatever the truth in special cases such accusations, it is clear that the causal force lies deeper. fundamental industries have been carried on for years and years on a social basis; for public service indeed, but for public service under such conditions of private restriction as would render the maximum of personal profit. Our large failures are merely exhibitions of the anarchy and confusion entailed by any such principle of conducting affairs. When profit may arise from setting up division and conflict, it is hopeless to expect unity. That this, taken together with the revelation by the war of the crucial position occupied by the wage-earner, points to the socialization of industry as one of the enduring consequences of the war cannot be doubted.

Socialization, as well as the kindred term socialism, covers, however, many and diverse alternatives. Many of the measures thus far undertaken may be termed in the direction of state capitalism, looking to the absorption of the means of production and distribution by the government, and to the replacement of the present corporate employing and directive forces by a bureaucracy of officials. So far as the consequences of war assume this form, it supplies another illustration of the main thesis of Herbert Spencer that a centralized government has been built up by war necessities, and that such a state is necessarily militaristic in its structure. On the other hand, it must be pointed out that in Great Britain and this country, and apparently to a considerable degree even in centralized Germany, the measures taken for enforcing the subordination of private activity to public need and service have been successful only because they have enlisted the voluntary cooperation of associations which have been formed on a non-political, non-governmental basis, large industrial corporations, railway systems, labor unions, universities, scientific societies, banks, etc. Moreover, the wage-earner is more likely to be interested in using his newly discovered power to increase his own share of control in an industry than he is in transferring that control over to government officials. He will have to look to politics for measures which will secure the democratization of industry from within, but he need not go further than this. Reorganization along these lines would give us in the future a federation of self-governing industries with the government acting as adjuster and arbiter

rather than as direct owner and manager, unless perhaps in case of industries occupying such a privileged position as fuel production and the railways. Taxation will be a chief governmental power thru which to procure and maintain socialization of the services of the land and of industries organized for self-direction rather than for subjection to alien investors. While one can say here as in the case of international relations that a more highly organized world is bound to result, one cannot with assurance say which of two types of organization is going to prevail. But it is reasonably sure that the solution in one sphere will be congruous with that wrought out in the other. Governmental capitalism will stimulate and be stimulated by the formation of a few large imperialistic organizations which must resort to armament for each to maintain its place within a precarious balance of powers. A federated concert of nations, on the other hand, with appropriate agencies of legislation, judicial procedure and administrative commissions would so relax tension between states as to encourage voluntary groupings all over the world, and thus promote social integration by means of the coöperation of democratically self-governed industrial and vocational groups. The period of social reconstruction might require a temporary extension of governmental regulation and supervision, but this would be provisional, giving way to a period of decentralization after the transfer of power from the more or less rapacious groups now in control had been securely affected. The determination of the issue in one sense or the other will not, of course, immediately follow the conclusion of the war. There will be a long period of struggle and transition. But if we are to have a world safe for democracy and a world in which democracy is safely anchored, the solution will be in the direction of a federated world government and a variety of freely experimenting and freely coöperating self-governing local, cultural and industrial groups. It is because, in the end, autocracy means uniformity as surely as democracy means diversification that the great hope lies with the latter. The former strains human nature to the breaking point; the latter releases and relieves it—such, I take it, is the ultimate sanction of democracy, for which we are fighting.

## CONCERNING CLOTHES

(Continued from page 478)

We have women in overalls, doing farm work and machine work; we have women in uniforms doing all manner of military service, even to direct fighting.

Now let us have a larger army of women, the country over, establishing a minimum ration in clothing and living on it. It would vary, of course, according to the needs, the genuine needs that is, of different women, and it should carry with it a wide field of constructive effort, developing workshops with short hours, living wages, healthful conditions, and an output of reasonable priced garments.

Far reaching and intelligent effort for conservation in cloth calls for three lines of action: designing, based on health and truth and real beauty, altering with improved ideas, but not fluttering in a hurricane of hasty changes that have no purpose but to sell more goods; manufacturing, that shall show prices based on a fair wage to all the workers, neither sweatshop cheapness nor Madame's extortion; and above all, a new spirit in our women, a clear and independent choice, ennobled by the growing recognition that what we have but belongs to the service of the world.

Tennis, basket-ball, canoeing, "hikes"—all outdoor sports. Handicrafts, gardening, Red Cross work. Tutoring if desired. 7th Season.  
Miss Blanche D. Price, 313 W. School Lane, Philadelphia, Pa.

## THE LAST TO LEAVE

(Continued from page 471)

homes. Of course we promised to help.

Just after breakfast Dr. Devine came in. Tuesday morning, and asked me if I would leave five girls in Montdidier to finish up the work, and go with the others to Amiens, where help was badly needed. Miss Mather, Daisy, Alice, Frances and I went down in the afternoon with two cars and some R. C. chauffeurs, arriving about five o'clock. We went to R. C. headquarters and found that rooms had been engaged for us at the Hotel de la Paix. There were already signs of people hurriedly leaving lately. We waited for Dr. Devine, who was to send instructions to the other girls, and it was half past eight before a letter was sent back to the men telling them to report at Beauvais when their work was finished.

In the meantime the situation was such that we decided to keep one car in case it became necessary to leave in a hurry. Miss Mather and Alice had finished their dinner and the rest of us had started on our soup when there was a loud crash, the lights were turned out, and we realized that we were being bombed. Of course we all fled to the cellar, which was very small and very crowded. This, as I said, was about 8:30 in the evening, and from then until four in the morning we did nothing but go up and down stairs. We could hear the planes very distinctly and the crashes as the bombs fell were very terrific. When they had used all of their ammunition, our friends went home for more. Naturally we waited until we were sure they were all gone to go upstairs, but unfortunately it was just then about time for them to return. You can picture us spending the night commuting between the second floor and the cellar. Several times we only got as far as the smoking room, and lay for as much as five minutes on the hard leather cushions, only to hurry back at the sound of these awful double engines. Even before Dr. Devine came around at five to see if our hotel was still standing, we were convinced that Amiens was a poor place to stay. Dr. Devine said we would leave as soon as possible. Before going we took supplies for the refugees who were crowding the station, and sent blankets and condensed milk to a hospital they had decided could not be evacuated. We left shortly after noon with the Red Cross workers from Amiens, taking with us on a mattress a girl of fourteen who had been seriously wounded the night before. We went directly to Poix over roads so crowded with refugees, ambulances and soldiers that it was almost impossible to drive the cars. We were in Poix some hours and then went to Beauvais, where we spent the night in a hospital. Dr. Devine went directly to Paris to send down a soup kitchen. We rightly guessed that the kitchen would arrive too late to be of any use in that particular place, so Marion, Daisy and I got up early in the morning, filled the White with supplies, and started back. On the way we found a milk station and were able to get all we needed for the children. Mr. Jackson later in the day brought us a truckload of supplies and we fed thousands of refugees the two days we were there. We left Poix when the rush was past and turned the soup kitchen we had established, over to the French Mission. We left them our equipment and supplies and they carried on the work of feeding the stragglers. We came on to Beauvais, where our help was badly needed. We feel the way our peasants do about those villages on the Somme, where we have lived and worked since last September, and I hope you will tell every one that when the proper time comes we will return and build them over.

## Allied and American Peace Terms

By SAMUEL A. B. MERCER, Ph.D., D.D.,  
Professor of Semitic Languages in  
the Western Theological Seminary,  
Chicago, and Editor of the Journal  
of the Society of Oriental Research  
Cloth, 60 cts. Postage about 5 cts.

We must win the war first. But we must not wait for it to be won before we consider what comes next. The fate of races, peoples, and groups will depend upon the terms of the treaty of peace. To be able to deal intelligently with them, America and the Allies must learn what group units have the elements of nationality in themselves and what have not. This is the subject of Professor Mercer's inquiry.

He evinces a thorough knowledge of the many separate groups in the Balkans and elsewhere. What are the race affinities and prejudices of each of these? Statesmen must know before they can deal intelligently with the issues that come after the war: and when the war is over it will be too late to begin to learn.

## ARE YOU A MENTAL AND PHYSICAL WRECK?

Do not wake up each morning feeling that you've got to drag yourself through another day. Among the most part of your body, the appetite, no energy, your head full of confusion, your nerves all on edge; tired out, where you can't sleep, your work?

It means that **SOME THING'S WRONG**: that your brain, lungs, liver, stomach, and muscles are not working right; your food isn't assimilating properly; you are not getting your oxygen; you are out of gear; your blood is a building up your wasted strength. It means that you are gradually going to pieces.

**LET ME GIVE YOU VIM, VIGOR, VITALITY**

I can do it, for I work with the greatest healer in the world—NATURE. I have studied out her secrets; I have mastered the laws which bring back health, strength, energy, vim, force, to weak, emaciated, atrophic human wrecks.

**I HAVE HELPED THOUSANDS**

Even if your condition is the result of your own overwork, forget it. Look about instead of back. Learn how Strongfort can rebuild you. He can strengthen every one of your vital organs. Learn how it will pad your bones with solid flesh, rid you of rheumatism, back-lagging ailments, and restore to your brain, your nerves, your muscles, and to your blood, and make a man of you again.

Strongfort can do it—has done it for thousands—will do it for thousands more. Mr. L. B. "Promotion and Conservation of Health, Strength and Mental Energy." Your own strength. Best results, without those annoying to cover mailing expenses. Write for it today.

STRONGFORT  
THE PERFECT MAN

## WHEN DIXIE GOES OVER THE TOP

(Continued from page 173)

didn't think you were serious, S'eh. I'd shuah like to have you go with me, but I'd never fo'give myself if you got you'self killed. It's contrary to o'dahs, too. If G. H. Q. evah found it out, I'd shuah get myself co't martialled. If it's the same to you, S'eh, I'd rather you didn't come."

I was not going to increase that fine boy's embarrassment by putting up a disappointed howl. So tho it wasn't "the same to me" by any means, I shook hands and wished him luck, then joined the sentry up above and listened to the rustle of their passing thru the wire till it was drowned by the pattering rain.

It was eerie watching, there, hour after hour, in wet, black silence that was broken only at long intervals by the boom of a distant gun or the shriek of a passing shell. Imagination peopled the utter darkness beyond the parapet with sinister shapes. Small noises took on vast importance. Once I saw the dim form of a sentry stiffen in breathless attention. Rifle at hip, leaning slightly forward, he stood, rigid, absolutely motionless, for fully ten minutes. My straining ears had also picked up the sound—clip, ping! clip, ping! the exact noise made by nippers severing wire! The Boche! I know that in the sentry's place I should have fired. But he stood, frozen still, and soon a whisper fell thru the darkness.

"It's water, S'eh, dropping from the tree on to the wire."

Shortly thereafter a star shell on our left suddenly laid out the wood's dark outline and No Man's Land under its bright blue flare. Came the sentry's hissed whisper, "Don't move!" As the light faded, he said, "A German sniper might be out thar. If a light goes up when we're out on patrol, we freeze—with one foot up, if it chances to be raised. So long as you don't move they kain't see you."

Just then a second star shell broke on high followed by a burst of machine gun fire, rapid in its reverberation as the ripping of canvas. For five minutes it continued, but the pictures of German attacks that formed in my mind were dissipated by the sentry's laconic comment, "Number Three's nervous tonight."

When, a few minutes later a second eruption of flares and firing broke on our right, he added, "Nervous as a pack of wimmen. Number One's got it now: must be catching. I'd sho' think they'd be ashamed."

Presently flares and firing died, leaving us to continue our watch in cold, wet darkness. Tho there with the sentry in the flesh, in spirit I roved with the patrol groping its way out there thru the utter blackness of No Man's Land. Always I looked for the star shell that would leave it discovered under German fire. But up to the moment a sergeant climbed up to us from a dugout below, nothing further disturbed the black night beyond the parapet.

It is quite easy for a patrol to lose itself. The marvel is how it ever gets back. Therefore, according to agreement, the sergeant fired a pistol flare at twelve o'clock. Quarter of an hour thereafter came the soft rustle of men passing thru our wire. Then, one by one, twenty dark figures climbed down the parapet.

The lieutenant's report was vividly alive; tense with the dread interest of those who walk with death. They had gone up to and lain down close to the German wire; so close that they had seen a Boche patrol in dim outline passing above along the parapet.

"We could have picked off a few," he explained, "but the next second they'd have lit No Man's Land brighter than day with

their flares and machine-gunned us off the airth. We could hear them talking. One chap said "Nein! Nein!" in a hissing whisper as if he was checking something foolish. If we'd been thar just one hour sooner we'd have had the wire cut so we could have gotten them. But, we know, now. We'll go out earlier tomorrow night and get them to rights."

If he had known just where that patrol had been I doubt whether he could have held his men's fire. But none of us knew until, quarter of an hour later, we stopped on our way back to the main camp at Number Three Post.

"Nervous, eh?" The corporal in charge replied to the lieutenant's banter. "There's three dead Boches out thar in our wire that would tell you diffrent. They raided us while you were gone—killed one of our sentries and wounded two others: sniped 'em from the edge of the wire. But three for one is good exchange. If we keep that up, I know who'll win the wah."

"Must have been the gang we saw! Oh, why didn't we meet them in the open?"

The lieutenant's exclamation drew an echo from the dark line of men from behind us—a mingled snarl and growl similar to that emitted by an animal torn away from its prey. It was not, I suppose, a pleasant sound, but it boded ill for Fritz when they "got him to rights tomorrow." All the way back to the camp they growled and grumbled, and as I listened there was borne in upon me the full comprehension of how their grandfathers, under Robert Lee, had for three years made life for the northern armies one long hell. My last look at the grim, determined faces going out next morning assured me that they could be depended upon to do the same for Fritz.

The latter was shelling the road on general principles rather than in search of correspondents when I approached the village under the shards of which, as before said, the complaisant major lived with his staff. In saying goodbye he put into a couple of sentences the spirit of these fighting southerners.

"We're not naturally quarrelsome, S'eh. I'm a man of peace mysef—out there not at any price. There's only one way it can ever be restored again on earth—by giving Fritz particular hell."

The last I saw of him, this man of peace was bending over a map with his finger on the spot where he next intended to cut hell loose upon Fritz.

We shall soon see the German goose-step give way to our Foch's trot.—*London Opinion*.

Base—That coach hasn't much of a carriage.

Ball—No, he's rather hackneyed.—*Purple Cow*.

Hobbs—I see we are now restricted to a two-ounce bread ration. How much is that?

Dobbs—Of my wife's bread a piece about two inches square.—*Exchange*.

Corporal O'Rourke—The General says yez are to be shot at sunrise, so trot along wid yez and pray for a cloudy day.—*Judge*.

That man with Jane certainly has on loud clothes.

Doesn't matter. She turns a deaf ear to his suit.—*Purple Cow*.

To one who from his Listening Post heard the Hudson Terminal, the Western Union, and the Woolworth Buildings go up, rivet by rivet, the noise of the bombs and shells is the soft murmur of a lullaby. Sweet and low, sweet and low, bombs of the Western Front!—*F. P. A. in the Stars and Stripes*.

## DIVIDENDS

## THE ELECTRIC STORAGE BATTERY CO.

Allegheny Avenue & 19th Street.  
Philadelphia, June 5, 1918.

The Directors have declared a dividend of one dollar (\$1.00) per share from the net earnings of the Company on both Common and Preferred Stocks, payable July 1, 1918, to stockholders of record at the close of business on June 17, 1918. Checks will be mailed.

WALTER G. HENDERSON, Treasurer.

## RAY CONSOLIDATED COPPER CO.

25 Broad St., New York, June 6, 1918.

The Board of Directors of Ray Consolidated Copper Company has declared, for the quarter ending June 30, 1918, a dividend of seventy-five cents per share, payable June 29, 1918, to stockholders of record at the close of business on June 14, 1918.

E. P. SHOVE, Treasurer.

## Stop the Leaks that Keep You Poor

Saving money is hard work until you get the secret. No matter how large or how small your income you will never save as much as you should until you get the knack.

If the average business were operated on the haphazard basis on which our household finances are run, there would be fifty times as many bankrupts. The truth, whether we admit it or not, is that very few families know where their money goes. At the end of each year we find ourselves little better off, if any, than at the beginning. We have earned \$800 or \$1,500 or \$5,000, yet practically all has been spent—and the pitiful part of it is we have nothing to show for it!

## New Method Makes Saving a Pleasure Instead of a Hardship

The Ferrin Money Saving Account Book is a simple automatic watch-dog of your income and expenditures. It is the only account book based on the Budget idea. It is the only one that provides for the income as well as the classified items of expense. It contains much valuable information as well as 96 pages, size 8 1/4 x 10 3/4 inches, which are sufficient for keeping your household expenses and income for four years; also recapitulation covering the four years, with a Budget plan. The book is bound in dark blue seal grain imitation leather, stamped in gold. The book is prepared by an expert and fits any salary from the smallest to the largest.

For Further Information Read Page 479

## BUILDING A WAR TOWN

(Continued from page 469)

be in Colonial style. This is the best of our American styles, and Mr. Litchfield has fully employed its limitless varieties.

"Yorkship Village will not look like a Spotless Town, or an institution," says Mr. Litchfield, happily turning the pages of his book of plans. "Here is a little house in red brick with a green slate gable. That house there in stucco with the red composition roof is just like it, altho you would never notice the similarity. Here is the same plan again as part of a double house and there it appears at each end of a row of five. And there it is with a different porch and roof angle. There are only twenty-seven basic plans, but we have seventy group combinations, each reappearing only three or four times in the whole 907 houses of the present initial contract. And of course we scatter them. I am painting some of the brick houses and using colored stuccos and I have seven different roofing materials to work with. To give such variety adds practically nothing to construction cost and only a trifle to the architect's office work, whereas the results will be so much more attractive than the long dismal, monotonous working men's rows characteristic of the Philadelphia region that these houses will always be worth at least ten per cent more on the open market and will be far easier to keep rented."

All the little Yorkship Village houses will have bathrooms and sewer connection, gas ranges and electric lights. Playgrounds, parks and garden lands are reserved. A spacious central square is to be surrounded with stores with apartments above, and as Yorkship Village is isolated, it will have here a full-fledged shopping center of its own.

The houses will presumably be rented at \$25 to \$30 a month, which should cover cost. The realty company is limited by the conditions of the government loan to five per cent dividends annually, so if it does charge more than the costs require, there will be nothing to do with the excess except reëxpend it on the town, or use it to reduce the government mortgage, thereby releasing larger excess revenue for later years.

The Committee on New Industrial Towns is urging the Government not to allow the property to be divided and sold off to individuals piecemeal, but to sell the whole village by easy instalments to the people of Yorkship Village, to be held by them intact forever as a communal possession. Thus, when an annual amortization charge from rentals has retired enough of the Government loan to permit securing a private mortgage to refund the remainder, the people (or, strictly speaking, a representative limited-profit or non-profit realty company acting for them) would own all the real estate within the village, and at full normal rents, would enjoy a revenue available for public purposes exceeding ordinary taxation by some 50 per cent!

An influx of new population to a given neighborhood creates a land boom, and the various individuals, by shrewd speculation, or bull luck, proceed to get suddenly rich at the expense of the incoming population. In the case of Yorkship Village and the other government towns that are projected, we have a freak condition, namely, a successful development of a new suburb by a limited-profit company with no boom profits for anybody—a unique advantage which might as well be preserved to the people of the village forever!

And that wonderful revenue (if Washington grasps this "Self-Ownning Town" idea in time) would make Yorkship Village a still more interesting town to live in!

DIVIDEND NO. 76

A quarterly dividend of two per cent. (two dollars per share) on the capital stock of this Company has been declared, payable on July 15, 1918, to stockholders of record at the close of business June 20, 1918.

JOHN W. DAMON, Treasurer.

# THE NEW BOOKS

## The War Is On! Page Washington!

IN *The War Whirl in Washington*, Frank Ward O'Malley has drawn an irresistibly funny picture of our rudely roused capital, trying frantically to keep up with the war and clutching wildly lest oldtime traditions be lost in the shuffle. The ludicrous restrictions of red tape; the reluctance of Congress to abandon precedents that interfere with action; the rush of profiteers large and small, with special emphasis on taxibandits; the influence of total abstinence on the Washingtonian populace; are all subjects of deepest mirth and sharpest irony as Mr. O'Malley points them out to us. His descriptions manage somehow to keep good-humored and yet to spare not at all just scorn where scorn is due. Take for example these paragraphs concerning slackers:

The lad with the pull almost always lands a Washington billet. Into the rooms of busy men of influence stream the youngsters of draft age, all anxious to "do something," so long as it will keep them in an office that is tightly enough closed to prevent a severe draft on the back of the neck. The horrors of war to them are centered in their inability to get a room with bath at the Shoreham or Willard while bothering everybody for a Washington job that includes a commission.

As the country saw our end of the Big Mix-up stretch on, the capital began to rain bearers of letters of introduction who had held out until the last, not having the gumption in the earliest days to exchange home pleasures for even the discomforts of Washington, but all waiting until a draft number was beginning to reach out and bite 'em. Among them were countless youths who, fearing the shoulder blisters that might come from carrying a rifle, had tried at last to get a commission in an officers' training camp, but had been rejected because they lacked the hearts and the brains and the guts that an officer should have. Back they went to their home towns then, and to inquisitive neighbors they described their brain and soul ailments as "eye strain," "slight physical defect," or, to quote the commonest term for head and heart hollowness, "flat feet;" whereas the chief trouble was that the army men who had probed their general mental make-up had early discovered in their training camps that any one of them could comfortably wear a demi-tasse for a high hat.

So, with the draft still snapping at their heels, down they trooped to Washington.

They began to look around for an office desk with a southern exposure and a suit of working clothes that included at least one bar at the shoulder, leather puttees, and a pair of third-act spurs warranted to play the very dickens with the rugs on the Willard's Peacock Alley or to gouge all the varnish off the Government's desk-chairs.

For the most part *The War Whirl in Washington* forbears to be so serious. Any chapter of it furnishes good jokes enough for a dozen dinner parties. But the unescapable conviction of truth points all its humor. You may take Mr. O'Malley's book as you will—in jest or in earnest—but don't fail to take it!

*The War Whirl in Washington*, by Frank Ward O'Malley. The Century Company. \$1.50.

## Illusions and Realities

THE most vital question for the English-speaking peoples today is that of Anglo-American unity. Beside this question all others are mere side issues. What the other nations will do depends on the political, social and commercial attitude of Great Britain and the United States.

This is the underlying idea in all the essays by Mr. Grierson collected under the general caption of *Illusions and Realities of the War*. Not all of them relate directly to the war but each touches with greater or less emphasis upon some vital phase of our present day civilization—its illusions which must be shattered—its realities which must be recognized—and how these ends are being accomplished by the Great War. Keen observation, trenchant criticism and a conciseness and concentration of style which make for unusual force, combine in a book worth reading.

*Illusions and Realities of the War*, by Francis Grierson. John Lane Company. \$1.25.

## Under the German Shells

IN wartime, the line between ancient and modern history is only that of a few years. Those feverish days of August, 1914, are almost forgotten now. It is difficult to realize that there was a time when France was just entering the war; when her first recruits went laughing to the railroad stations; when the men who later became the heroes of the Marne scribbled on the cars such legends as "Round trip to Germany," "Excursion Train for Berlin."

Then came the staggering shock of the first battles; the forced marches of the retreat; the lines of old men, women and children who stumbled on with the soldiers as far as they could and then fell, exhausted, to await the mercy of the invader.

Such are the scenes portrayed by Emmanuel Bourcier, eminent man of letters

and soldier of France. Beginning with the call to arms and ending with the terrible days of the Verdun offensive, Bourcier paints a picture of the war as seen by the poilu in the trenches. Much emphasis is given to the character of the French soldier—his light-heartedness, his spirit of comradeship, his manner of joking at the very threshold of death.

Thruout the book, however, there runs an undercurrent of sadness, as if one who had witnessed the struggle of the giants could never again be at home in the world of everyday.

Later in an unforeseen epoch, in the year —, it will be taught the children as two dates: the war began August 2, 1914; it ended —. All the tragedy, all our cries, our furies, our agonies, our suffering and death—all this, without name, blurred and indistinct, will be contained between two numbers, and will mark two eras: that before the War, that after the War. . . . We will no longer recall all that happened to us. To be explicit, we will say:

"At the Marne, we used rifles.

"In Champagne, we threw bombs.

"At Verdun—such cannon!

"On the Somme the shells flew so thick they met in mid-air.

"And then—and then, America came!"

*Under the German Shells*, by Emmanuel Bourcier. Charles Scribner's Sons. \$1.50.

## Something That Begins With T

CREATING a Western heroine who clives in the wilds but who uses proper grammar and doesn't wear a revolver strapped to her waist is the achievement of Kay Cleaver Strahan, author of *Something That Begins With T*.

Perched far up in the Oregon mountains was the home of the girl and "all her family," a nine-year-old boy whom she had adopted out of nowhere. Their favorite sport was suggesting topics of conversation thru letters of the alphabet. But the end of the alphabet was never reached. When a couple of masculine campers moved near "Perch-Edifice," the game slowed up at "L" and stopped entirely at "T."

The book moves on in an even tenor peculiarly adapted to the motion of a hammock, and has just enough plot on which to string the quaint witticisms of the heroine and "all her family." But its airy optimism comes as a decided relief at a time when most of the new books are about something that begins with W.

*Something That Begins with T*, by Kay Cleaver Strahan. Small, Maynard & Co. \$1.35.

"At the Marne, we used rifles." Emmanuel Bourcier tells the story of the poilus fighting in the trenches in "*Under the German Shells*"

## CAPITAL COPY

About 60,000 officers and men are engaged in coast patrol work of the United States Navy.

Fourteen new United States destroyers have been named in honor of American naval heroes.

Our soldiers abroad are asking that more new novels be included in the books sent to them thru the Library Association.

The Motor Corps of America, an organization of women, has been recognized officially by the Army Medical Department.

Military authorities will hereafter have entire charge of all mail for the American Expeditionary Force after it leaves United States ports.

Sweetening formulas for soft drinks that will cut the actual sugar content to 50 per cent or less are being prepared by the Bureau of Chemistry.

According to a statement by the Department of Agriculture, there has been an actual shortage of more than 2,000,000 tons of sugar annually since the war began.

The Girl Scouts of America received official recognition from the War Department when eleven of them were appointed messengers by the Surgeon General's Office.

Arrangement has been made for sending personal welfare inquiries between persons in the United States and persons in enemy countries and in territory occupied by the enemy, thru the Red Cross.

The Signal Corps is training carrier pigeons on an extensive scale for war work. Possessing or shooting the birds belonging to the Government, or impairing the service in any way, is punishable by fine and imprisonment.

The Red Cross has called for thirty-five men above the draft age to volunteer as "casualty searchers." They will get all possible information concerning the wounded and missing to supplement the War Department records.

There are now 3,378,998 women registered for service according to their specialized talents under the Woman's Committee of the Council of National Defense. The majority are registered for industries and agriculture.

Beginning in September the War Department will provide military instruction under army officers in every institution of college grade enrolling for the instruction one hundred or more able bodied students over eighteen years old.

In output of completed steel ships the month of May has exceeded any previous month in the history of the Shipping Board. May's record shows an average of more than one completed ship a day, the average tonnage being 7594.

President Wilson has issued a proclamation establishing three new National Forests in the East—the White Mountain, in Maine and New Hampshire; the Shenandoah, in Virginia and West Virginia, and the Natural Bridge, in Virginia.

Replies to many of the inquiries in the letters that flood the War Offices in Washington can be found in the Official United States Bulletin published daily. This news-

Twenty-five of the army's twenty-nine air service flying fields are named for men who lost their lives on aeronautical duty.

The Emergency Council on Education has announced that the universities of France have accepted the offer of 100 scholarships for French women in American colleges and universities.

Thirty women are training as Industrial Secretaries at Bryn Mawr College. The Young Women's Christian Association has appropriated \$15,000 for the purpose and the work has the approval of the Department of Labor.

More than 2,000,000 members of American fighting forces are now insured by the United States Government, and approximately 11,000 applications are being received daily. Applications for insurance must be made within 120 days after joining the service.

## REMARKABLE REMARKS

**WILSON MACNAIR**—Most women have the hide-and-seek instinct.

**JAMES DOUGLAS**—I think we all remember too much, and forget too little.

**BONAR LAW**—You can forget the strain of war best by straining your utmost to help.

**BERTA RUCK**—Masterfulness doesn't go down with all women, tho all men think it does.

**THEODORE MARBURG**—Can we afford to shake hands with the unholy thing known as Germany?

**LEONARD MERRICK**—Everything is more or less of a disappointment except the unattainable.

**LOUIS F. POST**—Between a worthy war-patriotism and a virile peace-patriotism there is no essential difference.

**SAMUEL GOMPERS**—The labor movement does not discount the service to civilization rendered by intellectual ability.

**WILLIAM JENNINGS BRYAN**—Before the Government acts, discussion is proper; after action, obedience is a duty.

**H. H. ASQUITH**—I find the greatest relief from war-strain in the fascinating but little appreciated subject of cutlery.

**PRESIDENT WILSON**—The old party slogans have lost their significance and will mean nothing to the voter of the future.

**CLARENCE DARROW**—The arguments that were once used by German sympathizers are today the arguments of the pacifists.

**VISCOUNT BRYCE**—The small states have been a potent and useful—perhaps the most potent and useful—factor in the advance of civilization.

**EMPEROR WILLIAM**—Looking upon myself as the instrument of the Lord, without regard for daily opinions and intentions, I go my way.

**PROFESSOR REINKE, OF KIEL**—The idea that we can conciliate defeated enemies by magnanimity is a dream and not even a pretty dream.

**PROF. EDWARD A. ROSS**—The virtues of the Russians are to be credited to the goodness of their nature, rather than to their acquired standards.

**FLETCHER DURELL**—Never perhaps has there been a nation more difficult thoroly to grasp and understand than is Germany at the present time.

**HON. MEYER LONDON**—Any individual who starts out with the proposition that he cannot improve and has nothing to learn is universally regarded as a hopeless fool.

**JOHN HASTINGS TURNER**—Comfort consists largely in drinking one's tea from the saucer when it is too hot, and keeping one's ideas to oneself when they are too unusual.

**HUGH WALPOLE**—When you see some one criticizing something you've always loved, it makes you hot defending it, but also, altho you'd never own it, it makes you see weak spots.

**P. G. WODEHOUSE**—The morbid enterprise of authors who subscribe to press-clipping agencies is akin to the eccentric behavior of the priests of Baal who gashed themselves with knives.

# Are You the Dupe of a Patriotrick?

A PATRIOTRICK is a swindle by which your patriotism is twisted to serve the selfish interests of another. It usually takes the form of a spreading rumor that a certain brand of goods is owned or controlled by Alien Enemies. True patriots do not want to buy such goods and in times like these a lie has a thousand lives and travels on broad, fleet wings. The patriotrick is not a new trick. Dozens of loyal American, French and British firms suffered from it, even before America entered the war.

We and our customers are victims of it today. We can no longer ignore the fact that thousands of druggists and dentists have been told, and are innocently passing along the story, that Pebeco Tooth Paste is an Alien Enemy Product.

The story is untrue. Its only possible foundation is the fact that the formula for Pebeco was originated years ago in the laboratory of a Hamburg scientist.

Pebeco has been made in New York City since 1903. Every share of Lehn & Fink stock and every dollar's worth of bonds are owned by American citizens.

Not one dollar from the sale of Pebeco Tooth Paste finds its way to any alien enemy or any alien interests. Sole license for the manufacture of Pebeco has been granted to Lehn & Fink by the United States Federal Trade Commission.

All the officers and directors of Lehn & Fink are American citizens, and only American capital is used. Lehn & Fink is not subsidized by or connected with any other concern, American or Foreign.

Don't be the dupe of the patriotrickster.

*Pebeco Tooth Paste is for sale by all druggists*

**Manufactured by LEHN & FINK, Inc., 120 William St., N. Y.**

*Under sole license granted by the Federal Trade Commission*

## A BETTER WORLD ALREADY

**P**EOPLE are saying, "This will be a better world after the war." It will. But why shorten the arm of the Almighty? The world is better now.

It is better not only because its inhabitants have dropt self-indulgences and frivolities and have given themselves gladly to a glorious cause. It is better also in concrete and specific ways.

It is better because we have revised our scale of values. In our enjoyment of day by day pleasures and in the struggle for social recognition and preferment, we had fallen into a cynical indifference to the essentials of life.

For so many years the world had been well fed that we had forgotten the worth of sustaining food; and in forgetting, we had failed to make proper provision for its production. The price of beef had been rising, but we were still neglecting to multiply the herds of cattle. We were trusting to luck. Everybody had all the wheat he could consume, but nobody gave attention to the warnings, which were abundant enough, that the supply could not be maintained unless systematic and organized efforts to that end were made. Our farm acreage was not half tilled. Our agricultural methods were primitive and wasteful, and farm life was so undeveloped that the boys, instead of taking pride in it and enjoying it, thought only of getting to the towns, to work in offices and shops.

We have learned the value of knowledge. Our universities had been making headway. Researches of immense importance were in progress. But between the laboratory and the college there was an unfortunate distance. The spirit of college boys was not serious. They cared too much for athletics, and for the social side of college life, and not enough for intellectual hard work. The people in general did not understand that physics, chemistry and biology had become vital to national self-preservation. Now they are participants in a war which will be won by chemists and mechanics, and the possibility of remaking a devastated

world lies in the activities of the young men and the young women who are mastering thru the methods of experimental science the secrets of the material world.

We had lost that feeling of the imperative necessity of useful occupation which all the peoples of the world once had when the struggle for existence was hard. The humane impulse to lighten the toil of men and to emancipate women and children from hard tasks was worthy, and it was accomplishing commendable reforms. But it erred to the extent that it failed to appreciate the hygienic and the moral value of systematic productive activity. It is better for children to have a certain amount of work to do. Between a reasonable performance of useful labors and an exploited childhood in manufacturing industries, there is a wide distance. And it is more probable now than it was five years ago that the rule of reason will prevail in this matter. Already women have been incalculably benefited by the larger opportunity which has been opened to them for useful service. They are happier and saner. It is easier for them to bear the grief with which war is overwhelming them when they themselves are doing their part in the struggle.

We had forgotten also the supreme values of liberty and justice. Dwelling in a false security, we had imagined that these would not again be challenged. But once more we have learned that the price of liberty is eternal vigilance. We shall not soon forget again.

We realize anew the values of courage and of humane-ness, of resoluteness and of good faith. We have curiously little desire to inflict suffering upon our foes, but our hearts are steeled against their purposes. Willing ourselves to endure pain and to face death, we have happily lost our sentimental shrinking from inflicting pain and death upon men who live only to do evil. This is one of the greatest moral victories of the war. Life has no value irrespective of its qualities and its purposes. To have realized this truth is large compensation for the desolations of conflict.

## THE AUSTRIAN PEACE NEGOTIATIONS

**I**N order to understand the meaning and intent of the new Austrian drive against Italy we must consider the changes that have taken place in Austria's internal condition and external relations since her drive of last year. That drive was heralded as a "peace offensive" and not without reason, for, as we since learned, it was in part thru the opposition of Italy that the tentative peace proposals of the Emperor of Austria were finally rejected last August. In November Austria launched the attack on the Italian front in the hope of weakening Italy's self-confidence and reducing her territorial aspirations.

Details of the negotiations of 1917 have recently been coming out bit by bit from Petrograd, Paris and Vienna, and by piecing these together we can now get a tolerably

connected and almost complete history of the whole affair. Since little attention has been paid to it in the American press and since it has an important bearing upon the present situation, it is worth reviewing as a whole. The informal discussions between Austria and France beginning in the spring of 1917 continued at intervals and by means of various channels thru the summer and fall and into the present year. They began in March with a holograph letter of Emperor Charles of Austria address to his brother-in-law, Prince Sixtus of Bourbon-Parma, who is serving in the French army. In this letter, which will be found in full in The Independent of April 27, 1918, the Emperor proposes peace on the following terms: That Serbia should be reestablished, that Belgium should be restored and compensated and re-

tain her African colonies, and, adds the Emperor, "convey privately and unofficially to President Poincaré that I will support by every means and by exerting all my personal influence with my allies France's just claims regarding Alsace-Lorraine."

This was not, as has been said, an attempt to induce France to make separate peace, for Kaiser Karl in this letter asked that Great Britain be consulted. He did not, however, say anything about Italy. Premier Lloyd George, when the letter was first placed before him, is said to have favored opening negotiations on this basis, and Premier Ribot is also thought to have been inclined to the same view, but Baron Sonnino, the Italian Foreign Minister, refused to consider the Austrian offer when it was referred to him in July because it made no concessions to Italy, and President Poincaré insisted that France must get more than the Alsace-Lorraine territory seized by Germany in 1871. As President Poincaré wrote to M. Ribot:

It is not a question for us of the Alsace-Lorraine of 1871; what France asks for is the Alsace-Lorraine of 1814 and 1790, with the valley of the Saar; restitutions, reparations, and indemnities and guarantees on the left bank of the Rhine.

This plan for taking away from Germany all of the territory left of the Rhine had been embodied in the secret agreement which France had negotiated with the Czar's Government a month before. According to this document, as published by the Bolsheviks, Russia agreed in exchange for a free hand in the East to support France in the following demands:

1. Alsace-Lorraine to be restored to France.
2. The frontiers are to be extended at least up the limits of the former principality of Lorraine, and are to be drawn up at the discretion of the French Government so as to provide for the strategical needs and for the inclusion in French territory of the entire iron district of Lorraine and of the entire coal district of the Saar valley.
3. The rest of the territories situated on the left bank of the Rhine which now form part of the German Empire are to be entirely separated from Germany and freed from all political and economic dependence upon her.

Darling in the New York Tribune

NOW IF WE COULD ONLY INOCULATE THE FOLKS AT HOME WITH IT

4. The territories of the left bank of the Rhine outside French territory are to be constituted an autonomous and neutral state, and are to be occupied by French troops until such time as the enemy states have completely satisfied all the conditions and guarantees indicated in the treaty of peace.

The Government of Great Britain, it seems, never approved of these ambitious demands of France for territorial expansion and did not even learn of the negotiations with Russia "until very much later," as Mr. Balfour informed Parliament on May 13, 1918. He adds:

Certainly this Government never gave the least encouragement to any such notion. It is altogether outside our whole modes of thought on this subject. It is not a subject which we should ever have seriously contemplated, nor do I think it ever was a very fixed or solid part of the foreign policy for any length of time of any French Government.

But whether this ever was "a very fixed and solid part of the foreign policy" of France it appears to have been insisted upon by President Poincaré in his reply to Prince Sixtus. The President also proposed that Austria cede Triest and Trentino to Italy and compensate herself at Germany's expense by annexing Silesia.

In reply to this the Austrian Emperor wrote a second letter in which, it appears, he expressed confidence in his ability to induce Germany to make peace provided France restricted her territorial claims to the restoration of Alsace-Lorraine. He even went so far as to intimate that unless Germany would agree to a peace on such terms Austria and Bulgaria would secede from the alliance and make a separate peace. But he offered no concessions to Italy and he reminded the Allies that Silesia was not in their possession to give away.

The Emperor's second letter has not been made public, but it was submitted to the Foreign Affairs Committee of the French Chamber and its contents, as given above, somehow leaked out and came to the knowledge of the correspondent of the *Manchester Guardian*, who was promptly expelled from France for publishing it. The Foreign Affairs Committee by a vote of thirteen to five supported the Government in its refusal to consider the Austrian terms as an acceptable basis for peace. But it is startling to learn that if five of the deputies had changed their votes we should now be in the midst of a peace conference instead of a great offensive. In fact it was closer than that, for these four men, Poincaré, Ribot, George and Sonnino, took it upon themselves to ignore the proposals of the Austrian Emperor without consulting their colleagues or Belgium, Serbia, Russia or any of the other of the Allies or President Wilson. Even Mr. Balfour, the British Foreign Minister, did not know of the affair until after it was over. The four men came to the conclusion either that Kaiser Karl was insincere or that he could not "deliver the goods" without the consent of Kaiser Wilhelm. President Wilson, when he learned of the negotiations, seems to have concurred in this conclusion. We do not question their judgment, tho it does seem that it might have been possible to have "called the bluff" and demonstrated the insincerity without slackening our war preparations, especially since it was the policy of the Allies to mark time in 1918 while the American army is growing.

In August, that is, at the same time that Austria was holding out Alsace-Lorraine as a peace offering, German agents approached M. Briand with a proposal to cede Triest and Trentino. Each party was willing to sacrifice the territory of the other partner but none of its own. Collusion has been suspected, but judging from the outburst of indignation in both countries when these secret negotiations were revealed this explanation seems improbable.

Prince Sixtus, in conveying the Emperor's letter to President Poincaré, warned him that its revelation "might put the Emperor's life in danger and would certainly put Austria more than ever under the domination of Germany." Premier Clemenceau published it in a fit of temper, for

which he has virtually apologized. "You must take me as I am, with all my defects," he said to a deputy of the Foreign Affairs Committee. Whether wise or not the effect has been just what Prince Sixtus foretold. As soon as the letter came out Kaiser Karl hastened to Kaiser Wilhelm and practically placed his empire in vassalage to the German. It is now doubtless at the instigation of Germany that the Austrian offensive in Italy has been begun just as the German offensive in France slackens. But as the Austrian Government weakens the subject nationalities become bolder and American recognition of their aspirations has become an important factor in the war. Since March of last year Germany's power or at least her hope has risen by reason of the collapse of Russia and her gains in France. The Reichstag peace proposals of July 19 which President Wilson commended have been virtually repudiated. Count Czernin, who professed agreement with President Wilson's terms, was thrown out of office by the revelation of the Sixtus letters and the pro-German Baron Burian has replaced him as Austro-Hungarian Foreign Minister. Austria could not and Germany would not consider a peace such as was under discussion with the Allies last summer. The questions then being debated in Switzerland are now being settled on the Marne and the Piave and if these lines hold, as they are holding now, Austria and Germany will be putting forward peace terms much more nearly acceptable than those that were secretly suggested a year ago. On the other hand, both France and Italy have reduced their territorial claims since last year. We may infer from Mr. Balfour's remark above quoted that England will not support and France no longer insists upon the cession of German territory, and we hear that Italy has relinquished her demands for Slavic lands east of the Adriatic.

## THE TEST OF A WON WAR

**F**OLLOWING in the wake of Germany's big war offensive will no doubt come a big peace offensive, perhaps several "drives" in succession to confuse the mind and break the will to victory of the Entente Allies.

Thanks to President Wilson the minimum demands of the Allies are fairly well understood; they may, indeed, be reduced to one: a world safe for democracy, and therefore safe from the only powerful external enemy of democracy still extant, the conscienceless military oligarchy of Central Europe. If this security can be finally obtained it would indeed be criminal to prolong the war for any other purpose. Until it can be obtained it would be even more criminal to consider any peace offer, however attractively drest. A peace with victory is the only kind that we can now afford to consider; and security for the future is victory. What particular item among all the demands of the Allies will be the real test of such a victory?

Suppose that Germany agreed to evacuate France, Belgium and Italy; to cede Alsace-Lorraine to France and the Trentino to Italy; to let Great Britain keep the German colonies and perhaps Mesopotamia as well; and, finally, to pay a few billions of indemnity to Belgium for her trespass; demanding in return only the recognition of the "independent" states carved out of the late Russian Empire? Would not this seem a generous and reasonable offer? Would it not meet the world's desire for a lasting peace? Would it not be victory?

But twenty years later, with an Austrian prince ruling over Poland, a Saxon dynasty in the Kingdom of Lithuania, a Hohenzollern princeling enthroned in Finland, some Wilhelm Friedrich Ernst of Durstunddonnerheim in the Ukraine, a Duke of Courland related by marriage to the royal family of Saxe-Etwas, and other German courts planted in the Caucasus, Great Russia, Siberia, Rumania and the Balkans, things might look differently. Each Teutonic or near-Teutonic realm would be a center of German

Marcus in the New York Times

### HAS HE THE PRICE?

*Kaiser: What! Rates raised again?"*

*Ticket Agent: "Yes—and they're going still higher!"*

intrigue and influence, as were the courts of Constantine of Greece and Ferdinand of Bulgaria. A powerful German aristocracy would fill the upper chambers of the parliaments of these petty kingdoms. Commercial treaties, drawn up in Berlin (or perhaps Hamburg) would make all these nations so many economic dependencies of Central Europe. Military "alliances," and a corps of officers supplied by Germany, would bind them to the cause of the Central Powers when the hour struck for their next blow at France or Britain—or at us! And all the while these nations would go thru the motions of self-government; Germany would not "annex" but would rule. Is this a fantastic nightmare? It is half accomplished already by treaties which have been concluded between Germany and her eastern neighbors. Nothing is wanting but a decade or two of peace to "consolidate" these gains.

How then are we to prevent the Germanization of that not unimportant part of our world which lies east of the Baltic and Adriatic and extends to the Pacific? By refusing recognition to the new nations and attempting to restore the lost balance of power by putting together the lost Russian Empire? But all the king's horses and all the king's men can never quite restore the old Humpty Dumpty of the Czar's domain. It has been so thoroly smashed that we might as well attempt to restore the Roman Empire. Finland, Poland, Lithuania, the Baltic states, the Ukraine, the Caucasus states are accomplished facts; we will have to concede their existence. They may, and doubtless will, form new federations on their own account, but they will not soon become mere provinces of a military empire of the Muscovites.

To block Germany we must take her at her word. We must recognize these nascent nations as independent, and then see that they really are so. It goes without saying that Germany in entering the peace conference must first drop into the waste basket all the treaties which give her control of the armies, the trade, the industries, the mines or the internal administration of the new nations of Eastern Europe. But there are more subtle ties which must also be severed, and the chief of these is the tie of dynastic and oligarchic sympathy. Let there be no more Ferdinands, Constantines, Wilhelms of Wied or "Dear Nickys;" no German-speaking-and-thinking Barons; no royal marriages with provinces for dowry; no teaching in the schools of that slavish reverence for rank which is the essence of "Kultur." The Allies must absolutely insist, and above all America must insist, that each new state that is recognized shall be recognized as an independent, liberal, democratic republic and that recognition shall be conditional upon the adoption of such political institutions.

# THE STORY OF THE WEEK

## The Plan of the Austrian Offensive

The long anticipated attack upon the Italian front was launched on June 15. As far back as February the concentration of troops in the Trentino and the changes in the Austrian command gave warning that an attempt would be made to carry forward the advance made last fall. At frequent intervals during March and April it has been reported that the offensive was anticipated within a few days. By the end of May it was known that about a million Austrian troops had been gathered on this front, that heavy artillery had been placed in position on the Asiago heights, and that hosts of boats and pontoons had been brought to the Piave ready for the crossing.

The Italians interfered with these preparations by constant bombardment and daring raids. It was surmized in advance that the Austrians would also strike west of Lake Garda in the direction of Brescia and Milan, but so far no such movement has developed.

As it is, the battlefront is twice as long as the longest in France, that of the German drive toward Amiens, for the conflict is continuous all the way from Asiago to the Adriatic, a distance of over ninety miles. In regard to the forces engaged also, it is one of the biggest battles of the war. The Austrian forces are said to consist of eighty divisions of infantry and twelve of cavalry, approximately a million men. In last fall's offensive the Austrian front was strengthened by some German divisions, but this time the Germans do not appear to be participating. It is estimated that the Austri-

ans are using 7500 guns of all calibers.

The forces opposing the invader are considerably greater than his, for the Italian army is supposed to amount to more than three million, and it has been reinforced by considerable contingents of French and British troops which were rushed in last November to assist in checking the Austrian drive. Some Italian troops were sent to France this spring to assist in checking the German drive, but this seems to have been done in accordance with General Foch's policy of intermixing troops of different nationalities on the same sector rather than for altering the relative strength of the Italian and French fronts. The foreign contingents have been stationed at the critical points where the two rivers emerge from the mountains onto the plain; the British on the Piave plateau northwest of Treviso, and the French on the Brenta plateau northwest of Bassano. This country is familiar to every reader of Ruskin and Browning.

The Austrian drive that began October 21, 1917, was halted, rather unexpectedly, on the Piave River, for the collapse of the Italian forces on the Isonzo side was so complete that it was at first feared that they would have to fall back to the Brenta, the Adige or even to the Po, thus losing Venice. When the Austrians found that they could not cross the Piave they tried to get around it by coming down from the Tyrolean mountains on the left flank of the Italian position. But here they were held in the foothills, and so the line remained all winter substantially as shown upon the map. They have, then, the advantage of starting this

year from positions on both sides of the Brenta and the Piave, and if they can advance down the right bank of either of these rivers it will force a withdrawal of the Italians.

## The Execution of the Austrian Offensive

At three o'clock on the morning of June 15 the Austrian artillery opened a terrific bombardment all along the line. On the key positions of the Monte Grappa region 70,000 shells fell in the first twenty-four hours. Their long-range guns completed the demolition of the old city of Treviso. Gas shells were also used extensively for the first time. The fumes filled the valleys and floated over the mountains like white clouds.

After four hours of such fire the infantry charged. Following the tactics of Hutier they had been drilled and rehearsed in the rear and were brought up to the front secretly during the night, on foot and in motor busses.

The first break in the Allied line seems to have been made on the sector held by the British under Lord Cavan. They were attacked by four divisions and forced to fall back a thousand yards. But the British rallied and in the counterattack took 7000 prisoners and inflicted 5000 casualties. The French and Italians on the foothills above Asolo and Bassano were also successful in the main in holding their own, and the storm troops of Field Marshal Scheuchenstül lost a third of their number in their repeated charges. The Austrian Emperor has established his headquarters at Trent so as to be in touch with this field of operations.

In the Venetian plain the Austrians were more successful than in the mountains. They threw fourteen bridges over the Piave River, and, altho these were sometimes destroyed by the Italian artillery or British aviators as quickly as they could be built, yet the Austrians at several points were able to cross and hold positions on the southern bank. But their bridges were carried away by the flooding river and many of those who crossed were captured.

The Austrians claim to have taken 30,000 prisoners and 120 guns in the first three days. On the other hand, the Allies claim 9000 prisoners.

## Night Raid on Reims

In the German advance from the Aisne last month the left wing swept by Reims and brought them as close to the city on the west as they had been on the east. The city was now enveloped for nearly three-fourths of its perimeter at a distance of from two to four miles from its center. It has been subjected to bombardment ever since 1914 and a large part of it lies in ruins. The civilian population has long since been withdrawn, but the ring of forts which surround the city and the forti-

## WHERE SUBWAY TRAINING COUNTS

These American soldiers in France are on their way to the front in one of the troop trains with the famous legend, "Hommes 36-40. Chevaux (en long) 8," meaning, as one correspondent has explained it, "that the horses must be put in lengthwise and not folded. There are no restrictions as to the method of packing the men"

fications that have been erected during the war have held firm against all attacks, even the recent German offensive that swept from the Aisne to the Marne.

Failing in this offensive the Germans have tried to take the city in a night attack. The violent bombardment was started at six o'clock on the evening of June 18, in which high explosives were mingled with poison gases. Three divisions, amounting to some 40,000 troops, were ordered to take Reims at all cost. At nine o'clock the attack was launched from Ormes on the southwest to Fort de Pompelle on the southeast. Slight gains were made at first in the woods on the eastern side near the Vesle River, but the Germans were soon expelled by the French counter-attack, while the Germans attacking on the west of the city were repulsed with great slaughter without reaching their objective.

#### Château Thierry and Xivray

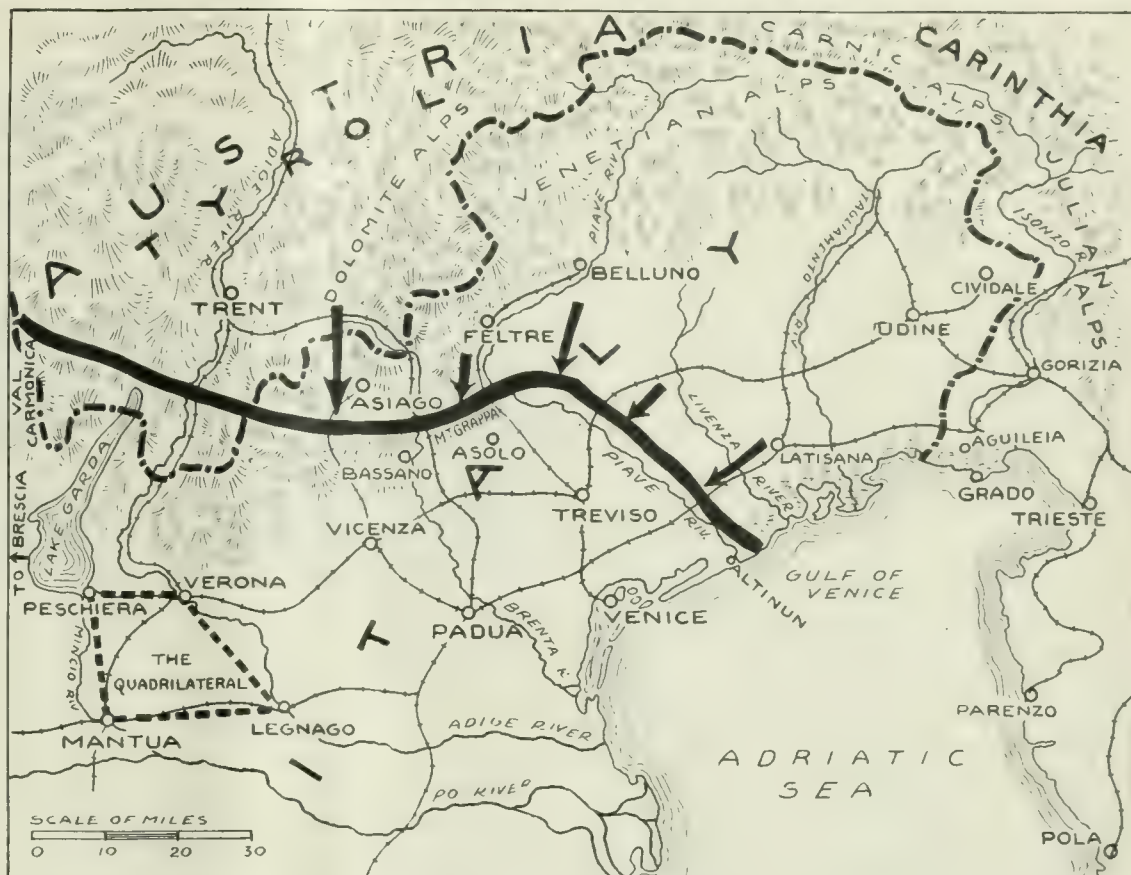

The American troops northwest of Château Thierry are not only holding the line against some of the Kaiser's pet shock troops but have even thrown Germans back a mile or two. Among the rocks and trees of the Bois de Belleau they disconcerted the enemy by using Indian tactics and creeping up on unsuspecting patrols and outposts. In clearing out this wood the Americans took 300 prisoners and they brought the number up to a thousand within the week. The Germans were surprised at the treatment they received, for they had been told by their officers not to surrender because the Americans would kill them.

Along the Marne to the east of Château Thierry the Americans hold the southern bank and the Germans the northern. The river here is only about 150 feet wide and the American boys have several times crost it at night by boats or swimming to stir up the Germans in the bottom timber.

On the Toul front the Germans made another raid on the village of Xivray for the purpose of making prisoners. The attack was made on Sunday morning, the 16th, with about 600 shock troops, divided into three sections converging upon the village from different directions. But our barrage fire was so heavy that only a part of one of these detachments succeeded in penetrating Xivray and these were all killed or captured.

#### American Troops in Germany

The mention in a German communiqué that on June 14 the French and American trenches in Alsace were raided and prisoners taken brought to the notice of the public the fact that American soldiers had crost the old French frontier and were stationed in the Alsatian mountains close to Switzerland. As soon as the secret was out Washington added the information that the American troops which had been sent to the Alsace front were the Thirty-second Division, National Guard, composed of men from Michigan and Wisconsin, and that they had been sent into this sector on the night of

THE INVASION OF ITALY

Austria has thrown a million men against the Italian line between the Tyrol and the Adriatic. The Austrians have crost the Piave at several points, but were repulsed on the mountain end of the line

May 21. At that time Floyd P. Gibbons, correspondent of the *Chicago Tribune*, wrote a picturesque description of this night march, but it was held up by the censor until the news of the movement should be revealed. Meantime Mr. Gibbons was wounded in the second battle of the Marne. We quote a part of his account:

A pale moon, hanging high over the Swiss Alps, looked down on the groups of United States troops moving along winding mountain roads bordered and shaded by pine trees as trim, verdant, and conical as the painted wooden imitations of the real thing.

One column stopped in the shadow of a tree for the customary five minutes' rest. The platoon commander gave the order "At rest" and walked to the side of the road for a solitary smoke. He took a match from his pocket and scratched it on a pole which stood ten feet high at the edge of the road. As the match flared, something caught his eye and arrested the movement of the flame to the cigaret in his lips. He covered the burning match in his hands so as to cast a light on the pole, which was striped red, white and blue.

"Some location for a barber's shop," he said, then stopped suddenly as if struck by the news. The match went out and the unlighted cigaret hung neglected from his lips. He fumbled with his map case, and then directed the rays of the electric flash lamp on the unfolded map. He considered a minute, and then gave vent to an involuntary whistle of surprise.

"Platoon, attention!" he ordered sharply. There was a rustle of equipment as the men standing in the road moved to their places. They waited expectantly.

"I know it will interest all of you to know," said the lieutenant, "that this minute you are in German territory. That is, it used to be German. This red, white and blue pole marks the old French-German frontier."

#### Turks Take Tabriz

The ambitions of the Germans have expanded with their recent successes in the East. Before the war they were talking about a Berlin-Bagdad railroad, but now they talk of a Hamburg-Herat railroad by which their goods—and

troops—may be brought directly from the North Sea to the Gate of India. This would pass thru Lithuania, Ukraina, Caucasia and Persia to Afghanistan. Of these Lithuania is in the possession of Germany. Ukraina is dominated by German troops, and under the control of a pro-German dictator. The Turks as the allies of Germany have occupied the greater part of Transcaucasia and are now penetrating Persia.

The British made a brave attempt to bar the road toward India. They sent officers into the Caucasus to organize the Armenians of the Transcaucasus to hold out against the Turks and sent them arms by way of Tabriz. The Transcaucasian government refused the request of the Ottoman government to allow troops and munitions to be transported thru this territory to be used against the British in Mesopotamia. But they were not able to withstand the Ottoman army and the Armenians lost Alexandropol after a bloody battle. The Turks have also occupied Batum, Kars and Erivan.

Evidently the Armenians in Transcaucasia could not be expected to hold out long unless they could be reinforced, so the British have been making strenuous efforts to make connection with them by expeditions sent north from Bagdad. One went northwest up the Tigris as far as Tekrit and Fathe. Another was sent northeast to Kifri and a third north, 150 miles, to Kirkuk. Here the British took 3000 prisoners, 16 cannon, 26 machine guns and much other booty. These stores the British were able to withdraw, but they could not hold Kirkuk or prevent the Turks to the north from advancing into Persia.

The Turks have now occupied all of the region of Lake Urumia and the city of Tabriz fifty miles to the east of the

lake. Tabriz is a familiar name to Americans on account of the American missions, schools and hospitals that have been maintained there. These were left in charge of the Spanish Consul, but in spite of this they have been seized and looted by the Turks. The Turks have hitherto been rather careful not to damage American property unnecessarily and have even sent their young people to the American schools in larger numbers than before, but this appears to be a wanton violation of American rights and may bring us into war with Turkey.

#### A New Factor in the Russian Problem

According to the Brest-Litovsk treaty of peace the prisoners held in Russia and in the Central Powers were to be sent home, but this provision has not been carried out completely on either side. A good many of the Russian prisoners in Germany have been in some way induced to remain and raise crops or make munitions. On the other hand a good many of the German and especially Austrian prisoners in Russia are by no means anxious to return to active service and be sent to the French front. Indeed, the Bohemians or Czechoslovaks, as they now prefer to be called, had mostly surrendered voluntarily or actually deserted the Austrian army and they are anxious to join the enemies now that the Allies and the United States have declared in favor of the independence of Bohemia. Professor Masaryk, the leader of the Bohemian nationalist

#### THE AMERICAN WALLOP

As soon as the U. S. artillerymen were assigned to the big French 40-centimeter guns they rechristened them informally "the American Wallop" and proceeded to make good the name in their bombardment of the German advance toward Reims. This gun, mounted on railway trucks, is being moved to a new position in charge of American troops.

movement, who is now in America, was recently in Russia where he assisted the Czechoslovaks to organize into an army.

But the German Ambassador at Moscow protested to the Bolshevik government that allowing the departure of an armed force to fight Germany was a violation of neutrality. Accordingly Leon Trotzky, the Bolshevik Minister of War, ordered their disarmament and promised to permit their departure by way of Archangel and the Arctic. But the Czechoslovaks refused to disarm and continued their march eastward along the line of the Siberian railroad in the hope of getting out by way of Vladivostok and the Pacific.

Consequently fights have taken place at various points along the railroad between the Czechoslovaks and the Bolsheviks. The first station on the Siberian side of the Urals, Chelyabinsk, is held by 12,000 Czechoslovaks, but the train which was bringing another contingent of their comrades from the west was stopped on the other side of the Urals and after a battle with the Bolsheviks at Zlatoust the Czechoslovaks had to continue their way on foot.

There are said to be 80,000 to 100,000 Czechoslovak soldiers in Russia. West of the Volga River they defeated the Bolshevik forces and seized the station of Penza, so now the eight hundred mile stretch between this point and Chelyabinsk is that either under their control or at least out of the control of the Russians. If they get as far as Lake Baikal they may meet the army of General Semenov and the Japanese.

By getting control of the Volga at Syzran, where it is crossed by the Siberian railroad, the Czechoslovaks are able to stop the river traffic on which a large part of Russia depends for its food supply. Lower down at Tsaritsyn, the Volga is held by Krasnov and the Don Cossacks. Further south at Taganrog, where the Don flows into the sea of Azov, a body of 30,000 Bolsheviks under the command of Czech officers have been fighting the Germans. According to the German report the Bolsheviks were almost wiped out while the German losses were slight. General

Knörzer states more than 3000 Bolshevik bodies were counted, not including the drowned.

The most formidable of the foes that have arisen against the Bolshevik government of Moscow is General Krasnov, who has become the head of a Cossack movement in the region of the river Don. Krasnov was formerly a member of Kerensky's staff and was supposed to be acting in the interests of the Allies in his attempt to overthrow Bolshevik rule in Russia, but it appears that he is receiving aid from the Germans and Austrians, for his first proclamation as transmitted thru Moscow says:

Our late enemies, the Austro-Germans, have now entered our territory as our allies to fight against the Red Guard and help us in the establishment of order on the Don.

The Bolshevik's Commissariat of Foreign Affairs complained to the German Ambassador at Moscow against Germany's giving armed aid to the enemies of the Russian Government contrary to treaty, and in reply Ambassador Mirbach denied it and declared that Krasnov's request for German troops had been refused. It appears that the German military authorities favored intervention on the Don, but the diplomatists opposed it for fear of offending the Bolsheviks. It is admitted that when Krasnov's capital, Rostov-on-the-Don, was under bombardment by the Bolsheviks they were driven back by the aid of Germans.

General Krasnov has declared null and void all the laws of the present revolutionary government. He claims jurisdiction over Don, Kuban, Terek, Astrakhan and northern Caucasus. This territory lies east of the newly established Ukrainian republic, now under the control of Germany. The German commander in the Ukraine, General Eichhorn, is using his troops to support the Ukrainian dictator, General Skoropadsky, in his fight against the adherents of the Rada government which he has overthrown. Krasnov, as Dictator of the Don, is acting in conjunction with Skoropadsky, Dictator of

© Underwood & Underwood

#### AN AMERICAN COMMANDER OF THE ALLIES

Brigadier General Benjamin D. Foulois, head of the aviation service for the American Expeditionary Forces, has been appointed commander of the air service of the First Army of the Allies. General Foulois was one of the first officers of our army to study aviation, and was the second to fly in a heavier than air machine. In 1909 he was selected by Orville Wright as his passenger in the first army test flights. General Foulois began his army career as a private in the Porto Rico campaign in 1898; he served in the Philippines, and on the Mexican border in 1916.

the Ukraine, and if he succeeds by German aid in his fight with the Bolsheviks, it will mean that all southern Russia as far as the Urals and the Caspian will fall under the domination of Germany.

**A Million Men in France** That there are now 800,000 American soldiers in France, that this number will be 1,000,000 by July 1, and that by August 1 there will be 3,000,000 Americans under arms here and abroad are official statements which released last week news of the utmost good cheer and value to the Allies. From now on discussion and effort will be expended on quantity production of men, material and munitions "with the lid off" and no limit set. The underlying purpose of this activity is the conviction that mainly by sheer man-power can the German tide be stemmed and turned back. "It is their fixt and unalterable purpose," President Wilson said in his message to President Poincaré, speaking of the nation, "to send men and materials in steady and increasing volume until any temporary inequality of force is entirely overcome and the forces of freedom made overwhelming."

So far as Congress is concerned, the money and the authority have been granted, except for extensions of draft age which may later be necessary in the process of going the limit. Speaking before the Senate Military Affairs Committee last week, Major General Crowder, provost marshal general, declared that if the draft age is not increased, class 1 of the draft registrants will be exhausted early next year, and it will be necessary to begin taking men from class 2. Of the 3,000,000 men whom General Crowder expects to be under arms by the end of July, two-thirds will be drafted men, and the other third supplied by the Regular Army and the National Guard under the volunteer system. In congressional as well as in military circles discussion is centering around the plan to raise the draft age

as an alternative for drawing men out of class 2. The argument for increasing the age limit is that class 2 contains many married men, and the advocates of the extension of the age limit prefer not to take married men while single men of relatively the same age can be used.

According to the figures made public at the time of this hearing, the first draft registration is divided as follows: Class 1, 2,428,729; class 2, 509,666; class 3, 427,870; class 4, 3,483,326; class 5, 1,829,856.

That the Administration approves the Crowder plan for the extension of the draft limit down to eighteen and up to forty-five was indicated late last week when Secretary Baker announced that he will approve any change in the selective service act necessary to raise an army of the required size. This approval is taken to mean that the President also will approve, tho it should be borne in mind that this is by no means final, since Congress is the ultimate judge in such matters.

The number of single men between eighteen and twenty who, according to recent experience, would qualify as physically fit, is placed at 1,167,947; the number between thirty-one and forty-five is expected to be 1,389,338. The proposed extension, therefore, would in effect add to Class 1 approximately 2,500,000—who may be badly needed before the job is successfully completed.

Much energy now being devoted in Washington to the prosecution of the war is concerned with man-power and nothing other than man-power. As the War Department views the situation, the position of the Central Powers is such that a smaller force can threaten severely an equal or slightly larger force. Opinions differ as to whether the Allies must outnumber the Germans by two to one or by a smaller fraction. But outnumber them we must, and that right speedily.

## THE GREAT WAR

*June 13*—Peru seizes German shipping in her ports. American airmen drop eighty bombs on railroad north-east of Verdun.

*June 14*—Czechoslovaks seize Siberian railroad. Food riots in Vienna.

*June 15*—Austrians attack Italian front with a million men. Revolt in Kiev against German domination of Ukraine.

*June 16*—Turks occupy Tabriz, Persia. Germans raid American line at Xivray.

*June 17*—Austrians cross Piave but Italians hold them. House of Commons votes \$2,500,000,000 more for war.

*June 18*—Piave floods impede Austrian advance. Premier Radoslavoff, of Bulgaria, replaced by Anti-German Malinoff.

*June 19*—German attack on Reims repulsed. Americans cross Marne and bring back prisoners.

**Navy and Merchant Marine** Whenever the Navy needs more men, the Secretary of the Navy must go to Congress and ask permission to increase the "present enlisted strength." Last week Mr. Daniels put in a slip for an increase of at least 40,000 men. Why the request is apparently made at the eleventh hour is not quite clear unless it is that the Administration figures that Congress acts quickest when there is need for speed. Some idea of the extent of our new Navy and its needs may be gathered from the fact that the warships which will be turned out during the fiscal year ending July 1, 1919, will be divided as follows:

For battleships, 4400; destroyers, 29,992; patrol boats, 5400; seagoing tugs, 3705; submarines, 1026; fleet fuel ships, 1070; gunboats, ammunition ships, etc., 553.

On last April 1, he wrote, 83,475 men were required for the permanent navy as follows:

On battleships, 33,486; cruisers and monitors, 18,590; gunboats, 3228; destroyers

Underwood & Underwood

BASEBALL IN SPITE OF THE WAR

Tho they are a long way from the big league contests American soldiers and sailors in England have managed to get their share of American baseball enthusiasm. They began a U. S. Army-Navy series recently at Chelsea; Admiral Sims (right), commanding the U. S. fleet in European waters, pitched the first ball

and torpedo boats, 8234; supply vessels, 5304; naval transports and hospital ships, 2506; tugs, 1000; yards, stations, hospitals, radio stations, 6000; submarines and tenders, 5037.

With a force of 131,485 men it is estimated that there must be a surplus over those actually on duty of 5864 to replace men wounded, on sick or regular leave.

Forty thousand more American boys and men afloat with the Navy will be, however, but a drop in the bucket which this nation is launching and planning to launch. In every possible way the Government is endeavoring to secure men for the manning of the great merchant fleet which it is building in coöperation with private industry and capital. How many men will be needed to sail this fleet nobody knows, and the calculations disagree as to extent. But it will run into the thousands, and there will be no lack of work at sea for any able-bodied youngster. Moreover, it is being emphasized by the recruiting agencies, not only that as in the old days, to sail the seas is to see the world, but to sail the seas in a modern machine-run ship is to have the opportunity to learn trades equally valuable for a mere land-lubber to know. The Daniels "go-to-school-while-at-sea" plan is to be worked out with especial reference to the new merchant marine.

**In Congress** With revenue legislation overshadowing every other activity, Congress last week endeavored to straighten out the tangle of appropriation bills which should be enacted before the end of the current fiscal year on June 30. Important amendments to these bills are tying up action. The prohibition rider attached to the eleven-million-dollar emergency agricultural bill may well cause that measure to be held in conference for some weeks. Other measures, notably those carrying supplies for the army and navy, are having easier sledding.

The Ways and Means Committee of the House is gradually winding up its list of witnesses on the revenue bill. Typical testimony was presented by representatives of the National Retail Dry Goods Association, which went on record as willing to turn over to the Government practically all its excess income, "every bit, if necessary, for carrying on the war." Members of the

association declared that they would not oppose a higher tax than England's rate of eighty per cent if the money is desired.

In the Senate three notable things occurred. Unexpectedly the Senate, in acting on a District of Columbia bill, prohibited the teaching of German in the public schools of the nation's Capital. Only a few days previously, by the fairly close vote of 41 to 34, the Senate refused to adopt the Underwood cloture rule designed to govern debate during the war. As the situation now stands, if the Senate approves by a two-thirds vote a petition signed by sixteen of its members, debate on any measure may be restricted. The third occurrence was the revival in the Senate of the woman suffrage issue, said revival being due to the announcement of the President that he favors the constitutional amendment. Whether Mr. Wilson's influence, cast at this late day into the scale, will have the desired effect, the events of the next few weeks will show.

The long-standing controversy on various matters and opinions between George Creel, chairman of the Committee on Public Information, and various members of Congress, came to a head last week, when the House passed a bill cutting the funds for this committee practically in two. The President is strongly supporting the work carried on by Mr. Creel, and the contest may prove to be a still livelier one when it reaches the Senate.

#### Averting a Telegraph Strike

It took, apparently, but a word from the President of the United States to secure from the Postal Telegraph Company virtual submission to the decision of the National War Labor Board in the case of employees discharged for joining a union. Rumor had had it that the Government would take over the lines in case of obstinacy on the part of the operators to abide by the War Labor Board's verdict. The effect of the President's action and the deference thereto of the operators has been immeasurably to strengthen the power of the board which it admittedly draws from the common consent of labor, capital and the Government.

"To fail to accept them," wrote the

President, speaking of the decisions of the board, "is to jeopardize the interests of the nation very seriously, because it constitutes a rejection of the instrumentality set up by the Government itself for the determination of labor disputes—set up with a sincere desire to arrive at justice in every case and with the express purpose of safeguarding the nation against labor difficulties during the continuation of the present war."

The Western Union Company, on the other hand, replying to the President's request, "stands pat," pointing out as the basis of its decision that "we are not favorable to sharing the responsibility of conducting a great public service with the peculiar features of the telegraph, which the exigencies of the war have increased manifold, with members of an outside organization whose interests are personal rather than public." Beyond this the Western Union asks the advice of the National War Labor Board in the formation of a union of employees, such union to be "free from any influence that might limit its effectiveness in dealing with the rights and privileges of employers."

**The President's Choice for Senators** The senatorial campaign of Henry Ford, automobile manufacturer, was launched last week, and, according to advices from Michigan and Washington, it promises to hold political attention. Mr. Ford enters the race for nomination at the request of President Wilson, who, it is understood, hopes to see Republicans and Democrats unite in electing Mr. Ford. The fact that Senator William Alden Smith, Republican, is not a candidate to succeed himself, and the further fact that Mr. Ford is a Republican, give the President's supporters hope that the choice will be a winner. Political commentators and gossips are using the incident to preach amalgamation of party interests in the common interest of loyalty and service.

Another indication that Presidential advice is well received by those seeking togas this year is to be found in the fact that, at the request of Mr. Wilson, Representative Lever, of South Carolina, has withdrawn from the contest for the Democratic nomination as

Underwood & Underwood

#### WEST POINT SPEEDS UP ITS WORK

The class of 1919 was graduated from West Point last week, its four years' work having been compressed into three

senator. Mr. Lever has long been chairman of the important Committee on Agriculture, where, to the President's mind, his expert service is needed during the war.

**No More Empty Cars** In spite of the discomfiture of travelers, who discovered on June 10 that the Government wants real money for running the railroads, the United States is bringing order out of common carrier chaos in remarkably short time. Last week there appeared in one corner or another of the newspapers an item of a significance far greater than appears on the surface. The item read, in part:

By pooling all car equipment, railroad lines under Government control have today been concentrated into one great system, making all equipment common property. The railroad administration in an order has abolished the per diem plan of charge for the use of cars between individual lines. Under the new order any car can be utilized anywhere without piling up rentals against the various lines. Under the old system the return of empty cars to their respective roads resulted in loss of motive power, when at a slight increase of cost they could have been transported with freight consignments.

Carefully read, this tells its own story and furnishes its own comment. What difference does it make what labels the cars bear if they are all at the service of all the nation all the time?

**Aliens and Objectors** In normal times last week would have been considered one crammed full of sensations, but this is a season of war and the unexpected is the expected. What Congress did and failed to do amounts to little in view of other activities of the now thoroly mobilized United States.

The dragnet of the Department of Justice brought into New York from a Washington chicken farm a certain Jeremiah A. O'Leary, charged with conspiracy to commit treason and with conspiracy to violate the espionage act. Enough is now known of the success of the Government in such cases to make it a reasonable assumption that Mr. O'Leary is better caught than at large. At the same time the alien property custodian let it be known that he has taken over the Busch property, said to be worth many millions of dollars. Many minor intriguers against the welfare of the nation were tripped up by Uncle Sam last week, among whom should be mentioned certain groups of contingent-fee collectors, the camp followers and small fry of the manufacturers who have contracted to supply goods to the Government. Raids were made simultaneously by Federal agents in a score of cities and the offenders thus identified and captured will be dealt with under a law enacted in Civil War times, whereby contingent-fee contracts are forbidden. Direct dealing between contractor and Government is the underlying purpose of this law and its enforcement.

Secretary of War Baker approved formally last week the sentences of the

**NEW UNIFORMS FROM OLD**

At the American salvage station behind the lines in France uniforms worn and soiled from service are washed and sterilized in these machines and mended till they are as good as new. Even uniforms beyond all repair are washed and converted into "handy rags" useful in many branches of the army for cleaning anything from boots to cannon

© Committee on Public Information from International Film

**SEWING SHIRTS FOR SOLDIERS—THE LATEST VERSION**

A whole corps of French seamstresses is employed to mend the uniforms of American soldiers in the war zone

privates who were sentenced by courts-martial for refusal of military service. But in his decision the Secretary of War expressly stated that he did not consider these men to fall within the class of conscientious objectors. The verdict, upheld by Mr. Baker, was to the effect that since the men were citizens of the United States, regularly inducted into service under the selective service law, they were in duty bound to fight for the country, and that they could not, therefore, select the country against which they would bear arms.

**Getting Ready for the Fourth Liberty Loan** Just in order to work up the American people to the proper pitch for buying Liberty bonds of the fourth issue, the Government is offering certificates of indebtedness to the sum of approximately \$6,000,000,000. These certificates will be issued every two weeks, beginning June 25.

"At a convenient and favorable period during the summer," says a Treasury Department statement, "an offering will be made to the general public directly, and thru the banks, of an amount yet to be determined, per-

haps \$2,000,000,000 of certificates of suitable maturities for use by taxpayers in paying next year's taxes."

The certificates will bear 4½ per cent interest and will mature within four months or sooner. The date of the fourth Liberty Loan will be some time in October.

**Class Distinctions** Much food for reflection may be gathered from the following table, made public by the Treasury Department last week. The statistics are based on income tax returns:

Income class	Number of returns filed		
	1914	1915	1916
\$1,000 to \$4,000.....	82,754	69,045	86,122
\$4,000 to \$5,000.....	66,625	58,919	72,027
\$5,000 to \$10,000.....	127,448	120,402	150,553

# FALLING SEVEN THOUSAND FEET

BY HERMAN WHITAKER

CORRESPONDENT OF THE INDEPENDENT  
AT THE BATTLEFRONT

© Kadel & Herbert

Mr. Whitaker ready for his flight

WE sat on the edge of the stone quay, the chief pilot and I, dangling our legs above a miniature gale raised by the propellers of a seaplane that was being "tuned up." A dozen stout men were restraining the great bird from flight, and its attempts to break their grip strongly reminded me of a Christmas turkey in sight of the ax and block.

© Kadel & Herbert

*"The great bird swooped on down. It was a new sensation, that headlong dive thru golden sunlit space. I should have enjoyed it—if I had not been quite so afraid"*

Two other hydroplanes and three small fighting machines were also poised like yellow dragonflies with attendant wasps along the quay. A machine gun in one was being aligned, and its crackling fire at a sandbag target, rapid as the reverberation of torn canvas, split the hum and roar of motors and propellers.

Such sights and sounds are to be seen and heard, these days, at any of the naval aviation stations Uncle Sam has scattered with a free hand along the coast of France. But it were easy to tell this for the war zone. A nest of British gunboats, the night patrol, cuddled like sleepy ducklings under the opposite quay. Two squat monitors, bulldogs of the ocean, drowsed heavily further down the channel—with their 15-inch guns, however, still trained on the German naval base fifteen miles away in readiness for anything Fritz might start.

Behind us the little port town lay in the sun, battered and mangled by three years of war. A single monster shell fired from twenty miles away had laid its greatest pride, a fine old church, in ruins. Blank windows stared from deserted houses like the sightless eyes of the dead. All were torn by shell and shrapnel, for in one hour of one night the Boche dropt ninety bombs in a limited area and this was but a single sample of his doing.

The shells from that monster gun twenty miles away are, however, more feared by the townspeople than the bombs. When one crosses the Belgian trenches, a signal is flashed to a sentry on a lofty watch tower that dates back to the thirteenth century but has not seen in six centuries of turbulence worse times than these. The sentry, in turn, sounds "Mournful Mary," a siren with a sob in her voice. From the other end of the town the "Old Man" answers

in basso profundo. Whereafter the population has just seventy seconds to duck into the dugouts while the great shell is tearing thru the air.

That watchman's job, by the way, is no sinecure. A Boche airman emptied his mitrailleuse into the last incumbent as he flashed past one night. Neither has the American Naval Station escaped scotfree. Four bombs had struck within a few hundred feet of where we sat. All of which, the battered town, patrol boats, monitors, formed a grim war background for the sea and land planes that whirled and whined above.

A tearing burst of machine gun fire drew our eyes up to five British planes that were swinging and diving, fleeing across the sky in the war game. Three were in swift pursuit of two, but just as they gained to position, the two looped the loop and dropt on their pursuer's tails with a burst of blank fire. It was fascinating to watch, but when the chief pilot spoke, his pointing finger indicated a dozen white specks at least fourteen thousand feet up in the blue.

"That's the British bombing squadron returning from a raid. They are big fellows that can do better than a hundred and fifty miles an hour with a heavy load of bombs. Fritz is continually making claims for air supremacy, but last month the British dropt seventy-one thousand bombs in daylight to his eleven hundred. The night dropping scores were more even, but even there the British led, and day dropping is so much more effective because the aviator can select targets of real military importance. They also destroyed ninety-five German machines on land and six at sea, and drove forty-six down out of control with a loss to themselves of thirty-nine. To this has to be added the forty machines Fritz lost to the French. The British also made thirty-eight raids

into Germany, dropt forty-eight tons of bombs, with a loss of only ten machines out of two hundred and fifty-five flights. On the whole it was a bad month for Fritz. One of his aviators captured the other day had only been flying four days at the front. A green man—in one of the latest machines. He must be hard up for aviators."

As his glance went back up to the soaring aviators, he said, "Those chaps have evidently made a big killing, for when the luck is poor they fly low and drop quietly into camp." From that awful hight, just then, the planes began to drop earthward in a series of dizzy loops. "There they go! pulling the joy stick to beat the band. They must have cleaned up the German submarine base.

"There's no getting away from it—the British have set us a terrific pace. We'll have to go some to catch up. Come along, now, and I'll show you what we are doing."

As we walked here and there, peeping into huts, workshops and hangars, the signs of war were everywhere. Not a building that failed to show scars and gashes from shrapnel and bombs. A table at which a dozen men had been sitting a few minutes before the raid, was deeply scored by a splinter thru-out its length. Yet while practically under fire, with the additional handicap of building the station while training their men and establishing patrols, officers and men were straining every nerve to take the "British pace."

"So far Fritz hasn't bothered us much," the chief pilot explained. "But we are not allowing him to lull us to sleep. He'll wait till he thinks we feel secure, then he'll come sweeping out from the land to try and get us. But each of our sea planes has a machine gun mounted fore and after, and three swift battle planes go up with each patrol, so we expect to give a good account of ourselves."

The glint in his eye said a good deal more, for he was a quiet chap, bore himself with that courteous mixture of frankness and reserve which is the hall mark of the American university. Only by accident had I discovered that he had come into our naval service with another American from the Lafayette Escadrille and had been cited by both the French and Belgian governments for

shooting down German planes. I had had great difficulty in getting him to tell of these exploits. He had been lucky in getting in the first burst of fire! The observer had collapsed! The pilot had crumpled and slid sideways, held in his seat by the straps! The plane had dived, spinning to the earth ten thousand feet below! That was about all I could get out of him. But he was quite ready to talk about the others. It was from him I heard of how young H——, another American flyer, had chased a Boche aviator back to his hangar behind the German lines and shot him as he climbed down from his plane.

"But that wasn't good flying." He commented upon the feat. "They got him next time he tried it. The thing I try to impress on our boys is to inflict the greatest possible damage on the enemy without cutting off their get-away. One live aviator is worth more to us than seven dead heroes. Fritz prefers them that way—heroic and dead."

The station had already given two names to the "roll of honor," for an ensign and bluejacket observer had fatally "crashed" the preceding week.

But that is the inevitable price of war flying, and it had not affected the morale of the others. For matter of that, each and all had had their narrow shaves. One pilot had saved himself by throwing the machine over on one wing just before he crashed, so that it absorbed the shock. The other Lafayette man had driven a plane at a hundred miles an hour between two trees twelve feet apart. He stripped both wings and landed with the motor in the bushy top of a pine a hundred feet further on. From whence he climbed down and walked back to his hangar. He it was who told me of one plane, the finest and latest of the British makes, that traveled in perfect balance after its pilot had been shot dead, for a hundred and twenty miles. Like a faithful carrier pigeon it flew till the last drop of petrol gave out, and it descended to a perfect landing in a level field with the dead man's hands still gripping the wheel.

We were standing as we talked, at the door of a dugout, and for the comfort of mothers and fathers, sisters and wives of the lads here in the war zone, I can certify that everything possible has been done to make them bomb proof. First a [Continued on page 513]

# WHAT ARE WE FIGHTING FOR?

BY CORRA HARRIS

*This is the third of a series of forward-looking articles on America's aims and ideals in the war, written for The Independent by the leaders of thoughtful America. President Lowell of Harvard University began the series; the second article was written by Professor John Dewey of the Philosophy Department in Columbia University. Mrs. Harris is the author of "The Recording Angel" and "A Circuit-Rider's Wife"*

HERE is so much discussion about what we are fighting for from so many sources, wise and otherwise, that it may be interesting to know what some very plain country people think about it.

In this valley we are removed from the world by miles and mountains. We have lived here for generations with nothing but the land and the weather. We are not so much citizens as we are literally patriots of the land. We obey the laws as Catholics obey their priests, by way of placing the responsibility for these laws on the people who made them.

Since the beginning of the war in Europe we have suffered great hardships, without realizing that this war had anything to do with it. We are accustomed to the inscrutable ways of

Providence and we accepted these privations as one of the frequent dispensations of the Lord, like storms and drouths. The question with us was not whether we should have war or peace, but it was the same old question of whether the frost would kill the wheat and whether a spring freshet would wash away the crops. The Atlantic Ocean rolled between us and the nations at war. We put our faith in God and this "great body of water" and continued to worry about the weather as usual, which is always immediate and nearly always threatening in this valley.

In April of 1917 we heard that Mr. Wilson had declared that this country was in a state of war with Germany. We understood that. Sometimes we have a state of war here between neighbors. But they do not fight. They simply withdraw from one another's friendship and society until the next revival season, when all differences are settled on strictly Scriptural grounds. We reckoned that for good and sufficient reasons the United States had "fell out" with Germany, and that we should have to hate the Germans until prayers were said over there and peace was declared over here. We put in a double crop to help feed the Allies and let it go at that.

Then Congress passed the Draft bill. A few of us take tri-weekly papers, but we do not have time to read them, so we knew very little about the nature of this Draft bill, and thought less. We were plowing corn and had no time to think.

The next thing we knew all our young men were required to register for military service. But we did not realize that

this meant more than the bare possibility that they might be called some time in the future, but not now, not anywhere near now. When you have lived a long time in peace according to the weather and seasons, war becomes incredible, like earthquakes to people who never felt the earth tremble. Nothing can make them expect such a disaster, and nothing that can be said prepares their mind for war, because in their limited experience there is no reason for war.

Then suddenly, one day, all our young men were called to the training camps. Our people were shocked into a strange silence. The earth had quaked. Their sons were gone. For weeks no one discussed this thing. It was too terrible. Then they began to talk, to grieve, not for themselves nor for their sons, but for the land. The land had been stripped of its youth and strength. Next year most of it must "lie out." The harvest will be merely patches of corn and wheat in these fields. They speak of their lean acres between these hills now as if they were dear children whom they will not be able to feed and clothe.

From that day when the young men went into service, we, the old men and women and children, have been in this war, engaged in a desperate struggle against one of the most invincible forces of war, nakedness, cold and hunger. Not a single barricade nor trench nor gun separates our people from these grim enemies of the poor. Fear, anxiety, and a curious resignation are written upon every face in this valley.

I say it is worth while knowing what such people think of this war and what we are fighting for.

At her home in the Valley. Mrs. Harris with her daughter—and Busco

Mr. Kirk lives in a little house where the north wind swirls down thru the hills into the valley. He thinks he is an American because his forefathers were born in this country. In fact he is a rever-sion to type, a Scotch-man with Presbyterian brows who has settled down in the Primitive Baptist Church as a rock settles to the bottom of the sea from whence nothing can move that rock. He is an old man, poor in everything except sons. I met him hauling wood one day just after three of them had been called to the National Army.

We exchanged salutations. He said he was "well as common, but," he added, cocking his eye to the leaden skies, "I am afeerd we'll have a hard winter on the wheat. The wild geese are

all flying south. That's a bad sign."

I wanted to know if any of his sons had asked for exemption.

"I told 'em not to," he answered simply.

"But you still have a large family to support, and you are too old to do heavy work. You might have kept one," I insisted.

"Would I be taking my boy's chance from him for that?" he returned, as if I had suggested that he take the bread out of his children's mouths.

"You wanted them to go, then?" I asked.

"Not that, exactly. But you know Herberman over there," he answered, pointing to the only painted house in our valley.

I nodded.

"Ever see him with other folks, at church or a singing or a picnic, or riding or walking with another man, or talking to anybody?" he asked.

"He is a quiet man," I admitted.

"He must be. He has got more than the rest of us, but not a friend, not a real neighbor, and do you know why?"

I did not.

"Well, during the Civil War every man in this valley fought in the Confederate army but Herberman. He stayed at home, hid out. That's nearly sixty years ago, but we've never forgotten nor forgiven him. He's dead. People don't even talk about him. That's what I mean. I wanted my sons to go so as they'd live even if they died."

"That ain't all," he added after a pause. "I am, as you say, an old man, but I have had peace and plenty all my life. I have had my rights. I have been protected, me [Continued on page 517]

# OUT OF GERMAN CAPTIVITY

BY WILLIAM T. FOSTER

PRESIDENT OF REED COLLEGE

A homeless, feeble relic of the war

SAID is the story of the war, as it is written in every village of France—in long rows of ambulances and far-flung fields of rough wooden crosses; in once lovely villages, now ravaged beyond recognition; in schools, casinos, hotels, cellars, villas—all turned into hospitals—easy targets for enemy bombs; in maimed, shell-shocked, discarded men; in poilus, twice-wounded, plodding their way back to battle; in women of harvest fields and factories, bent with the added weight of men's labor; in faces which tell of husbands, fathers, brothers, dead; in children for whom fright has blanched the will to laugh and play; but nowhere has the tragedy so terse a summing-up or so dramatic a setting as at Evian-les-Bains.

I came upon that vision of inviolate peace and beauty, on the southern shore of Lake Geneva, in the glory of an early morning, my mind worn with the ugliness and the turmoil of battlefields. Over the vivid blues, purples and greens of Lake Geneva, changing in the sunlight, pointed sails were darting, white gulls above them. Between two tall, dark sequoias on the shore, I caught the white flash and the red circle of a French aeroplane. Across the lake, the gay roofs of Lausanne seemed to be climbing the hills in an effort to reach the summits of the Bernese Alps beyond. Such is the setting provided by the fortunes of war for a tragedy of Prussian origin.

The theme of the tragedy is that every war, whatever else it may be, is a war against women and children. The pitiful proof of this indictment is straggling into Evian every day from the devastated regions of Belgium and northern France. Every French man, woman and child behind the lines that Germany cannot use in prosecuting the war, or otherwise dispose of, is put on the lists for deportation into France—*rapatriés*, they are called. Twice a day, 500 are cut off the lists, packed into a train, and delivered to the benevolent care of Switzerland at Schafhausen—500 exactly, with typical German system, let the line come where it will, separating mothers and daughters, if need be. If the daughters are capable of any kind of labor, they have already been separated from their mothers, and sent away to other parts, known only to military authorities, for purposes known only to military authorities.

On my first morning in Evian, one of the *rapatriés* greeted me with a smile of contentment that made her a marked woman in that company. She begged the honor of informing me that she was the Countess of Liege, that she was to be married on November 30, that she would send an automobile to take me to the wedding, and wished me to bring a purse of morocco leather. She is not the only woman who has become insane, on seeing her daughter dragged away by German soldiers.

With each train comes a list, made in Germany, of the names of the detachment. Here and there, a woman's name is crossed out of the list, with the explanation, "bleibt zurück, ist noch

Reading again the news of his son's death

arbeit fähig." Thus, her people in France have the comfort of learning that in the judgment of German authorities, she is still capable of doing some work, and therefore retained behind the lines as a "military necessity." As a rule, only the aged, the infirm, the consumptives, the syphilitics, the maimed, the feeble-minded and the young children are released. Germany has devised this way of getting them off her hands, at the same time making them an additional drain on the meager food supply of France and on the sadly-depleted corps of doctors, and thus spreading disease. Sick in France, these people are a greater military advantage to the Kaiser than they would be if dead in Germany. So they have been shipped to Evian-les-Bains, every morning, every evening, for more than a year, bearing in their arms some remnants of what they once owned, and in their faces some traces of what once they were.

At Schafhausen, the *rapatriés* are turned over to the Swiss. During their journey to Lausanne and around the eastern end of Lake Geneva, they are kindly received and bountifully fed by the Swiss people. Indeed, many of these travelers break down and weep for joy at unaccustomed kindness, and some of them break down from the sudden shock of having enough to eat.

At Evian-les-Bains each new contingent is taken at once to the municipal Casino, a great domed pleasure-palace by the lake transformed for the duration of the war. The dining hall is still a dining hall, but it is serving 500 new guests at each meal on a

Unfit for work, this old woman is sent back to France

"no pay, no tip" plan. In the orchestra balcony, children under seven are checked while their mothers are busy; and the mothers must not lose their checks lest they fail to recognize their children after they have been scrubbed and combed and drest anew and despoiled of vermin by the expert and thoro corps of Red Cross nurses.

The theater of the Casino has become the Vestiare. At the box office each person receives a ticket entitling him to as many articles of clothing as the authorities think he needs. Where once the footlights shone, is a collection of hats; in one of the opera boxes are petticoats, in another pajamas, in another blankets. The shoe department is behind the scenes. It contained, at the time of my visit, a consignment of high-heeled shoes from an American donor.

The Dance Hall has become a clearing house for the bringing-together of separated families. Here is filed all available information concerning the people who lived in the occupied parts of France. Letters await those who may possibly be selected by Germany for deportation. Beside merry paintings of sprightly dancers, many of the *rapatriés* receive the first news from their families, since the invasion of their homes in the summer of 1914. One evening, I saw a mother with her three children who had just received a letter telling of her husband's death two years before, and another mother who had just heard that her son, whom she had given up as dead, was alive and well. These are daily happenings at Evian.

On the wall is a placard calling for information concerning "Charles or Carlito Bonlant, Pilot Aviateur, Class 1909, who fell in an air-fight after having brought down a German craft, east of Baupaume" and many other attempts to trace "lost men." Not even the International Red Cross at Geneva has been able to send any welcome news of "lost men" to the French people behind the German lines; for Germany, alone among the nations of the world, forbids the mailing of good news to any of her captives, civil or military. Bad news may be sent, provided it is sent without a single word of sympathy.

The Bar of the Casino has become the Medical Examiner's quarters. Here I found three physicians, one of them ill, making valiant efforts to care not only for the previous arrivals who were still in Evian at eight hospitals and homes, but at the same time for one thousand new arrivals daily. Only

Once a pleasure-palace, the Casino is now headquarters for food and clothing

the most obvious and urgent cases could receive attention. As I entered the Casino, an old man fell on the stairs from sheer exhaustion and cut a gash in his head. It took one of the doctors half an hour to care for this one arrival. Meantime, fully one hundred more had entered the Casino. The physicians had no time to examine even all those supposed to have tuberculosis or venereal diseases. A majority of the *rapatriés* appeared to need immediate medical care. They had been without such care for three years, under conditions of malnutrition and mental anguish. The physicians and nurses at Evian excited my admiration; they

Every war is a war against women

were working with skill and devotion and good cheer—but at a task they could not compass.

Large barracks are used as a hospital under the care of devoted sisters; but the buildings are not adapted for the needs, the equipment was meager, and the French Government could not answer the calls for more physicians. Help at Evian seemed one of the most obvious and immediate needs of Europe. It is a service the American Red Cross is well qualified to render, and is now undertaking.

The buildings of the Collège at Evian are now a home for men and women from seventy to one hundred years of age. As I entered the dining hall, they

sat at uninviting rows of tables—these mothers and fathers who endured the Prussian war in middle life—before them their allotment of coarse war-bread, and no sign of cheer except a placard on the barren wall—"Rapatriés! Economize the bread. Any one who wastes the least morsel is a bad Frenchman." I did not wonder that Germany had found no use for these

homeless, childless, feeble relics of the war.

The tragedy was not without its humorous scenes. One little lady stepped off the train at Evian with all she had saved from the wreck of her home—enough camouflage to hide the honest war-wrinkles of her face, and a little red bird in a cage to match. A Darby and Joan, resting by the roadside on their way to the Casino, exhibited all their worldly possessions—the miscellaneous assortment of clothes they wore, picked up at railroad stations on their way thru Switzerland, their white identity tags and a large bundle of canes and umbrellas. A black-gowned mother from St. Quentin appeared with a white table-cloth tied over her head. She had been driven from her home to Malignes, later to Namur, recently across the border to German territory, and for the past three days and nights she had sat bolt upright among her 499 fellow travelers. In all her wanderings she had not lost sight of her favorite white table-cloth. Another woman appeared at the Casino with two shabby children and a French poodle.

On the steps of the Casino sat an old man, leaning on his cane, and reading over and over again a letter he had just found at the registration bureau telling of his son's death. At the foot of the staircase stood a man in search of his grandmother, eagerly watching the new arrivals. Twice a day he came, hoping against hope. Nearby was a woman with her four children, all crying, and in her arms the unruffled cause of their troubles—a year-old babe. The people to whom they had been sent for the night's lodging had spurned the child as "Boche." An old man with bushy white whiskers and a sailor hat, tucked all his belongings under his arm and started off to join the old people in the Collège. One of the women declared by the German Government "unfit for work," and sent back to France to begin life over, was born during the Napoleonic wars. One of the men, M. Rufin by name, whom the Germans had returned to France as unfit for work, made the sketches of his fellow *rapatriés* which appear in these pages.

The daily arrivals at Evian from behind the [Continued on page 510]

Paul Thompson

Senator Simmons, of North Carolina, chairman of the Finance Committee of the Senate

IT is a very fortunate thing for all concerned—and all are concerned in this thing—that there is only one Ways and Means Committee of the House of Representatives. Just now the casual visitor to the halls and offices of the Capitol will find that committee sitting every fine morning in its courtlike room in the southwest corner of the marble House Office Building, holding hearings on the bill which is to raise between \$25,000,000,000 and \$30,000,000,000 of revenue for the further prosecution of the war. If Congress raised its money as it expends it, instead of one Ways and Means Committee there would be half a dozen, each with a different name: a Committee on Revenue, a Committee on Income for the Territories, a Committee on Supplying the Treasury, and so on. But, broadly speaking, it is true that the task of raising revenue directly is entrusted to just one group of the House. In the Senate it is entrusted to the Finance Committee.

This fact has an important bearing on one of the most difficult problems connected with operating the public business at a time when the public business is more complex, more stupendous, more vital than it ever was in the history of democracy.

If, broadly speaking, there is one revenue-raising committee for each branch of Congress, if, that is to say, Congress has one bookkeeper for the work of securing funds and defining tax policy, why does not and can not Congress have one bookkeeper for the work of apportioning the expenditures of the nation? Better still, why not have a single bookkeeping committee charged with the duty of regulating both income and outgo? Why not go the whole way and be businesslike? Why not, in short, have a budget system and a budget committee?

Before the summer is over, it is quite possible that if the President is willing to have a little tilt with Congress, he may again bring up the issue of the budget. The President's stand thereon is well known. He is for it, and incidentally those who know him have quoted privately several sentences which indicate that the President has some more very definite and progres-

# CONGRESS NEEDS A BUDGET

STAFF CORRESPONDENCE  
FROM WASHINGTON

sive ideas about the manner in which Congress performs its duties. But Mr. Wilson, idealist tho he is, never sacrifices his ideals by forcing action on them when in his shrewd judgment action is impossible. Yet with regard to the budget the existing tangle promises to become so confusingly tangled before the revenue bill is enacted that he may feel it fitting and practicable to take a hand.

Only a few weeks ago a little incident occurred which shows what kind of trouble Congress can get itself into by reason of unbusinesslike accounting methods. It was announced in Congress that the War Department wanted about \$15,000,000,000 for the next year. This figure was arrived at—or was intended to be arrived at—by adding up the estimates submitted by the War Department to the House. It is not clear to whom the estimates were sent, but it is clear that two committees were concerned, the Military Affairs Committee and the Appropriations Committee. The first-named committee frames the bill known as the Army Appropriation bill, the second the Fortifications bill. Both bills appropriate money for defense—for the War Department—but they are separate bills. And the separate committees operate separately.

Because of this condition, and because of the fortunate employment of statisticians by the two committees who happened to hold converse together, it was discovered after a few days that the War Department was not asking for fifteen billion dollars; it was only asking for \$1,771,666,847 and some odd cents. It seemed that the same provision for coast fortifications had been inserted in each bill, and had therefore been added up twice. Needless to say the error was corrected. But it might not have been found till after the bills had passed, and the House would then have been in a position extremely embarrassing to explain to its efficient business constituents.

Everybody who has thought about the matter at all knows that Congress needs a budget system. An expert commission in President Taft's day recommended it, and for some time there was a good deal of agitation, but it got nowhere. President Wilson has urged it, but beyond the introduction of several budget committee bills, there has not been on the part of Congress a single positive move in this direction.

Underwood & Underwood

Congressman Kitchin, chairman of the Ways and Means Committee in the House

According to the way things work in this forward-going world, the day of reckoning and change will some time come. What will that day bring forth?

Of course it will eventually bring forth a budget system. It is impossible to suppose that an American Congress, altho composed of a majority of lawyers, will never put into order its book-keeping division. But during the agitation and education of Congress and the public on this matter, it is well to know what are the real reasons, from the point of view of Congress, against a budget committee.

The basic reason is conservatism, opposition to change, the political theory of let-well-enough-alone-haven't-we-always-worried-thru-somehow-before-this? Plus this reason, or perhaps part of it, is the natural distrust of able and experienced men, accustomed to handle things one way, to scrap that way and become mere cogs in one big wheel. It is the same kind of distrust that fought the excellent Overman departmental reorganization bill. It is similar to the distrust which opposes the centralized commission form of government in cities. It is a distrust that is aided and abetted by pride of office, political preference, and patronage.

Some hasty critics of Congress, who are at the same time earnest advocates of the central budget committee, fail to take into consideration this all too human side of the question. They like to define it in terms of graft and betrayal of public confidence. They prefer to think in the language of the muckraker of fifteen years ago. In part because this attitude of mind was assumed by the efficiency experts who, in Mr. Taft's administration, performed a magnificent and constructive piece of work, what they did came to naught. They offended Congress by offending powerful individuals in Congress. They tried to force Congress to do something which it did not understand, was by nature opposed to do, and would prefer to do by its own apparent initiative. I happened to be in quite close touch with the President's Commission on Economy and Efficiency in those years, and am therefore sure of my ground. In fact, along with other correspondents, I innocently assisted in

preventing the adoption of the budget idea by writing articles denouncing Congress for not immediately putting it into operation.

Congress possesses a peculiar psychology, and the most successful President is he who understands it and who, by that understanding, is able to secure the adoption of his pet measures. I think that Wilson understands it, and I think that because he understands it he is holding off from pressing the budget idea, confident that events, properly guided, will carry it with them. A possible solution may be found in this: The centralized budget committee does not necessarily require the abandonment of all the little appropriating committees. It merely means the centralization of their plans and decisions in one switchboard, which, being central, will have knowledge and facilities for competently adjudicating between demands and apportioning sums. By common consent—a means by which much is being done extra-legally these days—the President can secure the formation of an informal centralized budget committee from powerful members of the House, and can suggest to them the advisability of meeting, say, with a central executive budget committee representing the executive departments. Such a move would cut miles of red tape and involving precedent. It would be the Woodrow Wilson way of doing the job. It would be the sensible, businesslike way. It would preserve honest pride and legitimate prejudice, and would, moreover, fully recognize the delicate psychology of the patient!

The budget is coming, whether by this way or another, it makes little difference. But it won't come by "knocking" Congress.

## "NOW I HOLD HER LIFE AND HONOR IN MY HANDS!"

exclaimed Elizabeth when those famous love letters written by Queen Mary Stuart to Bothwell fell into her hands.

Was Mary the most ill-used plaything of fate?

We see her as Queen Dowager of France and Queen of Scotland at the tender age of nineteen in all the flower of her beauty—a beauty so marvelous that it diffused a charm which no one of those whom she sought to please ever escaped.

We see her with Rizzio frantically clutching at her skirts for protection from the knives of Darnley's hired assassins—and on that mad ride to Bothwell.

With bated breath we follow this strange career of romance and tragedy, with its attendant train of crime, to that heart-rending closing scene when under the raised axe of the executioner Mary exclaimed: "In manus tuas, Domine."

Was this fascinating but indiscreet woman more sinned against than sinning?

Only those can decide who have read her thrilling story—with nothing omitted—as Dumas tells it in his

## THE CELEBRATED CRIMES OF HISTORY

NEVER BEFORE TRANSLATED

"Great crimes have played so large a part in the world's history that one cannot obtain a thorough knowledge of past times without the aid of such a book as this," says *THE NEW YORK HERALD*, recently reviewing *THE CELEBRATED CRIMES OF HISTORY*. The lover of History is enraptured with the wealth of facts, from new authorities, brought to bear by Dumas upon many important personages in history.

The millions of English admirers of the works of Alexander Dumas will hail with delight this, the first and absolutely the only complete and unexpurgated translation of Dumas' *LES CRIMES CELEBRES*, now for the first time available at a price within the reach of all readers. Printed from the same plates as the Edition sold by the Publisher at \$125.00 a set, which was eagerly snapped up by wealthy connoisseurs, the small edition it is our privilege to offer our patrons has all the unusual features so much appreciated by lovers of books as works of art.

## A LICENTIOUS COURT

Brilliantly worked into a vivid picture of the Dark Ages are the vices and crimes of that extraordinary family, the Borgias, that furnished some of the blackest pages in history.

Here we see the whole murderous, poisonous crew with their greedy craving for debauchery, flattery, titles and gold. We watch the career of the beautiful and depraved Lucrezia, who with the head of a Madonna of Raphael had the heart of a Messalina beneath her demure exterior. We see the intrigues of the mediæval papal court—the murders, abductions, poisonings—drawn from the chronicles of eyewitnesses, those naïve accounts which, without embarrassment, call a spade a spade.

## DUMAS' MASTERPIECE

*THE CELEBRATED CRIMES OF HISTORY* is considered by many in France as Dumas' masterpiece. The highest praise has been bestowed on it by Andrew Lang, Robert Louis Stevenson, and other competent judges.

Think of a fascinating new historical series by Dumas of which only the highly privileged few among English readers heretofore had any knowledge. And all yours at a really nominal price!

## OUT OF GERMAN CAPTIVITY

(Continued from page 507)

German lines are the latest sources of dependable information concerning certain aspects of life in the enemy country. German prisoners, to be sure, are always available: but it is difficult to tell whether their stories are true, or designed to please their captors, or to aid their fatherland. The *rapatriés* seem to have no motive other than to tell the truth. Furthermore, they arrive daily from various parts of Germany, France and Belgium.

Some of the women from Lens told us that they had been urged, again and again, by German military authorities to renounce their allegiance to France and go with their children to settle in a German town designated for that purpose. They were told that all France was devastated, that the people were starving, that the French Republic was at an end, that London was utterly destroyed, and that the United States of America had no intention of sending troops. A few days later they were shown pictures of ruined cities—cities which the German Army has not reached. During all this time the only reports the German Government allowed them to receive from the International Red Cross told of the deaths of their husbands and sons. Thruout their three years of captivity, these women were left to infer that all their relatives were dead. "If they are still alive," said their persecutors, "why have they not written to you?"

At the Casino, after dinner on the day of my arrival, the Sous-Prefect made an address of welcome in which he assured the people that their villages would be restored and their houses rebuilt. He told them of recent military victories of the Allies. As a final word of encouragement, he spoke of what he called the greatest event of the war, the coming of the United States to their aid. The applause was spontaneous and prolonged. I was the only American there and the speaker was then unaware of my presence. I took his words and the demonstration which followed as the genuine expression of the feelings of the French people. One of the *rapatriés* spoke in response.

Then I looked upon the most touching of all the scenes I found in all Europe. In the balcony, among the children, a woman began to sing. There was a respectful lull. A moment later, a sudden thrill seemed to transfix every person in the hall. "The Marseillaise"! Under the iron heel of the German Army, they had not heard that song since the terror of 1914 descended upon them. Now, the first strains caught them unprepared, and brought to bear upon them, of a sudden, the terror and the heartache of those three years and the new, exquisite joy of their first moments in La Belle France. For, up to that moment, most of them had gone thru the various movements of the Evian Administrative program, as tho walking in a dream. Weak with years of hunger, wearied with broken hopes, dazed with German lies, habituated to docile obedience, they were not easily awakened. "The Marseillaise" was the magic touch. With its first notes came a silence that was almost too much to bear—a silence surcharged with pent-up emotion.

Then a man above ninety years of age arose at his place, and joined in the song with a voice so weak that it seemed as if every breath would be his last. Other *rapatriés* tried to sing, but their voices wavered and the tears came. Nowhere in the hall could I see eyes that were quite clear. For my own part, I do not pretend to be a reliable witness of anything after the first notes of "The Marseillaise."

## Health Culture

ESTABLISHED

ELMER LEE, M.D.

Editor

HAROLD WELLS TURNER

Publisher

## Monthly Magazine

1894

HEALTH CULTURE is the most progressive health organ in the world and teaches the most up-to-date medical science based on Natural Methods, Common Sense Psychology and Diet. What an important part the food we eat plays in health and how little people understand it. Babies get thin and rickety when improperly fed. Children fall into decline through lack of nutrition. Nervous and highly strung people require those elements that create nerve power. A correctly balanced diet supplies the proper amount of fats, etc., and is absolutely necessary for health. Unless you maintain a good all 'round diet you will sooner or later suffer for it. HEALTH CULTURE contains numerous articles devoted to diet, giving valuable information on the subject.

HEALTH CULTURE will give you thought control, and teach you how to become strong, virile, magnetic and attractive. Teaches the underlying laws of eugenics and sexology. Will teach you to live the Happy Life and how you may escape from bondage and sickness no matter how you have trifled with your health or what your environment is, or what your parents may have died of, or what your occupation. HEALTH CULTURE will teach you to climb to the healthy life and so become strong and successful.

WE are interested in you and if you are in difficulties about anything connected with your health, remember we are at your service, so write to us fully. Our Question and Answer Department offers to every reader a privilege that few other periodicals do. HEALTH CULTURE fights drugs, quackery serums, stimulants, useless operations, medical humbug, vivisection, vaccination, and everything likely to injure the health of the nation.

THERE is no reason under the sun why you should grow old and wrinkled as the years roll on. It is up to you to keep young and well. Men and women may be old and worn out at 30, if they have not followed the right course of living. We have thousands of followers of 70 years who are youthful and vigorous, having learned the true way of health. It is not a question of age, but your condition of health. We are sincere when we say that as you grow older and learn more, you should grow healthier and more youthful appearing. The Natural Methods ARE the best. No right-thinking person can have the slightest doubt about that and HEALTH CULTURE is just brim full of live wire information that tells you explicitly what to do to keep well and young.

#### PINE TREE CAMP FOR GIRLS

On the beautiful Pine Tree Lake, in the heart of the Berkshires, near Williamstown, Mass. This is a beautiful summer camp for girls, with a fine swimming pool, tennis courts, golf course, and other sports. Write for circular. Address Miss Blanche D. Price, 313 W. School Lane, Philadelphia, Pa.

# RAILROAD BONDS FOR SMALL INVESTORS

BY LUIGI CRISCUOLO

THE act for the Federal control of the railroad systems of this country provides a revolving fund of \$500,000,000 for the current needs of the railroads, such as advances on compensation for rental, loans for improvements, additions, equipment, for payment of overdue and unpaid vouchers, etc. It has been tentatively estimated that the railroads of the United States will require at least one billion dollars in 1918 for extensions and improvements alone, but this figure does not take into consideration the funds required to meet unexpected obligations which are the outcome of Government operation of the properties. Practically all the roads reported a railway operating deficiency in the first few months of the current fiscal year, the standard return provided under the act not being sufficient to enable the companies to pay operating expenses. Of course, the deficiencies in most cases are being rapidly made up by the better results in the spring months.

Those operating deficiencies have resulted in delays in payment of vouchers, wages and even interest on bonds. Small roads have been crippled temporarily by reason of having been taken over under the act until July 1 without any assurance that they would be retained. The result of this condition in ordinary times would be receiverships for practically all of the small roads in the country. It is only the fact that at present all roads are technically under the control of the Government which keeps these roads out of receivership. This is a dangerous condition, and if not remedied would undermine the financial prosperity of the country to such an extent that general under-confidence would result in the refusal of investors to buy railroad securities, even those issued under Government sanction, and the diversion of funds to industrial enterprises solely.

The securities of the short line railroads are held by many thousands of investors, individuals and institutions. If the short lines are not taken over by the Government, the result will be that they will be forced to compete with the Government controlled system. Some will survive, many will not, because of the fact that under the Government's plan of routing traffic many of them will be deprived of important and profitable business. As they would not be under Government control, and would not receive a fixed rental, the result would be wholesale bankruptcies, with thousands of investors wailing over the loss of their savings, and thousands of banks having to charge off large losses on securities of short lines owned.

THERE can be only one outcome of this—distrust of the Government, refusal to buy bonds for the prosecution of the war, an argument for a rival political party to show that Government operation of railroads by the present administration has been a failure, and that this failure will affect the outcome of the war. In all revolutions or war periods there are two factors—economic and political, both of which are closely related. In the Russian revolution, the allied nations failed to take into consideration the fact that the Romanoffs were hated by the masses, that there was an undercurrent of distrust for the Romanoffs among the Russian people, that the Russian people regarded all kings as tyrants and all wars as the amusement of tyrants or the moneyed classes at the expense of the peasant. Well, the result of the Allies' indifference as to the real situa-

tion in Russia was the most disgraceful debacle in history, and the prolongation of a war which the Allies had almost won, to a struggle whose end is not in sight.

So with our financial situation. So long as we keep our financial skies clear, so long as there is work for the masses at good wages, so long as the savings of the middle classes are not menaced, so long as securities are maintained in sound condition, the people's interest in the war will not be dampened, and it will go on to a successful conclusion. Therefore, a sound economic situation will prevent the political situation from becoming menacing. And that is what must be accomplished.

Writing in *The Independent* last January, I said that the best reform that would occur to railroad finance was a consolidation of the entire railroad system of the country by means of an exchange of the securities of hundreds of railroads into securities of one consolidated corporation. I beg leave to quote from the article:

One of the arguments in favor of government ownership of the railroads has been that under government ownership the consolidation of all necessary lines would make it possible to effect large economies. Charles E. Markham, president of the Illinois Central Railroad, took exception to this and stated that one reason why our railroads have not in the past effected all of the economies possible has been that the Government thru its anti-trust legislation has prohibited them from curtailing wasteful competition. When we entered the war the prohibition against concerted action and unified operation ceased to be espoused and, with the helpful coöperation of the shippers, the managements of the railroads have since made increases in efficiency that are remarkable. He claimed that under private ownership there can be effected economies and efficiencies which could not exist under government ownership with all of the red tape, waste and incompetency which ordinarily characterizes government management.

The latter argument sounds plausible, but there is no reason why railroad operation under government supervision should be wasteful. If the railroads are operated by the same men who now work for the railroads, and if such railroads as are pure duplications of facilities are scrapped, if the men who now work for private corporations could feel that they had permanent positions and were in effect government employees, with pensions in old age, they might be willing to work more efficiently than they do for privately owned corporations which are not now run by their stockholders, but by a handful of men who have usurped the powers of the real owners of the railroads.

The best reform that could happen to the railroads would be the organization of a consolidated railroad corporation to include every essential interstate railroad system in the country, an exchange of all present securities at fair market value for securities of a new corporation, supervised by the United States Government, all stock to be guaranteed as to dividends by the Government, and all bonds issued to be guaranteed as to principal and interest. The bonds should be of one class only and all bonds for future requirements to be of the same class, the same as Government bonds which are now issued.

The railroads could be controlled by a central board of directors with a seat at Washington, and all stockholders and bondholders would have a right to elect a certain number of directors, while the Government would be permitted to name a certain number. Security issues would have to be made under the approval of the Interstate Commerce Commission and sold on commission thru recognized investment houses which distribute directly to investors. This would avoid one unnecessary middleman.

The United States is beginning to have a conscience. The old order of politicians is fast disappearing. We have in Congress many men who are honest, much more honest than a great many of the exponents of railroads controlled by private interests. I am not inclined to be a "bear" on the United States. While many of the foreign governments have not made a success of their state-owned railroads, I am sure that if the United States Government turns the operation of a consolidated system of railroads over to the actual railroad men who are now operating them as separate systems, we can have an efficient system of railroads.

What I said last January has in part come to pass, and there is a feeling in many

quarters that the railroads now under Government control will never return to their security holders as separate systems. The short line situation is the serious one, because many of them are unessential and could be thrown overboard. I believe, however, that enough money will be saved thru having a consolidated system of railroads to permit the Government to compensate owners of unnecessary short line roads on a fair basis, even tho they were scrapped. By this I mean that there will be no need for receiverships and reorganizations with the attendant fabulous charges for underwriting commissions and legal fees, so that the Government could afford to pool the good with the bad and make the public stand for the whole proposition. In the long run the public would benefit.

TO get back to the original thought—\$1,000,000,000 for railroad extensions and improvements in 1918 and only \$500,000,000 provided under the act. The railroads need money and they apply for it to Washington before going to their usual bankers. They must do so in any event, because Governmental authority is required before securities can be sold, the Government also fixing the rate of interest to be paid *net* by the company. This eliminates large commissions and high interest rates. The elimination of high interest rates helps the general financial situation by keeping bond prices at a fair level. This makes it possible for the Government to borrow at  $4\frac{1}{2}$  per cent, while private corporations pay from 7 per cent to 10 per cent for money.

With the necessity for financing on a very large scale for improvements and extensions, it is advisable for the Government to begin at once to consider means of financing the railroad requirements by means of a special issue of Government bonds to provide for current and future needs of the railroads under Government control, said bonds to be a direct obligation of the Government, secured by deposit of securities of the railroads which require the funds. The bonds would be a collateral trust issue, we may say, secured by a most diversified assortment of securities—bonds, notes and stocks—all collateral being fully investigated by a staff of competent experts and passed upon by the Advisory Committee on Finance before being accepted.

THESE bonds would have a great demand and could be issued in denominations of fifty dollars and upward, in coupon or registered form, or both, as experience with the Liberty Loan issues would dictate as regards to convenience. These bonds could be sold thru recognized distributors of securities all over the country, country banks and city banks, and not sold to a syndicate of bankers. If there is to be a distributing syndicate, that can be organized at the Treasury Department at little expense so that the bonds could be offered directly to the public by the Government with but one middleman intervening.

Our experience with the three Liberty Loans should teach us that an issue of this sort would be popular and would obviate the necessity of the Government drawing on the usual Liberty Loan funds for railroad purposes, and bonds could be sold continuously as long as there was need by the railroads and as long as they had collateral to offer which was acceptable.

We ought thus in time have a Government bond in every home—every resident in the United States with a personal financial interest in his Government.

## FALLING SEVEN THOUSAND FEET

(Continued from page 501)

corrugated iron arch is bedded in thick concrete ten feet underground. Next comes an air space to absorb shock. Then a second thick layer of concrete surfaced with granite blocks that have proved their worth in resisting high explosives. Finally layers of sandbags rise ten feet over all, topped with a glancing roof of thick boiler plate. The doorways at each end are heavily bulwarked with sandbags and lead around right angle passages down below.

As we entered, the pilot switched on electric lights that revealed the corrugated iron roof, long and dark as the upper arch of a big sewer. A double bench ran down the center. Single benches lined each side. In case the lighting system should be destroyed, ship lanterns with candles ready to light hung from the center of the arch. Each of the three dugouts in the station can accommodate a couple of hundred men, and already they have been used. For Uncle Sam is ever careful of his men. When the "Old Man" answers "Mary's" mournful yell, it is all hands for the dugout till the alarm be proved imaginary or real.

The sailors whom the pilot had called to pose for a snapshot displayed more of curiosity than concern at the probable effects of a bomb. "We don't know, yet, whether they'll stand up under a direct hit," one lad said, with a grin, "but we're liable to find out. That's all in the game. What we don't like is being yanked out of bed every night by false alarms."

In real American sailor fashion they were hauling all the fun that was to be had out of the situation. Fritz and his frightfulness drew from them only sardonic humor. The instant we released them, the players went back to their baseball, while another group lounged on the sunny side of the dugout and played with three little tow-headed maids from the French barracks next door. Their ages ranged from five to nine, and never have I seen three prettier or nicer children. Just now they were frolicking like small kittens with our lads; but when their faces settled I felt that the raids had marked them. Fear dwelt not far behind the bright blue eyes. But I do not think that they consciously dwelt on it, and between raids they have a good time. Not a box of candy or parcel of eatables comes to the station that they do not share. Apart from certain small stomachaches induced by indiscriminate largesses, they are as content as other children with whom air raids loom as an indefinite terror in a far off land.

"A German plane hovered over here taking photographs yesterday," the pilot told me as I said goodbye that evening. "We rather expect to get it tonight. Rumor has it we're going to be gassed."

I carried that interesting piece of information back to the top story of the hotel where I slept with only a few thin slates between me and the Boche. Being bombed is one thing; gassed—quite another. No respectable person likes the idea of being asphyxiated in his beauty sleep. I once helped to pull a couple of farmers, who had blown out the gas, out of a hotel bedroom. They looked horrid. Their appearance haunted my sleep. I was sure that I must look like them when awakened by "Mary's" wail in the middle of the night. Far away the "Old Man" was also cursing the Boche. But louder than either—at least so it seemed to me—rose the "Grumph, grumph, grumph" of German planes.

There is no mistaking the sound, and they were directly above. I know that I

## U. S. Army or Navy Red Cross or Y. M. C. A.

Letters of Credit are the safest and most convenient medium for carrying funds.

During the war we are issuing such Credits, *free of commission*, to officers and men in the U. S. Army and Navy, and to those engaged in Red Cross or Y. M. C. A. work.

*We have also sent our American representative to France for the convenience of our friends, with headquarters at the office of the Credit Commercial de France, 20 Rue Lafayette, Paris.*

must have presented an accurate reproduction of the Bairnsfather cartoon which represents a Tommy, hair on end, stretched out flat on "No Man's Land" under the glare of a star shell. At least that is how I felt. But they were not after me. Four hours later "Mary" warned us of their return—the hands of their pilots red with the blood of women and children in Paris.

The patrol, two sea planes and three fighters, were again perched like dragon flies and wasps on the edge of the quay when I returned to the station next morning. The officer pilots and bluejacket observers were already in their places: the former giving a last tryout to motors and controls; the latter clamping the "loads" on their machine guns in the pits fore and aft of the pilot. The aft observer, by the way, needs to be coolheaded, for he has to shoot thru a maze of wires and could easily cut the tail off.

I, also, was to take a "hop"—not my first, but the others had been made on the south French coast escorting convoys with only an off chance of encountering a submarine. This was the war zone! within shelling distance of the German lines! At any moment a squadron might come sweeping out from the land and cut us off!

This time my ears were wadded against the roar that had left me deaf for twenty-four hours on previous trips, and I knew what to expect; was ready for the blow of the wind in my face. So I saw everything as we rushed down the channel past the nesting gunboats, squat monitors, lifting, lifting, lifting in the low long flight of a mallard till we soared high over the lighthouse at the pier end. A wide circle laid the town directly beneath us; its red-roofed houses in vivid contrast to the dull, winter green of surrounding plains, all bisected and cut up by gleaming water channels.

I did not half like it—there over the land. A seaplane is a seaplane and the ground looked so confoundedly hard. Those pretty red pebbles of houses would hurt like the dickens in the small of one's back. Tho I knew we should crash just as violently if we fell to the water, still it looked soft. I was greatly relieved when the pilot headed out to sea.

A motor boat had preceded us down the channel and now lay with a couple of patrols, mere decks nailed flat to the blue of the sea. From a thousand feet we swooped down for a snapshot then, shooting up again, the pilot laid a straight course down the coast.

As on my other flights, the coast lay below like a map in relief, hills mere green nubs amid winding channels; the beach a golden satin band edged by the foaming lace of the sea. Here and there a yellow road wound toward a distant toy hamlet. As before, the gulls floated far below, bits of white fluff against the green of the sea, stationary by comparison with the speed of our flight.

Today the visibility was not good, yet the haze that wrapt sea and land as in a golden cloak lent them mystery. Anything might come out of that enchanted prospect—flying Boche dragons, for instance, belching five hundred bullets a minute from the midst of fire and smoke. But it was all so beautiful up there; the air so crystalline, sunlight golden clear, sea so wide and green, the Boche had no place in it. I quite forgot him. We roared on between sea and sky while the toy ships and little coast villages, with their map-like channels, locks and long wharves, passed in swift procession beneath. I had almost forgotten I was flying when—the motor stalled.

How quickly I remembered! For then it was that I recognized the truth of a clever

NATIONAL EFFICIENCY SOCIETY, 119 W. 40th St., N. Y. City

British doctor's statement in the House of Commons. "Tho the flyer may have no conscious fear, his nervous system is nevertheless afraid." Unconsciously my heart had synchronized with the motor. They stopped—and after the pilot had gotten the motor going again after falling a few hundred feet—and started again together.

We were then about twenty miles from our base, and tho we turned about at once I cannot claim to any great enjoyment of the homeward flight. The way in which that pilot climbed for altitude was ominous and prophetic—for half way home the motor stalled again. This time we had air room to fall in, and took full advantage thereof. After that—how that pilot did climb, climb, climb! But we needed it, for about two miles from home, at an altitude of seven thousand feet, the motor gave its last kick; refused us another turn.

Seven thousand feet in mid air—and the motor stalled? A nice predicament for a peaceful correspondent! We fell, at first, of course, then as the planes took hold of the wind, the great bird steadied and swooped on down in a wide hawk spiral that carried us in to and over the land. It was a new sensation, that headlong dive thru golden sunlit space in silence broken only by the harping of the wind on the wires. I should have enjoyed it—if I had not been quite so afraid. I hope and believe the pilot did not notice my fright, for I camouflaged it with a few snapshots at those little red pebbles of houses as we fell. Perhaps he was as afraid as I? I do not think it. The pilot, whether of a plane or automobile, has this advantage over the passenger—he knows what he and the machine are doing.

The channel in front of the station, too, looked about the size of a cotton thread, and there was so much land on each side of it. Even at a thousand feet it looked no wider than a length of baby riband. I did not believe we could possibly hit it; was rather surprized when we took the water with barely a splash almost in front of the hangars.

"It was one of the prettiest spirals I ever saw," the chief pilot congratulated us as we came ashore.

To the flyers, those fine lads of ours who go daily out to sea to rid the sea ways of the submarine, one cannot give their just due; it is beyond the power of language, for in the course of their every day duty they face not only death, but also dominate the profoundest fear of our race. The falling dreams of a child are an inheritance handed down the ages from the far time when our arboreal ancestors roosted in the tops of the trees. The sleepy heads among them fell and were killed. The timid, in whom the fear of falling persisted even in sleep, survived to reproduce their kind and fix the falling fear in the race.

And do not imagine that the flyer differs from the rest of us; is immune from this fear. Of course he does not think about it—any more than he can help. Nevertheless the English doctor, already quoted, spoke truly when he said that the flyer's nervous system was always afraid. A bad crash will sometimes bring that subconscious fear to the surface, and if not, the strained nerves still give at last. One by one the flyer sees his fellows go down to their ends. Yet, having seen them, he goes on flying.

And this, to me, is the great wonder of this war—that lads can be found by the thousands and hundreds of thousands in whom patriotic pride and manly courage dominate not only the fear of death but also the most profound instinctive dread of the race. By the example they are leaving for future generations, they have made this war worth while.

## Write for This Guide to July Investments

WE have just published literature of the greatest value to everyone who has money for July investments. If you have—

- interest due in July,
- dividends due in July, or
- money idle or earning a low rate of interest, available in July,

which you wish to invest, write for this literature today. Our newest booklet, a valuable guide to the investment of your funds, is

## Safety And Six Per Cent

It concentrates in a few pages the knowledge of thousands of experienced investors, and the practical results of our thirty-six years of selecting, buying and selling safe investments without losing a dollar for any of our clients.

# TURN OVER A NEW LEAF

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

THE news reports of the day carry an item to the effect that the directors of the Pittsburgh Life and Trust Company, by paying a certain amount of money, are to escape prosecution for their part in selling that company to a couple of men who promptly misused enough of its funds to cause its failure. If this is true, and the directors, short of making good every penny lost by the stockholders, succeed in escaping responsibility for their negligence, to use no harsher term, justice will not be served.

For a clear understanding of this case let us review it in a general way. Here was a company with a cash capital of \$1,000,000, assets of about \$24,000,000; a policy reserve (policyholders' equities) approximating \$22,000,000; and a total insurance outstanding of more than \$108,000,000. Compared with the best life insurance companies as to management, it was not better than commonplace; but, as the figures quoted indicate, it was financially solvent and rendered fair, if not the best, service to policyholders. In time, under men skilled in life insurance work, it could have been made a most excellent insurer.

Two men in New York conceived the idea of getting control of it. But a short time before, its president, a fairly competent life underwriter, had died. The men left in charge knew little about the business and welcomed any plan that would relieve them of the responsibility. The New York exploiters, having no money of their own, had arranged with a New York bank for enough preliminary cash, backed by the stock that would be transferred, to finance the deal. As I remember the details now, something like \$140,000 in cash was paid as a first instalment for a controlling interest in the capital stock.

The stockholders who sold seem to have made no inquiry into the character and standing of the New York strangers. They passed the company and its \$24,000,000 worth of securities over to them. The latter very promptly converted something like \$1,900,000 of the securities, selling some of them outright for cash. Thru the announcement in a newspaper of the sale of a building in New York, and not before nor in any other way, the Insurance Superintendent of New York came into the knowledge that some sort of deal had been made. Attempts were then made to stop the matter, but it was too late. As a means of saving as much of the remnant as possible, the business of the company was reinsured in the Metropolitan Life; but as the wrecked company's reserves were found to be heavily impaired, the face value of the reinsured policies as death claims was depreciated about one-third.

And now we learn that the suits instituted by the Insurance Commissioner of Pennsylvania against the criminally negligent stockholders, as a means of recovering the losses inflicted by the stockholders, are to be dismissed on the payment by the latter of something like \$400,000. True, this is a penalty; for the stockholders got no money out of the deal made. But the policyholders are still a million and a half to the bad.

The State of New York heeded the lesson taught it by this exploit in high finance as related to life insurance funds in stock companies. The legislature very promptly enacted a drastic law governing the sales and transfers of life insurance stocks and prohibited their consummation until they

had been examined into and approved by the Superintendent of the Insurance Department.

But this was a Pennsylvania company, and so far as I am advised, the legislature of that state has not yet enacted a similar law for the security of policyholders in stock life insurance companies.

In the interests of decent life insurance companies, as well as of policyholders, it is about time somebody went to jail for these irregularities. In every case the policyholders are the sole victims. Ingenious men devise new ways of robbing the latter; there is great excitement for a brief period; prosecutions are begun and drag along for years; the subject finds little space in the papers; the prosecutions are dropped and the policyholders remain as the only parties to suffer.

There is a special insurance code in every state, a perfect tangle of laws, all intended for the protection of the assured. In such cases as the one under review the merciless operation of the law against larceny seems to be indicated.

IT is only within a few weeks that I have come into possession of reliable data from which the experience in the fire insurance business in 1917 may be fairly judged. The reports required of the companies by all the states are massive affairs, voluminous with complicated details. In many of the states these figures may be delayed as to filing as late as March 1, in order that sufficient time may be afforded in closing the December business along so far-flung a line as that which the giant corporations must cover, many of them having agents in almost every city, town and hamlet in the country.

Only after these reports are filed is it possible to make the various calculations reflecting any phase of the experience desired.

As the years go on it is plain that each one leaves us with a wider and a higher ash heap.

As President Bissell, of the National Board of Fire Underwriters, observed recently in his annual review of conditions: "The complete fire loss statistics will undoubtedly show a large increase in the value of property destroyed as compared with the preceding year. All unofficial estimates agree in this judgment. According to the best data now available the figures for 1917 are likely to reach \$250,000,000 as compared with \$214,000,000 for 1916. Should this figure be substantiated by our investigations it will give us a disquieting increase in the per capita loss from \$2.10 to \$2.42."

We fail to get the real significance of an annual fire waste when we express it in a number of hundreds of millions; we understand it better when we measure it by the population—when we say, as in this case, that it equals a contribution of \$2.42 from

every man, woman and child in the nation. And when we do see it from that angle, we should be appalled. Now that we have plunged into familiar association with larger numerals—billions for this thing and that—I fear, we may grow less sensitive to hundreds of millions, and that we will forget the fire waste is a steady annual drain, constantly mounting. The war against Germany will cease some day; but, unless we reform our methods, the war against the destruction of values will have to grow in intensity.

A study of the figures presented by the National Board of Fire Underwriters shows that the 137 companies which are members of that organization closed the year 1917 in what we may regard as satisfactory. This is true comparatively. They made a profit—not a large one, it is true, but a little larger than usual.

During the year they received an aggregate premium income of \$495,266,662 and after paying all losses and expenses and providing funds to cover additional liabilities assumed, they cleared \$11,751,567. This was a percentage of the premiums equaling 2.37. By the usual business house in mercantile lines, a profit of 2.37 per cent of the money received from customers would be regarded as rather slender. That, however, represents the net results of the underwriting, and it is to be remembered that underwriting is the business of a fire company. This is to be kept in mind when I supplement the figures with the income from another source—that from the investment of assets.

Just what the investment income was by the same 137 companies, I am unable to state, because they do not appear in the underwriting account before me; but on consulting the annual report of the Connecticut Insurance Department, covering the business of the companies reporting to that department (not all of them the same companies) for the year 1917, I find figures which are relatively informing. The Connecticut premium total is \$419,387,204 (as against \$495,266,662 in the National Board's statement) indicating returns from fewer—as I know that some are different—companies. The total income from investments was \$26,404,852. These companies paid to their stockholders an aggregate of \$25,910,113, from which it is clear that the banking side of the business, as distinguished from the underwriting side, provided the returns paid on capital invested in the companies.

As a matter of fact, this is true every year—stockholders' dividends are provided by the earnings on assets. Underwriting profits during a series of continuous years are rarely equal to the demand.

This may be exemplified by considering the National Board figures for a period of ten years, from 1908 to 1917, inclusive. The premium receipts were \$3,336,703,842; the underwriting profit was \$33,587,230, a ratio of 1.01 per cent. As will be observed, this total ten-year underwriting profit was but \$8,000,000 or so more than the total dividends to stockholders for the single year 1917.

It is this condition of affairs which makes it difficult to start and build up new fire insurance companies. Profits on underwriting are too slender to yield dividends, and it is only when a large sum of assets has been accumulated that such dividends can be paid.

*The Insurance Department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. Address all communications on insurance subjects to the director of The Independent Insurance Service*

# WHAT ARE WE FIGHTING FOR ?

(Continued from page 502)

and my children. And I never paid over four dollars and sixty-seven cents for taxes in my life. That is what the Government charged me each year to take care of me and my property. It is mighty little when you think of the privileges I have had. If the Government needs my sons, well, there they are!"

"But what is this war about, what are we fighting for?" I asked.

"I don't know. I am too busy to keep up with things. I don't read and I don't believe half I hear. I just leave it to the Government. If we are fighting, it is because we've got to fight or because we ought to fight. That is what I told the boys when they left. A good soldier doesn't ask questions until he has done his duty and gits back into citizen's clothes. Then he doesn't have to ask any. He knows. The tables are turned. The Government doesn't own him; he owns the Government. So I don't care what they think we are fighting for. That is what this war means to me and my boys."

This man lives here in the flesh. As nearly as I can recall I have quoted him correctly. He is such a patriot as some very rare Christians are saints, with no interest in doctrines or theology, but with an eye single to the glory of God. And it is not the Government at Washington that keeps this country together and makes it stand, nor armies marching into battle. It is the faith of men like this one in the Government as an ideal, whether it is a fact or not.

Joel Capers lives in a crow's nest of a house on the hat brim of this valley with his wife and eleven children. He is a little man who never straightens his legs nor his back, as if he had started life running and had never stopped. His elbows stick out, and he is pop-eyed. He moves quickly, automatically, as if his muscles had the best of him and were always jerking him about. He inhabits his body as a squirrel lives in a hollow tree. He merely peeps out of himself to see what is going on around him, and then disappears, still silent. He is a very brave man in his way, having supported this enormous family on practically nothing at all, and never complained.

A month after his only son was drafted I saw him picking cracked cotton bolls in a wintry field. After chasing him round and round in a conversation about the war for half an hour, he came kiting up to the point as if it were the tallest bough on the tree and where he wanted to be all the time. Afterward I discovered that his replies were guarded at first because he was in some doubt about my loyalty to the Government, not his.

He told me that Budd was doing well at the camp. Yes, he could get on without the boy, seeing he had to go.

"But," he added, flirting his old hat down against the wind, "it's hard on the land. I can't work more'n half of it next year without Budd. And that ain't good for land any more than it is for folks. to be idle. It gets bad habits, weeds and washes. You got to work the devilment out of it then before you can get anything else out of it. But we got to fight, and that takes the young men," he concluded.

"But why, what are we fighting for?" I asked, detaining him.

"What we fighting for?" he repeated as if the question was absurd. "Why, to whip the Germans, of course!"

"But why must we whip the Germans?" I insisted.

He put his whole mind on it, I am sure

1918

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures against marine and inland transportation risk and will issue policies making loss payable in Europe and Oriental countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has

insured property to the value of....\$30,949,773,989.00

Received premiums thereon to the extent of.....\$312,671,550.90

Paid losses during that period.....\$152,928,388.68

Issued certificates of profits to dealers...\$96,523,710.00

Of which there have been re-

deemed .....\$90,801,110.00

Leaving outstanding at pres-

ent time .....\$5,722,600.00

Interest paid on certificates amounts to.....\$24,494,668.95

On December 31, 1917, the assets of the company amounted

to .....\$18,041,890.25

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

for the first time, plucking fiercely the while at the little black bolls about him.

"I ain't never thought it down to facts and figgers," he began slowly, "but there is something wrong in the world, plain pisen wrong. We all feel it, don't we?"

I nodded.

"Well," he went on, "it's them Germans. Nobody knowed how bad they were till they got loose. And the evil in 'em, it's ketching like—like—the itch," he stammered. "We got to stop 'em before we git it. And they are trampling down everything, the women and children, and the harvest in other folks' fields. They are destroying the land. And they keep on going. They ain't never going to stop till they bust clean thru everything. So we got to head 'em off and turn 'em back in their own pasture. There ain't nobody else can do it but we all. Them Allies have give out. We are obleeged to fight for the land, not for what we got because we can git some more, but if they take the land there ain't nothing left that can stand. Ain't that plain to see?"

"Yes, it is," I agreed.

"Well, then, it's enough to fight for," he flung back, bending to his task.

Every man in this valley had his own view of this war and every woman held the same view. We were fighting, they told me, for the women and children in France and Belgium whom the Germans were starving, and for the women and children here who would starve if the Germans conquered. Everybody was fighting the Germans to save the women and children. I believe in their secret souls all women since the beginning of strife on this earth, who have seen their men go to war, thought the same thing. It is an instinct with them based upon the fact that they are that part of his property very precious to his honor, for the defense of which it is indecent not to die, if it is necessary to fight and die. This is why women love soldiers more than they do other men. Soldiers are personal compliments to them, armed and maintained for them.

We have one "scholar" in this valley, only one. This is Captain Billy Beavers. If you are a stranger he will make haste to tell you that he belonged to Longstreet's Division. Ten years ago he was still a very talkative old man anxious to dispense information. But we are not keen on extraneous knowledges. We know more now than we can live up to. So the dumb energy and the indifference of his neighbors finally silenced the Captain. He took to reading and raising chickens, chiefly, I think, because they kept him company.

As I turned a bend in the road after leaving Capers I saw the Captain sitting like a little, old, ragged, windblown scarecrow on top of a low shed in his yard. He was mending the roof of his hen house. A flock of very smart looking fowls circled about on the ground below with their necks stretched and their heads cocked sidewise watching him.

"Good afternoon, Captain!" I hailed him as I came up from the road.

"Good evening, ma'am," he returned cheerfully, accompanying the salutation with brisk strokes of his hammer.

"Come down, Captain Beavers, I want to interview you," I called to him.

He did what every man here does before he is ready to talk. He laid two fingers on his lips, gave a sort of skirting noise and shot a neatly aimed stream of tobacco juice far out beyond the shed. The hens moved aside, with a sort of tittering shock. Then he regarded me with a grin, which made his wrinkled brown face look like a cracked hickory nut.

"My legs ain't what they once were, ma'am. I am thinking now I may have to

## INSURANCE Service of The INDEPENDENT

A constantly increasing number of readers are securing valuable information through the Insurance Service Department conducted by W. E. Underwood, Director.

roost up here tonight. It is easier for you to come up than for me to come down," he challenged.

I hesitated, then I took my courage in my teeth, seized my skirts in one hand, climbed the duck-legged ladder and sat gingerly on the edge of the roof with my feet braced on the last rung. I have lived twenty stories up in a skyscraper and thought nothing of it. I have stood on top of tall mountains, but never before had I been on the humblest roof. And never had I felt so perilously far away from the solid earth.

"Now, ma'am, what is it you want to know. I'll tell you even if I don't know," the old man said, sorting his shingles like broad feathers.

"Captain," I began, "I have been trying to find out what our people here in the valley think of this war. What they think we in this country are fighting for."

He bobbed his head attentively at me. "Conar says we are fighting because our rich men have capital invested over there in France and England, and we have been drawn into this war to protect their interests. He calls it a rich man's war and a poor man's fight," I began.

"Conar knows the worst of everything, thinks that proves he's got brains, but it don't," he commented dryly.

"And Kirk says we are fighting because the Government has called us to arms, and it is our duty to obey the Government."

"Kirk's mind never went far. It ain't much larger than a gun-barrel, but as far as it goes he draws a clear line, and hits the mark," he put in.

"Capers says we are fighting to whip the Germans. That is all he knows about it." He grinned approvingly.

"The school teacher says we are fighting for disarmament and for universal peace—"

"He read that in a magazine," the Captain interrupted.

"All the women I ask have no doubts at all. They know that we are fighting for them, and for women and children everywhere who have been starved and oppressed by the enemy."

"The German women think the same thing," he answered. "And all history proves it. Men would not accumulate property, build cities, establish governments if it were not for having to take care of their wives and children. And when they get all these things they must fight to hold 'em when the time comes."

"Then you think that is what we are fighting for?" I asked, vaguely disappointed.

"Oh, no; I did not say so," he objected quickly.

"Well, what do you think we are fighting for?" I persisted, pinning him down.

"We don't know. Men never know at the time what they are fighting for. They only think they know. But it is years before they find out by the fruits that ripen from the struggle."

"In 1860," he went on, "we thought we were fighting to hold our slaves, and for the right to secede from the Union. But we were really fighting to deliver this land from a feudal civilization which was wrong and out of date. And we did it," he concluded grimly.

"The Yankees helped," I suggested.

"Oh, yes, they were a right smart help; we couldn't have done it but for the Yankees," he agreed, cutting his eye wittily at me across the wind.

"I can't tell you what we are fighting for," he went on after a pause, "because every nation has reasons of her own, peculiar to her needs and character for entering this war. And different groups in every one of them have their own personal reasons besides. There are more causes for

Both dividends are payable to stockholders of record as of June 29, 1918.

H. F. BAETZ, Treasurer.

New York, June 18, 1918.

this war written right now in the minds of men than could be set down in an unabridged dictionary. But I think I know what the war means."

"Well, what does it mean?" I urged when he fell silent and began to tap on his shingles.

"It means that the world has come to an end again," he answered.

"Again!" I exclaimed.

"Yes, the world comes to an end every hundred years or so. People don't understand that. They look for the stars to fall and for fires to consume the earth, taking the Bible prophecies literally. But once in so often, old things pass away, the institutions that we thought were lasting, the creeds that we lived by, the laws we made to keep us, they all pass like smoke from a fire. We get a new heaven and a new earth. And we start out fresh with new institutions, new laws and creeds nearer to the mind of God. Read your histories and you will find it so. Civilization is a spiritual phenomenon, based upon the quality and character of the people who make it. But the qualities and characters of nations change as they do in the generations of men in the same family. So civilizations wear out, or they get too small, too narrow for the mighty minds and spirits of the growing people. Then they must be laid away in history and poetry as Homer folded a world away in his great epic. That is what is happening in Europe today with this war sweeping like a consuming fire thru the undergrowths of her civilizations. The Europe we have known is passing. The Germany that we hate will go, too. The same thing must happen here, tho an enemy's ship never reaches our shores. We have got to go and come again, or perish. We can never be what we have been after this.

"Look at the Monroe Doctrine, that has held and shepherded us for a hundred years. Well, we cannot live any longer to ourselves according to that doctrine and leave the rest of the world to fight it out so long as they do not break our peace. The telegraph, telephone and the wireless and the aeroplane, all these new inventions have destroyed the Monroe Doctrine. They are spiritual achievements which have made all the nations of the earth, not merely neighbors, but human blood kin. So that we cannot see men drawn into a war even in the uttermost parts of the earth without feeling a brother's responsibility to help these men defend themselves, their homes and their rights.

"Democracy, ma'am, is an ideal. It means the sharing of the rights of men with mankind. We are fighting for this ideal, not as we fought in 1776 for our own rights, but for the rights and liberties of all men. We are fighting no less to deliver the German people from the yoke of military despotism than to restore Belgium and France. And before the struggle is over we shall make this world so safe for democracy that even a German may live in his own country and not be compelled to immigrate here to escape oppression."

I had a vision, not of some far-off millennium, but of a new world now at hand, born out of terrible travail and at frightful cost.

I saw men who spring ever younger and stronger from the dust of old orders living in all the ways of peace together, and I said it for a prayer, "Lord, this must be the way the Kingdom of Heaven will come at last, not in the paradise of our Patmos imaginations, but here upon this earth!"

Presently I left him sitting cross-legged on the speckled roof of his henhouse, a poor old man whom nobody knows beyond these hills, but I felt as if I had listened to a cheerful prophet.

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question of doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.
